On funds for operation and maintenance of Army and Air Force in Germany—with testimony from C. Burke Elbrick, Deputy Assistant Secretary of State for European Affairs; Maj. Gen. W. S. Lawton, Chief, Army Budget Division; Brig. Gen. C. R. Hutchison, Assistant Chief of Army Budget Division, Lyle Garlock, Assistant Secretary of the Air Force; and Maj. Gen. Robert S. Moore, Special Assistant to the Assistant Secretary of Defense, Comptroller.

Hearings continue tomorrow.

MILITARY QUARTERS ALLOWANCE

Committee on Armed Services: Subcommittee on Military Construction held hearings on H. R. 5731, to permit members of the uniformed services to occupy inadequate quarters without loss of quarters allowances, with testimony from Albert Pratt, Assistant Secretary of the Navy for Personnel and Reserve Forces, and Rear Adm. E. B. McKinney, Director of Shore Establishment Development and Maintenance Division, Navy.

CUSTOMS SIMPLIFICATION, TAXATION, AND ALUMINA

Committee on Finance: Committee, in executive session, ordered favorably reported amended H. R. 6040, to amend certain administrative provisions of the Tariff Act of 1930 and to repeal obsolete provisions of the customs laws, and without amendment H. R. 11995, to provide that the 1955 formula for taxing income of life-insurance companies shall also apply to taxable years beginning in 1956, and H. R. 10269, to amend the Tariff Act of 1930 to place metallurgical alumina on the free list.

COMMITTEE BUSINESS

Committee on the Judiciary: Committee, in executive session, ordered favorably reported the following:

H. R. 7049, to revise and codify titles 10 and 32 of U. S. Code relating to Armed Forces and National Guard; H. Con. Res. 244, providing for a joint committee of Congress to represent the Congress at the unveiling of the Commodore John Barry Memorial at Wexford, Ireland, on September 16, 1956; and an original bill to amend the Trading With the Enemy Act and the War Claims Act of 1948;

The nominations of Victor R. Hansen, of California, to be Assistant Attorney General, and Scovel Richardson, of Missouri, and John E. Henry, of Montana, to be members of the Board of Parole; and

Forty-three private immigration bills (H. Con. Res. 246, H. J. Res. 617, 618, 620, 621, 626, 627, 636, 637, 638, 639, S. 579, 1407, 1626, 3068, 3103, 3127, 3155, 3179, 3182, 3188, 3191, 3193, 3257, 3258, 3285, 3306, 3354, 3358, 3364, 3370, 3440, 3487, 3521, 3537, 3557, 3657, 3660, 3713, 3813, 3814, 4015, H. R. 5808).

Committee indefinitely postponed further action on 32 private immigration bills (S. 856, 857, 2449, 2583, 2945, 3028, 3098, 3105, 3192, 3205, 3274, 3294, 3300, 3301, 3351, 3378, 3390, 3403, 3432, 3563, 3578, 3618, 3625, 3627, 3687, 3701, 3712, 3716, 3733, 3921, 3954, 4090).

Also, the chairman was authorized to request that the committee be discharged from further consideration of S. 4048, relating to intercorporate relations between General Public Utilities Corp. and the Manila Electric Co., and that the bill re-referred to Committee on Interior and Insular Affairs.

TRAINING OF FEDERAL EMPLOYEES

Committee on Post Office and Civil Service: Special subcommittee held and concluded hearings on S. 3287, to authorize the training of Federal employees at public or private facilities. Testimony generally favoring the purpose of the bill was heard from Philip Young, Chairman of Civil Service Commission; Percival F. Brundage, Director, Bureau of the Budget; Lewis B. Cuyler, Hoover Commission; Michael Markwood, president, National Federation of Federal Employees; Royce Givens and Lt. Francis Dunn, both of Metropolitan Police Association; and Mrs. Adria Lynham, director, Washington School for Secretaries.

CONSERVATION

Joint meeting: Committees on Public Works and Interior and Insular Affairs concluded their joint hearings on S. Res. 281, conservation and development of land and water resources, after hearing testimony from Robert E. Merriam, Assistant to the Director of the Bureau of the Budget; Fred Mynatt, Assistant General Counsel, Department of Agriculture; James C. Bradley, representing Department of Interior; and Willard W. Gatchell, General Counsel, FPC.

House of Representatives

Chamber Action

Bills Introduced: 13 public bills, H. R. 12143–12155; 10 private bills, H. R. 12156–12165; and 3 resolutions, H. J. Res. 677–679, were introduced. Pages 11064–11065

Bills Reported: Reports were filed as follows:

H. R. 6681, amending the Bankruptcy Act relative to referral of proceedings, amended (H. Rept. 2644);

Disposition of executive papers (H. Repts. 2645 and 2646); and

H. R. 8937, to fix the term of office of district judges in Alaska (H. Rept. 2647). Page 11064

Conference Reports Adopted: Adopted conference reports on the following three bills and sent them to the Senate:

Mutual security: H. R. 11356, the Mutual Security Act of 1956;

Narcotics control: H. R. 11619, the Narcotic Control Act of 1956; and

Military construction: H. R. 9893, the Military Construction Act of 1956. Pages 11021–11034

Committee To Sit: The Committee on the Judiciary was granted permission to sit during general debate on Tuesday. Page 11034

Calendar Wednesday: Pursuant to a unanimous-consent request the House dispensed with Calendar Wednesday business in order on July 11. Page 11034

Indian Claims Commission: Disagreed to Senate amendments to H. R. 5566, relative to termination of existence of the Indian Claims Commission; requested a conference with the Senate, and appointed as conferees Representatives Haley, Shuford, Edmondson, Westland, and Utt. Page 11034

D. C. Legislation: The following bills pertaining to the District of Columbia were considered and passed by the House:

D. C. highway-railroad: S. 2895, relating to payment of cost and expense of constructing railway-highway grade elimination structures in D. C. (amended and returned to Senate);

D. C. highway-railroad: S. 2704, authorizing funds for construction of certain highway-railroad grade separations in D. C. (cleared for President);

D. C. railroad spur: S. 2705, to authorize the Philadelphia, Baltimore & Washington Railroad Co. to construct a branch track or siding over Second Street SE. in D. C. (cleared for President);

D. C. security gifts: H. R. 11090, concerning gifts of securities to minors in D. C. (sent to Senate);

Inaugural policing: H. J. Res. 667, providing for maintenance of public order and protection of life and property in connection with Presidential inaugural ceremonies (sent to Senate, amended);

D. C. cemeteries: S. 2896, to amend the act relating to cemetery associations in D. C. (cleared for President);

D. C. police: H. R. 7538, to provide five longevity increases for certain members of the Metropolitan Police force (sent to Senate, amended);

Potomac River bridge: S. 2568, to amend the act authorizing construction of Potomac River bridge to be known as the Theodore Roosevelt Bridge (amended and returned to Senate);

Potomac River bridges: H. R. 10947, to provide names for highway bridges over the Potomac River at 14th Street in D. C. (sent to Senate); and

D. C. memorial stadium: H. R. 11967, relative to consideration of a site and design for a National Memorial Stadium in D. C. (sent to Senate). Pages 11035–11047

D. C. Beer Sales: The consideration of H. R. 4697, to amend the Alcoholic Beverage Control Act of the District of Columbia of 1934 relative to the sale of beer in chainstores was prevented by the point of order that the bill was ordered reported by the committee when the House was in session and the committee had not obtained permission to sit during the session of the House. Pages 11047–11048

Mutual Security Appropriations: Adopted H. Res. 583, providing for the consideration of, the waiving of points of order against, and 4 hours of debate on H. R. 12130, making appropriations for mutual security for fiscal year 1957. After nearly 1 hour of debate further consideration of the bill was deferred to Wednesday. Pages 11049–11063

Early Meeting Hour: Pursuant to a unanimous-consent request the hour of meeting of the House on Wednesday was fixed at 10 a. m. Page 11063

Program for Tuesday: Adjourned at 5:01 p. m. until Tuesday, July 10, at 12 o'clock noon, when the House will consider rules for the consideration of certain bills.

Committee Meetings

GEN. NATHAN F. TWINING

Committee on Armed Services: Met in executive session and heard Gen. Nathan F. Twining, Chief of Staff, Department of the Air Force, accompanied by Maj. Gen. Joe W. Kelly and Col. Mayhue D. Blaine, report on his recent visit to Russia.

LAND CONVEYANCE

Committee on Armed Services: Ordered favorably reported to the House the following bills:

S. 976, to release U. S. interest in certain land in Montgomery, W. Va.; and

H. R. 5519 (amended), to convey and exchange certain tracts of land in El Paso County, Tex., to the U. S. Government.

The committee also approved one Navy acquisition project No. 150.

WEST COAST PIPELINE

Committee on Armed Services: Subcommittee on Special Investigations held hearing on the military necessity for pipeline to Los Angeles, Calif. Witnesses heard were Capt. C. G. Drescher, USN, Chief, Armed Services Petroleum Purchasing Agency; Dr. Arthur S. Flemming, Director, Office of Defense Mobilization; T. S. Petersen, president, Standard Oil Co., California; Maj. Gen. L. E. Cotulla, Staff Director, Petroleum Logistics, Department of Defense; and H. J. Barton, Chief of Branch, Division of Petroleum, Department of the Interior.

GOVERNMENT INFORMATION

Committee on Government Operations: Subcommittee on Government Information heard the following representatives of the Department of Defense in regard to practices and policies which restrict information to the Congress and the public: Robert T. Ross, Assistant Secretary of Defense; Philip Allen, Deputy Assistant Secretary for Public Affairs; Leonard Niederlehner, Deputy General Counsel; and C. Herschel Schooley, Director, Public Information. Hearings continue on Tuesday.

ACCOUNTS SUBCOMMITTEE

Committee on House Administration: Subcommittee on Accounts heard Representative Bonner on H. Res. 566, to provide funds for the Committee on Merchant Marine and Fisheries; and Representative Rabaut on H. Con. Res. 258, accepting without cost to the United States copies of the recording, Pledge of Allegiance to the Flag, and providing for distribution of such copies.

PUBLIC LANDS

Committee on Interior and Insular Affairs: Held hearing on H. R. 10371, providing that withdrawals or reservations of more than 5,000 acres of public lands of the United States for certain purposes shall not become effective until approved by act of Congress. Witnesses heard were Wesley A. D'Ewart, Assistant Secretary, Interior Department, accompanied by Earl G. Harrington, Cadastral Engineering Staff Office, Bureau of Land Management; Donn Miller, Office of General Counsel, Air Force Department; and Maj. Edward A. Turrou, Office of Adjutant General, Army Department.

FOREIGN AGENTS

Committee on the Judiciary: Subcommittee No. 3 held hearing on S. 1273 and H. R. 4105 to amend the Foreign Agents Registration Act to require the registration with the Attorney General of any combination of individuals supervised, directed, controlled, or financed, in whole or in substantial part, by any foreign government or foreign political party. Witnesses heard were Nathan B. Lenvin, Chief, Foreign Agents Registration Section, Department of Justice; V. W. Clapp, Chief Assistant Librarian, Library of Congress; Dr. Keyes Metcalf, representing the Association of Research Libraries; Dan Lacy, American Book Publishers Council, Inc.; Solicitor Abe McGregor Goff, Post Office Department; Winslow H. Osborne, American Friends Service Committee. Statements for the record were submitted by the American Library Association; American Federation of Teachers; and the American Civil Liberties Union.

ANTITRUST

Committee on the Judiciary: Antitrust Subcommittee No. 5 continued hearings on S. 3897 and H. R. 11360, to supplement the U. S. antitrust laws to enable automobile dealers to bring suit against automobile manufacturers regarding termination of franchise. Witnesses heard were John W. Gwynne, Chairman, Federal Trade Commission; Robert Bicks, Department of Justice; William T. Gossett, vice president and general counsel, Ford Motor Co.; William Hufstadter, vice president in charge of sales, General Motors; Lloyd Halverson, National Grange; and Senator Monroney.

OIL AND GAS LEASES

Committee on Merchant Marine and Fisheries: Completed hearing on proposal of Department of Interior to issue oil and gas leases on an additional 6,560 acres of the Railroad Valley, wildlife management area, in Nye County, Nev. John L. Farley, Director, Fish and Wildlife Service, Department of Interior, was heard.

FLOOD CONTROL

Committee on Rules: Granted an open rule with 2 hours of debate on H. R. 12080, omnibus rivers and harbors flood control bill. Supporting witnesses were Representatives Blatnik, Dondero, Jones of Alabama, Kluczynski, and Dempsey.

MINERAL PRODUCTION

Committee on Rules: Granted an open rule with 1 hour of debate on S. 3982, to provide for the maintenance of production of tungsten, asbestos, fluorspar, and columbium-tantalum in the U. S., its Territories, and possessions. Supporting witnesses were Representatives Engle, Durham, and Young.

AGRICULTURE

Committee on Rules: Completed hearing but took no action on H. R. 11708, to increase the amount authorized to be appropriated for purposes of title I of Agricultural Trade Development and Assistance Act of 1954. Supporting witnesses were Representatives Cooley and Hope.

COASTWISE TRADE—VESSELS

Committee on Rules: Considered but did not complete hearing on H. R. 11122, to promote the development and rehabilitation of the coastwise trade and to encourage the construction of new vessels. Supporting witnesses were Representatives Bonner and Tollefson. Committee will resume hearing on this bill on Tuesday.

EXCISE TAX

Committee on Ways and Means: Completed review of draft of legislation embodying recommendations of the Subcommittee on Excise Tax Technical and Administrative Problems and agreed that Representative Forand would introduce the bill as soon as it is ready so that it will be available to the public for comment during adjournment.

Joint Committee Meetings

AGREEMENTS FOR COOPERATION

Joint Committee on Atomic Energy: Subcommittee on Agreements for Cooperation held an executive session to discuss international agreements for cooperation. Witnesses heard in this session were Chairman Lewis L. Strauss, and Dr. Willard F. Libby, Thomas E. Murray, and Harold S. Vance, members, all of the Atomic Energy Commission.

D. C. TRANSIT

Conferees continued in executive session to resolve the differences between the Senate- and House-passed versions of S. 3073, the D. C. transit bill, but did not conclude their work and will meet again Wednesday, July 11.

COMMITTEE MEETINGS FOR TUESDAY, JULY 10

(*All meetings are open unless otherwise designated*)

Senate

Committee on Agriculture and Forestry, executive, on S. 3429, to amend the credit provision in the Bankhead-Jones Farm Tenant Act, and on other bills, 10 a. m., 324 Senate Office Building.

Committee on Appropriations, on supplemental appropriations for fiscal 1957, 2 p. m., room F–37, Capitol.

Committee on Armed Services, executive, to hear Gen. Nathan F. Twining, Air Force Chief of Staff, 10 a. m., 212 Senate Office Building.

Committee on Banking and Currency, executive, on S. 3911, regulation of bank mergers, S. 3868, to extend Export-Import Bank Act of 1945, and S. 3832, disposal of Government-owned rubber research laboratories at Akron, Ohio, 10:30 a. m., 301 Senate Office Building.

Committee on Interior and Insular Affairs, executive, on committee business, 10 a. m., 224 Senate Office Building.

Committee on Interstate and Foreign Commerce, Aviation Subcommittee, on section 1 of S. 3914, to amend Civil Aeronautics Act of 1938 regarding foreign air transportation, 10 a. m., room G–16, Capitol.

Committee on the Judiciary, Subcommittee on Juvenile Delinquency, to explore possibility of using surplus military installation for Boys' Town-type projects, 10 a. m., room P–63, Capitol.

Committee on Post Office and Civil Service, executive, on committee business, 10:30 a. m., 135 Senate Office Building.

House

Committee on Armed Services, executive session, Subcommittee on Acquisitions and Disposals on real-estate projects, 9 a. m., 313–A Old House Office Building.

Committee on Banking and Currency, executive session, on H. R. 11000, providing for the striking of medals in commemoration of the 100th anniversary of the birth of the late Justice Louis Dembitz Brandeis; and S. 3732, to provide insurance against flood damage, 10 a. m., 1301 New House Office Building.

Committee on Education and Labor, Special Subcommittee on Aid to the Blind on bills to authorize wider distribution of books and other special instructional material for the blind, and to increase the appropriations authorized for this purpose, 10:30 a. m., 429 Old House Office Building.

Committee on Government Operations, Subcommittee on Legal and Monetary Affairs on Federal role in civil aviation. Charles J. Lowen, Civil Aeronautics Administration, and other CAA officials will be heard, 10 a. m., 1501 New House Office Building.

Subcommittee on Government Information on Defense Department policies and practices that have restricted the flow of information to Congress and the public. Maj. Gen. C. S. Melon, Jr., Army Chief of Public Information; Rear Adm. E. B. Taylor, Chief, Navy Office of Information, and others will be heard, 10 a. m., 304 Old House Office Building.

Subcommittee on Government Activities, executive session, to consider Senate bills, 11 a. m., 1537 New House Office Building.

Committee on Interior and Insular Affairs, to mark up H. R. 10371, providing that withdrawals or reservations of more than 5,000 acres of public lands of the United States for certain purposes shall not become effective until approved by act of Congress, and pending bills, 10 a. m., 1324 New House Office Building.

Committee on the Judiciary, executive session, full committee on pending bills, 10 a. m., 346 Old House Office Building.

Antitrust Subcommittee No. 5 to continue hearings on S. 3789 and H. R. 11360, to supplement the United States antitrust laws to enable dealers to bring suit against automobile manufacturers regarding termination of franchise, 2:30 p. m., 346 Old House Office Building.

Committee on Merchant Marine and Fisheries, to determine the necessity or desirability of additional Federal legislation to regulate pleasure boating in the United States, 10 a. m., 219 Old House Office Building.

Committee on Post Office and Civil Service, on S. 2875, to increase retirement benefits for Federal workers. Representatives of Board of Actuaries, Civil Service Commission; Joseph Campbell, Comptroller General of the United States; and Charles I. Schottland, Commissioner, Social Security Administration, will be heard, 10 a. m., 213 Old House Office Building.

Committee on Public Works, executive session, Subcommittee on Flood Control on pending bills, 10 a. m., 1302 New House Office Building.

Committee on Rules, to consider granting of rule on the following bills:

H. R. 12138, supplemental appropriations for the fiscal year ending June 30, 1957;

S. 1644, Federal Construction Contract Act;

H. R. 3, establishing rules of interpretation governing questions of the effects of acts of Congress on State law;

And to continue consideration of request for rule on H. R. 11122, to promote the development and rehabilitation of the coastwise trade and encourage the construction of new vessels, 10:30 a. m., G–12 Capitol Building.

Committee on Un-American Activities, to hear John Cogley, director of a recently published survey by the Fund for the Republic on the subject of the so-called blacklisting of Communists and fellow travelers in the entertainment industry, 10 a m., 362 (Caucus Room) Old House Office Building.

Committee on Ways and Means, executive session, to consider Members' bills, 10 a. m., Committee Hearing Room, Old House Office Building.

Joint Committee

Joint Committee on Atomic Energy, Subcommittee on Research and Development, executive, on draft report on shortage of scientific and engineering manpower, 2 p. m., room F–88, Capitol.

Conferees, executive, on H. R. 7089, veterans' survivors' benefits, 10 a. m., 312 Senate Office Building.

United States of America

Congressional Record

PROCEEDINGS AND DEBATES OF THE 84th CONGRESS, SECOND SESSION

Vol. 102 WASHINGTON, TUESDAY, JULY 10, 1956 No. 116

Senate

The Senate was not in session today. Its next meeting will be held on Wednesday, July 11, 1956, at 12 o'clock meridian.

House of Representatives

TUESDAY, JULY 10, 1956

The House met at 12 o'clock noon.

The Chaplain, Rev. Bernard Braskamp, D. D., offered the following prayer:

Most merciful and gracious God, we thank Thee for the privilege of prayer and its power to fortify and strengthen us when the struggle of life is difficult and our problems are hard to solve.

We humbly acknowledge that our minds are frequently thronged with a multitude of disturbing and disconcerting thoughts and we feel ourselves wavering between conflicting and opposite decisions.

Constrain us with a determination to bring all our plans and purposes, our desires and longings, into harmony with Thy divine will, in which is our peace.

Grant that we may be eager to invoke and worthy to receive Thy blessing and benediction upon everything which we shall endeavor to do during this day for the welfare of our country and all mankind.

Hear us in Christ's name. Amen.

THE JOURNAL

The Journal of the proceedings of yesterday was read and approved.

MESSAGE FROM THE SENATE

A message from the Senate, by Mr. Carrell, one of its clerks, announced that the Senate had passed a bill of the following title, in which the concurrence of the House is requested:

S. 3449. An act relating to the reinvestment by air carriers of the proceeds from the sale or other disposition of certain operating property and equipment.

The message also announced that the Senate agrees to the amendments of the House to a bill of the Senate of the following title:

S. 1871. An act to amend the act entitled "An act to reimburse the Post Office Department for the transmission of official Government-mail matter, approved August 15, 1953 (67 Stat. 614), and for other purposes."

The message also announced that the Senate insists upon its amendment to the bill (H. R. 483) entitled "An act to amend the Army-Navy Public Health Service Medical Officer Procurement Act of 1947, as amended, so as to provide for appointment of doctors of osteopathy in the Medical Corps of the Army and Navy," disagreed to by the House; agrees to the conference asked by the House on the disagreeing votes of the two Houses thereon, and appoints Mr. RUSSELL, Mr. STENNIS, Mr. SYMINGTON, Mr. SALTONSTALL, and Mrs. SMITH of Maine to be the conferees on the part of the Senate.

The message also announced that the Senate agrees to the report of the committee of conference on the disagreeing votes of the two Houses on the amendments of the Senate to the bill (H. R. 9893) entitled "An act to authorize certain construction at military installations, and for other purposes."

MANNER IN WHICH ANTITRUST SUIT AGAINST GENERAL MOTORS WAS ANNOUNCED

(Mr. VANIK asked and was given permission to address the House for 1 minute, to revise and extend his remarks and include extraneous matter.)

Mr. VANIK. Mr. Speaker, permit me to call the attention of the House of Representatives to an editorial which appeared in the Cleveland Press of July 6, 1956, entitled "Political Corn," commenting upon Attorney General Herbert Brownell's television performance last Wednesday night when he went on a Corn Products-sponsored television program to announce that the Justice Department would file an antitrust suit against the General Motors Corp.

The preparation of this suit must have taken most of the Attorney General's time during the past 3½ years. You can almost bank on the assumption that it was most adroitly prepared with a confused cause of action and that the service of summons will inadvertently be made on the wrong person, perhaps some unsuspecting motorist.

It should further be a subject of congressional concern that public news and information, particularly information of such far-reaching importance as an antitrust suit prepared by a Republican Attorney General against the great General Motors Corp., should be distributed by public officials on private television time. News has a property value and the distribution of it on a private advertiser's television time is a conversion of public property in the news for the private profit or advantage of an advertiser and/or other persons. Releases of public information by public officials should always be made in a thoroughly public manner.

The Press editorial is as follows:

POLITICAL CORN

If Secretary Ezra Benson were to go on a General Motors-sponsored TV program to announce that the Agriculture Department had decided to blacklist Corn Products Co.—

We doubt honest old Ezra would do such a thing, but if he did—

Well, it would be on all fours with Attorney General Herbert Brownell's performance Wednesday night, when he went on a Corn Products-sponsored TV program to announce that the Justice Department would file an antitrust suit against General Motors.

It might be good politics, because this is an election year and some farm spokesmen have been accusing Ezra of loving the food processors more than he loves the farmers. But, repeating, we don't think Ezra would play politics that way.

And, of course, we have no way of knowing how long Brownell carried that official news item around in his hot little hand before he stepped up to the TV camera to perform a governmental act under the auspices of a

sponsor with a name appropriate to the performance.

But we do know that Brownell attained his present position by his skill in politics, that General Motors has been a large and growing corporation through 3½ years Brownell has been Attorney General, that Democrats have been accusing the Eisenhower administration of favoring big business, and that Brownell didn't announce his suit against the symbol of big business until well along in an election year.

The traditional way for the Justice Department to break the news of an antitrust action is to file the complaint, making it a matter of court record, and give out a press release or hold a press conference available equally to all media of public information, explaining the reasons for the suit.

But Brownell chose an unorthodox way of making his announcement, arousing controversy that might possibly draw more attention to the idea that the Republicans, in this election year, are hellbent for protecting the little fellows against the big fellow.

For his performance, Brownell received a leather-bound, 20-volume encyclopedia, and newspaper reporters participating in the Corn Products press conference received a cash honorarium for 30 minutes of acting the role they are paid all week to do for their own newspapers.

However you grind it, it's corn.

CORRECTION OF RECORD

Mr. HAGEN. Mr. Speaker, I ask unanimous consent to correct the RECORD of July 9, 1956, at page 11026 where I questioned the gentleman from Georgia [Mr. VINSON]. The reporter got my language completely confused. According to the official report I made the statement:

I think the military should be satisfied with a smaller amount of land than they desire to take.

That language should be stricken and this substituted:

I think the military needs would not be met by the smaller acreage suggested by the Senate report and that the Senate report is erroneously in conflict with the expression of judgment in the authorization agreed upon by both Houses of Congress.

The SPEAKER. Is there objection to the request of the gentleman from California?

There was no objection.

EX-SENATOR CAIN AND THE SECURITY PROGRAM

(Mr. UDALL asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. UDALL. Mr. Speaker, I think it is unanimously agreed by those who have followed our security program carefully that no one has contributed more during the last 18 months toward putting commonsense and fair play into that system than has former Senator Harry P. Cain, who is a member of the Control Board on Subversive Activities. Senator Cain has worked tirelessly and with great courage to improve our security procedures.

His appointment expires on August 1 of this year. If I were a Republican and were asked what the President has done to improve the security system, I would reply, "He appointed Senator Cain." In my opinion, there is no better test of the President's sincerity in this matter than the Cain reappointment.

RELIEF OF CERTAIN RELATIVES OF UNITED STATES CITIZENS

Mr. WALTER. Mr. Speaker, I ask unanimous consent to take from the Speaker's desk House Joint Resolution 456 for the relief of certain relatives of United States citizens with Senate amendments thereto and concur in the Senate amendments.

The Clerk read the title of the bill.

The Clerk read the Senate amendments, as follows:

Page 1, line 7, strike out "under" and insert "and upon compliance with."

Page 2, line 4, after "Huffman", insert "Stella W. Janinis."

Page 2, line 4, after "Jackson", insert "Reinhold H. Meric."

The SPEAKER. Is there objection to the request of the gentleman from Pennsylvania?

There was no objection.

The Senate amendments were concurred in.

A motion to reconsider was laid on the table.

RELIEF OF CERTAIN ALIENS

Mr. WALTER. Mr. Speaker, I ask unanimous consent to take from the Speaker's desk House Joint Resolution 580 for the relief of certain aliens with a Senate amendment thereto and concur in the Senate amendment.

The Clerk read the title of the bill.

The Clerk read the Senate amendment, as follows:

Page 1, line 7, strike out "Lee Fay Fan."

The SPEAKER. Is there objection to the request of the gentleman from Pennsylvania?

There was no objection.

The Senate amendment was concurred in.

A motion to reconsider was laid on the table.

RELIEF OF CERTAIN ALIENS

Mr. WALTER. Mr. Speaker, I ask unanimous consent to take from the Speaker's desk House Joint Resolution 616 for the relief of certain aliens, with Senate amendments thereto and concur in the Senate amendments.

The Clerk read the title of the bill.

The Clerk read the Senate amendments, as follows:

Page 1, strike out lines 8 to 12, inclusive.

Page 2, line 1, strike out "3" and insert "2."

Page 2, line 6, strike out "4" and insert "3."

Page 2, line 11, strike out "5" and insert "4."

Page 2, line 16, strike out "6" and insert "5."

Page 2, line 21, strike out "7" and insert "6."

Page 3, line 1, strike out "8" and insert "7."

Page 3, line 6, strike out "9" and insert "8."

Page 3, line 11, strike out "10" and insert "9."

Page 3, line 16, strike out "11" and insert "10."

Page 3, line 21, strike out "12" and insert "11."

Page 4, line 1, strike out "13" and insert "12."

Page 4, line 6, strike out "14" and insert "13."

Page 4, line 11, strike out "15" and insert "14."

Page 4, line 16, strike out "16" and insert "15."

Page 4, strike out lines 21 to 25, inclusive, and insert:

"SEC. 27. For the purposes of sections 101 (a) (27) (A) and 205 of the Immigration and Nationality Act, Paz Tupas Meeker shall be held and considered to be the minor natural-born alien child of C. A. Meeker, a citizen of the United States."

Page 6, after line 2, insert:

"SEC. 28. For the purposes of sections 101 (a) (27) (A) and 205 of the Immigration and Nationality Act, the minor child, Luciana Papa Powell, shall be held and considered to be the natural-born alien child of James M. Powell and Camille Powell, citizens of the United States."

The SPEAKER. Is there objection to the request of the gentleman from Pennsylvania.

There was no objection.

The Senate amendments were concurred in.

A motion to reconsider was laid on the table.

ADVANCEMENT OF MAJ. GEN. HANFORD MACNIDER TO LIEUTENANT GENERAL

Mr. VINSON. Mr. Speaker, I ask unanimous consent for the immediate consideration of the bill (H. R. 11677) to provide for the advancement of Maj. Gen. Hanford MacNider, United States Army Reserve, retired, to the grade of lieutenant general on the retired list.

The Clerk read the title of the bill.

The SPEAKER. Is there objection to the request of the gentleman from Georgia?

Mr. SHORT. Mr. Speaker, reserving the right to object, would the gentleman from Georgia, our distinguished chairman, explain briefly the bill or have its author do so?

Mr. VINSON. I suggest, inasmuch as I cleared the matter with the gentleman before I called it up, that the distinguished gentleman from Missouri, who is quite familiar with this bill, should briefly state to the House the distinguished military career of this outstanding general.

Mr. SHORT. Mr. Speaker, I think all Members are aware that Hanford MacNider, of Iowa, is one of the greatest soldiers that this country has ever produced, having served in both World War I and World War II, and being wounded many times on the battlefield. Not only are the Members of the Iowa delegation but many of the Members all over the Nation, as well as some of our highest military men in the country, are heartily in favor of granting this recognition to a very outstanding and great American. I want to say that the bill will not cost the taxpayers one dime. It merely promotes him from major general to lieutenant general; wholly an honor but an honor richly deserved and written in sacrifice and blood. I am confident that every true American who loves his country will rejoice that this high recognition and signal honor is being bestowed by an appreciative Congress and a grateful people upon a stalwart, fearless, and exemplary soldier, a sterling patriot, and a great and good man.

Mr. KEAN. Mr. Speaker, will the gentleman yield?

Mr. SHORT. I yield to the gentleman from New Jersey.

Mr. KEAN. Mr. Speaker, it so happens that Hanford MacNider and I both served in World War II; in fact, we slept in the same dugout at one time. He was a captain in the 9th Infantry, 2d Division, and I was a second lieutenant in the 15th Field Artillery. I was assigned as the liaison officer to the 9th Infantry. Of all the wonderful fighters and brave men, Hanford MacNider was one of the best, and I heartily endorse this bill.

Mr. SHORT. I thank the gentleman. Mr. Speaker, I would like to say, too, to the gentleman that I have been told by some of our highest ranking officers that he is the greatest fighting man they have ever known, coming back from the battlefield to the dugout with blood actually running out of his shoes and refusing to go to a hospital.

Mr. KEAN. He was what we colloquially call a fighting fool.

Mr. SHORT. He was and still is.

Mr. GROSS. Mr. Speaker, will the gentleman yield?

Mr. SHORT. I yield to the gentleman from Iowa, the author of the bill. And I want to congratulate and thank him for his interest in this matter.

Mr. GROSS. Mr. Speaker, I hope this bill will be approved. Hanford MacNider, in my opinion, is one of this country's greatest living nonprofessional fighting men. Hanford MacNider has been awarded the Distinguished Service Cross; not the Distinguished Service Medal but the Distinguished Service Cross, with two clusters awarded for combat above and beyond the call of duty. He is a former Ambassador to Canada; a former national commander of the American Legion and of the Iowa Department of the American Legion. Major General MacNider has had a long and illustrious career, both as a military man and a civilian. As the distinguished gentleman from Missouri [Mr. SHORT] has stated, this advancement to the grade of lieutenant general is purely a recognition of the honor that is due a great nonprofessional soldier. It should be noted that the bill explicitly provides that this advancement will not permit an increase of a single dime in the retirement pay of General MacNider.

I wish to take this opportunity to thank Mr. VINSON, chairman of the House Armed Services Committee, and the ranking minority member of the committee, Mr SHORT, for making it possible to consider this bill today honoring as it does one of the distinguished citizens of the Nation and the congressional district which it is my privilege to represent

Mr. SHORT. Mr. Speaker, if I might add one word, there are many Members of this House who, like the gentleman from New Jersey, served with Hanford MacNider I never did have that privilege or honor, but I have met him, and I know that he has been considered on different occasions seriously in years gone by as a presidential possibility.

Mr. Speaker, I withdraw my reservation of objection.

(Mr. SHORT asked and was given permission to revise and extend his remarks.)

Mr. McCORMACK. Mr. Speaker, further reserving the right to object, everyone knows of the great career of General MacNider, one of the outstanding generals of American history. I know that General MacNider will derive great pleasure and satisfaction in the knowledge that this bill, brought up out of order, has passed the House unanimously, conveying to him and to the entire country the great respect that all Members of the House, without regard to party, have for him and the admiration they have for the man himself, and the military leader.

Mrs. ROGERS of Massachusetts. Mr. Speaker, will the gentleman yield?

Mr. McCORMACK. I yield to the gentlewoman from Massachusetts.

Mrs. ROGERS of Massachusetts. Mr. Speaker, I should like to say how extremely glad I am that this body is about to pass this bill. Gen. Hanford MacNider is known all over this country and abroad for his great work. His contribution has been just as great since the war as it was during the war, during his gallant fighting days. America should do him all honor. I have known him and his lovely wife for years. Their friends are legion and will rejoice over this appreciation of this great man.

The SPEAKER. Is there objection to the request of the gentleman from Georgia?

There was no objection.

The Clerk read as follows:

Be it enacted, etc., That Maj. Gen. Hanford MacNider, United States Army Reserve (retired), shall be advanced on the retired list to the grade of lieutenant general effective as of date of enactment of this act.

SEC. 2. Nothing contained in this act shall be deemed to increase the retired or retirement pay received by the said Maj. Gen. Hanford MacNider and no other benefits shall accrue to him by virtue of the enactment thereof.

The bill was ordered to be engrossed and read a third time, was read the third time, and passed, and a motion to reconsider was laid on the table.

COMMITTEE ON THE JUDICIARY

Mr. McCORMACK. Mr. Speaker, I ask unanimous consent that the Committee on the Judiciary have permission to sit during general debate tomorrow and Thursday.

The SPEAKER. Without objection, it is so ordered.

There was no objection.

COMMITTEE ON PUBLIC WORKS

Mr. BALDWIN. Mr. Speaker, I ask unanimous consent that the Committee on Public Works have until midnight tonight to file sundry reports.

The SPEAKER. Without objection, it is so ordered.

There was no objection.

CORRECTION OF THE RECORD

Mr. O'HARA of Illinois. Mr. Speaker, on page 10853 in line 14 of the first column of the CONGRESSIONAL RECORD of July 6, 1956, I am recorded as having said "impression." That should read "confession." I ask unanimous consent that the permanent RECORD be corrected accordingly.

The SPEAKER. Without objection, the permanent RECORD will be corrected accordingly.

There was no objection.

SUPPLEMENTAL APPROPRIATION BILL, FISCAL YEAR 1957

Mr. SMITH of Virginia, from the Committee on Rules, reported the following privileged resolution (H. Res. 534, Rept. No. 2648), which was referred to the House Calendar and ordered to be printed.

Resolved, That during the consideration of the bill (H. R. 12138) making supplemental appropriations for the fiscal year ending June 30, 1957, and for other purposes, all points of order against the bill are hereby waived.

PERMISSION TO SIT DURING GENERAL DEBATE

Mr. WRIGHT. Mr. Speaker, I ask unanimous consent that the Committee on Public Works have permission to sit during general debate tomorrow.

The SPEAKER. Without objection, it is so ordered.

There was no objection.

ASSISTANCE TO CERTAIN NON-FEDERAL INSTITUTIONS FOR THE CONSTRUCTION OF FACILITIES FOR RESEARCH

Mr. BOLLING. Mr. Speaker, by direction of the Committee on Rules, I call up House Resolution 577 and ask for its immediate consideration.

The Clerk read the resolution, as follows:

Resolved, That upon the adoption of this resolution it shall be in order to move that the House resolve itself into the Committee of the Whole House on the State of the Union for the consideration of the bill (S. 849) to provide assistance to certain non-Federal institutions for construction of facilities for research in crippling and killing diseases such as cancer, heart disease, poliomyelitis, nervous disorders, mental illness, arthritis and rheumatism, blindness, cerebral palsy, tuberculosis, multiple sclerosis, epilepsy, cystic fibrosis, and muscular dystrophy, and for other purposes. After general debate, which shall be confined to the bill, and shall continue not to exceed 1 hour, to be equally divided and controlled by the chairman and ranking minority member of the Committee on Interstate and Foreign Commerce, the bill shall be read for amendment under the 5-minute rule. It shall be in order to consider without intervention of any point of order the substitute amendment recommended by the Committee on Interstate and Foreign Commerce now in the bill and such substitute for the purpose of amendment shall be considered under the 5-minute rule as an original bill. At the conclusion of such consideration the Committee shall rise and report the bill to the House with such amendments as may have been adopted, and any Member may demand a separate vote in the House on any of the amendments adopted in the Committee of the Whole to the bill or committee substitute. The previous question shall be considered as ordered on the bill and amendments thereto to final passage without intervening motion except one motion to recommit with or without instructions.

Mr. BOLLING. Mr. Speaker, I yield 30 minutes to the gentleman from Oregon [Mr. ELLSWORTH], and at this time I yield myself such time as I may consume.

(Mr. BOLLING asked and was given permission to revise and extend his remarks.)

Mr. BOLLING. House Resolution 577 makes in order the consideration of S. 849 to provide assistance to certain non-Federal institutions for the construction of facilities for research in crippling and killing diseases. The resolution provides for an open rule and 1 hour of general debate. It also provides that it shall be inorder to consider without intervention of any point of order the substitute amendment recommended by the Committee on Interstate and Foreign Commerce, and the substitute shall be considered as an original bill for the purposes of amendment. Any Member may demand a separate vote on any of the amendments adopted in the Committee of the Whole to the bill or committee substitute.

The bill, as amended, authorizes a 3-year grant-in-aid program on a matching basis of not to exceed $30 million for each of the 3 years to assist public and nonprofit institutions in the construction and equipping of facilities to engage in research in the sciences related to health.

As amended, the bill sets up a National Advisory Council on Health Research Facilities. The Council will have the Surgeon General as chairman and an officer of the National Science Foundation. There will be 12 members appointed by the Secretary of Health, Education, and Welfare. Of the 12, 4 will be selected from the general public and 8 from among leading medical, dental, and scientific authorities.

The bill outlines certain factors which the Council must take into consideration when applications are submitted to assure equitable distribution of the grants. The Council shall, within 6 months after enactment of the bill, set up general regulations covering eligibility of institutions and the terms and conditions for approving applications. Also, the Council is to make annual reports to Congress summarizing its activities under this legislation.

A committee amendment provides for the recapture of funds if within 10 years after construction of any facility the applicant ceases to be a public or nonprofit institution, or ceases to be used for the purposes for which it was constructed.

A noninterference provision is included as a committee amendment to preclude any attempts to place such research facilities under Federal direction.

The committee unanimously approved the bill as amended. There was no opposition before the Rules Committee, and I urge the adoption of House Resolution 577.

Mr. ELLSWORTH. Mr. Speaker, I yield 5 minutes to the gentleman from Michigan [Mr. HOFFMAN].

(Mr. HOFFMAN of Michigan asked and was given permission to revise and extend his remarks and to speak out of order.)

Mr. HOFFMAN of Michigan. Mr. Speaker, 75 Members are not in the House at the moment. My assumption is that the lack of attendance is due to the effort to get an early adjournment, and the absent Members are either in committees or working on research problems so as to be better prepared to pass on legislation when it does come up.

The difficulty in understanding some of the bills that come before the House is due in part at least to the fact that committees of the House are holding hearings, hearings that continue from day to day almost continuously. It would not seem to be an exaggeration to state that some of these hearings have a political tinge, not red, but a sort of a pinkish color to them; that is to say, along the line of political propaganda. I am not talking about communism or anything of that kind, so please do not let me be misunderstood.

For example, the Committee on Government Operations through subcommittees, I think there are three subcommittees sitting today. We started out with the Chudoff subcommittee as it was originally authorized by a letter from the chairman of one of the Senate committees who told us to go into the question of the deposal of timber owned by the Government. That was fine. One of the objectives was to learn whether the inventory of the national timber was down to date. Another was to learn whether it was advisable to have area harvesting and manufacturing of the timber. Another was whether there should be access roads. That was all right. Another was whether there should be a cut which would permit and give an annual cut in the coming years. That was all right. All were questions which were, and are, vital to the Northwest. But those hearings degenerated, and I use that word advisedly, into a political attack upon the Department of the Interior. The digging up and rehashing of a charge and an issue that was decided out in the Northwest some 2 years ago. If there was any remedy for what had happened, if what happened was wrong, then the Department of Justice could have been appealed to there 2 years ago or even before that, but no such appeal was taken. They waited until this session of Congress. Then this subcommittee, staffed by former disgruntled officials and employees of the Department of the Interior, went off on a political tangent in an effort to help elect certain members of the opposition party—when I speak of the opposition party I mean the Democratic Party—and to defeat certain members of the Republican Party at the coming November election.

Look where we are getting now. Here we are in the last 2 or 3 weeks of this session of the House. Bill after bill is coming before us for determination. Some of them carry millions if not billions of dollars. Yet as stated just a moment ago, there are less than 75 Members on the floor. I am not critical nor do I want to make a point of order when we go into Committee of the Whole if we do or when the bills are called for consideration. I do not want to make a point of order at this time while the House is in session. But, Mr. Speaker, because I realize that the Members are away today working in committee or in their offices with this monumental load that is bearing down on them and despite the fact they are so inadequately paid, with so little time to attend to their duties a quorum should be present when legislation as important as that which is pending in on—but look, why should the Committee on Government Operations through three subcommittees or more be holding sessions day after day, especially when none is considerating legislation which should be enacted before adjournment? The Chudoff committee served notice, I think it was last night, that beginning next Monday they would hold hearings every forenoon and every afternoon. On what? Private-power companies. That committee has already put out a report, and I expect to speak on that later tomorrow, maybe today if some more of the Members get back from the arduous tasks they are

now on, calling attention to the fact that the committee put out a report charging a conspiracy between the Department of the Interior and the private-power companies. That is the report adopted by the Committee on Government Operations which has been released to the press. True—true, 5 members of the majority—Democrats all of them—disagreed with some phases of the report. So while the report purported to be signed and was signed, as I assume, by 17 Members——

The SPEAKER pro tempore. The time of the gentleman from Michigan has expired.

Mr. HOFFMAN of Michigan. May I have another 5 minutes?

Mr. ELLSWORTH. Mr. Speaker, I yield 5 additional minutes to the gentleman.

Mr. HOFFMAN of Michigan. I thank the gentleman. That obviates any necessity of calling a quorum and will not take nearly as long as having to have the Members present. As I stated before, I do not want to take the Members away from their desks and offices and committee rooms and from the Congressional Library where they are doing the necessary research work and consulting with the department officials and the executive agencies trying to get information to enable them to form an accurate judgment on pending legislation. I do not want to do that. Far, far be it for me to do anything to hinder them from working today, especially when the task is so difficult—oh, no, they should not be called over here—they should not be called over here to vote on any bill no matter how much it might carry in the way of appropriations, until today's labors have been finished.

But, now back to these 5 Members of the majority party who filed disagreeing or more properly additional views—the report was adopted by 17 members of the committee—and if you subtract the 5 from the 17 then add the 5 to the 12 minority members, do you see where you get? The majority is gone—wiped out. So the report becomes the report of 17, 5 of whom are not in wholehearted approval of all of it. And 4 of the 5 expressly stated that the committee, made up of their own political bedfellows, had held hearings and condemned the private power companies without ever having given the companies a hearing.

Now that subcommittee is off again and beginning next Monday every morning and every afternoon and every day while the House is in session, mind you, while the House is in session, it intends to hold hearings in an attempt to prove their charge that a wicked, vicious—if my colleague, the gentleman from New York, could give me a few additional words to describe it—that a conspiracy—I fail for want of words to express it—I say they have already determined and reported that a wicked conspiracy exists. Now, lo and behold, next week and the week after, morning and afternoon, they intend to hold hearings to substantiate the report that they have all given out. They wish to seek and find evidence to support a charge they made—a verdict of guilty which they rendered without a hearing. I wonder what my young friend from California [Mr. LIPSCOMB] who has just come here so recently, and who has shown himself to be such an active and able—I am sorry there is not room on the ticket for 2 vice presidential candidates so that California could again put on the ticket a man of such outstanding ability as our friend and colleague [Mr. LIPSCOMB], who has made outstanding contributions to the Congress since he came here. Some of us older ones who are fading just rely on the good judgment, the outstanding ability of these young men to help us out when as today the load grows heavy and difficult. The only thing I can think of at the moment which distracts from my pleasure is that it is unfortunate that he cannot be in two places at once—must be here on the floor instead of working in the Library or on committee. But we all assume he has very religiously attended all of these committee hearings and rendered valuable service because of his experience in the legislature of the State of California.

Mr. HOLIFIELD. Mr. Speaker, will the gentleman yield?

Mr. HOFFMAN of Michigan. I am happy to yield to the gentleman.

Mr. HOLIFIELD. I just want to concur in what the gentleman said about our colleague——

Mr. HOFFMAN of Michigan. About the committee—about the committee report?

Mr. HOLIFIELD. About Mr. LIPSCOMB.

Mr. HOFFMAN of Michigan. Oh.

Mr. HOLIFIELD. I want to pay tribute to his constant attendance in committee and the hard work that he has done.

Mr. HOFFMAN of Michigan. And the exceptionally good work—you concur in that, do you not—the exceptionally good and efficient work? Yes; I notice you nodding in the affirmative. I want that to show in the RECORD because I think it might be gratifying to him to receive such an outstanding commendation from an experienced outstanding Member from his own State of California and who is so aware of our colleague's exceptionally fine record here.

The Committee on Government Operations under the House rules has permission to sit when the House is in session. That is the present rule, but I think it is unfortunate when so many committees are held so near the end of the session.

Certainly as one Member to another, permit me to ask, Is it right to hold committee hearings day in and day out this last couple of weeks of the session, especially when the hearings have nothing to do with pending legislation? How can we do justice to our constituents by procdure which takes us off the floor? How can we perform our tasks here on the floor if every day we are to have these committee hearings? It is very disagreeable to any Member to be forced to make a point of no quorum. But if that is necessary in order to legislate intelligently then it must be done by someone.

The SPEAKER pro tempore (Mr. ALBERT). The time of the gentleman from Michigan has expired.

Mr. ELLSWORTH. Mr. Speaker, with reference to the pending House Resolution 577, we find no objection whatever to the adoption of the rule on this side of the aisle. The bill is a worthwhile piece of legislation, which we hope will be adopted.

I yield back the balance of my time, Mr. Speaker.

Mr. BOLLING. Mr. Speaker, I move the previous question.

The previous question was ordered.

The SPEAKER pro tempore. The question is on the resolution.

The resolution was agreed to.

A motion to reconsider was laid on the table.

HEALTH AMENDMENTS ACT OF 1956

Mr. DELANEY. Mr. Speaker, by direction of the Committee on Rules, I call up the resolution (H. Res. 580) and ask for its immediate consideration.

The Clerk read the resolution, as follows:

Resolved, That upon the adoption of this resolution it shall be in order to move that the House resolve itself into the Committee of the Whole House on the State of the Union for the consideration of the bill (S. 3958) to improve the health of the people by assisting in increasing the number of adequately trained professional and practical nurses and professional public health personnel, assisting in the development of improved methods of care and treatment in the field of mental health, and for other purposes. After general debate, which shall be confined to the bill, and shall continue not to exceed 1 hour, to be equally divided and controlled by the chairman and ranking minority member of the Committee on Interstate and Foreign Commerce, the bill shall be read for amendment under the 5-minute rule. At the conclusion of the consideration of the bill for amendment, the Committee shall rise and report the bill to the House with such amendments as may have been adopted, and the previous question shall be considered as ordered on the bill and amendments thereto to final passage without intervening motion except one motion to recommit.

(Mr. DELANEY asked and was granted permission to revise and extend his remarks.)

Mr. DELANEY. Mr. Speaker, I yield 30 minutes to the gentleman from Oregon [Mr. ELLSWORTH], and at this time I yield myself such time as I may require.

Mr. Speaker, House Resolution 580 makes in order the consideration of S. 3958, the Health Amendments Act of 1956. The resolution provides for an open rule and 1 hour of general debate.

The bill provides five programs designed to increase the supply of health personnel and health facilities, and to improve the methods by which certain health services are furnished.

Title I is intended to stimulate the training of more public health specialists by establishing a 3-year Federal program providing graduate traineeships for physicians, engineers, nurses, and other professional health personnel. The cost of this program is estimated at $1 million during the first year and double that amount during the second and third years.

Title II establishes a 3-year Federal program providing advanced training to

professional nurses. The Federal grants would be awarded to the training institutions who would select the individuals to receive the traineeship awards. The estimated cost during the first year is approximately $2 million and it is expected the cost in the second and third years would increase.

Title III establishes a 5-year program of Federal matching grants to States for expanding and improving vocational educational training programs for practical nurses. For the first 2 years of the program the matching provisions would require at least 1 State dollar for every 3 Federal-grant dollars, and for the remaining 3 years dollar-for-dollar matching would be required. An appropriation of $5 million annually would be authorized for this program.

Title IV of the bill will extend for 2 additional years the Hospital Survey and Construction Act, as amended, which would otherwise expire on June 30, 1957. This act authorizes an annual appropriation of $150 million for the construction of public and other nonprivate hospitals. An amendment to the act in 1953 authorized an additional appropriation of $60 million for construction of diagnostic centers, chronic disease centers, rehabilitation facilities, and nursing homes.

Title V authorizes the Surgeon General to make special project grants for the support of investigations, experiments, and demonstrations in the field of mental health with special emphasis placed on projects designed to improve the operation and administration of State institutions for the care and treatment of the mentally ill. In the 1957 budget provision is made for the submission of a budget request of $1,500,000 for special mental health project needs. This request is contingent upon the enactment of title V of this bill.

The committee report complies with the Ramseyer rule and I urge the adoption of House Resolution 580.

Mr. ELLSWORTH. Mr. Speaker, House Resolution 580 makes in order a bill which appears to be very worthwhile. There is no objection on this side to the enactment of the rule. The bill should certainly be considered and passed.

Mr. DELANEY. Mr. Speaker, I move the previous question.

The previous question was ordered.

The SPEAKER pro tempore. The question is on the resolution.

The resolution was agreed to.

A motion to reconsider was laid on the table.

Mr. HOFFMAN of Michigan. Mr. Speaker, a parliamentary inquiry.

The SPEAKER pro tempore. The gentleman will state it.

Mr. HOFFMAN of Michigan. Can a Member be recognized on the bill itself for an amendment?

The SPEAKER pro tempore. When the bill is taken up for consideration; yes.

Mr. HOFFMAN of Michigan. I wanted to be sure that I got in in time.

The SPEAKER pro tempore. The gentleman will undoubtedly be recognized.

RIVERS AND HARBORS AND FLOOD CONTROL CONSTRUCTION

Mr. MADDEN, from the Committee on Rules, reported the following privileged resolution (H. Res. 585 Rept. No. 2656), which was referred to the House Calendar and ordered to be printed:

Resolved, That upon the adoption of this resolution it shall be in order to move that the House resolve itself into the Committee of the Whole House on the State of the Union for the consideration of the bill (H. R. 12080) authorizing the construction, repair, and preservation of certain public works on rivers and harbors for navigation, flood control, and for other purposes. After general debate, which shall be confined to the bill, and shall continue not to exceed 2 hours, to be equally divided and controlled by the chairman and ranking minority member of the Committee on Public Works, the bill shall be read for amendment under the 5-minute rule. At the conclusion of the consideration of the bill for amendment, the Committee shall rise and report the bill to the House with such amendments as may have been adopted, and the previous question shall be considered as ordered on the bill and amendments thereto to final passage without intervening motion except one motion to recommit.

NATIONAL INSTITUTE OF DENTAL RESEARCH

Mr. MADDEN. Mr. Speaker, I call up House Resolution 579 and ask for its immediate consideration.

The Clerk read as follows:

Resolved, That upon the adoption of this resolution it shall be in order to move that the House resolve itself into the Committee of the Whole House on the State of the Union for the consideration of the bill (S. 3246) to increase the amount authorized for the erection and equipment of suitable and adequate buildings and facilities for the use of the National Institute of Dental Research. After general debate, which shall be confined to the bill, and shall continue not to exceed hour , to be equally divided and controlled by the chairman and ranking minority member of the Committee on Interstate and Foreign Commerce, the bill shall be read for amendment under the 5-minute rule. At the conclusion of the consideration of the bill for amendment, the Committee shall rise and report the bill to the House with such amendments as may have been adopted, and the previous question shall be considered as ordered on the bill and amendments thereto to final passage without intervening motion except one motion to recommit.

Mr. MADDEN. Mr. Speaker, I offer an amendment.

The Clerk read as follows:

Amendment offered by Mr. MADDEN: Page 1, line 9, preceding the word "hour", insert the figure "1."

The amendment was agreed to.

The SPEAKER. The gentleman from Indiana is recognized for 1 hour.

Mr. MADDEN. Mr. Speaker, I yield 30 minutes to the gentleman from Oregon [Mr. ELLSWORTH], and yield myself such time as I may use.

The SPEAKER. The gentleman from Indiana is recognized.

Mr. MADDEN. Mr. Speaker, House Resolution 579 makes in order the consideration of S. 3246, to increase the amount authorized for the National Institute of Dental Research. The resolution provides for an open rule and 1 hour of general debate on the bill.

S. 3246 as passed by the Senate, provided that section 5 of the National Dental Research Act of 1948 be amended to read $5 million instead of $2 million. The House Interstate and Foreign Commerce Committee reported this measure with an amendment making the amount authorized $4 million.

The amount is authorized for the erection and equipment of buildings and facilities for the National Institute of Dental Research at the National Institutes of Health at Bethesda. The program for the expansion of dental-research facilities was authorized in 1948 and plans for the buildings were drawn. Construction was postponed due to the Korean conflict. Since that time building costs have increased considerably and it is believed by the Committee on Interstate and Foreign Commerce that additional funds will be required to make possible the construction of the planned buildings and facilities.

The committee report complies with the Ramseyer rule, and I urge the adoption of the resolution so consideration may be given this bill.

Mr. ELLSWORTH. Mr. Speaker, this resolution makes in order legislation having to do with the National Institute of Dental Research. We have no objection to the adoption of the resolution on this side.

Mr. Speaker, I yield back the balance of my time.

Mr. MADDEN. Mr. Speaker, I move the previous question on the resolution.

The previous question was ordered.

The resolution was agreed to.

WASHOE RECLAMATION PROJECT, NEVADA AND CALIFORNIA

Mr. DELANEY. Mr. Speaker, by direction of the Committee on Rules, I call up House Resolution 581 and ask for its immediate consideration.

The Clerk read as follows:

Resolved, That upon the adoption of this resolution it shall be in order to move that the House resolve itself into the Committee of the Whole House on the State of the Union for the consideration of the bill (H. R. 10643) to authorize the Secretary of the Interior to construct, operate, and maintain the Washoe reclamation project, Nevada and California. After general debate, which shall be confined to the bill, and shall continue not to exceed 1 hour, to be equally divided and controlled by the chairman and ranking minority member of the Committee on Interior and Insular Affairs, the bill shall be read for amendment under the 5-minute rule. At the conclusion of the consideration of the bill for amendment, the Committee shall rise and report the bill to the House with such amendments as may have been adopted, and the previous question shall be considered as ordered on the bill and amendments thereto to final passage without intervening motion except one motion to recommit.

Mr. DELANEY. Mr. Speaker, I yield 30 minutes of my time to the gentleman from Oregon [Mr. ELLSWORTH], and at this time I yield myself such time as I desire.

Mr. Speaker, House Resolution 581 makes in order the consideration of H. R. 10643, to authorize the Secretary of the Interior to construct, operate and maintain the Washoe project in Nevada and California. Enactment of this legislation will also permit the construction of flood control works in the Truckee Valley which were authorized in the Flood Control Act of 1954, with construction contingent upon authorization of the Washoe project.

The resolution provides for an open rule and 1 hour debate on the bill.

This multiple-purpose project on the eastern slope of the Sierra Nevada will provide irrigation, power, flood control, public health, recreation and fish and wildlife benefits through regulation of the stream flow and storage of snowmelt flood waters on the East Carson and Little Truckee Rivers and drainage of surplus ground waters in some areas of the basins.

The legislation contains certain other provisions. The States of Nevada and California are negotiating a compact with respect to the waters of the Truckee and Carson Rivers, both involved in the development of the Washoe project. Language in the bill assures that the future water needs in the Little Truckee River watershed in California will be met, and additional language provides that when the compact is completed the operation of the Washoe project will be in conformance with the compact.

The total cost of the project is $43,558,000. Seventeen million, one hundred and eight thousand dollars will be allocated to irrigation and drainage and, up to the ability of the users to repay, and after suitable development periods for various project lands, the repayment would be made under 50-year repayment contracts and would total $8,180,000 over the period. The power investment of $18,209,000 would be repaid in 50 years, with interest. Net power revenues accruing after payment of the power investment with interest would repay that part of the irrigation and drainage allocation beyond the repayment ability of the water users. The allocation of $6,141,000 for flood control, $100,000 to recreation and $2 million for the development of fish and wildlife resources would be nonreimbursable.

I urge the adoption of House Resolution 581 so that the House may proceed to the consideration of H. R. 10643.

(Mr. DELANEY asked and was given permission to revise and extend his remarks.)

Mr. ELLSWORTH. Mr. Speaker, I know of no opposition to the rule on this side.

Mr. DELANEY. Mr. Speaker, I move the previous question.

The previous question was ordered.

The SPEAKER pro tempore. The question is on the resolution.

The resolution was agreed to.

A motion to reconsider was laid on the table.

PRODUCTION OF TUNGSTEN, ASBESTOS, FLUORSPAR, AND COLUMBIUM-TANTALUM IN THE UNITED STATES

Mr. TRIMBLE, from the Committee on Rules, reported the following privileged resolution (H. Res. 586, Rept. No. 2657), which was referred to the House Calendar and ordered to be printed:

Resolved, That upon the adoption of this resolution it shall be in order to move that the House resolve itself into the Committee of the Whole House on the State of the Union for the consideration of the bill (S. 3982) to provide for the maintenance of production of tungsten, asbestos, fluorspar, and columbium-tantalum in the United States, its Territories, and possessions, and for other purposes. After general debate, which shall be confined to the bill, and shall continue not to exceed 1 hour, to be equally divided and controlled by the chairman and ranking minority member of the Committee on Interior and Insular Affairs, the bill shall be read for amendment under the 5-minute rule. It shall be in order to consider without the intervention of any point of order the substitute amendment recommended by the Committee on Interior and Insular Affairs now in the bill, and such substitute for the purpose of amendment shall be considered under the 5-minute rule as an original bill. At the conclusion of such consideration the Committee shall rise and report the bill to the House with such amendments as may have been adopted, and any Member may demand a separate vote in the House on any of the amendments adopted in the Committee of the Whole to the bill or committee substitute. The previous question shall be considered as ordered on the bill and amendments thereto to final passage without intervening motion except one motion to recommit with or without instructions.

AUTHORIZING LOAN OF NAVAL VESSELS TO FOREIGN GOVERNMENTS

Mr. TRIMBLE. Mr. Speaker, by direction of the Committee on Rules, I call up House Resolution 582 and ask for its immediate consideration.

The Clerk read the resolution, as follows:

Resolved, That upon the adoption of this resolution it shall be in order to move that the House resolve itself into the Committee of the Whole House on the State of the Union for the consideration of the bill (H. R. 11613) to authorize the loan of naval vessels to the Governments of the Federal Republic of Germany, Greece, Portugal, Spain, and friendly far eastern nations, and for other purposes. After general debate, which shall be confined to the bill, and shall continue not to exceed 1 hour, to be equally divided and controlled by the chairman and ranking minority member of the Committee on Armed Services, the bill shall be read for amendment under the 5-minute rule. At the conclusion of the consideration of the bill for amendment, the Committee shall rise and report the bill to the House with such amendments as may have been adopted, and the previous question shall be considered as ordered on the bill and amendments thereto to final passage without intervening motion except one motion to recommit.

Mr. TRIMBLE. Mr. Speaker, I yield 30 minutes of my time to the gentleman from Oregon [Mr. ELLSWORTH], and at this time yield myself such time as I may use.

Mr. Speaker, this resolution makes in order the consideration of the bill, H. R. 11613.

The purpose of the bill is to authorize the President to lend 2 destroyers and 2 destroyer escorts to the Government of the Federal Republic of Germany, 2 submarines to the Government of Greece, 2 destroyer escorts to the Government of Portugal, and 2 destroyers to the Government of Spain for a period of 5 years, and at his discretion for an additional period of not to exceed 5 years. The bill further would extend the authority of the current law whereby the President, until December 31, 1956, is authorized to lend not to exceed 25 naval vessels not larger than destroyers to friendly far eastern nations, by providing a 2-year extension until December 31, 1958, and by increasing the number of such vessels to 50.

(Mr. TRIMBLE asked and was given permission to revise and extend his remarks.)

Mr. ELLSWORTH. Mr. Speaker, I yield myself such time as I may use.

Mr. Speaker, House Resolution 582 makes in order the bill, H. R. 11613. According to the testimony given in the Rules Committee this is necessary in the interest of our national security. There is no objection to adoption of the rule on this side.

Mr. GROSS. Mr. Speaker, will the gentleman yield?

Mr. ELLSWORTH. I yield to the gentleman from Iowa.

Mr. GROSS. How many vessels are involved in this?

Mr. ELLSWORTH. The resolution pending does not state. I cannot answer the gentleman's question.

The bill reads:

To authorize the loan of naval vessels to the Governments of the Federal Republic of Germany, Greece, Portugal, Spain, and friendly Far Eastern nations.

Mr. GROSS. Are these modern vessels? Does the gentleman have any idea what they are, whether they come out of the mothball fleet or what they are?

Mr. ELLSWORTH. I am unable to answer the gentleman's question. The matter before the House is whether or not the House will agree to the rule which will make in order consideration of the bill which the gentleman is asking about. During general debate on that bill I am sure the legislative committee responsible for bringing it to the floor of the House will be glad to answer fully the questions of the gentlemen from Iowa.

Mr. HOFFMAN of Michigan. Mr. Speaker, will the gentleman yield?

Mr. ELLSWORTH. I yield to the gentleman from Michigan.

Mr. HOFFMAN of Michigan. As I read the bill it says that the President

may lend 2 destroyers and 2 destroyer escorts to the Government of the Federal Republic of Germany, 2 submarines to the Government of Greece, 2 destroyer escorts to the Government of Portugal and 2 destroyers to the Government of Spain, for a period of not more than 5 years. Then there is a provision that he can extend that for an additional period of not more than 5 years. I think the gentleman from Iowa is interested in the fact that all expenses involved shall be charged to funds programed for the recipient governments under the Mutual Security Act. I know the gentleman is interested in knowing who provides funds under the Mutual Security Act. I think Iowa contributes quite a share.

Mr. ELLSWORTH. I thank the gentleman for the information he has given the House.

I yield back the balance of my time, Mr. Speaker.

Mr. TRIMBLE. Mr. Speaker, I move the previous question.

The previous question was ordered.

The resolution was agreed to.

A motion to reconsider was laid on the table.

PARLIAMENTARY INQUIRY

Mr. HOFFMAN of Michigan. Mr. Speaker, a parliamentary inquiry.

The SPEAKER pro tempore. The gentleman will state it.

Mr. HOFFMAN of Michigan. The House is adopting resolutions from the Committee on Rules, as I understand it, to make the considertion of these bills in order. When will the bill be called up?

The SPEAKER pro tempore. Some of them may be called up this afternoon, the Chair will advise the gentleman.

Mr. HOFFMAN of Michigan. Well, if they are to be called up this afternoon, let me say this. I already notice there is $2 million on one, $20 million on another, 10 or more vessels loaned for a period of 10 years, I will have to make a point of no quorum if they are called up today. I am trying to establish a record for economy.

Mr. COLMER. Would the gentleman from Michigan withhold that until we could dispose of the rules?

Mr. HOFFMAN of Michigan. Sure. Mr. Speaker, my only point was that when the bills are taken up, I thought the Members ought to be here. They will have finished their office work and their committee work by that time, I am sure.

The SPEAKER pro tempore. The Chair understands the gentleman from Michigan.

DEPARTMENT OF DEFENSE APPROPRIATION ACT AND THE CIVIL FUNCTIONS APPROPRIATION ACT

Mr. COLMER. Mr. Speaker, I call up House Resolution 526 and ask for its immediate consideration.

The Clerk read the resolution, as follows:

Resolved, That upon the adoption of this resolution it shall be in order to move that the House resolve itself into the Committee of the Whole House on the State of the Union for the consideration of the bill (H. R. 7992) to enact certain provisions now included in the Department of Defense Appropriation Act and the Civil Functions Appropriation Act, and for other purposes. After general debate, which shall be confined to the bill, and shall continue not to exceed 1 hour, to be equally divided and controlled by the chairman and ranking minority member of the Committee on Armed Services, the bill shall be read for amendment under the 5-minute rule. At the conclusion of the consideration of the bill for amendment, the Committee shall rise and report the bill to the House with such amendments as may have been adopted, and the previous question shall be considered as ordered on the bill and amendments thereto to final passage without intervening motion except one motion to recommit.

Mr. COLMER. Mr. Speaker, I yield 30 minutes to the gentleman from Oregon [Mr. ELLSWORTH], and pending that, I yield myself such time as I may consume.

Mr. Speaker, House Resolution 526 makes in order the consideration of H. R. 7992, the so-called point of order bill. The resolution provides for an open rule and 1 hour of general debate.

The purpose of this bill, as amended, is to enact into permanent law numerous legislative provisions which have heretofore appeared in appropriation acts. Enactment of this bill will supply legislative authorization and will preclude the raising of points of order with respect thereto in the consideration of annual appropriation acts.

The proposed bill, as amended, contains 33 sections, most of which involve relatively minor matters. It also amends in minor respects some existing law authorizing the expenditure of funds for certain purposes and repeals certain statutory authorization heretofore applicable only to the Navy Department, thus providing a uniform authorization for all the military departments for such expenditures.

Section 27 repeals section 638 of the Defense Appropriation Act of 1956, which required the Department of Defense to submit to the Appropriations Committees of the House and Senate for their approval the proposed transfer to private industry of operations performed by civilian personnel of the Department of Defense for 3 or more years and which involved more than 10 employees. The committee adopted an amendment which gives to the Congress the full authority to pass upon each proposed transfer within reasonable limitations.

Section 10 authorizes the training in law at civilian universities of a maximum of 135 officers of the regular components of the Armed Forces within any 3-year period. Existing restrictions in the Defense Appropriation Act of 1956 and the 1957 act precludes such training.

These two sections are the only sections which present any departure from the authorizing language contained in previous appropriation bills.

The committee report complies with the Ramseyer rule, and I urge the adoption of House Resolution 526.

(Mr. COLMER asked and was given permission to revise and extend his remarks.)

Mr. ELLSWORTH. Mr. Speaker, there is no objection to the passage of this rule on this side. Therefore, I yield back the balance of my time.

Mr. COLMER. Mr. Speaker, I move the previous question.

The previous question was ordered.

The resolution was agreed to.

A motion to reconsider was laid on the table.

AMENDING INTERSTATE COMMERCE ACT TO REGULATE USE BY MOTOR CARRIERS OF MOTOR VEHICLES NOT OWNED BY THEM

Mr. COLMER. Mr. Speaker, I call up House Resolution 578 and ask for its immediate consideration.

The Clerk read the resolution, as follows:

Resolved, That upon the adoption of this resolution it shall be in order to move that the House resolve itself into the Committee of the Whole House on the State of the Union for the consideration of the bill (S. 898) to amend the Interstate Commerce Act, with respect to the authority of the Interstate Commerce Commission to regulate the use by motor carriers (under leases, contracts, or other arrangements) of motor vehicles not owned by them, in the furnishing of transportation of property. After general debate, which shall be confined to the bill, and shall continue not to exceed 1 hour, to be equally divided and controlled by the chairman and ranking minority member of the Committee on Interstate and Foreign Commerce, the bill shall be read for amendment under the 5-minute rule. At the conclusion of the consideration of the bill for amendment, the Committee shall rise and report the bill to the House with such amendments as may have been adopted, and the previous question shall be considered as ordered on the bill and amendments thereto to final passage without intervening motion except one motion to recommit.

Mr. COLMER. Mr. Speaker, I yield 30 minutes to the gentleman from Oregon [Mr. ELLSWORTH], and at this time I yield myself such time as I may consume.

(Mr. COLMER asked and was given permission to revise and extend his remarks.)

Mr. COLMER. House Resolution 578 makes in order the consideration of S. 898, which would amend that section of the Interstate Commerce Act having to do with the use by motor carriers of motor vehicles not owned by them. The Resolution provides for an open rule with 1 hour of debate.

Under proposed regulations of the Interstate Commerce Commission, the effective date for which has been postponed from time to time, motor carriers who lease motor vehicles that they do not own, must lease such vehicles for at least 30 days' duration. The Commission has stated that this rule was necessary to maintain effective control over the operational safety, carrier responsibility and the economics of the motor-carrier industry.

The 30-day lease requirement is the provision to which strong objection has been made, for it is contended generally, that it would for all practical purposes abolish "trip-leasing," the term given to the leasing of a motor vehicle, with driver, for a single one-way haul or a round trip. Currently the ICC has

granted exemption from the 30-day minimum leasing rules to agricultural haulers. However, it is believed that the exemptions should be provided for by statue so that the ICC could not at a later date cancel such exemptions.

If trip-leasing were abolished, truck haulers of agricultural commodities, livestock, fish, and other perishable products, who now obtain return hauls by leasing their trucks to authorized motor carriers would no longer be able to do so, but would have to return empty. Hence such haulers would have to charge more for hauling those products, thus increasing the cost of marketing and the spread between farm and consumer prices.

S. 898 provides that section 204 of the Interstate Commerce Act be amended so that the 30-day minimum leasing rule would not apply to motor vehicles used in the transportation of agricultural and other perishable commodities.

The committee report complies with the Ramsayer rule.

I urge the adoption of House Resolution 578 so that the House may proceed to the consideration of S. 898.

Mr. ELLSWORTH. Mr. Speaker, there is no objection to the adoption of this rule on this side. Therefore, I yield back the balance of my time.

The SPEAKER pro tempore. The question is on the resolution.

The resolution was agreed to.

A motion to reconsider was laid on the table.

MARKETING FACILITIES FOR HANDLING PERISHABLE AGRICULTURAL COMMODITIES

Mr. SMITH of Virginia. Mr. Speaker, I call up House Resolution 556, and ask for its immediate consideration.

The Clerk read the resolution, as follows:

Resolved, That upon the adoption of this resolution it shall be in order to move that the House resolve itself into the Committee of the Whole House on the State of the Union for the consideration of the bill (H. R. 4054) to encourage the improvement and development of marketing facilities for handling perishable agricultural commodities. After general debate, which shall be confined to the bill, and shall continue not to exceed 1 hour, to be equally divided and controlled by the chairman and ranking minority member of the Committee on Agriculture, the bill shall be read for amendment under the 5-minute rule. At the conclusion of the consideration of the bill for amendment, the Committee shall rise and report the bill to the House with such amendments as may have been adopted, and the previous question shall be considered as ordered on the bill and amendments thereto to final passage without intervening motion except one motion to recommit.

Mr. SMITH of Virginia. Mr. Speaker, I yield 30 minutes to the gentleman from Oregon [Mr. ELLSWORTH], and at this time I yield myself such time as I may consume.

Mr. Speaker, this rule makes in order the bill H. R. 4054. That bill is one that has been before the House several times. In fact, it passed the House once. Substantially, it provides for the guaranty or insurance of loans for the construction of marketing facilities in metropolitan areas. The reason advanced for it is that in many large cities the marketing facilities are very inadeqaute and obsolete. In many cases they are far removed from the railroad. They are in rundown condition. Goods that are shipped in, such as perishables, for consumption in the markets of large cities are so far removed from other means of transportation that it becomes very expensive to take them off the railroad and put them on trucks and carry them to these marketing facilities and unload them there.

There has been no opposition to the bill in the Committee on Rules. It does not provide for the expenditure of any funds but it does provide for the insurance of these marketing facilities to the extent of 85 percent. It is somewhat similar to the various and sundry housing provisions.

I know of no objection to the rule. There will probably be some to the bill.

Mr. Speaker, I reserve the balance of my time.

Mr. ELLSWORTH. Mr. Speaker, the bill this resolution would make in order, H. R. 4054, appears to be one of those measures coming frequently before Congress which would require a considerable amount of discussion and understanding on the floor. Speaking for myself alone, after having heard the testimony given by the committee before the Rules Committee, I find myself having some doubts as to the wisdom of the bill. However, I was glad to vote in the Rules Committee for a rule to bring the bill to the floor. Therefore, I am urging the adoption of this resolution, because this bill, rather more than most of the others we have had under discussion today, deserves full and free debate on the floor.

Mr. SMITH of Virginia. Mr. Speaker, I move the previous question on the resolution.

The previous question was ordered.

The resolution was agreed to.

PROCEDURE IN THE HOUSE

Mr. HOFFMAN of Michigan. Mr. Speaker, may I inquire as to the procedure? It is proposed now that the House adjourn?

The SPEAKER pro tempore. We have special orders yet to be heard.

Mr. HOFFMAN of Michigan. But no legislation?

The SPEAKER pro tempore. If the gentleman objects, there will be no legislation.

Mr. HOFFMAN of Michigan. I certainly will make a point of order on some of these bills.

The SPEAKER pro tempore. Under the circumstances, the Chair will proceed with the recognition of Members under special orders.

THE JERSEY FARMER

The SPEAKER pro tempore. Under previous order of the House, the gentleman from New Jersey [Mr. HAND] is recognized for 10 minutes.

Mr. HAND. Mr. Speaker, although New Jersey is widely known as the Garden State, its preeminent position in agriculture is sometimes lost sight of because most people are familiar with its concentrated metropolitan area in which are located thousands of modern factories, which make our small State the sixth greatest industrial producer in the Union.

FIRST IN ACRE CASH

The interesting fact remains that my State continues to rank No. 1 in cash receipts per acre, which has now reached the phenomenal figure of $195 per acre of agricultural land. Curiously, the next highest producers per acre are the like industrial northeastern States of Connecticut, Rhode Island, Delaware, and Massachusetts. The justly famous States of our Farm Belt in the Middle West are not even close competitors on a cash acreage basis.

What is perhaps even more unusual, New Jersey is fourth ranking State in cash receipts per farm. Although our average farm is only 70 acres in size, our cash receipts per farm are $13,542. We are only significantly exceeded by the State of California with an average acreage of 250, and the leader, Arizona, but the average farm acreage there is 4,000 acres compared to our 70.

New Jersey, the third smallest State in Union in geographical area, produced more than $366 million of agricultural products in the year 1955.

Our leading farm products are eggs, milk, vegetables, and poultry, but by far the greatest crop is eggs, of which we produce $121 million worth, a very substantial part of which is produced in my congressional district.

WE ARE FARMERS, TOO

All of this is by way of preface to indicate that this great agricultural producer is seriously neglected in our national legislation, which is concentrated for the benefit of the West and South. The first farm bill, which happily the President vetoed, would have adversely affected our leading crops of eggs, poultry, and milk, and was of no help whatever to vegetables. The second bill, while less harmful to a degree, still has the net effect of damaging agriculture in New Jersey. The concentration on artificially maintaining prices for grain crops simply causes the egg industry, for example, to pay more for what it needs than it would have to pay in a free market, while at the same time the price of eggs is not supported. The soil-bank plan which is, no doubt, of benefit to agriculture elsewhere, has an insignificant effect in New Jersey, except for some of our corn producers.

Nevertheless, Mr. Speaker, the average New Jersey farmer is going to work out his own salvation as best he can, but he hopes that some time in the future, the national farm policy will not be completely concentrated on wheat, corn, cotton, and tobacco—the so-called basic crops—which even include tung nuts and honey. It is hard for them to appreciate that tung nuts are basic to the national welfare while eggs are not.

THE APPROPRIATION BILL

This years' appropriation bill for the Department of Agriculture, however, is of interest and benefit to New Jersey as well as to the rest of the Nation. Our farmers are pleased with the committee report on soil conservation, which is as follows:

SOIL CONSERVATION

The committee has resisted efforts for the past 3 years to curtail the soil-conservation programs of the Department. Each year it has restored budget cuts in these activities.

In this bill, the committee has exceeded the budget for the Soil Conservation Service by $5 million, to assure adequate technical assistance to an increasing number of soil-conservation districts, and to accelerate the watershed protection and flood-prevention programs of the Department. Further, it has again included $250 million in the bill for the advance agricultural conservation program announcement for next year.

This action appears to be particularly appropriate in view of the need for increased attention to diverted acres and soil reserves. It is entirely consistent with the actions of the Congress and the administration in adopting the soil-bank plan, which had its genesis with certain members of this committee in January 1954. The organizations now operating the soil-conservation programs of the Department should be given adequate financial support in this bill to carry out any new programs of this type which might be undertaken. The committee feels that the amounts it has recommended for the next fiscal year will help these agencies to meet this additional responsibility.

The Soil Conservation Service assists soil conservation districts and other cooperators in bringing about physical adjustments in land use that will conserve soil and water resources, provide economic production on a sustained basis, and reduce damages from floods and sedimentation. The Service also develops and carries out special drainage, irrigation, flood prevention, and watershed protection programs in cooperation with soil conservation districts, watershed groups, and other Federal and State agencies having related responsibility. It is expected that the new soil-bank legislation will increase the work of this agency in these fields.

Conservation operations: The committee recommends an appropriation of $67,500,000 for 1957, an increase of $4,557,255 over the 1956 appropriation and an increase of $2,285,000 in the budget estimate.

ANIMAL DISEASE

We are likewise glad to see $22 million appropriated for plant and animal diseases and pest control, and over $2 million to control the gypsy moth, which is potentially a serious threat to our agriculture.

For fiscal year 1957, the sum of $3,500,000 was recommended for continuing the study of diseases of animals and poultry, a substantial increase over the amount allowed in 1956. The proposal to construct an animal and poultry laboratory at a cost of some $10 million is encouraging.

PRICE SPREAD

Two problems stand out in my mind, which are not receiving the attention they deserve. One is the very large spread between what the farmer receives for his product and what the consumer pays for such products. Last year, and again this year, the Congress has appropriated funds for a study of this question, which study is continuing in the Department of Agriculture. This spread is serious economically and also psychologically. By the time food gets from the farm to the ultimate consumer, having passed through wholesalers, brokers, retailers, delivery people, and usually very fancy packaging, the price the consumer pays bears no relationship to the original price of the product, which means first, that the farmer is not getting anywhere near his fair share of the cost of food, and which also means that the consumer tends to blame high-food prices on the farmer, when in fact the blame belongs elsewhere.

CROP INSURANCE

The second problem is crop insurance. As to this, the committee says in part:

The Federal Crop Insurance Corporation is a wholly owned Government corporation created in 1938. Crop insurance offered to agricultural producers by the Corporation provides protection from losses caused by unavoidable natural hazards, such as insect and wildlife damage, plant diseases, fire, drought, flood, wind, and other weather conditions. It does not indemnify producers for losses resulting from negligence or failure to observe good farming practices.

In the light of recent experience in certain areas of the country, the committee believes that the crop-insurance program should be tried on an experimental basis on peaches and other fruit crops. The committee directs that within the funds provided in the bill for 1957 such an experimental program be initiated.

However, the amount appropriated for this activity is $6,210,000 which indicates, obviously, that this insurance program is on an extremely limited basis.

Just as I favor Federal participation in insurance programs indemnifying our coastal and other areas against the devastating effect of hurricanes and storms, so I favor the extension of crop insurance on a premium basis to protect the farmer against natural hazards, which he cannot prevent and which are sometimes catastrophic. The problems to an extent are intermingled. In our last severe hurricane, for example, the publicity mostly dealt with coastal areas, but enormous damage was done to the fruit orchards and the poultry houses in the inland sections of my district.

Broadly speaking, Mr. Speaker, at least these things are needed, amongst others, for New Jersey agriculture:

First. Less concentration on the so-called basic crops, and more attention to the vital food stuffs which are grown in the Northeast;

Second. Less spread between the price the farmer gets and what the consumer pays; and

Third. A greatly improved and expanded crop-insurance program.

THE MANIFESTO AND THE SUPREME COURT

(Mr. ABBITT asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. ABBITT. Mr. Speaker, these are trying times in this great country of ours. We see on every hand agencies and arms of the Federal Government reaching out their octopuslike tentacles grasping and taking from the people rights and privileges that were delegated to our people by the Founding Fathers of this great country of ours in the Constitution. We see an arrogant Supreme Court attempting to change the habits, customs, traditions, and mores of our people. This Court has arrogated unto itself powers never given it by the Constitution in an attempt by judicial decree to compel the people of this country to accept the sociological and political philosophy of the individual members of the Court. This Court has usurped authority and is attempting to wreck the sovereignty of our individual States.

The fateful and horrible decision rendered by the Supreme Court of the United States of America on May 17, 1954, declaring segregation in the public schools of America unconstitutional is just one of the many decisions by the Court attempting to change our way of life.

The problem created by this illegal and unfounded decision based on the political philosophy and theory of the Supreme Court Justices has done more to disrupt and damage race relations in the South than we realized at the time of the decision. It is heartening, however, to see that gradually there is an awakening on the part of a large part of the American people, particularly the editors, to the awareness of our problem in the South and the necessity for combating, overriding and changing the dreadful decision referred to heretofore. It was not based on law and legal precedent.

The people of this country are fortunate indeed to have at this time as a Member of the House of Representatives from the great State of Georgia, the Honorable E. L. FORRESTER. Representative FORRESTER is one of the most able Members of the Congress. He is an outstanding attorney of national repute, a man of high integrity and entirely fearless. I am proud to call him my friend and count it a privilege to serve in the House of Representatives with him. Representative FORRESTER has written an article explaining in detail the manifesto submitted by 101 Members of the Congress expressing their views on the Supreme Court decision referred to hereinbefore.

In an endeavor to acquaint the people of this country with what is happening to them as a result of the recent decisions of the Supreme Court of the United States, I include with my remarks the article by Representative E. L. FORRESTER entitled "The Manifesto and the Supreme Court," which appeared in the July 1956 issue of Facts Forum, which is as follows:

THE MANIFESTO AND THE SUPREME COURT

(By Representative E. L. FORRESTER, Democrat, of Georgia)

On March 12, 1956, there was submitted to the Senate and the House of Representatives a declaration of constitutional principles signed by 19 Senators and 82 Representatives, which is now commonly referred to as "The Southern Manfesto." The word "manfesto" is perhaps not fully understood by everyone, and consequently some confusion has arisen as to its meaning. However, the word "manifesto" simply means a group declaration of principles.

That so-called manifesto was a declaration of our constitutional rights. I sincerely wish that every citizen had a copy of it. It is an immortal document, and as sure as the sun shines it will take its place as one of the greatest classics, and future generations from all sections of this country will be glad that someone spoke out for their fundamental and constitutional rights. I did not have the privilege of assisting in the preparation of that instrument, but I did have the privilege of signing my name thereto, and thereby telling posterity that I endorsed every word in it. That declaration was by Senators and Representatives from the section of our country that, more than any other section, wrote and gave us our Constitution.

Thomas Jefferson, George Mason, George Washington and the other framers of that Constitution suffered at the hands of a Government possessing centralized and complete power. Those men understood the tyranny that naturally and always follows all-inclusive power. The present generation, the beneficiaries of the work of those great men, has not had the experiences concerning the intoxicating qualities of unlimited power in the hands of human agents entrusted therewith. They have not personally experienced the fact that history indisputably proves, that human beings have always become tyrannical when all power is placed in their hands.

Framers of the Constitution labored for months; they strove to form a Union, giving that Union only the necessary powers to operate successfully, reserving to the States and our people all the rights not delegated to the Federal Government. Fear of tyranny, fear of unlimited power and fear of the loss of liberty were the influences operating in the minds of those great men. Those men were determined to preserve the rights won by patriots who risked conviction for treason to obtain those rights. Everyone should see that original document, and take note of the fact that they diligently sought to use the right words. The deletions, erasures, and substitutions of language completely illustrate that they intended our Constitution to be the judicial skeleton of our laws and the foundation of our Government.

They did not intend for these foundations to be wiped out because of clamor, hysteria, treaty law, or by judicial decree. On the other hand, they did anticipate that the future and changed conditions might make some changes and additions necessary.

They intentionally provided in our Constitution the machinery therefor. They did not intend to make these changes or additions impossible, but they certainly did not intend to make these changes or additions so easy that they could be accomplished without the knowledge of the people, and without the people having the opportunity to reflect thereon and to work their will. Inasmuch as our Constitution has been amended 22 times, the argument of some that amending imposes impossible requirements falls to the ground. Likewise, the position that our Supreme Court has taken to the effect that our Constitution must be interpreted in the light of the times or on changed conditions or that the Court has learned more about sociology since our Constitution and amendments thereto were adopted, becomes a usurpation of power which belongs—and, despite any United States Supreme Court decision, will always belong—to the people.

Decisions usurping these powers can be found in the words of Justice Frankfurter in *Wolf* v. *Colorado* (338 U. S. 2527), and in the article of Justice Douglas on stare decisis, and in *U. S.* v. *Classic* (313 U. S. 316, 319) and in the five cases known as the school cases, decided in May 1954 and reported in Three Hundred Forty-seventh United States Reports. Regarding the school cases referred to, the Supreme Court said, in approaching the questions presented to the Court: "In approaching this problem we cannot turn the clock back to 1868 when the amendment was adopted, or even to 1896 when *Plessy* v. *Ferguson* was written. We must consider public education in the light of its full development and its present place in American life throughout the Nation. Only in this way can it be determined if segregation in public schools deprives these plaintiffs of the equal protection of the law." What that court was actually saying was that it would not construe the 14th amendment, the basis of these decisions, according to the intentions of the lawmakers when that amendment was adopted in the Congress and that they would not construe the questions according to the intentions of the people who ratified that amendment. They were, in effect, saying that we will interpret the Constitution as it appears to us to be in harmony with our belief today, and if our beliefs change tomorrow, or a few days from now, we will again interpret that constitutional amendment as we wish it to be. In other words, we will make the Constitution a chameleon, changing its color according to our moods and fancies, and as we please.

I wonder what the architects of our Constitution would think. I ask the American people, what would Mr. Jefferson, Mr. Mason, President Washington and those other great men have said if some dreamer should have said to them while they were laboring over the creation of this instrument, "You need not be so careful in selecting the proper language for this instrument, for it will mean one thing today and another thing tomorrow." Everyone knows that under that hypothesis there would have been no Constitution.

If our Supreme Court has the right to change the meaning of our organic law whenever it sees fit, or to deviate in the slightest from the meaning and intent of our people who ratified that document then actually we have never had a Constitution. Further, it also means that what we understood were the bulwarks of our way of life have become an ambush to law-abiding citizens who planned their businesses upon the decisions of that Court yesterday. It is surprising and doubtless shocking, but the Supreme Court of the United States has declared that there is no restraint placed upon it that is not self-imposed. Under these declarations just quoted the Supreme Court is endowed with the powers of a dictatorship. Irrespective of what the Supreme Court says, there are restraints placed upon it. The framers of our Constitution saw to it that there were checks and balances. The Constitution itself is a restraint. Further, our Constitution provides that the jurisdiction of the Supreme Court on all constitutional questions shall be subject to such exceptions and regulations as Congress might make.

RESTRAINTS KNOWN

Restraints upon the Supreme Court are well known to many who would like to remove those restraints. S. 44, introduced in the 83d Congress, completely proves that these restraints were known to be in existence. S. 44 provided that the Supreme Court would have appellate jurisdiction on all constitutional questions, leaving out the present constitutional provision that Congress would have the right to make exceptions and regulations. Had S. 44 passed and been adopted, the Congress of the United States would have surrendered the power to make exceptions and regulations, and would have deprived the people from upsetting any of the erroneous decisions (and there are many) rendered by the United States Supreme Court, and no agency of the Government would have any power whatever save the Supreme Court, and the Supreme Court would have been completely free to interpret the Constitution belonging to 165 million Americans, without any lawful restraint. I will always be humbly grateful for the privilege that was mine to lead the fight in the House Committee on Judiciary and kill S. 44. I feel certain that the rank and file of our people do not know that there was ever a bill like S. 44, which by its terms would have deprived the people of any power whatsoever regarding the Supreme Court.

Some have said the southern Senators and Representatives had no right to issue that declaration of principles concerning the Supreme Court. Some have said that we took an oath to support the Supreme Court. I am astonished over such statements. We never took an oath to support the Supreme Court. We did take an oath to support the Constitution of the United States, and that oath carries with it the duty to criticize any branch of this Government that has violated the Constitution. That oath also carries the duty to do everything possible to preserve the Constitution. The arguments are ridiculous. Our history abounds in criticisms toward the Supreme Court.

President Jackson criticized the Supreme Court severely. Indeed, one of the contributing causes of the War Between the States was the refusal to accept the Supreme Court decision in the Dred Scott case. See Beveridge's Abraham Lincoln, volume IV, pages 157–158, stating that in 1858 the Republican leaders in the Senate accused the Supreme Court of being engaged in a scheme to spread slavery over the country. According to that book, the Republican Party joined that criticism in unity. Page 157 of that volume says that Senator Trumbull described the Dred Scott decision as the "odious and infamous opinion of a slave-driving Court," and that Court must be "wholly and totally revolutionized." See Nicolay and Hay, Lincoln Works, volume I, page 229, where Mr. Lincoln chided Judge Douglas for saying that no criticism or resistance should be made against a Supreme Court decision. Mr. Lincoln reminded Judge Douglas that he had applauded criticisms of that Court in the past and remarked, "It would be interesting for him to look over his recent speech and see how exactly his fierce philippics against us for resisting Supreme Court decisions fall upon his own head." Everyone remembers the harsh and continued criticisms of the Supreme Court by President Franklin Roosevelt. President Roosevelt referred to that Court as nine old and tired men, and endeavored to get rid of those Justices in every conceivable way. If we have lost the right to criticize the Supreme Court, Congress, or the President of the United States, then one of our greatest protections of constitutional government has been lost.

It was the combination of the school cases decisions and many other decisions that inspired a declaration of principles. For the last 20 years the Court has shown little respect for the rule of stare decisis, although that rule is hoary with age and indispensable as a rule of law. Stare decisis simply means "to stand by decided cases; to uphold precedent; to maintain former adjudications." The doctrine rests upon the sound principle that law by which men are governed should be fixed, definite, and known, and that when the law is declared by a court authorized to do so, such declarations, in the absence of palpable error, be accepted by the public as the law until changed by the legislative branch of the Government. The Supreme Court has made many decisions holding that stare decisis is peculiarly applicable to constitutional questions, but unfortunately it has also many times ruled that stare decisis is not applicable to constitutional questions. I think the public will agree that the rule of stare decisis should apply with more force to constitutional questions than perhaps any other legal question.

PRESIDENT MADE AGREEMENT

Another case that we do not like is *U. S.* v. *Pink* (315 U. S. 203). In that case moneys in a bank in New York were taken charge of by the courts of New York and that court was proceeding by well-settled law to administer those assets in a legal way. The President of the United States made an agreement with Soviet Representative Litvinov regarding those moneys, and though this agreement was made only by the President and was never submitted to the Senate for approval, the Supreme Court held that the President's agreement, like a treaty, superseded our Constitution and the laws of New York, thus saying that with one stroke of a pen the President could annihilate our Constitution and State laws.

In the case of *Missouri* v. *Holland* (252 U. S. 416), the Supreme Court held that a treaty made with Great Britain made a law which had theretofore been held unconstitutional completely valid, by ruling that this treaty was superior to our Constitution. Those rulings are not law, and have never been the law, and we reserve the right to criticize them. Thomas Jefferson said: "If the treaty power is unlimited, we have no Constitution." As a result of such decisions, the report of President Truman's Committee on Civil Rights in 1947 proudly pointed out that while our Constitution did not convey delegated powers to protect civil rights, that this could be overridden by means of treaties, and that the doctrine regarding treaty law had obvious importance in the field of civil rights legislation. That report said further that the Human Rights Commission of the United Nations was working on an international bill of rights, and if that was accepted by the United States, a strong basis for congressional action under the treaty power may be established. It is amazing to realize that for 120 golden years our Supreme Court held that our Constitution was supreme and that a treaty could not override its provisions; see *New Orleans* v. *United States* (10 Pet. 662, decided in 1838).

In *Shelly* v. *Kramer* (334 U. S. 1), the United States Supreme Court held that restrictive racial covenants in deeds were unenforceable, although for many years there was an unbroken background upholding racial covenants. It is true, of course, that these usually provided that the property conveyed would never be deeded to one of African descent. It necessarily follows, however, that any persons of African descent had the same right to incorporate in their deeds that the land could never be conveyed to any other race.

SUBMERGED LANDS WERE PROPERTY OF STATES

The result of the decision destroying these racial covenants was to cause damage to the property owners in this country exceeding the expense of some of our wars. It is a well-known fact that property in a neighborhood inhabited by mixed races immediately and seriously declines in value. The people suffering those terrific damages had relied upon the Court's former decisions that such covenants were valid and enforceable. When the United States Constitution was adopted, the States brought into that union their lands and their seacoasts, and throughout the ages it had been recognized that while the Government had a highway over the seas, the submerged lands were the property of the States. The Supreme Court a short time ago upset that ruling, and held that the United States owned those submerged lands. It took an act of Congress to destroy that erroneous decision. If those lands belonged to the Government, then the fish, shrimp, and all marine life belonged to the Government, and our citizens had been taking marine life from the sea unlawfully. Businesses built upon land that was a part of the sea would have automatically become the property of the Government.

Certainly the decisions regarding the five school cases aroused the interest of the Senators and Representatives signing the manifesto. It would have been news to Charles Sumner and Thaddeus Stevens, the two most rabid on civil rights, when the civil rights laws and the 14th amendment were passed, that their bills touched public schools. Both confessed many times that their legislation did not. In the middle of the debate of the 14th amendment Congress paused to pass a bill conveying property in the District of Columbia for the sole use of colored children (14 Stat. 342 (1866)). Segregated schools were established in the District of Columbia in 1862 when the War Between the States was raging, and segregated schools continued in the District until after the decision of the Supreme Court in 1954. Everyone knows that the District of Columbia, the seat of our Government, is and has been the guinea pig for all social experiments.

Stevens and Sumner knew schools were segregated in the District, and would have stopped them if they had had any legal basis therefor. In 1871 Senator Sumner tried to pass a law outlawing school segregation in the District of Columbia, but he was unable to do so. See S. 1244, 41st Congress, 3d session., CONGRESSIONAL GLOBE, 41st Congress, 3d session, 1053–1061. In December 1875 President Grant recommended to Congress a constitutional amendment to require all States to maintain schools for all children, irrespective of color. That recommendation was not followed by Congress. Had not segregated schools been the law in the District of Columbia and the majority of the States in the Union, there would have been no necessity for creating Howard University in the District of Columbia for the purpose of educating colored children at the expense of the taxpayers. Certainly if the intention had been to integrate the races, there could have been no justification for such a school. When the 14th amendment was ratified, there were 37 States in the Union. Twenty-three of those States had segregated schools, while some of the States had no public schools at all. There will be found no mention of education or schools in the 14th amendment or civil rights legislation, or in the Constitution of the United States. Public schools were and continue to be specifically reserved to the States by the 10th amendment.

SENATOR QUOTED

Even Senator Trumbull is quoted in CONGRESSIONAL GLOBE, 42d Congress, 2d session (1872) 3189, as saying: "The right to go to school is not a civil right and never was." In construing the former Supreme Court decisions regarding the 14th amendment and the civil-rights statutes, one must remember that the 14th amendment did provide for voting rights, sitting on juries, and other rights, implemented by civil-rights legislation. Any rights covered by the 14th amendment or implementing statutes come within the purview of the Supreme Court's jurisdiction. Any rights not covered in that amendment or implementing civil-rights statutes are not questions for the Supreme Court to consider. In 1896 the Supreme Court decided the case of *Plessy* v. *Ferguson* (163 U. S., p. 537), involving transportation facilities, a field coming within the 14th amendment and implementing legislation. That Court held that separate but equal facilities satisfied the Constitution. It is true that Justice Harlan, a relative of the present Justice Harlan, dissented in that case. Nevertheless, many State courts, including New York, Ohio, Indiana, and California had theretofore ruled that separate but equal facilities were sufficient.

The ruling in *Plessy* v. *Ferguson* was to the effect that the 14th amendment and the implementing civil-rights legislation were compiled with, though the facilities be separate, if equal. Justice Harlan's dissent in this case was never intended as a dissent on the question of schools. In *Cummings* v. *Board of Education* (175 U. S. 528 (1899)), Justice Harlan wrote the opinion. That was a case involving schools, and in that case he said that separate but equal facilities satisfied every constitutional provision and law, and the Court unanimously agreed with him. The reasoning of Justice Harlan is plain: In the Plessy case he felt that the Constitution and implementing legislation covering transportation was very different from school questions because schools were not touched by the Constitution or by legislation. A great distinction, to be sure. *Gong Lum* v. *Rice* (275 U. S. 78 (1927)), was written by Chief Justice Taft for a unanimous Court, and page 86 shows the holding to the effect that the question presented was one "within the constitutional power of the State legislature to settle without any intervention of the Federal courts under the Federal Constitution."

In that case, Lum, a Chinese, demanded that he be allowed to attend a white school rather than a colored school. The Court said that if the facilities were equal, the Constitution was satisfied. The 1954 decisions of the Supreme Court in the five school cases were virtually sterile with regard to precedents. That Court did refer to the slaughterhouse cases (1873) and *Strauder* v. *West Virginia* (1879). Any lawyer can certainly understand that those cases involved questions specifically covered under the 14th amendment and enabling legislation, and therefore could never be authority on a question completely divorced from the 14th amendment and implementing legislation.

PSYCHOLOGY HAS PLACE

The other cases cited as authority were decided in complete harmony with the separate but equal doctrine. It is shocking that in the 1954 school-case decisions the Supreme Court held that psychological knowledge at the time of the *Plessy* v. *Ferguson* case might not have been as great as modern authority. Psychology has its place, but psychology can never substitute for law. We respectfully maintain that the separate but equal doctrine is the only doctrine that makes good sense. Under these recent decisions one would assume that a male student would be within his constitutional rights to insist that he be enrolled in a school exclusively for females, and be permitted to share their dormitories, based on the contention that this all-girls' school had a better faculty than the male or coeducational school he was attending, and he was thereby deprived of his constitutional rights.

The Senators and Representatives signing the southern manifesto felt, and we believe many all over the United States are beginning to feel, that every vestige of States rights is being rapidly swept away, that our public schools have been the flowers of our democracy because they have been locally controlled. It is shocking to know that in the case of *The Board of Education* v. *Barnette* (319 U. S. 624), the Supreme Court struck down as unlawful a State requirement that schoolchildren salute the American flag. It is our opinion that the local authorities making that requirement were clearly within their rights and that the Court decision was completely erroneous. It is amazing that a State furnishing education to children cannot at the same time ask a little loyalty to the flag that made that privilege possible.

STATE COULD NOT LEGISLATE

We have a right to be discouraged concerning the rights of the States. On April 2, 1956, in the case of *Pennsylvania* v. *Nelson*, the Supreme Court by a split decision held that the State of Pennsylvania could not legislate against sedition, and upset a con-

viction by a court of Pennsylvania of an acknowledged member of the Communist Party for a violation of the Pennsylvania Sedition Act. That reversal was predicated on the ground that where the Government has legislated on that subject and occupied that field, any State law on that subject is superseded. That decision points out that 42 States, plus Alaska and Hawaii, have statutes prohibiting advocacy of the violent overthrow of our Government. Apparently, that decision has wiped out the laws of those 42 States and Alaska and Hawaii. The Federal law which the Supreme Court held was exclusive and prohibited State action is the law known as the Smith Act (title 18, U. S. C.) No one was more startled over the decision of the Supreme Court than was Congressman SMITH of Virginia, the author of that law.

That decision was rendered despite the fact that section 3231 of title 18 of the United States Code provides: "Nothing in this title shall be held to take away or impair the jurisdiction of the courts of the several States under the laws thereof." Pennsylvania is one of the great States of our Union, and it follows that any attempt to overthrow the Government of the United States is also an attempt to overthrow the government of Pennsylvania and the government of every other State in this Union.

Pending before the House Committee on the Judiciary now is H. R. 3, the same Congressman SMITH being the author thereof, and it simply provides that no act of Congress shall be construed to exclude State laws on the same subject, unless the act contains an express provision to that effect. By all means the people of this country should rise up and insist that H. R. 3 be speedily enacted. It is not expedient to try to pass a law to remedy only one Supreme Court decision. H. R. 3 would cover all congressional laws not containing the provision that State laws are excluded. On April 9, 1956, the Supreme Court in the case of *Slochowera* v. *Board of Higher Education of the city of New York*, ruled in a split decision that said school board could not discharge Slochowera as a schoolteacher because, when he was testifying before the Senate Subcommittee on Internal Security, he refused to answer questions concerning his membership in the Communist Party during the years 1940 and 1941 on the ground that his answers might tend to incriminate him. The board of education acted under section 903 of its city charter, providing that an employee of the city claiming the privilege against self-incrimination to avoid answering a question relating to his official conduct would have his employment terminated. The majority opinion of the Supreme Court says that no sinister meaning can be imputed toward a person asserting his rights under the fifth amendment. We do not agree with that statement.

FIFTH AMENDMENT PROTECTS

The fifth amendment does say that no person shall be compelled to give evidence against himself, and protects the individual from being convicted on such compelled testimony. It certainly does not mean that a person exercising that privilege can insist that he continue in the most sensitive area of our country, the schoolroom, and that the city is helpless to discharge him. Perhaps the public does not know that the same section 903 has been invoked many times against policemen in the city of New York, and that policemen claiming the fifth amendment have been discharged.

So long as the States are permitted to legislate and to exercise their rights retained in the 10th amendment, we have no fear for our country. We will stake our destiny upon our faith in the majority of the States of our Union. But when our States are not permitted to legislate on subjects covered by the Federal laws, then we see grave danger to our way of life. One United States Attorney General, entrusted with the destiny of our entire Union and our liberties, by reason of the fact that he alone is charged with enforcement of those laws, by his failure to act, his lack of sympathy with our ideals or even his lack of ability, could bring disaster upon our heads. Without reflection upon any Attorney General, past or present, a disloyal one could wreck our cherished institutions and destroy our liberties. Anyone familiar with Communist activities knows that their strategy is to infiltrate our most important Government agencies and our finest private institutions.

The signers of the declaration of principles have no apologies for their criticism. We support the Constitution of the United States. We recognize the powers belonging to the States and to the citizens of our Union. We have never asked the Supreme Court to "turn back the clock." We simply ask them to keep their hands off the clock and not attempt to keep time for America, that being the inalienalbe right of our 165 million American citizens. We know that good people all over our land share our views. No section has a monopoly on patriotism or loyalty. The American people are waking up. We do not wish to divide our people. We know that we are facing the most relentless enemy of human history. We want and expect to win this battle, both within and without our gates. America will stand up and be counted.

AIRPORT AT BURKE, VA.

(Mr. FLOOD asked and was given permission to address the House for 1 minute.)

Mr. FLOOD. Mr. Speaker, for the fifth time this year I rise to ask my friends on the other side of the aisle to follow President Eisenhower in suggested legislation. Since 1950 I have been appealing to the Appropriations Committee, and the subcommittee of which I sit dealing with CAA. I have offered a series of amendments in the Subcommitee on the Department of Commerce and in the full Committee on Appropriations and on the floor on main appropriation bills and on supplemental bills asking for funds to commence the construction of a new national airport at Burke, Va. The House and the committee have seen fit to reject those requests.

In 1950 we succeeded in getting the first million dollars to purchase the necessary land to begin the construction of this new airport.

In last night's Evening Star, Mr. Speaker, I saw a headline, "President Presses for the Burke Airport." Mr. Speaker, I hope this House and the Appropriations Committee in this body and the other body will give immediate consideration and attention to this essential and necessary addition to the safety of our Federal airways.

PROCEDURE IN THE HOUSE

(Mr. JONES of Missouri asked and was given permission to address the House for 1 minute.)

Mr. JONES of Missouri. Mr. Speaker, I take this minute to make some comment about the way we operate here in the House. Today we are finding it difficult to stretch out the business to remain in session for an hour, and of course no controversial issues will be considered.

Last Friday we had under consideration a bill to raise postal rates. Toward the end of the day a motion was made that all debate on the bill end in 15 minutes, and at that time vote on the bill, although there were some 6 amendments pending. In the division of the time, I was allotted 2 minutes to discuss what I thought was a rather important amendment.

Although the amendment on the first standing vote was defeated by a vote of 110 to 104, it was later defeated by a much larger vote. But, the next morning it was interesting—I had at least 25 Members who came to me and said that they had voted against the amendment because they did not understand it. I thought I had explained the amendment rather fully in the 2 minutes allotted to me. But, I want to say for the benefit of those who have expressed themselves in favor of an amendment which would restrict the activities of Members in sending franked matter, reprints from the CONGRESSIONAL RECORD, that they might have an opportunity to vote for that legislation later. I had already introduced a bill which has been referred to the Committee on Post Office and Civil Service and those Members who are sincerely interested in practicing some economy can express themselves as being in favor of that bill which I hope the committee will report out.

The SPEAKER pro tempore (Mr. ALBERT). The time of the gentleman from Missouri has expired.

KEEP THE COURT SUPREME

(Mr. VANIK asked and was given permission to address the House for 10 minutes and to revise and extend his remarks.)

Mr. VANIK. Mr. Speaker, during the past many weeks the Supreme Court of the United States, the third coordinate branch of our Federal Government, has been under a merciless attack by persons who oppose its decisions, primarily the decision of the Court banning segregation in the Nation's public schools. The history of our Nation is replete with attacks against the high court for its courageous stands on momentous issues. The Court has equally been criticized from time to time for its failure to show adequate courage in the face of dynamic, sociological change. There has in fact been no time in history when the decisions of the Court were pleasing to every American. In fact there is no time that the decsiion of any court is pleasing to more than 50 percent of the interested parties in any litigation.

It is an inherent right of any American to critically evaluate the work of any public official, elected, or appointed, who serves our Nation in either of the three branches of the Federal Government. That is the essence of our democratic system and the Justices of the Supreme Court must face fair criticism in the same manner as any Member of Congress or any executive in the administration. However, such criticism must be temperate and impersonal, directed toward the decision or to the action rather than to the person.

The vehemence of the current prolonged attack on the Supreme Court of the United States gradually destroys the

concept that the individual has for the administration of justice and respect for the law. The undermining of public confidence in the supreme legal authority of the United States Supreme Court undermines public confidence in all courts and impairs the law and order of the land.

It is argued that the recent integration decision is without legal merit and that it is contrary to the separate but equal decisions in previous cases. The separate and equal doctrine was an evolutionary step in the development of civil-rights law and in effect a moderate approach to the integration which is spelled out clearly in the American Constitution. If the Supreme Court deserves criticism on its integration decision, that criticism must be directed to the delay and the long road which the Court followed to finally reach its conclusion on the doctrine of segregated schools.

Recently a proposal was made to prohibit appointment to the Supreme Court without at least 5 years' experience in a lower court. Judicial experience is invaluable on the bench, but a lifetime of experience cannot provide sound judgment and sound reasoning where it did not originally exist. I suggest that this proposal is a blatant attempt to discredit a majority of the Justices, including the Chief Justice, who presently sit on that revered bench out of a deep and dedicated sense of duty. Their trust is unparalleled in the world. The proposal would have disqualified and denied to America the talents and genius of some of the most illustrious men in our history. John Marshall, who picked the Court up by the bootstraps and made it an important member of our executive-legislature-judicial triangle of checks and balances did not have 5 years' experience on the bench before his appointment. Nor did Roger Taney, who gave the Dred Scott decision on slaveholding a century ago; Salmon Chase, who had been in Lincoln's Cabinet; nor Melville Fuller, who was Chief Justice in 1896, when the Plessy against Ferguson case set up the separate but equal basis for segregation; nor Charles Evans Hughes.

It seems to me that the attacks which are being made upon the Supreme Court are designed as a retaliatory attempt to place in a position of public distrust an entire Court of fine and distinguished gentlemen for their rendition of a verdict which some persons find distasteful. It is nowhere provided in the Constitution that a decision must be pleasing to all sections of the country. Any group of people interposing against a decision which they do not like and declaring that it shall not be applicable are close to the brink of anarchy if their interposition is a belief that they can nullify the effect of a general decision upon their community.

The undisputable fact is that our Supreme Court has grown to keep pace with the increasing strength of our national Union. The courage of the Court has grown as the courage of the Nation has grown in the belief that this is a nation joined in the love of liberty and in the respect for equality under the law.

The Supreme Court's decision banning segregation in the Nation's public schools is the first long-overdue step in providing what the Constitution originally intended should be the law. The long road ahead calls for prompt legislative action to bring about a full measure of civil rights for every citizen. The current vicious attacks upon the integrity of the Supreme Court of the United States are, indeed, intemperate and not in the interest of the national well-being.

POSTAL RATE BILL

(Mr. HOLIFIELD asked and was given permission to address the House for 5 minutes and to revise and extend his remarks.)

Mr. HOLIFIELD. Mr. Speaker, during the debate on the postal rate bill the other day, I made some arguments, which I thought were based on facts and which I still think were based on facts, with regard to assigning the deficit from the second- and third-class departments of the Post Office over to the first-class mail department users of the 3-cent stamp and 6-cent airmail stamp. The time was very limited and we had to avail ourselves of such time as the parliamentary procedure allowed us. Shortly after my remarks on the floor, in which I paid strict attention to the merits of the legislation and made no allusions to individual Members of the House, three Members of the minority party who are members of our committee—and I will not use their names because I did not know that I would have the time at this time to address the House and, therefore, had no opportunity to notify them—these three Members arose and in place of replying to my arguments on the postal rate bill, the proceeded to take me to task personally and intimated that I had not performed my committee duties as ardently as I should have.

Mr. HOFFMAN of Michigan. Mr. Speaker, will the gentleman yield?

Mr. HOLIFIELD. I yield.

Mr. HOFFMAN of Michigan. You realize very well, I am sure, that no one is subject to attack that way unless he has been doing a worthwhile job.

Mr. HOLIFIELD. I thank the gentleman for his contribution. I will say this. I happen to be a member of 3 committees of the House—2 by choice and 1 by assignment of the leadership. The reason I was assigned to the Post Office and Civil Service Committee was that due to the fairly equal division of Members in the House, it was found that on the Democratic side I was the only Member not either serving on an exclusive committee or who was not already serving on two different committees. It so happens the House Committee on Government Operators is not an exclusive committee, and it also so happens that the Joint Committee on Atomic Energy is not counted as a House committee. My duties on both of those committees are very heavy. I am chairman of the legislative authorization committee of the Joint Committee on Atomic Energy, and I have very heavy duties with reference to all atomic-energy legislation pertaining to those subjects which go through my subcommittee. I am also chairman of the subcommittee on military operations of the Committee on Government Operations.

We have been holding hearings for some 5 months. We have been in session many mornings and afternoons. We have accumulated, I think, the most complete treatment of Federal civil defense that has yet been made by a committee of either body.

So my duties on those committees have prevented me from attending all of the meetings of the Committee on Post Office and Civil Service. However, I have tried to attend every meeting that I could. Particularly, I have tried to be there when legislation was voted out. So I do not think it was a courteous or kindly act on the part of my colleagues on that committee to make a disparaging remark about the discharge of my committee duties. I feel that I have probably put in as many hours in committee as any Member of the Congress, serving as I do on three committees.

Mr. HOFFMAN of Michigan. Mr. Speaker, will the gentleman yield?

Mr. HOLIFIELD. I am glad to yield.

Mr. HOFFMAN of Michigan. Is it not a fact that if you do attend to your duties on either one of the committees to which you have made reference you just cannot be here on the floor when much of this legislation is considered?

Mr. HOLIFIELD. That is certainly true. You cannot be in another committee that is meeting at the same time. Particularly if you are chairman of a subcommittee. You have to preside as chairman of that subcommittee, and you cannot desert your own subcommittee in order to go to another committee of which you may be a member.

Mr. HOFFMAN of Michigan. Well, does it not follow that unless the matter which is being heard by the committee has to do with legislation which is about to come before the House, we should not be holding committee hearings during these last 2 or 3 weeks of the session?

Mr. HOLIFIELD. I will say this much that the judgment of the chairman of a subcommittee must prevail in a case like this. In my own case, I have tried to arrange my subcommittee schedules so that I will not have meetings during the last 2 or 3 weeks of the Congress. But I was forced to hold hearings on the Atomic Energy Committee while the House was in session. As I say, that is a privilege of the chairman of a subcommittee.

The SPEAKER pro tempore. The time of the gentleman from California has expired.

MUTUAL SECURITY APPROPRIATION BILL

(Mr. GROSS asked and was granted permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. GROSS. Mr. Speaker, in view of today's abbreviated session, indicating that there is no serious business pressing upon the House and probably will not be until the end of the session, I think we have every reason to expect that tomorrow, when the multi-million-dollar WPA bill is before the House, there will be no unreasonable limitation of debate.

STATEMENTS BY THE PRESS

Mr. HOFFMAN of Michigan. Mr. Speaker, in view of the fact that one of our subcommittee chairmen, the gentleman from California [Mr. Moss] is on the floor, I would like to ask permission to address the House for 5 minutes at this time.

The SPEAKER pro tempore. Is there objection?

There was no objection.

Mr. HOFFMAN of Michigan. Mr. Speaker, the reference was made to the gentleman from California [Mr. Moss], because yesterday in the committee a question which I consider of considerable importance came up. Because there might be some misunderstanding about the question which was raised, and that statement is made because of press comment, this time is taken. The point yesterday was this: Reference was made by the committee counsel to a newspaper article, parts of which were put in the record. My objection at that time was that if in committee hearings statements from the press were to be read and incorporated in the record, as evidence, whenever those statements charged any individual with misconduct of any kind then the one who wrote the statement should be called so that the committee might know what weight to give to that statement.

The chairman ruled, and correctly, I think, that the committee had no authority to investigate newspaper reports and newspaper articles. That is not difficult to go along with. That seems sound legally and in every other way. But that is not the situation to which my point was directed. Perhaps I did not make it clear. The situation yesterday did not raise the issue directly insofar as the individual was concerned, because no individual was by that article charged with misconduct. The article was being used to show that the recollection of the witness who was testifying before the committee was at fault.

On this point, and I would be glad to have the chairman of the committee comment on this, for as I view the hearings, he has conducted them fairly without any political tinge except possibly to show that the Eisenhower administration is a little more secretive than previous ones. However, I do not know of any executive department that has ever freely given any committee of Congress any information which would tend to reflect discredit upon the administration involved.

But this is the point, when a witness comes before a committee and then committee counsel or a member of the committee brings in and puts into the committee record a statement charging some misconduct on the part of the witness or a statement tends to substantiate some charge which has been made against either the department or an individual, the person who wrote that article should be required to come in and give the committee the source of his information. Otherwise we get uncorroborated, irresponsible statements on the record which may reflect and which at times do reflect upon a department or an individual who is under investigation, or whose name appears in the record.

Rule XI 25 (m) of the House provides:

(m) If the committee determines that evidence or testimony at an investigative hearing may tend to defame, degrade, or incriminate any person, it shall—

(1) receive such evidence or testimony in executive session;

(2) afford such person an opportunity voluntarily to appear as a witness; and

(3) receive and dispose of requests from such person to subpena additional witnesses.

The right of confrontation is a common law right guaranteed to one accused of a crime. The purpose of the sixth amendment reaffirming that right did not broaden it nor wipe out the exceptions nor can a State deny it—*Salinger* v. *U. S.* (272 U. S. C. 548). Nor is the right to confrontation limited to criminal trials or proceedings in Federal courts.

A conviction for contempt in a State court was reversed because the accused had not had opportunity to meet his accusers—*In re Oliver* (333 U. S. C. 257).

Because lawmakers should be especially careful to protect civil rights, congressional committees should not deny to anyone appearing before them the right to due process, the right to face and interrogate his accuser.

Mr. MOSS. Mr. Speaker, will the gentleman yield?

Mr. HOFFMAN of Michigan. Yes, I shall be glad to yield.

Mr. MOSS. First I want to thank the gentleman for his comment on the efforts of the chairman to keep the committee out of politics. I would, however, like to make one correction: We are not trying to prove that any administration is more secretive than any other; on the other hand, we are trying to look at facts.

Mr. HOFFMAN of Michigan. If the gentleman will let me comment there, that is a personal impression, that is all.

Mr. MOSS. The question the gentleman raises is purely an academic one, because I can envision no incident where the committee counsel would place in the record any charge that would become a basis for committee action.

The article referred to yesterday was not given the committee by a newspaper reporter but was taken by the staff from a newspaper for the information of the committee. I think the condition would be entirely different if a reporter referred an item to the committee for its study and consideration.

The SPEAKER pro tempore. The time of the gentleman from Michigan has expired.

(By unanimous consent Mr. HOFFMAN of Michigan was allowed to proceed for 2 additional minutes.)

Mr. HOFFMAN of Michigan. In my opinion the issue is not an academic one. It will be with us a long, long time. My point is this, and I want to be sure I make myself understood. I agree with the chairman wholeheartedly that the committee has no authority to investigate the truth or falsity of the average newspaper editorial or news story. The individual, if there is an individual who is harmed, has his remedy at civil law, and sometimes under the criminal law. My point is this, where there is a newspaper article, be it editorial or news story, which reflects upon the Department or upon an individual and by referring to it or quoting from it or putting it into the record, in making that a part of the testimony, then my point is that having given evidence in the case the one who is responsible for the statement containing the article should be subject to cross examination so that we will know whether the report is factual or merely the expression of an opinion or just a figment of the imagination of the writer. Certainly a committee cannot accept as evidence an ex parte statement on a disputed issue of fact without giving the accused an opportunity to test the weight to be given it. The right to be confronted by the witness is as old as the common law itself. That is the point I am making.

Mr. MOSS. On that point specifically, an article placed in the record by counsel for the subcommittee or by any member of the committee can be objected to by any other Member. If the article is placed in there because committee counsel or a member of the committee personally clipped it from a newspaper, then I feel that the committee has no authority, and it would be highly improper for us to request the reporter who is in no way a party to the controversy to come in and disclose the source of his information.

Mr. HOFFMAN of Michigan. With all due respect to my chairman, there is a difference of opinion there. Making an article a part of the record automatically carries with it the right of the accused to be confronted by the witness. I think it involves a fundamental proposition, because by placing that article in the record it becomes evidence. Then the one who gives that evidence should, like any other witness who appears personally, be subject to cross examination. Otherwise, I may get an article in a paper, or I may come in with an affidavit, or statement, introduce it into the record with no opportunity on the part of anyone to question its truthfulness. Our rules permit the introduction in committee hearings of statements either sworn to or otherwise. The article or statement may be filled with vicious, scurrilous charges, and if I as the author cannot be called then to give the source of my information to substantiate my charges, we get into the position where we are doing what our rules, and which I think commonsense and common decency forbid. We are letting someone be accused without the opportunity of being able to answer.

The SPEAKER pro tempore. The time of the gentleman from Michigan has expired.

(Mr. MOSS asked and was given permission to address the House for 2 minutes.)

Mr. MOSS. Mr. Speaker, it is my opinion, as it has been right along, that the committee has no authority to investigate the press. If the gentleman objects to an article and desires to request that a reporter be subpenaed, the gentleman can make that request and at

that time the committee may determine whether or not it intends to go ahead pursuant to that request. But it is still the chairman's opinion that any such attempt to bring before the committee a reporter would be a highly improper procedure.

Mr. HOFFMAN of Michigan. Even though his statement is put in the record?

Mr. MOSS. Even though his statement is put in the record. He has not requested that it be so printed.

CRITICISM OF EITHER HOUSE OF CONGRESS BY THE OTHER

(Mr. BOW asked and was given permission to address the House for 5 minutes and to revise and extend his remarks.)

Mr. BOW. Mr. Speaker, our distinguished Speaker of the House, on June 25, called the attention of the House to a rule that forbids any Member of the House from inserting in the RECORD anything which might be a reflection upon a Member of the other body. I agree with that rule. I think it is a good one, I think all Members of the House agree with that rule. However, Mr. Speaker, it seems to be a one-way street.

I should like to call the attention of the Speaker and the Members of the House to page A5384 of the Appendix to the CONGRESSIONAL RECORD of July 9. I shall not refer by name to the Member of the other body who inserted the matter in the RECORD, but I will say he is one of the leaders of the majority in that body. He has inserted an editorial which I shall read part of as follows:

> The death of the school construction bill in the House of Representatives on Thursday was nothing less than a national disaster. The measure was put to death by a combination of prejudice and politicking in an atmosphere of confusion and finagling discreditable to Democrats and Republicans alike, and to the House itself as a lawmaking body.

Mr. Speaker, as one Member of this body, I resent an editorial of that kind being inserted in the RECORD which casts a reflection upon the House of Representatives by a Member of the other body. I would suggest that the gentleman who has inserted that editorial, by reason of his leadership, could bring up a bill in the Senate himself. And, if he feels the way he does about it, he has been lax in his duty in not bringing that legislation before the Senate.

Mr. KEATING. Mr. Speaker, will the gentleman yield?

Mr. BOW. I yield to the gentleman from New York.

Mr. KEATING. Mr. Speaker, I am very glad that the gentleman from Ohio has brought this matter to the attention of the Speaker. It seems to me it is something which the Speaker might wish to take up with the Member of the other body in question and with the other body as a body. I call the attention of the Speaker to the fact that in the same issue on pages 11016 and 11017 another Member of the other body, whose name our rules do not permit us to disclose, not only inserted in the RECORD exactly the same editorial, which is something not permitted on our side of the Capitol, and I understand is not normally permitted in the other body, but also a complete rollcall coupled with an attack upon the Members of Congress who had voted for the Powell amendment and against the bill. Now, it so happens that his attack does not affect me personally. But, I do, on behalf of my colleagues whom he is attacking in that article, resent the attack. The particular Member making the attack in the other body happens to be a good friend of mine for whom I entertain personally a warm regard, but I think it should be called to his attention that such action on our side against Members of the other body would be criticized, and very properly so, by the Speaker of the House of Representatives, and that his action may be violative of the principles of comity which should govern our relations. I think the gentleman from Ohio has performed a service by bringing this matter to the attention of the House.

Mr. HOFFMAN of Michigan. Mr. Speaker, will the gentleman yield?

Mr. BOW. I yield to the gentleman from Michigan.

Mr. HOFFMAN of Michigan. The gentleman was referring to this article on page A5384, ignoring the children.

Mr. BOW. That is correct.

Mr. HOFFMAN of Michigan. Let me say to the gentleman that I read that article when it came out, and it was what you would expect if you were familiar with the publishers or the public policy of the Washington Post.

Mr. BOW. But you would not expect a Member of the other body to use it as an indictment against this body for its official action.

Mr. HOFFMAN of Michigan. Well, I would say that they were selecting a mighty poor witness. But I would not want to comment. The rules forbid any comment about what I would expect of the other body or the Members of it.

Mr. BOW. I am delighted the gentleman is respecting the rules of the House. That we both agree upon.

Mr. HOFFMAN of Michigan. As far as I can. I have difficulty sometimes, when I see something in the RECORD that has been put in over there. I have difficulty in abiding by the rules for two reasons: First, because you cannot comment under the rules upon what they do over there, and then there are laws against the use of certain words, kinds of words, that might factually but not with propriety be used about the Members.

HOUR OF MEETING TOMORROW

Mr. HOLIFIELD. Mr. Speaker, I understand the House has already agreed to meet tomorrow at 10 o'clock.

The SPEAKER pro tempore. That is correct.

Mr. HOFFMAN of Michigan. Mr. Speaker, if the gentleman will yield for a moment, the gentleman knows that our Members are very busy today. In the gentleman's opinion, will they be through with the tasks which they are trying to accomplish today in time to meet tomorrow at 10 o'clock?

Mr. HOLIFIELD. Mr. Speaker, I will say in response to the gentleman's query that I trust there will be a large attendance tomorrow at 10 o'clock. As I have already stated, the House has already agreed to convene at that time tomorrow.

SPECIAL ORDERS GRANTED

By unanimous consent, permission to address the House following the legislative program and any special orders heretofore entered, was granted to:

Mr. HAND, for 10 minutes today, his manuscript to be inserted following the other special orders of the day.

Mr. HESELTON, for 20 minutes, on Thursday and Friday next.

EXTENSION OF REMARKS

By unanimous consent, permission to extend remarks in the Appendix of the RECORD, or to revise and extend remarks, was granted to:

Mr. GROSS in two instances, in each to include extraneous matter.

Mr. SEELY-BROWN and include an editorial.

Mr. BENTLEY in two instances, in each to include extraneous matter notwithstanding that one exceeds the limit and is estimated by the Public Printer to cost $173.25.

Mr. LIPSCOMB in three instances, in each to include extraneous matter.

Mr. OSTERTAG and include extraneous matter.

Mr. MORANO (at the request of Mr. HAND) in three instances, in each to include extraneous matter.

Mr. JOHNSON of Wisconsin in two instances, in one to include extraneous matter.

Mr. WALTER and include an address by Major General Dean.

Mr. HAGEN and to include extraneous matter.

Mr. ABBITT (at the request of Mr. MCCORMACK) and to include extraneous matter.

Mr. FRIEDEL (at the request of Mr. MCCORMACK) and to include extraneous matter.

Mrs. ROGERS of Massachusetts and to include an article.

Mr. O'HARA of Illinois in two instances and to include additional matter.

Mr. LESINSKI and to include extraneous matter.

Mr. ZABLOCKI and to include extraneous matter.

Mr. REES of Kansas and include extraneous matter.

Mr. VAN ZANDT (at the request of Mr. KEATING) and include extraneous matter.

Mr. MULTER in five instances and include extraneous matter.

Mr. MADDEN and include a speech by the first district commander of the American Legion of Indiana.

Mr. DIXON (at the request of Mr. DAWSON of Utah).

Mr. FLOOD and to include some editorials.

Mr. DODD (at the request of Mr. HAYS of Arkansas) in five instances and to include extraneous matter.

Mr. RODINO (at the request of Mr. HAYS of Arkansas) in two instances and to include extraneous matter.

ADJOURNMENT

Mr. HOLIFIELD. Mr. Speaker, I move that the House do now adjourn.

The motion was agreed to; accordingly (at 1 o'clock and 26 minutes p. m.), under its previous order, the House adjourned until tomorrow, Wednesday, July 11, 1956, at 10 o'clock a. m.

EXECUTIVE COMMUNICATIONS, ETC.

Under clause 2 of rule XXIV, executive communications were taken from the Speaker's table and referred as follows:

2051. A letter from the Comptroller General of the United States, transmitting a report on the audit of the Federal home loan banks for the fiscal year ended June 30, 1955, pursuant to the Government Corporation Control Act (31 U. S. C. 841) and the Federal Home Loan Bank Act (12 U. S. C. 1421) (H. Doc. No. 444); to the Committee on Government Operations and ordered to be printed.

2052. A letter from the Assistant Secretary of the Interior, transmitting a report of the Department of the Interior on the Farwell unite, Nebraska, of the Missouri River Basin project, pursuant to the provisions of section 9 (a) of the Reclamation Project Act of 1939 (H. Doc. No. 445); to the Committee on Interior and Insular Affairs and ordered to be printed, with illustrations.

2053. A letter from the Assistant Secretary of the Interior, transmitting a proposed concession permit with Mrs. Arsena Robinson which, when executed by the regional director, region No. 3, National Park Service, will authorize Mrs. Robinson to provide accommodations, facilities, and services for the public within Timpanogos Cave National Monument, Utah, for a period of 5 years from January 1, 1956, pursuant to the act of July 1, 1953 (67 Stat. 271); to the Committee on Interior and Insular Affairs.

REPORTS OF COMMITTEES ON PUBLIC BILLS AND RESOLUTIONS

Under clause 2 of rule XIII, reports of committees were delivered to the Clerk for printing and reference to the proper calendar, as follows:

[*Omitted from the Record of July 9, 1956*]

Mr. HESELTON: Committee on Interstate and Foreign Commerce. Part 2, minority views on H. R. 8902. A bill to amend subsection 406 (b) of the Civil Aeronautics Act of 1938, as amended (Rept. No. 2530). Referred to the Committee of the Whole House on the State of the Union.

[*Submitted July 10, 1956*]

Mr. SMITH of Virginia: Committee on Rules. House Resolution 584. Resolution waving points of order against H. R. 12138, a bill making supplemental appropriations for the fiscal year ending June 30, 1957, and for other purposes; without amendment (Rept. No. 2648). Referred to the House Calendar.

Mr. MADDEN: Committee on Rules. House Resolution 585. Resolution for consideration of H. R. 12080, a bill authorizing the construction, repair, and preservation of certain public works on rivers and harbors for navigation, flood control, and for other purposes; without amendment (Rept. No. 2656). Referred to the House Calendar.

Mr. TRIMBLE: Committee on Rules. House Resolution 586. Resolution for consideration of S. 3982, an act to provide for the maintenance of production of tungsten, asbestos, fluorspar, and columbium-tantalum in the United States, its Territories and possessions, and for other purposes; without amendment (Rept. No. 2657). Referred to the House Calendar.

Mr. KILDAY: Committee on Armed Services. H. R. 5519. A bill to authorize and direct the Secretary of the Army to convey certain tracts of land in El Paso County, Tex., to the city of El Paso, Tex., in exchange for certain lands to be conveyed by the city of El Paso, Tex., to the United States Government; with amendment (Rept. No. 2669). Referred to the Committee of the Whole House on the State of the Union.

Mr. VINSON: Committee on Armed Services. S. 976. An act to provide for the release of the right, title, and interest of the United States in a certain tract or parcel of land conditionally granted by it to the city of Montgomery, W. Va.; without amendment (Rept. No. 2670). Referred to the Committee of the Whole House on the State of the Union.

Mr. BURDICK: Committee on the Judiciary. H. R. 8617. A bill to validate certain payments of sea-duty pay made to naval personnel serving on board vessels in the Great Lakes during the period November 1, 1950, to October 31, 1953; with amendment (Rept. No. 2671). Referred to the Committee of the Whole House on the State of the Union.

Mr. DAVIS of Tennessee: Committee on Public Works. H. R. 8265. A bill relating to the use of storage space in the Buford Reservoir for the purpose of providing Gwinnett County, Ga., a regulated water supply; with amendment (Rept. No. 2672). Referred to the Committee of the Whole House on the State of the Union.

Mr. DAVIS of Tennessee: Committee on Public Works. H. R. 8940. A bill relating to the sale of water from the Hulah Reservoir to the city of Bartlesville, Okla; with amendment (Rept. No. 2673). Referred to the Committee of the Whole House on the State of the Union.

Mr. DAVIS of Tennessee: Committee on Public Works. H. R. 11702. A bill to provide for the sale of lands in reservoir areas under the jurisdiction of the Department of the Army for cottage-site development and use; without amendment (Rept. 2674). Referred to the Committee of the Whole House on the State of the Union.

Mr. RODINO: Committee on the Judiciary. H. R. 11907. A bill to amend title 28, United States Code, with respect to fees of United States marshals; without amendment (Rept. No. 2675). Referred to the Committee of the Whole House on the State of the Union.

Mr. DAVIS of Tennnesee: Committee on Public Works. S. 1358. An act to authorize modification of the flood-control project for Missouri River Agricultural Levee Unit 513-512-R, Richardson County, Neb.; without amendment (Rept. 2676). Referred to the Committee of the Whole House on the State of the Union.

REPORTS OF COMMITTEES ON PRIVATE BILLS AND RESOLUTIONS

Under clause 2 of rule XIII, reports of committees were delivered to the Clerk for printing and reference to the proper calendar, as follows:

Mr. FORRESTER: Committee on the Judiciary. S. 1154. An act for the relief of Hal A. Marchant; without amendment (Rept. No. 2649.) Referred to the Committee of the Whole House.

Mr. FORRESTER: Committee on the Judiciary. S. 1708. An act for the relief of Mr. and Mrs. Ernest M Kersh; without amendment (Rept No. 2650). Referred to the Committee of the Whole House.

Mr. DONOHUE: Committee on the Judiciary: S. 3150. An act for the relief of Sgt. and Mrs. Herbert G. Herman; without amendment (Rept. No. 2651) Referred to the Committee of the Whole House.

Mr. WALTER: Committee on the Judiciary. S. 1243. An act for the relief of Kyu Lee; with amendment (Rept. No. 2652). Referred to the Committee of the Whole House.

Mr WALTER: Committee on the Judiciary. S. 1324. An act for the relief of Salvatore di Morello; with amendment (Rept. No. 2653). Referred to the Committee of the Whole House.

Mr. WALTER: Committee on the Judiciary. S. 1627. An act for the relief of Alexander Orlov and his wife, Maria Orlov; without amendment (Rept. No. 2654). Referred to the Committe of the Whole House

Mr. WALTER: Committee on the Judiciary. S. 3009. An act for the relief of Kiyoshi Kinoshita; with amendment (Rept. No. 2655). Referred to the Committee of the Whole House.

Mr. WALTER: Committee on the Judiciary. S. 3473. An act for the relief of Kurt Johan Paro; without amendment (Rept. No. 2658). Referred to the Committee of the Whole House.

Mr. WALTER: Committee on the Judiciary. S. 3579. An act for the relief of Elizabeth M. A. de Cuevas Faure; without amendment (Rept. No. 2659). Referred to the Committee of the Whole House.

Mr. FEIGHAN: Committee on the Judiciary. House Joint Resolution 662. Joint resolution for the relief of certain relatives of United States citizens; with amendment (Rept. No. 2660). Referred to the Committee of the Whole House.

Mr. FORRESTER: Committee on the Judiciary. H. R. 2952. A bill for the relief of John H. Parker; with amendment (Rept. No. 2661). Referred to the Committee of the Whole House.

Mr. FORRESTER: Committee on the Judiciary. H. R. 4464. A bill for the relief of Mrs. Kathryn H. Wallace; with amendment (Rept. No. 2662). Referred to the Committee of the Whole House.

Mr. FORRESTER: Committee on the Judiciary. H. R. 5586. A bill for the relief of Otto B. Hauffe; without amendment (Rept. No. 2663). Referred to the Committee of the Whole House.

Mr. FORRESTER: Committee on the Judiciary. H. R. 7162. A bill for the relief of T. W. Holt & Co.; without amendment (Rept. No. 2664). Referred to the Committee of the Whole House.

Mr. FORRESTER: Committee on the Judiciary. H. R. 8056. A bill for the relief of Col. Adolph B. Miller; with amendment (Rept. No. 2665). Referred to the Committee of the Whole House.

Mr. BURDICK: Committee on the Judiciary. H. R. 9028. A bill for the relief of Fred G. Nagle Co.; without amendment (Rept. No. 2666). Referred to the Committee of the Whole House.

Mr. BURDICK: Committee on the Judiciary. H. R. 11822. A bill for the relief of Tom R. Hickman and Nannie Conley and husband, Jack Conley; with amendment (Rept. No. 2667). Referred to the Committee of the Whole House.

Mr. COOLEY: Committee on Agriculture. House Joint Resolution 642. Joint resolution to authorize and direct the Secretary of Agriculture to quitclaim certain property in Coahoma County, Miss., to the Home Demonstration Club of Rena Lara, Miss., Inc.; without amendment (Rept. No. 2668). Referred to the Committee of the Whole House.

PUBLIC BILLS AND RESOLUTIONS

Under clause 4 of rule XXII, public bills and resolutions were introduced and severally referred as follows:

By Mr. ADAIR:

H. R. 12166. A bill to repeal the act of

February 18, 1896, as amended; to the Committee on Armed Services.

By Mr. BLATNIK:

H. R. 12167. A bill to authorize the payment to local governments of sums in lieu of taxes and special assessments with respect to certain Federal real property, and for other purposes; to the Committee on Interior and Insular Affairs.

By Mr. ELLIOTT:

H. R. 12168. A bill to amend section 4 (a) of the Vocational Rehabilitation Act, as amended; to the Committee on Education and Labor.

By Mr. HYDE:

H. R. 12169. A bill to establish the Chesapeake and Ohio Canal National Historical Park and to provide for the administration and maintenance of a parkway, in the State of Maryland, and for other purposes; to the Committee on Interior and Insular Affairs.

By Mr. JUDD:

H. R. 12170. A bill to remove the present $1,000 limitation which prevents the Secretary of the Navy from settling certain claims arising out of the crash of a naval aircraft at the Wold-Chamberlin Air Field, Minneapolis, Minn.; to the Committee on the Judiciary.

By Mr. LIPSCOMB:

H. R. 12171. A bill to authorize the payment to local governments of sums in lieu of taxes and special assessments with respect to certain Federal real property, and for other purposes; to the Committee on Interior and Insular Affairs.

By Mr. MORRISON:

H. R. 12172. A bill to exempt certain shipments of farm produce from the tax on the transportation of property; to the Committee on Ways and Means.

By Mr. MOSS:

H. R. 12173. A bill to authorize the payment to local governments of sums in lieu of taxes and special assessments with respect to certain Federal real property, and for other purposes; to the Committee on Interior and Insular Affairs.

By Mr. THOMPSON of New Jersey:

H. R. 12174. A bill to amend the Internal Revenue Code of 1954 so as to impose a graduated tax on the taxable income of corporations; to the Committee on Ways and Means.

H. R. 12175. A bill to provide for the transfer of the Civil Service Commission Building in the District of Columbia to the Regents of the Smithsonian Institution for use in housing the National Collection of Fine Arts and National Portrait Gallery, to provide for the international interchange of art and craft works, and for other purposes; to the Committee on House Administration.

By Mr. WAINWRIGHT:

H. R. 12176. A bill to provide for the establishment of a Federal Advisory Council on the Arts, and for other purposes; to the Committee on Education and Labor.

By Mr. YOUNG:

H. R. 12177. A bill to amend the Communications Act of 1934, so as to direct the Federal Communications Commission to provide for the licensing of television reflector facilities and VHF translator facilities; to the Committee on Interstate and Foreign Commerce.

By Mr. BONNER:

H. Con. Res. 263. Concurrent resolution authorizing additional copies of the hearing on Labor-Management Problems of the American Merchant Marine; to the Committee on House Administration.

PRIVATE BILLS AND RESOLUTIONS

Under clause 1 of rule XXII, private bills and resolutions were introduced and severally referred as follows:

By Mr. EVINS:

H. R. 12178. A bill for the relief of Col. Benjamin Axelroad; to the Committee on the Judiciary.

By Mr. HOSMER:

H. R. 12179. A bill for the relief of Jael Mercades; to the Committee on the Judiciary.

By Mr. WALTER:

H. R. 12180. A bill for the relief of Walter Schik; to the Committee on the Judiciary.

H. J. Res. 680. Joint resolution to waive certain provisions of section 212 (a) of the Immigration and Nationality Act in behalf of certain aliens; to the Committee on the Judiciary.

H. J. Res. 681. Joint resolution to waive the provision of section 212 (a) (6) of the Immigration and Nationality Act in behalf of certain aliens; to the Committee on the Judiciary.

H. J. Res. 682. Joint resolution for the relief of certain aliens; to the Committee on the Judiciary.

H. J. Res. 683. Joint resolution for the relief of certain aliens; to the Committee on the Judiciary.

Appendix

The Expanding Reality of the Communist Calculus for World Conquest

EXTENSION OF REMARKS
OF

HON. ALVIN M. BENTLEY

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 10, 1956

Mr. BENTLEY. Mr. Speaker, a great deal of confusion and misguided speculation in the free world has resulted from the Moscow exploitation of the concept of peaceful coexistence. Unfortunately, many are being lulled into a false sense of security and, in thought and spirit, are abandoning the captive nations and peoples in a finality of Red colonial slavery. These are the prime objectives of the current Russian propaganda drive. The skill and cleverness with which this drive is being managed, undoubtedly makes this period of the cold war the most dangerous of all.

An attempt to synthesize the many elements at work in the present situation, with a cautious appraisal of their significance, is provided in an interesting address on the Expanding Reality of the Communist Calculus for World Conquest, delivered on Saturday, June 30, by Dr. Lev E. Dobriansky in Winnipeg, Canada. Dr. Dobriansky, who is a professor of Soviet economics in the graduate school of Georgetown University and also chairman of the Ukrainian Congress Committee of America, appeared before the Ukrainian National Youth Federation of Canada.

This address is based on ideas incorporated in a previous address which I had the pleasure of introducing into the RECORD last summer. It maintains that the Communist calculus is in full operation despite Moscow's theatrics on peaceful coexistence and that unless our policy of national liberation is courageously and fully implemented in the near future, the chance of averting a third world war will diminish greatly. The address furnishes a working, integrated picture of the present phase in the cold war. Commending it to the reading of my colleagues, I include it in the RECORD, as follows:

THE EXPANDING REALITY OF THE COMMUNIST CALCULUS FOR WORLD CONQUEST

(Address by Dr. Lev E. Dobriansky, professor in Soviet economics, Graduate School, Georgetown University; chairman, Ukrainian Congress Committee of America, to Ukrainian National Youth Federation of Canada, Winnipeg, Canada, June 30, 1956)

In all humility, it was a source of great personal delight to be invited for this occasion this evening and, indeed, it is a real pleasure to have this opportunity to exchange views with friends across the border and, above all, with friends in the common cause of expansive freedom. The experience of addressing youth is always a pleasant and exciting one for me because youth represents a ready challenge to set ideas, a vigor to entertain the new and untried, and a vision to achieve the reality of its vibrant convictions. Of course, as in any field of thought and enterprise, there will, unavoidably, be points of disagreement due, perhaps, to different perspectives or shifts of emphasis enforced by practical criteria, but these should not deter us from exercising the highest measure of rational objectivity aimed at an essential mutuality of understanding beyond the parochial realm of personalities, parties, and vain pretensions of various sorts. My sole purpose this evening is to portray for you the manner in which we in the United States assess the present position of our cause in the complex of international developments and what, as citizens of this ultimate bastion of world freedom and national independence, we propose to do.

THE CAUSE OF THE NON-RUSSIAN NATIONS IN THE SOVIET UNION

Let us, for a moment, briefly review the main outlines of the cause of the non-Russian nations in the Soviet Union as we understand it and as we advance it within the United States. In essence, as you know, this cause is the cause of freedom and national independence of Ukraine, Lithuania, Latvia, Estonia, White Ruthenia, Georgia, Armenia, Agerbaijan, Turkestan, and other non-Russian nations, held captive in the Soviet Union empire. The essence of this cause necessarily promotes the real and genuine independence of the Russian people from centuries of autocratic government, totalitarianism, and costly Russian adventures in colonialism and imperialism. It is closely interwoven with the cause of national self-determination and freedom of all other captive non-Russian nations in Eastern Europe and Asia which share the common bondage under the yoke of imperialist Moscow. This cause of the non-Russian nations in the Soviet Union, for which there is overwhelming historical, political, and moral justification, is one of the most important and significant segments of the general cause of national and human freedom on the part of the free world.

As we view it—and I believe quite properly and soundly—this non-Russian action is inextricably tied up with the cause of freedom and justice championed by our own country and as best exemplified by our own Declaration of Independence. Sober analysis clearly demonstrates that it is crucial and determinative to the national security interests of the United States as we know it is to those of Canada as well. But most significant in the current situation, this action provides the best conceivable means of winning the cold war and defeating the global designs of Communist Moscow at the least cost and the maximum chance of averting a third world war. Once one grasps the present unfolding significance of the Communist calculus for world conquest, the full import of this truth conveyed by our action, becomes manifest and pressing.

The implementation of our program is understandably shaped by the fundamental premise that in advocating and advancing this non-Russian cause, which is so predominantly obnoxious to the oligarchical dictatorship in Moscow, we are serving the first and primary interest of the United States. What we do, therefore, must be and is within the legal and institutional framework of our Nation. Various legislative measures, projects, proposals, and acts are promulgated within this independent framework and cannot be otherwise. Some either do not understand this or do not wish to, but this is an unalterable fact contributing to the maximum efficiency of our endeavors and to the success of our efforts. We strongly believe that in serving our Nation, which, in ultimate effect, is the remaining powerful obstacle to worldwide Russian Communist dominion, we best serve the liberation interests of the Ukrainian nation, indeed, of all the captive nations in the present Russian Communist empire. Our energies are directed chiefly at the object of this mutual interest between the United States and the captive nations both within and without the Soviet Union and are spent on none other. In a consultative way, we join with all of like-minded inclination in the common effort, but we reserve to each the determination of honorable and respectable means toward the accomplishment of our mutual end.

The course that we have been pursuing in this decade has produced many sterling results, and promises to produce more. Knowledge and understanding of the various non-Russian nations in the Soviet Union are broader and deeper than ever before. A serious and distinct interest in this subject is observable in our institutions of learning, and it is an object of continuous study in many private and official circles. It receives appropriate treatment by invitation in various congressional hearings, and it poses tremendous potentiality for executive action. Only time and circumstance are required to actualize this potentiality in behalf of the enslaved Ukrainian nation and all captive nations in the Communist empire. That this actualization will take effect in the course of the cold war, we have no doubt whatsoever. The Communist calculus for world conquest will compel it.

THE COMMUNIST CALCULUS FOR WORLD CONQUEST

There is a Communist calculus for world conquest and its development poses a real and even frightening dilemma to the free world. Two years ago, precisely this August, it was my privilege to lecture before military groups at Fort Meade in Maryland. Being a professor, it is my happy vocation to contemplate ideas and at that time, the theory of this calculus was advanced. Shaped by the crucible of argument and debate, the theory was presented in a more refined form in an address to the Buffalo Advertising Club a year ago which, under the good auspices of the Honorable ALVIN M. BENTLEY, appeared in full text in the CONGRESSIONAL RECORD of July 28, 1955.

Now, what do we mean by the Communist calculus for world conquest? It maintains that the complexity and diverseness of data relative to the Soviet Union and the entire Communist bloc are reducible to three basic and determining variables. These variables are long-run categories accommodating and conditioning all sorts of short-run acts and programs aimed at the fixed goal of world domination by Moscow. The first of these variables is the genocidal consolidation of the Russian Communist empire. The second essential variable is the progressive attain-

ment by Moscow of substantial adequacy or superiority in arms and military prowess. The third variable is the fear of imperialist Moscow of free world retaliation, a variable that stands in direct relation to the deterrent power of the free world.

The theory holds that given the necessary time, achieve through skilled diplomacy, peaceful coexistence and acquiescent passivity on the part of the West, with the development and fruition of the first two variables, namely, empire consolidation and increasing select armed superiority, the third variable will radically lessen in importance and the free world will find itself without the deterrent material power to reinforce its policy of freedom. At the present rates of relative progress in politics and industry, the time necessary for this fruition is calculated not in terms of a generation, but anywhere from 5 to 10 years. While we comfortably bask in the momentary sunlight of peace and prosperity, induced largely by Moscow's policy of peaceful coexistence, the material and psychological forces entailed by these developing variables are at work, casting a real dilemma for the free world with doubtless increasing risks and danger to our respective national securities and futures.

THE EXPANDING REALITY OF THE CALCULUS

This theory is plainly not an optimistic one, but it is painfully realistic. In fact, steadily accumulating evidence over the past year, drawn from various essential sources, concretely supports the expanding reality of the calculus. The clever, cunning, and deceitful policies of Moscow in the current period cannot but accelerate the further expansion of this reality, while many quarters in the West are rendered confused, deluded and even helpless. Some even rationalize this expanding reality of the calculus as a healthy evolution, despite the fact that it generates behind the convenient facade of peaceful coexistence the unhealthy results of empire uniformity, armed superiority and the loss of power of deterrence for the West. Indeed, while scores of people are given to believe that the possibility of global armed conflict is receding, the material bases for such a conflict, with shifting advantage to the East, are increasing.

When we realistically survey the current situation in terms of our first variable, the formidable gains in empire consolidation cannot be doubted, and assuming our relative passiveness in policy and operation, they will continue to increase in behalf of Moscow's successful strategy. There is no evidence of any cleavage or disunity between and among the various dictatorial Communist governments. There is no evidence of any real loss of subservience on the part of these numerous governments to Moscow; nor is there any evidence of the possibility of rampant Titoism, for even Tito has negated Titoism. Despite recent events, the illusion of Titoism still possesses the minds of many officials in the West who cannot seem to grasp the Communist meaning of "national in form, socialist in content," which is an expedient concept for the annihilation of all patriotic forces dedicated to national and human freedom.

The steady integration of the empire, both political and economic, has been progressing uninterruptedly since the end of the last decade. The great hope of western support for the eventual liberation of the many enslaved nations in the Communist empire has steadily dwindled. Mass redefection of emigres who fled from this empire of national captivity provides perhaps the most grim evidence of this spreading hopelessness and, at the same time, of the remarkable success of the Kremlin's consolidation efforts. Through the expedient concept of "national in form, socialist in content," the well calculating dictatorship in Moscow will realize further crucial gains in this respect by the subterfuge of innocuous liberalization in its hold over the various captive nations in ite empire. Forms of economic and political decentralization will be furthered, propaganda play on the freedom, independence, and contentment of the captive nations will be intensified, and like-minded national quislings will be integrated into the ruling caste, all with the well-calculated purpose of empire consolidation and depriving the West of the use of its most formidable weapon against Russian colonialism and imperialism, namely the true patriotic force of nationalism resident in each of the captive nations.

This strategy, which greatly buttresses our first variable, is not new. Stalin used it on occasions to sap the strength of nationalist forces in the Soviet Union, as witness his insistence at Yalta on the membership of Ukraine and White Ruthenia in the United Nations. But, today, it is being employed with greater finesse, keener skill, and with doubtless success. It is, to be sure, being utilized by the oligarchical dictatorship as a risk to Moscow's domination over the captive nations, but a bearable risk so long as the West just passively observes and wishfully speculates on what is transpiring. The program of "national in form, socialist in content" can be pursued only to a point short of unleashing unmanageable forces that would destroy the empire itself. It would be naive for us to believe that the Kremlin is intent upon approaching this point too closely. However, it is not unreasonable for us to deplore the policies of the West that, in real effect, guarantee the success of this program by their sheer unimaginative and passive character.

It is no wonder then that the high priest of the policy of containment in the United States, George F. Kennan, has already written off the fate of the captive nations as a "finality for better or worse." The finality of national captivity is the chief consequence of myopic containment based essentially on deterrent material power. The containment policy, which is still being pursued without the name, is, strangely enough, one of the main contributors to the success of Moscow's empire consolidation effort. In the light of this analysis, it is no wonder, too, that the other day in response to a reporter's query on the possibility of "more freedom for satellite states," Marshal Tito replied, "Now they have ceased to be satellites" and demanded "Why do you people keep calling them satellites?" (Evening Star, Washington, D. C., Wednesday, June 27, p. A-33.) For the supposed personification of Titoism, Poland, Hungary, Bulgaria, Rumania, Slovakia, and Czechia are to be regarded as free and independent. This is the basic Communist meaning of "national in form, socialist in content."

The variable of empire consolidation is, of course, primary and prerequisite to all else. An insecure hold on the captive peoples scarcely provides the springboard for world domination. But the fruition of this variable is not sufficient. The fixed goal of world domination requires also the full development of the second variable, namely material adequacy and armed superiority. Some wish to portray the present phase of the cold war as one of economic competition, but here, too, there is nothing substantially new. The present dictatorship in Moscow is in the most orthodox economic manner carrying out the policies of Stalin in agriculture, in industry, in the high priorities of nuclear warfare. But, again, behind the facade of peaceful coexistence, with all of its harmless frills of cultural exchanges, diplomatic respectability, and incessant tributes to the cause of peace, under the present dictatorship these policies are being executed with greater skill and shrewdness.

It is not my intention here to glut your minds with statistics. However, let me point out certain crucial facts, validated by available statistical data, which unmistakably point out the fruition of our second variable. First, it is most misleading to compare absolute figures in the production of steel, pig iron, oil, coal, electricity, and other industrial essentials between the free world and the Communist empire, and comfort ourselves that our combined production exceeds theirs to such a marked extent that we have nothing to fear. An armed invasion of Western Europe would wipe out the pronounced differences instantaneously. But given these figures, the determining fact is the allocation of such productive output. With the absolute differences contracting by virtue of the greater rate of increase in industrial growth in the empire, the Kremlin can achieve armed superiority in many critical lines of modern warfare by its continued emphasis on capital goods production to the relative neglect of consumer goods. In fact, as demonstrated by many experts in various areas, it possesses such superiority now in submarine warfare, certain aircraft and in many lines of general military equipment.

Projected in the period of the next 5 to 10 years, these trends can only spell out the loss of the 1 power that the West has so far insularly depended on, namely the material power of deterring further Communist aggression. It might be argued that, awakened to the full formation of this second variable, we, too, would be compelled to devote more of our gross product to nuclear and conventional armament. Acclimation to an induced public atmosphere of peace and prosperity, poised on peaceful coexistence, would hardly provide the environment for such a race. Even granting the assumption of maintained power balance, which is a most tenuous one, indeed, allowances still must be made for the material power of equality, the worldwide subversive activities of the Kremlin, the forged uniformity of its empire, the superiority of its psychological warfare instruments, and the multiple advantages associated with its guaranteed capacity to make the first aggressive move. Fully supported by the basic requisites of empire consolidation and armed adequacy and/or superiority, these allowances, made on the basis of present facts, certainly tip the scales in the long-run favor of global Communist ambitions. The third variable—Moscow's fear of massive retaliation—would obviously be reduced to insignificance.

The de-Stalinization program significantly bears no relationship to the feverish strides being made in forming a tremendous economic and industrial base for decisive military and political power. These strides are in the Stalinist tradition. To accelerate the broad formation of this base, the present Communist rulers are liberalizing totalitarian bonds in the factories, forced labor camps, agriculture, and in product distribution in the hope of enhancing productivity. But here, too, within a safe margin of totalitarian opportunism calculated to achieve this base in the shortest time possible and at the same time, impress upon the free world the more liberal and peaceable tendencies of the present ruling clique. That they are succeeding in this respect, events in the Middle East, in Southeast Asia, in Western Europe, with the virtual demise of NATO, and even on our continent, where many feel relieved by the dulling effects of Soviet-sponsored peaceful coexistence, provide more than ample evidence. The remarkable skill and cleverness of the Kremlin, seizing upon the inbred passion of peace in civilized man, have produced a real and perilous dilemma for the West. In comparison to these elements of the Communist calculus, the present noise in the ranks of

world communism is transient and hardly a source of comfort to any serious thinking person.

THE PEACEFUL LIBERATION POLICY AND OUR OPPORTUNITY FOR A COMMUNIST DILEMMA

This dilemma of the West can and must be converted into a dilemma of the Communist empire. If ever an opportunity existed for such a conversion, with prospects for the defeat of imperialist Russian communism and the dissolution of its empire, it is now. A carefully and imaginatively implemented policy of peaceful liberation should address itself chiefly in creating pressures for further liberalization in the Communist empire, toward the points of real and genuine independence of the now captive nations, significant rises in the standards of living of all the peoples involved, and the complete abolition of the Iron Curtain. Such pressures concentrated beyond the allowable margins of Moscow's totalitarian opportunism are the the only means available to us to prevent the successful consolidation of the empire, the rapid buildup of the economic and industrial base of the empire, the disappearance of our deterrent strength, in fact, the formation of conditions ripe for a third world war with dim prospects of victory for ourselves. The target of our liberation policy is real and solid concessions to the captive peoples, not nominal and half-hearted ones easily afforded by the margins of totalitarian opportunism. The burden of proof as concerns the sincerity of the pronagandized liberalization program of Moscow would be placed squarely on the shoulders of the alleged reasonable men of the Kremlin.

Don't allow anyone to tell you that this cannot be done. Enough has been written on an implemented peaceful policy of liberation to show that it is practicable, sound, and our only victorious course in the cold war. This is our choice; without it, our dilemma deepens, and possible disaster grows; with it, the dilemma is the enemy's, and victory in the cold war comes within our reach. Resolutions, official speeches, broadcasting are not adequate; a program, as in part outlined by General Sarnoff last year, contains the real and efficient means toward victory in this mortal struggle. Our tremendously powerful assets and weapons are many, and are of moral, political, and physical character on both sides of the curtain. Ukraine, the other non-Russian nations in the Soviet Union, and all other captive peoples are our allies. Our efforts must be directed at the people and their destiny, not at their power-usurping governments. In this context, by virtue of their invincible resistance, their undying patriotism, and their close proximity to the imperialist base of the Communist empire, the non-Russian nations in the Soviet Union have the potential role of being in the vanguard of world freedom.

In my judgment, the policy of liberation is inevitable. The time for its most effective and economical use is now. If I may paraphrase a sentence from an excellent work on what in detail could be done, liberation embodies "new techniques which would make brain and nerve win victories over guns and concrete." (Commando Extraordinary, Charles Foley, Putnam's Sons, New York, p. 197.) Commandos of freedom are as necessary in the cold war to insure peace as they are in a hot war to insure armed victory. With the Communist calculus for world conquest at work, our present course is in the direction of too little and too late. Only through the processes of peaceful liberation can we reverse this dangerous course for the full protection of our national securities, for peace with justice, for the national independence of all the captive nations in the Russian Communist empire. With God's help, we shall not fail.

The Passing of Former United States Senator Francis J. Myers

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 10, 1956

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorials—one from the Wilkes-Barre Times Leader of July 6, and the other from the Wilkes-Barre Record of July 7—lauding the outstanding public career of former United States Senator Francis J. Myers, who passed away last week in Philadelphia:

[From the Wilkes-Barre Times Leader of July 6, 1956]

FRANCIS J. MYERS

The death of former United States Senator Francis J. Myers, of Philadelphia, is a serious loss to the Democratic Party, particularly in a presidential election year.

As a Member of both Houses of Congress, he was a tower of strength to his party. He left an impressive record of public service in Washington, Harrisburg, and his native Philadelphia. Luzerne County thought very well of him, giving him a majority in the 1944 Senate contest of more than 1,100 over James J. Davis, who had many close ties here.

A seasoned and enthusiastic campaigner, with a flair for oratory and politics, Senator Myers continued to wield no little influence, even after he left office. The fact that he did not drop from the limelight, as so many do under these circumstances, testifies to his lasting qualities. Had death not intervened, he might have made a comeback since he was only in his prime and his prestige was considerable.

Friendly and capable, with a reputation for zeal and integrity, he was a true champion of the common man without jeopardizing the public interest.

His passing will cause widespread regret.

[From the Wilkes-Barre Record of July 7, 1956]

FRANCIS J. MYERS

Luzerne County knew Francis J. Myers as a frequent visitor, often as a speaker at a public affair, during his career in Congress for 6 years as a Member of the House and for another 6 years as a Member of the Senate. He made many friends in his community among Republicans as well as Democrats. This accorded with the fact that while he was a loyal supporter of Presidents Roosevelt and Truman, Senator Myers dealt with problems affecting Pennsylvania objectively without making partisan politics the primary consideration.

At the height of his career he was foremost among the Democratic strategists in Pennsylvania. After he had been defeated by JAMES H. DUFF for reelection to the Senate Senator Myers resumed his law practice in Philadelphia but with important active participation in public affairs through his chairmanship of the Philadelphia Redevelopment Authority and membership in the General State Authority and Greater Philadelphia Movement.

Nowhere was he held in higher respect than in his native city where on the occasion of his death at the age of 54 many tributes have been paid to the qualities that made him an outstanding citizens and public official.

Since 1945 Senator Myers addressed at least nine public affairs in Wilkes-Barre including those sponsored by Wilkes-Barre Civic Committee, Luzerne County Democratic Committee, Wilkes-Barre Chapter of the AMVETS, Ancient Order of Hibernians and Ladies Auxiliary, Wilkes-Barre area Postal Employees, Textile Workers Union of America, International Ladies' Garment Workers' Union, Luzerne County Democratic Committee, Duplan Silk Co. workers.

Commodity Credit Corporation

EXTENSION OF REMARKS
OF
HON. HENRY ALDOUS DIXON
OF UTAH
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 10, 1956

Mr. DIXON. Mr. Speaker, I rise to speak in favor of H. R. 1132, which would increase the borrowing authority of the Commodity Credit Corporation from $12 billion to $14 billion.

Mr. Speaker, the Commodity Credit Corporation's primary source of revenue for price-support operations is its authorized borrowing authority. As the volume of price-support operations has increased, the Congress has also on eight different occasions increased the Corporation's borrowing authority from $500 million in 1938 to $12 billion in 1955. H. R. 11132 would increase that authority to $14 billion.

It is my understanding that the Secretary of Agriculture has asked for this extension because there is a likelihood that before the Congress could take action in early 1957 the Corporation may be forced to commit all of its $12 billion borrowing authority and still not meet farmer demand for commodity loans and purchase agreements, based on average yields, farmer participation, and so forth.

So many variable factors influence the demand upon the resources of the Corporation that an accurate budgetary estimate would be impossible. It might be needlessly large; or it might be hopelessly inadequate. For example, should farm prices decline even slightly, an even larger number of farmers then would be likely to place their crops under price support. Weather conditions, acreages planted, yields, consumption patterns, volume of consumer purchasing power, to mention a few, all have a direct effect upon the volume of price-suppport operations of the CCC. These cannot be predicted with any degree of accuracy.

In considering this bill, I think it is important to also realize that mere congressional extension of the borrowing authority does not necessarily imply a cost to the taxpayer. It is not an appropriation but merely an authorization. Funds invested in commodity loans, purchase agreements, and direct commodity purchases do not in themselves constitute an expenditure. This cost is determined when the actual commodity inventories are disposed of by the Corporation.

In any year when the amount of program expenditures equals the authorized borrowing authority, all program operations would have to be dropped or the Congress called into special session to provide relief. Neither of these alternatives seems desirable to me; first, because by legislation the Congress was given a definite price-support commitment to farmers; and second, calling a special session for such a matter would not only be expensive but also indicative of a lack of foresight on the part of the Congress.

Death on the Hill

EXTENSION OF REMARKS
OF
HON. STUYVESANT WAINWRIGHT
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 3, 1956

Mr. WAINWRIGHT. Mr. Speaker, one of the most extraordinary phenomena in the newspaper fields has been the incredible growth of Newsday, the paper covering the district that I am fortunate enough to represent. Newsday has long since passed the struggling daily stage. It is now a forceful molder of public opinion.

Many of my associates in the realm of politics have developed that occupational disease, ulcers, over a particular drive being pressed by the paper. Yet, despite their feelings, even a limited analysis should force us to admit that the underlying philosophy of the paper is summed up in the words "community welfare."

This newspaper has written a number of editorials supporting my position. Naturally, these are never inserted in the CONGRESSIONAL RECORD by anyone, much less myself. However, as Newsday is diametrically opposed to my position on Federal aid to education, I feel that it is sporting to place this particular editorial in the RECORD. Fundamentally, the difference between the editorial policy of the paper and myself lies in the fact that Newsday believes that a social welfare philosophy is neither dangerous nor does it cut initiative. Possibly they are right. For my own part I feel that the more government management that can be left to the local communities the better it is for our Nation. This applies particularly to education. The editorial follows:

DEATH ON THE HILL

The House has killed the $1.6 billion Federal-aid-to-education bill. In the final moments of debate on the bill, the issues were so confusing that Congressmen often did not even know what they were voting for. Amendments were tacked on amendments; new proposals were introduced; a motion to send the bill back to committee was voted down. But when finally the vote on passing the bill itself came up, the issues were clear enough. By a vote of 224 to 194 it was defeated.

There are a number of explanations of why the House should turn down an appropriation bill to help solve one of America's most pressing problems. But the basic reason the bill did not pass was that a number of Congressmen—including the three from Long Island—insisted on the Powell amendment, which would deny Federal funds to southern schools that do not adhere to the Supreme Court's desegregation decision. The Powell amendment was almost certain to defeat the school-aid bill, as we pointed out earlier in the week.

On the final vote for the bill itself, Long Island Congressmen BECKER and DEROUNIAN cast their votes for passage. Suffolk Congressman WAINWRIGHT voted against it. For one thing, WAINWRIGHT wanted the Powell amendment included in the bill. For another, he felt that unless the States were forced to match Federal funds, the bill should not be passed. His overriding reason, however, for coming out against the bill was that he thinks there is danger of control when the Federal Government gives money to State school systems.

We think WAINWRIGHT is wrong and has cast a vote he will one day regret. Of course, there is a danger of Federal control. But the danger in America is infinitesimal compared to the burning need for more school construction. By tradition and by law, the kind of Federal control WAINWRIGHT says he is concerned with, is such a remote possibility that it hardly justified his stand on the bill.

Not long ago a White House Conference on Education elaborately explored the needs of America's school systems. The verdict was that the population grows at a much faster pace than school construction. The projections in the report of the future of our schools did not make very happy reading. By voting down the school-aid bill the House has jeopardized the future education of millions of American youngsters—and those yet unborn. It has also added a dreary chapter to the legislative record of the do-nothing (or do-wrong) 84th Congress.

Revolt in Poland

EXTENSION OF REMARKS
OF
HON. ALBERT P. MORANO
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 10, 1956

Mr. MORANO. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include a column of commentary by Miss Dorothy Thompson which appeared in the Washington Evening Star on July 9. This article deals with the uprising in Poznan, and the history and character of the Poles. It is a most informative article.

The article follows:

POLAND: PERENNIAL TIME-BOMB
(By Dorothy Thompson)

History placed Poland in an unhappy geographical position, with the vast Russian empire to the east and the rising power of Germany, originally of Prussia, on the west, and with no natural barriers to protect her, even before war took to the open skies.

The history of Poland, since the 18th century, from a time roughly corresponding to the birth of the United States, has been a history of partition between her more powerful neighbors, who before World War I, included, on her southern flank, Austro-Hungary.

For a century and a half, therefore, Poles lived under three fundamentally different regimes: Russian, Prussian-German, and Austrian, the last being the most culturally and politically compatible, since, like Poland, Austro-Hungary was a Catholic state with a more decentralized administration.

This atomization of the Polish nation would, it was hoped, serve the interests of the powers who sought to buy their own peace at her expense because each feared that a strong Poland, a nation of 20 million persons, might tip the balance of power by allying herself with one or the other side.

Each tried to break the Polish national spirit by the use and increase of non-Polish minorities, by attempts to convert Poles to Russian orthodoxy or Prussian protestantism, and innumerable other methods of blandishment and force. But the result was just the contrary.

Partition created modern nationalist Poland. Every Pole felt himself a Pole. "Polishness" took on the aspects of a devotion inseparable in many ways from that of a religion. Since the national cause against the Russian and Prusso-German overlords was closely associated with Catholicism, it was, in fact, a religious cause.

During the entire history of Polish subjection, Poland has been a perennial time-bomb. In war her legions were unreliable, and every internal crisis in Russia, Germany, or Austria was reflected by rebellions in Poland.

The Poles developed an almost unconscious technique of underground conspiracy, passive resistance, sabotage. They joined every revolutionary upheaval within the ranks of their masters, and equated all revolution with national freedom.

Abroad, in the West, to which many of them fled, they loyally supported the enemies of their enemies and fought for your freedom and ours.

At home, when occasion permitted, they played one master off against the other, with malice toward all.

Tenaciously protecting their language and religion, they produced, under subjection, an astonishing culture, all of it in the service of the Polish romance, served with romantic fervor.

Chopin, in Paris, was no less a national figure than Sibelius in Finland. Paderewski, thundering through the concert halls of two continents, was an ambassador without portfolio. Every Polish novel was a romance about Poland.

The Poles hated the Germans. They despised the Russians. They feared neither, being, one might say, mystically convinced that God was the sponsor of Polish national freedom, and that His cause cannot be lost.

Of all the East European peoples caught between Russian and German imperial ambitions, they were the most foolhardy, and alone among the Slavs were never tainted by Russian pan slavism. Russians were not their Slavic brothers. Russia was a boot on their necks. Temperamentally they are closer to the Finns and Hungarians, to whom they are not racially or linguistically related, than to the Czechs or Yugoslavs, who are also Slavs.

Alone among the eastern slavic peoples, they are not disappointed in communism. It is exactly what they expected, considering its source. Nothing good for Poland has ever come out of Russia. That they know from centuries of experience.

So why the rebellion in Poznan? The work (according to the latest explanation of the Kremlin's Central Committee) of American agents?

How very silly. Weeks ago this column predicted risings in Poland, fearing they would be premature. The Poles are simply running true to form and to their own character.

If they have more courage than prudence, it was always so. Courage and tenacity, not prudence, has kept Poland alive.

A lost cause that has ever refused to be lost.

Problems Facing the Small Farmer

EXTENSION OF REMARKS
OF
HON. ALVIN M. BENTLEY
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 10, 1956

Mr. BENTLEY. Mr. Speaker, under leave to revise and extend my remarks in the Appendix of the RECORD, I wish to insert the following letter which I have received from Mr. Frank W. Mortimore, of Morrice, Mich., regarding the problems facing the small farmer:

MORRICE, MICH., *June 27, 1956.*

DEAR MR. BENTLEY: Thanks for your interest in my initial attempt to convey to you my observations of family type businesses and their seemingly disappearance due to so-called progress. Although I didn't wish to mean the family type farmer was the only one suffering from this change it is the one closest to me.

In reply to Mr. Benson's letter to you concerning his views and purposes as told in answer to my thoughts previously expressed: First, I wish to say that recently I read in the small paper printed by the United States Department of Agriculture called the Agricultural Situation that sometime after World War II, 21 percent of the farmers had off the farm jobs and now it is estimated that 36 percent have off the farm employment. This indicates that this is their way of combating the price squeeze. This does not include the manager type farm of which the owner is in some other occupation and hires a manager for his farm or farms. Secondly, I believe that the commercial type farmers are the ones who will benefit from the subsidies. You see they are the ones who have been able to utilize the extension services from the agricultural agents of their counties and have been able to take advantage of the mass buying or purchases thereby defraying some of the high cost of operation.

The commercial type farmer, whether owner, manager, or hired manager does things on a larger scale making more efficient use of their equipment and can keep it replaced on better trade-ins as his volume is so much greater that he doesn't have to wear out the tools. Also the small farmer has to be a jack-of-all-trades and so can't afford to keep up with all the new ideas nor take the time to experiment with them as his operating margin is so narrow that he cannot spend the time or the money to fit the new methods to his farm. For example, he can ill afford the installation of a mow drier for the hay harvest or the bulk system for caring for his milk. The initial expense of these items is too great for the volume he handles. It would mean a poor dollar investment for dollar earned in labor or crop.

The larger operator makes use of self-propelled equipment and other large machinery to improve his conditions while the smaller operator is at such a disadvantage that he just can't compete. There are so many of us who are smaller operators that we can't all increase our land and that seems to be our problem. We cannot use the newly developed sprays for both insects and weeds or the hormones and the fertilizers. We can't always afford to fertilize as much as the county agent or others recommend. As we approach the saturation point the advantages are not so noticeable and for a gain we must use just enough to get the best yield for the amount invested. As before said the small operator has so many other things to study, to plan for besides doing the work that there is no time to do justice to everything and the small subsidy is such a small item that it doesn't help much. The restrictions are so great that we wonder what's the use and what is to become of the little man.

Sometimes between the Government regulations and the extension recommendations we wonder if living beyond our means is to be compulsory as one says to curtail acreage and the other says to sow more fertilizer and to use larger equipment, etc. So the surplus continues. We can't compete with the 40-hour weeks nor fringe benefits so we don't attract any of the laboring class for part-time work. Our cows do not lay off on weekends and holidays. We also must work with the seasons.

I think, as do many others, that the processing or in-between costs from the farm to consumer should be investigated. Also, I believe that more research into uses of existing crops and their surpluses as well as a search for new crops would be of value to all. One farm magazine states that some of the subsidies being paid could well be used for research such as is employed by the manufacturing field. Perhaps we would also gain a better idea of consumer demand. Maybe we should think about this instead of Government dole and politics.

One reads that the subsidies are such a help, but for the small landowner and operator it doesn't mean so much. For instance the wool situation: the subsidy was to be based on the national average price per pound subtracted from the support price. It was to the interest of the farmer to get as high a bid as possible for good wool. The buyers say what is the use of bidding higher, the Government will make up the rest. So they set a maximum price locally, about 45 cents per pound, whether the wool is short fiber, dirty or the best. It is all purchased for one and the same price. How does that encourage the small operator? What is more it looks as though the Government were buying the wool for the wool dealers. I correspond with a farmer in Australia and he says the reason that their wool is better than ours is because the government there buys it on strict conditions as to grades, cleanliness, and length of fiber. Then the mills know just what they are getting. No wonder the wool grown here doesn't meet the competition on the market. It also would appear that it never will. Another example of the subsidy would be that concerned with the milk or dairy industry. In this area grade B milk with a 3.5 butterfat test brought $3.20 per hundredweight in January, $3.15 on February 15, $3.10 on February 29. In March it brought $3.05 and since $3 per hundredweight even though $3.25 is supposed to be the government support price. I understand that the surplus grade A milk also dropped in this area. Some complicated explanation is that the national average test is 3.89 and so graded down to 3.5 makes it $3 or below. This seems to be the way that this subsidy works and with all the blanks and forms there are to fill out it just does not make sense or cents.

There are so many time consuming things that the family-type farmer can't do justice to them all. Our young people can't see any future with the insecurity, the hard work, and the time they must give to the armed services and so leave the farm for more lucrative opportunities. Only if one has a special love for rugged individualism do they stay to fight a gradually losing battle.

Mr. Benson says to be more effecient and in some cases that might apply as larger acreage uses the same equipment as the smaller, and by the statistics the farms are growing in size. We are using more fertilizer, better seed, and have improved livestock but we can't compete with so many restrictions as our costs accordingly are high. We are in too much of a price squeeze. The small operator usually in his own minor repair man, machinist, welder, veterinarian, and bookeeper. He must keep up on the latest methods of seeding, seeds and fertilizers, and insecticides and labor saving devices. He does the best he can with his small purchasing power but he must still be more efficient to meet conditions.

MR. BENTLEY, you took a trip over the flood area in your district this spring and saw the damage created. We know that similar conditions exist elsewhere in the country and that in many instances that the damage is more severe to property and human life. I believe that to some extent that man or the Government is to blame for this so-called natural disaster. You see we have encouraged the commercial farmer to use his cropland as efficiently as possible. To do this he has drained the swamps and cut down the forests to procure more acreage. Or perhaps the small farmer has been forced to sell his timber lot at a fair price to meet the current running expenses; at any rate it has been a mistake to destroy all of the protective cover of the land which nature has provided. This acts as a sponge to hold the water. When it is missing the water runs off quickly and nature goes on a rampage because her balance has been disturbed. The result is either a drought or a flood. One wonders if this could possibly have anything to do with the tornadoes, since we know that there are more extremes in temperature where our natural growing resources are unbalanced. That is something to think about, also we reclaim land then destroy it by upsetting the laws of nature. How can the Government help? Frankly, I don't know. Perhaps experiments of reforestation, wind breaks, dams, the soil bank, and encouragement of the balanced diversified farming which the family-type unit had might help. I believe that this kind of farming was better for the land for the conservation was greater. However, living conditions have changed and so must the methods, but still nature is the law of the land.

As to changes in methods of farming and other things one does not dare commit himself too far in advance for what is proper at the time is obsolete before the day is over. It takes much study and debate and sometimes I think there are too many politics in the farmer's problems, too many headlines in the papers about the costs of subsidizing them. The papers play up the consumer's side of the cost of food but fail to mention the producer's side. There are not enough headlines about the cost of handling the raw product. The consumer usually thinks that the producer gets the increase when the price of the product is raised on the grocer's shelf. For instance prior to the recent milk strike here, raw milk (grade A) was reduced like grade B from January to March at the farm but consumer prices remained the same. When the farmer was granted a small increase, the consumer price was raised also. In fact, the retail price was increased even before the producer ever received his raise, but the headlines didn't mention that the middleman was benefiting from the dairymen's strike. The same is true with the bread versus the wheat-marketing price.

Mr. Benson also says the output per worker is 2½ times what it was 25 years ago. I believe this is low as we have changed from horse farming to mechanized, which not only speeds up the work but releases land formerly used for animal feeding and hay for cash-crop farming. Of course, it must be remembered that the population has increased more in proportion than has farming. The Government has put acreage restrictions on crops but advocates increased fertilization, good seed, and cultural practices so therefore improved production has more than outgrown the restricted acres. Again it is the large commercial farmer who, with the same equipment, the same practices, the same incentive payments, who benefits. Somewhere I read that the barley supports went almost entirely to six Michigan growers and totaled many thousands of dollars,

while many other growers used theirs as feed and did not share in the subsidies.

This does not mean I am against the manager type or commercial farm for most of them do set a pattern that we in a small way can study and so might improve our own methods. Just as maybe a small factory although the competition is great, may if they have a good product be successful, so too can the small operator on the farm. Subsidies or the Government dole is not the full answer for the little fellow. If fewer subsidies were paid the part-time farmer would cease the production of surplus crops and stick entirely to his other occupation. This, to me, is the answer.

During World War II prices on all products were frozen such as farm produce or manufactured articles. For instance, gasoline was 18½ cents per gallon including taxes, now it is 30 to 33 cents per gallon. Wheat was set at $2 to $2.25 per bushel or thereabouts and is still about the same. So anyone who has the facts can see the cost-price squeeze is on. The consumer wants more services with the article he buys, whether it's packaging, delivery and upkeep, or insurance. For this he must pay but in a sense he doesn't know about it for it is not publicized. All he hears about is the millions that are being spent to subsidize the farmer and give him a 70 to 80 percent parity which means 70 to 80 percent of a favorable income. What other business can be told to live on three-fourths of a favorable or average income, and stay successful? That's why it hurts our pride to be on the Government dole so to speak.

Recently, the small local Farm Bureau groups had the problem of the small-time farmer discussed and it was almost unanimously agreed that they have to seek for off the farm employment to meet the challenge of living conditions. It was agreed that we in Michigan were particularly fortunate because there are chances for employment for the younger farmer. However, there is no immediate answer for those of us who are over the age of 40. I hope this gives a bit more information on our problems.

Thanks again for your consideration of problems of the district you represent.

Sincerely,

FRANK W. MORTIMORE.

New England and South America

EXTENSION OF REMARKS
OF
HON. ALBERT P. MORANO
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 10, 1956

Mr. MORANO. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include the following editorial from the Bridgeport (Conn.) Post regarding the promotion of air travel and increased trade with South America:

NORTH AND SOUTH AMERICA

Pan American World Airways has gotten out a 15-minute film entitled "Salute to New England," which is available for television stations, chambers of commerce, and civic bodies of various kinds. It shows in dramatic form the possibilities which lie ahead in the planned development of greater trade and passenger traffic between the North and South American continents.

"Why not?" the cynic may say, "Pan Am has an obvious motive in this. It's their business."

Of course, it is, but what of it? Is there anything to be ashamed of in that? If those who have an obvious interest don't take some intelligent steps to promote it, then who will?

In this case, as it happens, Pan Am's interest is the interest of all of us, for New England in particular has everything to gain and nothing to lose by increased trade with the Latin American countries. We need their raw materials, they need our manufactured products, each can do better by making the most of this relationship.

This particular film is based upon a 2-months economic survey which brings us right up to date on the whole subject. Ray H. Trott, president of the New England Council, recalls the experiences of this section during and immediately following the depression when so many of our industries closed and there did not seem to be any future for many of the others. The situation was met in this area by an intelligent, carefully organized drive to create new industries out of old and this drive was successful.

The depression ended with our being better off industrially, not worse off, than before it struck. One of the immediate problems facing us today is to find an ever-increasing foreign market for the products of our ever-increasing domestic production. In this respect, Mr. Trott points out, the great opportunity is increased trade with South America. The Latin countries have the minerals, petroleum, forest products, and many other raw materials which we need, while New England by buying such materials will in turn open a new and much greater market for this area's most important natural resource—the know-how and trained industrial ability of our people. New England and Latin America were made for each other because each has what the other needs and the promotion of this exchange can be profitable to both.

The showing of the New England Council's film then should be a public service in awakening everybody to the possibility of this situation and encouraging every rational step to promote its development. And when it comes to promoting travel north and south across the equator the possibilities are boundless.

"So there," says our friend, the cynic, once more, "so that's where Pan American World Airways comes in."

Very probably, and again we retort, what of it? Aren't we just that much more fortunate to have some influential agency attending to this promotion through intelligent self-interest, than to have it neglected and lost sight of, through ignorance and indifference?

New History of the Democratic Party

EXTENSION OF REMARKS
OF
HON. JOHN LESINSKI, JR.
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 10, 1956

Mr. LESINSKI. Mr. Speaker, this is the sixth installment of the New History of the Democratic Party. It graphically illustrates the way in which America responded to the twin challenges of Fascist aggression and Communist aggression and wrote one of the brightest chapters in her history. We Democrats are proud that both of these battles for liberty were waged under Democratic administrations.

The final chapter in this great history is as follows:

DEMOCRACY ON TRIAL IN WAR AND IN PEACE
COMBATING THE FASCISTS AND THE COMMUNISTS
(Pt. 6 of a New History of the Democratic Party)

The Democratic Party rolled up victory after victory in the elections of the 20 years, 1932–52. The biggest vote getter was Roosevelt, 4 times the unbeaten champion of American politics. In 1936 he topped his opponent by 11 million popular votes and 515 electoral votes—the biggest majority in American history.

President Truman, also undefeated, had a political style all his own. With his simple, direct approach to the voters, he was able, in 1948, to score an amazing political upset.

Harry Truman did not mind being called a politician. "Politics," he once said, "is public service." The tarnish that clung to the word could be removed if enough citizens, through their parties, took part in politics. So, working behind Roosevelt and Truman, were countless Democrats of lesser fame but equal dedication. They manned sound trucks, rang doorbells, watched polls, and cheered speeches, in that great turmoil of democracy that is an American campaign.

It was important for the people of the world that the faith of Americans in democratic government had been restored by the Roosevelt administration's battle against the depression. For history had chosen America to lead the democratic countries in the historic struggles of the 20th century against fascism and Soviet communism. These twin dictatorships, to whom popular government and individual liberty meant nothing, were to challenge the democracies first in a global hot war, then in a cold war. The stakes were to be no less than the freedom of every person on earth. It was a fight that was to test all the nerve and strength America could muster.

For a democracy to meet this challenge first involved a great task of popular education. During the 1920's, the United States had become increasingly isolationist. Minds had to be changed, people convinced that the world had become so small as to make events in other lands bound to affect the well-being of America itself. President Roosevelt pointed up the evils of the Fascist dictatorships. He also took action to strengthen the bastions of freedom. A reciprocal-trade program was passed to promote friendship through increased trade. In South America the big stick was replaced by the policy of the good neighbor. Over bitter opposition from isolationist forces, a Democratic Congress approved, in 1940–41, a peacetime draft. This provided at least partial preparation for the war launched by the treacherous Japanese attack on Pearl Harbor.

Pearl Harbor changed minds quickly. It unified America as never before. The mighty story of victory over Germany and Japan is too recent to need retelling. No political party can take credit for winning that struggle and ending the war. To do so would be to disparage the work of the Armed Forces and the performance of the great industrial machine on the home front. But directing the entire effort was Franklin D. Roosevelt. Despite his concern with the fighting, he never ceased to plan for permanent peace. His declaration of the four freedoms and the Atlantic Charter were eloquent statements of the peace aims of democracy. The entire allied world hailed him as the supreme spokesman in the struggle for the preservation of liberty. But on the eve of victory, exhausted by his labors, he died. Although an entire world poured out its grief, the most fitting epitaph was that on his tombstone: "Died in action."

But victory over the Axis meant the end of only one form of dictatorship. Russia, America's wartime ally, also had designs on the freedom of the people of the world. The free world scarcely had time to catch its breath before the well-organized forces of world communism moved into the power vacuums fascism had left.

After 4 years of sacrifice and war, many in America wanted to relax. But the Truman administration kept a close eye on Russian actions. One of the earliest and most important examples of President Truman's alertness to Russian tactics occurred in 1946, when the Russians failed to live up to their agreement to evacuate their troops from strategic, oil-rich Iran. As a result of President Truman's forceful insistence, the Russians finally backed down and withdrew their troops.

In February 1947 with Communist guerrilla activities gaining in intensity in Greece, Britain advised the United States that it could no longer maintain its forces in Greece and Turkey, and would be forced to withdraw them in a matter of weeks. President Truman made a quick, bold decision. On March 12, before a joint session of Congress, he enunciated the now famous Truman doctrine—a policy of United States intervention where necessary to save nations in danger of being taken over by a dictatorship—and asked Congress to authorize a $400 million program of economic and military aid to Greece and Turkey.

The Truman doctrine is now regarded as a major turning point in the cold war with the Communists, for it told the world that America was determined to lead the free world in the fight against communism and its causes. It was followed by a series of dramatic programs that literally saved Western Europe from the grip of communism: An emergency-aid program that helped Europe survive the cold winter of 1947–48; the historic Marshall plan (a long-range coordinated aid program to take the place of previous piecemeal programs); and the Berlin airlift, another dramatic example of United States determination to resist every Russian pressure.

As the economic strength of the free world began to grow, the Truman administration turned to the task of shoring up its military strength. The North Atlantic Treaty became the first in a series of collective security pacts, designed to prevent Communist aggression by making it plain that any attacker of free nations would have to contend with the armed might of the United States. This treaty was supplemented by a program of United States military aid to the member nations.

While building these safeguards, the Truman administration did not neglect the United Nations, the dream of Franklin Roosevelt as the right institution for lasting peace. The crucial test of the UN came in Korea, where troops from UN countries turned back a naked act of aggression on the part of Soviet and Chinese communism. The heavy sacrifies made by the American people in this combat put a brake to Communist expansion in the Far East, paving the way for a relaxation of world tensions in the following years.

Thus, in 20 years, the American people, under Democratic leadership, had revolutionized their thinking about world affairs. They had accepted the responsibilities of being the greatest nation on earth. They had defeated fascism and built ip a strong network of defense against communism. The entire economy had adjusted to the fact that, as long as aggressors exist, the only sure way to keep peace was to keep strength. Democratic foreign policy was so well-grounded in the realities of the world situation, that the Republican Party, despite its criticisms, found it could not do away with a single major program when it came to power.

As the cold war progressed, defenses against Communists also had to be raised within the United States. The Communist Party in America was at peak strength during the Hoover administration when 103,000 persons voted the Communist ticket for President. During World War II, some of these Communists had taken advantage of the spirit of wartime friendship to try to infiltrate government and industry. But as soon as the postwar aggression became evident, the Democratic Party began to dig them out.

When the Democrats left office in 1952, there was only one-fourth as many Communists in the country as 20 years earlier. The top leadership of the Communist Party had been wiped out—prosecuted and imprisoned by Democratic administrations. New laws were added to the statute books, a loyalty program was set up in the Government, and the protective strength of the Federal Bureau of Investigation greatly increased.

To administer a successful internal security program required a delicate balancing between the dangers of subversion and the importance of individual freedom. The disloyal had to be separated from the dissenter, and the old-style progressive not confused with the Communist. The Democratic Party opposed those who tried to use fear of Communist infiltration to check social progress and defame minority groups. In fashioning its internal security programs, it tried to be guided by the warning of President Roosevelt: that "if the fires of freedom and civil liberties burn low in other lands, they must be made brighter in our own."

The program to extend the New Deal and defend democracy from communism occupied most of Harry Truman's terms in office. After seven of the most eventful years in history, he retired, and the Democratic Convention selected Adlai Stevenson as its presidential candidate. Stevenson, despite his distinguished record as Governor of Illinois, was not well known nationally at the time of his nomination. But beginning with his famous acceptance speech, in which he sounded the keynote for the Democratic campaign—"Let's talk sense to the American people"—the eloquence and forthrightness of Stevenson's campaign speeches made a quick and deep impression on the voters in the short period between the convention and the election. Although defeated by a military hero who had been in the public eye for a full decade before Stevenson appeared on the national scene, the Illinois governor received more votes than any other presidential candidate in history except two: Franklin Roosevelt and Dwight Eisenhower.

General Eisenhower's victory was not a victory for the Republican Party. Notwithstanding his personal popularity, the party won the Congress by the narrowest of margins, and quickly lost it 2 years later. Nor was the Eisenhower victory a repudiation of the Democratic legislation of the previous 20 years. Public pressure forced Eisenhower to embrace the New Deal in his campaign, and to keep the basic domestic and foreign programs intact.

The Democrats from 1952 to 1955 maintained a policy of constructive opposition to the Republican administration. Time and again, they saved President Eisenhower from the Right Wingers and isolationists within his own party. Although criticizing sharply where the President's program was not in the public interest, the Democrats were not content merely to oppose. Especially in the Democratically controlled 84th Congress, they proposed constructive alternatives.

Satisfied that it still represented the wishes of the great bulk of the people of America, confident that adherence to Jeffersonian principles would be rewarded with a popular mandate in the near future, the Democratic Party looked forward to future years of service to the people of America. The faith and purpose which had guided it through the first 150 years had been reasserted by many Democratic leaders, and summarized eloquently by Woodrow Wilson:

"The Democratic Party, and only the Democratic Party, has carired out the policies which the progressive people of this country have desired * * * I feel confident that we know the spirit of the American people, that we know the program of betterment which it will be necessary for us to undertake * * * Our principles are well known. We believe in political liberty and founded our great Government to obtain it * * * the liberty of men to choose their own lives and of people to choose their own allegiance. Our ambition, also, all the world has knowledge of. It is not only to be free and prosperous ourselves, but also to be the friend and thoughtful partisan of those who are free or who desire freedom the world over * * * I thank God that those who believe in America, who try to serve her people, are likely to be also what America herself from the first hoped and meant to be—the servant of mankind."

AFL–CIO Group Supports H. R. 10261

EXTENSION OF REMARKS
OF
HON. MELVIN PRICE
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Saturday, July 7, 1956

Mr. PRICE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following resolution adopted on July 3, 1956, by the Oil, Chemical, and Atomic Workers International Union, AFL–CIO, supporting S. 4146 and H. R. 10261:

SUPPORT FOR GORE AND HOLIFIELD BILLS

The members of the Oil, Chemical, and Atomic Workers International Union, AFL–CIO, who work in the atomic-energy industry have consistently been supporters of programs in this field which redound to the benefit of our entire Nation.

As the first nation to use the power that lights the stars for destructive purposes, America has an obligation to be first in leadership in the peaceful uses of atomic energy without regard to mere motives of profit.

By their actions, the private utilities have clearly demonstrated to the people of the United States that they do not intend to build and operate atomic reactors for the production of power unless and until the United States Government finances such reactors for them. It is our fundamental belief that despite the utility industry's dragging its feet we must maintain this Nation's leadership in the race for world peace—as we are doing in the race for military leadership—by accelerating the power-producing-reactor program of the United States.

The Atomic Energy Commission for the year 1956 will use a total of 58,217,488,000 kilowatt-hours of electricity, or 12.8 percent of the total consumption of electricity in the entire United States.

Many manufacturing companies, in the interest of increased profits, engage in the common practice of building their own plants to produce electricity for their own power needs. By following this same principle, the United States could not be wrong in building atomic-energy reactors for the production of power on the sites of AEC installations to serve the needs of those facilities. Such an experimental reactor pro-

gram would materially reduce the cost of electric power produced by atomic energy.

The many companies that have operated plants for the Atomic Energy Commission over a period of many years and have experimented with prototypes of power-producing reactors already have the technological know-how to eliminate the trial-and-error of empirical methods the private utilities are presently insinuating must be overcome before they can make expenditures of stockholders' money.

We therefore urge that the Members of the 84th Congress consider and pass in this session the Gore bill, S. 4146, and the Holifield bill, H. R. 10261, so that a power-producing program can be put into effect immediately.

Such a program will provide concrete evidence to people of good will the world over that our Nation has taken the lead in this foremost of present peacetime uses of atomic energy. By providing a demonstration of the feasibility of atomic-power electric utilities, it will as well encourage the prudent investment of utility stockholders' money for expanding automatically produced electric power in the future.

Adopted July 3, 1956; Atomic Energy Workers Council, Oil, Chemical and Atomic Workers International Union, AFL–CIO, Washington, D. C.

JAMES GREENE, *President.*
THOMAS W. BOUCHER,
Secretary-Treasurer.
ELWOOD D. SWISHER,
Coordinator.

Civil Defense

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 10, 1956

Mr. MULTER. Mr. Speaker, the following is my testimony before the Military Operations Subcommittee of the House Committee on Government Operations on July 2, 1956:

STATEMENT OF REPRESENTATIVE ABRAHAM J. MULTER, DEMOCRAT, 13TH DISTRICT, NEW YORK, BEFORE THE MILITARY OPERATIONS SUBCOMMITTEE OF THE HOUSE COMMITTEE ON GOVERNMENT OPERATIONS, JULY 2, 1956

Mr. Chairman and distinguished members of the committee, I appreciate the opportunity to present this statement to your committee in connection with this very important subject of civil defense. I know that your committee has labored hard and long with a most difficult problem.

Like many other Members of the Congress, I, too, introduced a bill on the subject. My bill bears the number H. R. 5943, and was introduced on May 2, 1955. Since the bill was introduced, I have received letters from all over the country approving the principle of my bill and urging its enactment.

Civil defense as we knew it during World War II is as obsolete and as useless as an old musket loaded by means of a powder horn. The dreadful but realistic view of the situation must accept the fact that if and when the bombs start falling, it will be absolutely essential to invoke martial law, at least temporarily, in those areas which are hit. If order will ever be brought out of such chaos, it will be done only because we will be able to bring into action at once a civilian force large enough and well trained enough to cope with the situation.

That is why my bill creates within the Defense Department a Department of Civil Defense, under the direction of a Secretary appointed by the President.

With an initial allocation of $25 million, the new Department would be authorized to prepare, on a nationwide scale, a comprehensive and effective program of civil defense, to make known to the public to the fullest possible extent, consistent with national security, the facts about the destructive power of the instruments of modern warfare, and to supply itself with an adequate number of personnel, either through the normal voluntary procedure, or, if necessary, by means of the Selective Service System. The bill also gives the President the power to transfer personnel into the Department of Civil Defense in case of a national emergency, as and when proclaimed by the President or the Congress.

There is an immediate, pressing need for such legislation. The civil defense program in the United States at present is utterly inadequate to cope with the danger of enemy attack. The problems of civil defense cannot be effectively separated from the problems of military defense.

The fiscal resources of the individual States and local communities are inadequate to guarantee equal minimum protection to all peoples in the United States, and although the patriotic efforts of part-time volunteer citizens is commendable, the complex requirements of an effective civil defense system call for full time, thoroughly trained personnel recruited on a national scale as in our present military departments.

Practically all of the Democratic members of the New York delegation have introduced bills similar to mine, or have indicated their support of such a bill and their agreement with the principles thereof.

I urge your committee to take early and forthright action on this very important matter.

George Meany's Further Statement on the Poznan Uprising

EXTENSION OF REMARKS
OF
HON. CLEMENT J. ZABLOCKI
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 10, 1956

Mr. ZABLOCKI. Mr. Speaker, under leave to extend my remarks in the CONGRESSIONAL RECORD, I wish to include a telegraphed message sent by President George Meany, of the AFL–CIO, to a mass meeting sponsored by the Polish-American Congress, which took place in Chicago, Friday evening, July 6.

I believe that Mr. Meany's statement does not need any elaboration. Because it deals with the Poznan rebellion which has such far-reaching implications in the struggle of freemen against communism, I commend it sincerely to the attention of the membership of this body.

The statement follows:

Please convey to the mass meeting sponsored by the Polish-American Congress in Chicago the heartfelt sorrow of the workers of this country over the tragic fate of the workers of Poznan who were slaughtered in cold blood by their Communist oppressors.

In this modern day and age, it is an outrage against all our concepts of decency, humanity, and justice that unarmed workers, asking only bread and freedom, should be cut down ruthlessly by tanks and machineguns.

The heroic workers of Poznan who participated in the uprising have aroused the highest admiration and the deepest sympathy of freedom-loving people of every country. At the same time, the ruthless savagery with which the Communist puppet government of Poland suppressed the strike of workers protesting against starvation and exploitation has shocked the conscience of the entire free world.

To think that this atrocity against workers should take place under a regime which pretends to be a "working class democracy," a proletarian government. To think that such terrorism should occur right in the midst of the so-called liberalization trend behind the Iron Curtain.

What a scorching light has thus been shed on the real nature and meaning of the 20th Communist Congress decisions. How fraudulent and empty the pretensions of the new rulers of the Kremlin appear in the light of this new evidence of unmitigated brutality. What an eye-opener this occurrence should prove to those who have entertained illusions about the end of Stalinist terror and the beginning of humanization behind the Iron Curtain.

It is to be expected that the Moscow propaganda machine should denounce the demonstrations of the Polish workers as "enemy provocations carried out by imperialist agents." They tried to use similar camouflage 3 years ago to hide the true causes of the June 17 uprisings of the workers of East Germany. The Kremlin dare not admit that it is subjecting workers in all captive lands to inhuman exploitation in order to build up its gigantic war production and extend its imperialist penetration of underdeveloped nations in Asia and Africa.

According to news reports from Poland, order has been restored in Poznan and the city's streets are once more quiet. But the Polish workers, whose blood stained those streets, have not died in vain. They fought for the ideals of all liberty-loving people, from New York to New Delhi, from Chicago to Casablanca, from Berlin to Formosa.

We must keep up that fight. We must continue to expose the hyprocrisy of communism. We must extend a helping hand to its victims, wherever possible.

We must keep the hope for freedom, and eventual liberation alive in the hearts of the prisoners of communism enslaved behind the Iron Curtain. Let our faith in divine justice inspire us to pray and work for the day when human justice will prevail everywhere on earth.

Interfaith in Action

EXTENSION OF REMARKS
OF
HON. SAMUEL N. FRIEDEL
OF MARYLAND
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 10, 1956

Mr. FRIEDEL. Mr. Speaker, as I have the honor and privilege of representing the Seventh Congressional District of the Free State of Maryland in the Congress of the United States, I should like to call its attention to the fact that my great State is fully entitled and justly merits its name as the "Free State."

Established 324 years ago by Lord Baltimore as a haven for persecuted Catholics, the Colony of Maryland established freedom of religion and was among the first places in the entire world to do so.

That this noble tradition still lives is attested by the holding of an annual in-

terfaith baseball game in the city of Baltimore where Protestant, Catholic, and Jew, represented by Boumi Temple of the Shrine, the Knights of Columbus, and the B'nai B'rith, have joined hands in order to raise funds which are devoted to charitable causes of all faiths.

At this year's annual interfaith baseball game, two Baltimoreans, active in civic affairs will be honored by the interfaith committee. These two gentlemen are Elkan R. Meyers and Nicholas C. Mueller.

Mr. Meyers will receive the interfaith award in appreciation of untiring efforts in behalf of the Red Cross, National Conference of Christians and Jews, Boy Scouts, Community Chest, the Associated Jewish Charities, the Jewish Welfare Fund, the Jewish Medical Center, and the Jewish Big Brother League.

Mr. Mueller will be honored in recognition of his services to the Big Brothers of Baltimore, the Optimists Boys Clubs, the Boy Scouts and other organizations.

Mr. Maurice R. Shochatt, the gifted editor and publisher of the Baltimore Beacon, wrote the following article, which appeared in the July issue of the Baltimore Beacon. Under leave to extend my remarks, I include the article in this address:

The 11th annual interfaith baseball game, to be played on Tuesday evening, August 14 at Memorial Stadium, is more than just a game. It represents more than rivalry of two cities, although the Baltimore Orioles and the Washington Senators are sure to provide the fans that night with one of the most exciting games of this season.

It represents more than another evening's entertainment, although the pregame pageantry, scheduled to begin at 7 p. m., will be extremely colorful and diversified. It represents more than another opportunity to see a celebrity in person, although the headliner to receive the annual interfaith award will truly be outstanding in every sense of the word.

For the annual interfaith game symbolizes much more than just another baseball game. It stands for the fact that the Boumi Temple Shrine, Knights of Columbus, and the B'nai B'rith have joined hands in the sponsorship of this game to indicate that all faiths can live harmoniously and peacefully side by side in Baltimore.

That sentiment is affirmed in the interfaith declaration of principles which states, in part: "Though our religious heritage is founded in the great faiths of Catholic, Protestant, and Jewish beliefs, we are all united in the great and unique brotherhood of American citizenry founded upon the equality of all men."

We therefore ask you to display your solidarity with these beliefs by attending the coming interfaith game on the evening of August 14.

Be with us that night, regardless where your seat in the stadium may be. For it is the spirit of the game that we ask you to bear in mind first and foremost above all. Furthermore, you can perform another good deed by making it possible for some underprivileged youngsters to attend this game through your generosity. Please also bear in mind:

1. That Baltimore is proud to have the record of being the first city in the United States of America to sponsor an interfaith baseball game.

2. That all the funds raised through the interfaith game are devoted to charitable causes of all faiths.

3. That, as part of this program, annual interfaith awards are presented to public and private senior high schools in the Baltimore area for services rendered in fostering interfaith.

Support the interfaith baseball game and help in the realization of the interfaith credo: "Work, live, play together."

Speech of Major General Deane at Colorado Conference, June 16, 1956

EXTENSION OF REMARKS
OF
HON. FRANCIS E. WALTER
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 10, 1956

Mr. WALTER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address:

SPEECH OF MAJOR GENERAL DEANE, COLORADO CONFERENCE, JUNE 16, 1956

Averell Harriman and I were together in the Soviet Union in the last 2 years of the last war. I can think of no place where Americans can get to know each other better than working side by side in the chilly atmosphere of Moscow. I wish I could give you the feeling of the service that Ambassador Harriman rendered to his country in those years. Indeed, I wish you could have representatives from each of the many governmental operations that the Governor has directed in the past 25 years to tell you of their personal experience in working with this great American.

In time of war, every question of statesmanship and diplomacy has facets that are military in character. Often military considerations predominate. It was for this reason that I was consulted on most of the questions that arose in Moscow during Ambassador Harriman's tenure, and thus had an opportunity to observe the manner and the effectiveness of his performance of that task.

KNEW THE SOVIETS

He came to Moscow prepared to an extraordinary degree, and you will find that he came to every position that he has held prepared to an extraordinary degree. He will go to the Presidency prepared to an extraordinary degree.

As far as his job in Moscow is concerned, he had visited the Soviet Union twice before taking up his position as Ambassador. He had been there once with Lord Beaverbrook, and it was at that meeting that the American lend-lease program initiating aid to Russia was formulated. Later Harriman went to Moscow with Winston Churchill, and it was at that meeting that the American position with respect to the establishment of a second front was explained to the Russian people. I know that these meetings were widely publicized in the Soviet Union. I know from personal experience that, unlike their leaders, the Russian people held Averell Harriman in the greatest affection and esteem.

Now, aside from these Russian contacts, Harriman had attended every British-American meeting during the war, from the Atlantic Conference of 1941, to the Quebec Conference in 1943. He had the complete confidence of the President and the Joint Chiefs of Staff. He was thoroughly familiar with their strategic objectives. Just prior to going to Russia he had administered the lend-lease program in the United Kingdom, and he had established close and friendly relations with the Prime Minister and the other political and military leaders of the British Empire.

So you see, he came to Moscow fully equipped, and he did a magnificent job. His objectives in Russia were at first military in character. Later, as the victory became apparent, the objectives became more and more political in nature. It was very interesting for me to observe the fine balance that Governor Harriman was able to maintain between helping the Soviet Union to help us win the war by furthering the alliance that would bring about an early victory while at the same time rigorously protecting the postwar interests of the United States. He never for one moment forgot what the situation would be after the war. He discerned and he warned that our wartime friendship with the Soviet Union was a fragile thing, born of expediency, and it was almost certain to collapse once the war was won.

PUSHES WAR EFFORT

There were countless military projects he helped put over in the Soviet Union. For instance, Hap Arnold was particularly anxious to have American bases in the Ukraine so that we could have shuttle bombing back and forth. This was anathema to the Soviet leaders. The idea of having American troops on Russian soil was not compatible with any of their thinking. They had even refused an American wing of bombers coming to Russia at the time of most dire need—when the Germans were approaching the Caucasus. Within 2 months of Ambassador Harriman's coming there, he had won from Stalin permission for the establishment of American bases. Within 6 months, American planes were operating from American bases in the Soviet Union.

Or again, on a more humanitarian scale, there were 100 or so American soldiers interned in Russia, whose planes had been forced down by accidents over Siberia. Harriman was determined to get those boys out. The Russians, on good grounds, said they couldn't possibly be released because it would be a violation of Russia's neutrality with Japan. Within 2 months Harriman had those boys released. He not only had Molotov's consent, but he had the Russian secret police prepare the most fantastic plot you can imagine for their escape. If you don't think that's being effective—you go to Moscow and try to duplicate it.

In directing the lend-lease program, Harriman scrutinized with the utmost care to make certain that what the Russians asked for was something to be used in the prosecution of the war. He resisted vigorously everything the Russians asked for that could only be used to broaden the base of their postwar economy. He is the man who stopped such things as port facilities, industrial facilities, and what not, going to the Soviet Union, often against the approval of people in Washington.

DEFENDS POLAND

I think that Harriman's defense of Poland is something that has not been made sufficiently well known. He was 1 of 3 persons who were designated by the heads of state to implement the Yalta decision with respect to the future of Poland. He is the only one who held out adamantly until the very end that the decision should be implemented in the spirit in which it was made. Had the British Government and our own Government held out with the same degree of firmness that Harriman did, Poland might not be behind the Iron Curtain today.

Perhaps his greatest diplomatic victory was the night of the Japanese surrender. He met with Molotov and the British Ambassador that night to formulate an agreed reply to the Japanese offer of surrender. During the course of those discussions, Molotov very cagily said that the command to accept the Japanese proposals and to ad-

minister Japan in the postwar years should be a joint command; and suggested that we might like to have General MacArthur and they would have Marshall Vassilevsky.

OUTWITS MOLOTOV

Well, that proposal was no sooner out of Molotov's lips than Harriman took him up one side and down the other and left him a burning crisp. He pointed out, with a great deal of justification, the part that had been played by the Soviet Union as against the part that had been played by the United States in the defeat of Japan; and what would have happened to the Soviet Union had not the United States taken that part. Siberia would have been a Japanese-occupied territory.

Molotov, of course, sputtered and fumed, but Harriman told him that you can take that reply to your boss. There will be no agreed reply to the surrender offer until you recognize that there will be a single command in the Far East, and that command will be an American command, and the commander will be Gen. Douglas MacArthur.

Harriman returned to his office with no agreed reply to the Japanese. Within 30 minutes Stalin's secretary telephoned and said that Mr. Molotov had misunderstood his instruction; they would be delighted to have General MacArthur as the Supreme Commander in the Far East.

If not for the firm position taken by Harriman at that time, if the question had been sent to Washington and became the subject of a debate, we would have had the most confused position in the Far East—the same confused position that we have suffered in Germany and Austria. But, fortunately, we had a man there at that time who had the courage to act fast and let the Russians know in no uncertain terms just where they got off on that particular issue.

ALWAYS ON THE JOB

How did he do all this? He did it by being everlastingly on the job. Averell Harriman is a fellow who is on the job when he wakes up in the morning, when he sits down to breakfast, when he meets you in the office, when he is talking to someone in the living room, and when he is trying to get to sleep at night. He just never quits his job.

There was one incident that rather amused me. Averell is a particularly concentrating person. This concentration is relieved, of course, by the magnetism of his smile, but when he's concentrating he doesn't smile very much. On one occasion I was sitting in the lobby of the Bolshoi Opera House with a man named Litvinov, who had been the Russian Foreign Minister.

Averell Harriman came by, and he was little stooped, he was very preoccupied, and he did look a little grim. Litvinov turned to me and he said: "Is it true dat dat man has a hundred million dollars?" I said: "Well, I don't know how much he's got. I saw in a magazine that he does have a huge fortune, and it did mention something about a hundred million dollars, but I have no way of knowing." And he gave a terrific sigh for an old Communist, and he said: "My God. How can a man look so sour with a hundred million dollars?" Of course, he wasn't sour—just absorbed in his thoughts.

More than stick-to-it-iveness, and that diligence that he has, he has the power of persuasive logic. Time and again Stalin—after talking to Harriman—made decisions in favor of the United States point of view against the advice of his own advisers. Harriman won his points by the keenness of his intellect and by knowing and understanding what he was talking about.

In Russia he operated mostly from midnight until dawn. That was when you always met the Russians. But would he come home from a 3 a. m. meeting and hit the hay and send a telegram the next morning—not Averell. He would come back from that 3 o'clock meeting, telephone me and wake me up and say: "Come on over. We've got a telegram to get out." Then we would go over and analyze the meeting and try and give the feeling of the situation to our President and Secretary of State. And when this was finished, long after daybreak, if he didn't have something else for me to do, then I might be able to get a little sleep. Everyone who worked for Averell Harriman knew that there was no end to office hours for the duration.

THE OUTSTANDING CANDIDATE

In Governor Harriman we have an opportunity to select a man of whose integrity there can be absolutely no doubt. He is a patriot. He is happiest when he is serving his country. He comes to public life prepared by experience. There is no American who has had the background and experience that he has had in domestic and foreign affairs. He brings to public service a superior intellect trained particularly in the fields of statesmanship, diplomacy, military affairs.

He is an outstanding economist, both by training and by experience. It has been his lot in the administering of lend-lease programs to go in deeply to the economy of countries. It has been his lot as the Secretary of Commerce to go into the economy of countries. It has been his lot as the administrator of military aid in the postwar period to know the economy of such countries as our allied friends in Western Europe. It has also been his lot to study the economy of our enemies; and I want you to be sure that he did that when he was in the Soviet Union. He was the person who initiated the idea of having an agricultural expert on the Embassy staff in the Soviet Union.

So I feel that most important of all he is trained in the field of economics. I think that this cold war, with everything else being stalemated, is going to be decided, in the long pull, by the economic stamina of the two sides. And I think Harriman would bring to the United States experience and knowledge in this field that cannot be duplicated.

Averell Harriman brings to public service a dedication and an intensity that is absolutely unremitting. So I say, that as a retired Army officer, as a contemporary of Ike's, as a registered Republican, I am going to vote for Averell Harriman. I commend him to you.

Foot-in-the Door Legislation

EXTENSION OF REMARKS

OF

HON. H. R. GROSS

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 10, 1956

Mr. GROSS. Mr. Speaker, under leave to extend my remarks, I include the following editorial which appeared in the Waterloo (Iowa) Daily Courier on July 4, the day prior to the final vote in the House on the Federal school construction bill, H. R. 7535:

Foot-in-the-door legislation to establish the principle of Federal aid to education is now being considered by Congress.

Bills being debated provide only trivial amounts of aid. The House Democrats are proposing $400 million a year in building aid for 4 years. The administration proposal is for $250 million a year for 5 years.

Even the Democratic bill would construct in the whole Nation only about 115 schools a year comparable to Waterloo's new West High School. That won't even make a dent in actual school-building needs. These proposals are obviously only a means of starting a precedent.

No one has yet advanced a valid argument for this Federal assistance. True, some school districts are in trouble because there is an inadequate financial base within the district. But there is not a State in the Nation which cannot provide an adequate education to its children in adequate school buildings. The Federal aid drive comes from those who, failing to get State legislatures to vote the money, propose to get the money from Congress. The public is then supposed to think it is getting the funds for free.

Of course there are variations in the ability of States to finance education. But no bill has yet been seriously considered by Congress which would distribute Federal aid exclusively on a need, or equalization, basis. Even the richest State in the Union, New York, would get Federal aid under all bills considered by Congress. Thus, even though equalization is the only argument for Federal aid with a shred of validity, the pending bills do not propose that the money be distributed exclusively on that basis.

Representative SAMUEL K. MCCONNELL, ranking Republican on the House Education Committee, will, however, introduce amendments which would provide the aid exclusively on a need basis and which would require State matching funds. "Many States," he points out, "now make no contribution toward school construction. * * * It seems to me to be especially important, if the Federal Government is to provide funds for school construction, that State governments do likewise."

The building-aid bills should be defeated. If, however, Congress is determined to transfer a share of the responsibility for education from States to the Federal Government, it should do so only on an equalization or need basis. Under that type of program there is a greater possibility that the appropriations could be discontinued after the so-called emergency building needs of the present period have been met.

Who Is Russia Trying To Fool?

EXTENSION OF REMARKS

OF

HON. RAY J. MADDEN

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 10, 1956

Mr. MADDEN. Mr. Speaker, the following article by Richard S. Kaplan, first district commander, department of Indiana, the American Legion, sets forth some interesting and factual statements concerning the Kremlin and its program of world conquest:

WHO IS RUSSIA TRYING TO FOOL?

(By Richard S. Kaplan, first district commander, department of Indiana, American Legion, 1955–56)

Premier Nikolai Bulganin and Communist Party Chief Nikita Khrushchev have destroyed the image of Stalin and have confessed that the great Stalin was a ruthless liar and murderer. They have apologized for the deliberate and senseless slaughter of millions of Ukrainians, Poles, Jews, and others in Soviet Russia since Stalin became head of the Communist state.

Those two honest (?) souls wept bitter tears as they made this confession, but forgot to tell the Rusian people that they were part and parcel of the Stalin conspiracy; that they stood idly by participating in the sadistic joy that was Stalin's as innocent people were shot from behind at his behest.

Now they ask that we forget all that has happened and believe these two who want peace—nothing but peace—at their price. I have no doubt in my mind that many thousands of Americans believe in the sincerity of Bulganin and Khrushchev. But they forget some very important facts and they do not realize that what is happening is that these two masterminds have switched signals. No more obvious threats of war. They intend to win a new way. This time, as the NATO ministers agreed, a few weeks ago, the world is facing a new and dangerous agile Soviet foreign policy based on economic and cultural penetration.

Let us analyze some indisputable facts.

Many years ago Nicolai Lenin, who has not as yet been denied by Bulganin and Khrushchev, and who was smuggled out of Switzerland in a boxcar and brought to Russia to sparkplug the underhanded overthrow of the Kerensky government, the only democratic government Russia ever knew, wrote these words, "It is inconceivable that communism and democracy can exist side by side in this world. Inevitably one must perish." Read those words over and over again until they sink indelibly into your mind. Those words constitute the fixed purpose of Russian communism, namely, to take over the rest of the world.

The writings of Marx and Lenin constitute the basic law of communism. If we are to listen to the two present leaders of Russia on the matter of coexistence peacefully, then we must be made to believe that a positive, inflexible, basic, and fundamental purpose of communism is about to be destroyed and that is pure, unadulterated hogwash. Eliminate this purpose and you destroy the purpose of existence for the Communists, and the Russian leaders know it. They have never for one moment forgotten the basic teachings of Marx or their revered saint, Lenin, and don't let anyone fool you on that score.

Let us again go back to Lenin's words. He also wrote: "We must in no case, not even in a single strategic maneuver, tie our own hands. If I pursue an enemy who does not move in a straight line, but zigzags, then I, too, must zigzag in order to reach him; when the turns of history are very sharp, the turns of the party's policy may also have to be sharp." This plan of action has not been repudiated by the present leaders of Russia.

Lenin also laid down this inflexible rule: "Until the final issue, between capitalism and communism, is finally decided the state of partial war will continue. We say 'a la guerre comme a la guerre.' Do they believe that the revolution can proceed calmly, smoothly, without torments, without infliction of pain, without terror, without horror?" And this fundamental belief has not been repudiated by Bulganin or Khrushchev.

The laws of communism are clearly laid down and defined. It's a struggle to the death between capitalism and communism. Lie, cheat, steal, make agreements but keep your fingers crossed and forget the agreements if it will serve your purpose. That's the Communist law and creed.

Doesn't Eisenhower know this fact? Doesn't Dulles know it? Don't the great leaders of the world know these facts? Certainly they do. They must know it. Then what in the name of all that is sane and holy keeps our leaders going around in circles and being whipped at every turn by the now sweet and gentle approach of the Russian killers?

Let's take a leaf out of the Russian book. It was Khrushchev who threatened, while visiting England, "Don't ever shake your fist at a Russian." It's about time we stop our diplomatic blunderings. Let's stop the efforts to use us as propaganda bait. Let's tell Russia in no uncertain terms, "Don't ever dare to threaten us or shake your hydrogen bomb in our face or you may find it exploding in your own kitchen." Let us get on with the strengthening of our Nation and the nations truly friendly to us. Give not an inch. Show communism that although we are a peace-loving people, we, too, can put iron in our fists when we are threatened.

The Communists understand only force and strength. They respect it. Then give them what they understand and respect.

There can be no peaceful coexistence between capitalism and communism. Marx said so. Lenin said so. Engles said so. And in this case, we believe those otherwise great liars.

But we will believe Bulganin and Khrushchev, believe everything they say, when:

They see to it that every slave laborer in Russia is freed.

They demand the immediate return of every Allied serviceman who was captured in Korea and whose disappearance has not been explained.

They return every ship this country loaned them under lend-lease during World War II.

They publicly acknowledge the debt they owe us for the gifts we gave to the Russian people during World War II.

They lift the Iron Curtain in Rumania, Albania, Lithuania, Poland, Estonia, Hungary and Russia, remove their stooges and allow the peoples of those nations the right to their own form of government.

Remove their stooges from East Germany and let Germany become reunited, without interference.

They denounce Lenin and Marx as imbeciles and would-be murderers.

Having acknowledged the thievery of Stalin, when they return the billions of dollars of machinery, factories, electrical supplies, and tools they stole and removed from the conquered nations.

When they punish the murderous Chinese Communists who tied the hands of our captured fighting men and then shot them in the back.

When, by their acts, they have shown their desire to become a part of the decent world, we shall, indeed, believe them. Until then, the Russians are fooling no one, that is, no one who knows what communism is and how it lives.

As of now the Russian Communists have only changed their pace. They're zigging where they formerly zagged. They're smiling where they formerly scowled. Why risk war when you can win by furnishing arms to the Arabs, encourage the Arabs to attack Israel, the only democratic bastion in the Mediterranean area, and force the Western nations into another war, with Russia standing by, furnishing nothing but the means of war, preserving her power and strength and always hoping that capitalism will let down its guard.

The rest of the Nation may be fooled by the charming words and smiles of Messrs. Bulganin and Krushchev but the American Legion will never permit these accessories before and after the fact to get away with their act. Let our diplomats shake hands and sit at diplomatic tables giving everything and getting nothing from the Russians in return. We, in the American Legion, will listen, watch, and be prepared for the worst.

Cutting the Carryovers

EXTENSION OF REMARKS

OF

HON. HORACE SEELY-BROWN, JR.

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 10, 1956

Mr. SEELY-BROWN. Mr. Speaker, under consent to revise and extend my remarks, I include an editorial which appeared in the July 9 issue of the Christian Science Monitor. This editorial very properly urges Congress to carry out the recommendations of the second Hoover Commission in reference to an improved system of accounting procedures for the Federal Government. I do hope before Congress completes its work during the present session that prompt and proper action may be taken on this legislation.

The editorial follows:

CUTTING THE CARRYOVERS

Congress, which has done so little to carry out the recommendations of the second Hoover Commission, has a golden opportunity to put one major reform into effect. This is the improved system of accounting embodied in the Kennedy-Payne bill recently passed by the Senate.

This measure would set up the accrued expenditure plan of accounting and budgeting. By it Congress would obtain from each spending agency of Government an annual report showing funds actually disbursed during the year just past, together with estimated expenses for the year ahead. As things stand today, Congress often appropriates without knowing whether funds already provided have been spent or are still available.

Much of the current controversy over mutual security (foreign aid) arises from misunderstandings about such carryovers. At one time the Army had $11 billion in hand for guided missiles, tanks, and ammunition, although it was spending no more than a fourth of that a year. It is estimated that this new fiscal year started with $53,900,000,000 in unexpended appropriations.

Many of these sums are obligated under contracts which will ultimately require payment. And opponents contend that long-range planning cannot operate on an annual accrued expediture basis. But the Bureau of Reclamation—which builds dams requiring long years of construction—uses the system successfully. It has helped many business firms, and is recommended by the Budget Bureau, the Treasury, and the General Accounting Office.

Hoover Commission experts believe that adoption of the system would save $4 billion a year. We would not guarantee any such figure, for the spirit of saving is more vital than the mechanics. But it does appear that this method would give Congress a better informed and tighter control on spending—which should spell economy.

In the House the companion measure of the Kennedy-Payne bill is the Rogers-Lipscomb bill. It is bogged down in the Government Operations Committee, where personal and partisan disputes threaten to hold it. But if public opinion is sufficiently mobilized, there is still time for Congress to adopt one of the most promising of the Hoover reform proposals.

Chasing the Pot of Gold

EXTENSION OF REMARKS

OF

HON. H. R. GROSS

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 10, 1956

Mr. GROSS. Mr. Speaker, under leave to extend my remarks, I include the following editorial from the July 7 issue of the Des Moines (Iowa) Register:

The National Education Association, now in convention in Oregon, is reported making plans for the greatest education lobby in history. The NEA wants the full strength

of each local, State and national educational organization used in a united drive for Federal legislation. Top priority is to be given to a Federal aid-to-education bill.

The Iowa State Education Association, with some 25,000 members, can be expected to go along with this NEA program. The State association is on record as favoring Federal aid in building of classrooms. The House of Representatives killed the bill on Federal school building aid in a vote Thursday, probably ending hope of any action on this issue in the present Congress. But the NEA undoubtedly will continue to work for such aid. The 90 Iowa delegates now attending the NEA convention also presumably will believe they have a moral commitment to work for Federal aid to education.

However, it is to be hoped that Iowa teachers and the State education association will put first things first when it comes to lobbying and legislation. It should be recognized that Federal aid to education is not of great importance in Iowa. Iowa could handle its own problem of providing the additional classrooms needed to take care of increasing school population.

The $6 million of Federal aid which would have come to Iowa annually under the bill before Congress wouldn't go very far toward constructing school buildings on a statewide basis.

School people in Iowa can accomplish much more for education in this State by working for State legislation than by chasing the pot of gold at the end of the Federal aid rainbow.

Their assistance will be needed in informing the public of the need for a new program of State aid which will result in a better education for many Iowa youngsters at a more reasonable cost per pupil. That means primarily reorganization of school districts. This is a problem which won't be solved by national legislation.

The Arab Side

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 13, 1956

Mr. MULTER. Mr. Speaker, I commend to the attention of our colleagues the following item which appeared in the June 1, 1956, issue of Israel Speaks. The author, P. L. Prattis, is the editor of the Pittsburgh Courier.

THE ARAB SIDE OF THE QUESTION
(By P. L. Prattis)

PITTSBURGH.—There has recently been organized at Harvard University a group which proposes to present to the American people the Arab side of the problem in the Middle East. The emergence of this new instrument of information (or propaganda) implies: (1) That there is an untold Arab side, and (2) that the American Friends of the Middle East, the American Council for Judaism, and other such agencies are not doing a complete and effective job of selling the cause of the Arabs to Americans. The entry of this new, perturbed group from the scholarly environment of Cambridge also raises the question: What is the Arab side?

I have visited in most of the countries of the Middle East (at least twice) and have read extensively the information and propaganda issued by the Israel and Arab Governments and by private organizations which support the one or the other.

The Arab side, in my opinion, rests upon eight (perhaps a few more) fundamentals which can be listed (not in the order of their importance) as: (1) fear of Israeli expansion; (2) concern over the plight of the Arab refugees; (3) concern over treatment of Arabs in Israel; (4) the intransigent attitude of Arab leadership and the refusal to talk peace; (5) the belief that Israel can be starved to death; (6) the rights of Arabs vis-a-vis the rights of Jews in Palestine; (7) the fear of popular, democratic government among the Arab ruling class, and (8) the use to which oil can be put as an instrument of Arab foreign policy.

EXPANSIONIST AIMS

If you visit in Lebanon, Syria, Jordan, or Egypt and talk with Arab leaders, they will tell you that Israel is preparing for a "second round" in order to expand at the expense of the Arab nations. You will be told that there is a covered map on the wall of the Knesset in Jerusalem on which Israeli expansionist aims are traced. Generally, the Israelis are said to be ready to try to make good on God's promise to Abraham this His people should have all the land between the River of Egypt and the Euphrates.

If you visit Jerusalem, you will find no such map as the Arabs have described no matter how carefully you examine the walls of the meeting place of the Knesset, nor do you find any responsible Israeli public official or private citizen talking or thinking about expansion. The Arabs have manufactured this one.

Again, you are told that there are nearly a million refugees and that their plight is a reproach to humanity. The American public should know that there are not nearly a million refugees, that two-thirds of the refugees are living on the same terms as the surrounding Arab population, that all of the refugees receive as much nutrition (or more) than the masses of the Arab people and that they receive more in terms of education, health and welfare. The camps one sees do not begin to represent the fraudulent total of refugees (dead and alive and the Arabs in these camps are at least as well off in terms of services as the nomads of the desert).

The Arab Governments have not shown their concern by helping in any substantial manner to foot the bill for housing, feeding, clothing, and generally caring for these refugees. Uncle Sam has already picked up most of the tab for that.

The Arabs compose at least one-tenth of the population of Israel. They are required to carry identification cards and a close tab is kept on their movements. What would America do if a tenth of her population was related to hostile neighbors who surrounded her on three sides? The United States with a population of 167 million makes her chief concern the probable existence of 50,000 Communists in our midst. What would she do if there were 16 million Communists among us and Russia was our next door neighbor?

ARAB INTRANSIGENCE

Repeatedly, the Arabs have pledged to one another that they will never recognize Israel. This intransigence is based on their belief that 2 million people, cut off from the Arab world, cannot live in the present confines of Israel. They therefore are willing to wait a hundred years for Israel to wear herself out trying to keep alive. They also hope to wear out the generosity of Jews in other parts of the world. That is a part of the Arab side.

The Arabs, and many others, believe they have primary rights in Palestine. That is a matter of endless debate. The Jews and Arabs, historically, have been in and around Palestine for about the same length of time, but Jewish sovereignty in Palestine, to go no further back than King David, prevailed centuries before there was any such thing as Arab sovereignty in the area. Arab sovereignty coincided with the spread of Islamism in the seventh century A. D. But just as Jewish sovereignty did not last, neither did that of the Arabs. The Turks are not Arabs and they held sway in in Palestine and other Arab countries for 4 centuries until their grip was broken in the First World War. Arab sovereignty in the Middle East was only restored after the Second World War. The Arabs didn't win sovereignty. It came to them as a product of the war aims of the free nations of the world. The Jewish people, therefore, have as much of a claim, based on either history or tradition, to sovereignty in Palestine as the Arabs.

COMPENSATION OFFERED

The Israelis did not take the land of the Arabs in Palestine. They started by paying cash on the barrelhead. When the Arab nations made war on Israel in 1948 and urged the Arabs in Palestine to flee, the Israelis were left holding the land. They have offered to compensate the former owners if the Arab governments will talk peace. That also is a part of the Arab side.

Not more than 2 percent of the people in Arab countries compose the ruling class. In all of these countries, the ruling class is allergic to the practical demonstration of democracy as it is revealed in Israel . The members of the ruling class do not want the masses of Arabs to see what democracy and free enterprise have done for the Israelis. They want to remove, cut out, or destroy, this "cancer of enlightenment."

Further and finally, these Arab peoples who are old in the arts of civilization and more crafty than they are given credit for, recognize that oil is their ace in the hole in the deadly game they are playing against Israel and the nations of the West. The Arabs have the oil which Europe needs. The West wants the oil (and is buying it), but the Arabs don't mind scaring the pants off the West by acting like they might sell to Russia. The more for Russia, the less for the West.

"If you want our oil, be reasonable about Israel," the West is cautioned.

Being reasonable from the Arab point of view is keeping hands off while they prepare for the next push which will drive the Israelis into watery graves in the eastern Mediterranean.

Middle East Tensions Must Be Relieved To Avoid War—An Opportunity for Israel

EXTENSION OF REMARKS
OF
HON. LAWRENCE H. SMITH
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 5, 1956

Mr. SMITH of Wisconsin. Mr. Speaker, under leave to extend my remarks, I am inserting a challenging article that recently appeared in Jewish Newsletter. The article is by Mr. William Zukerman, a Jew but not a Zionist.

One may not agree with all that the writer says in the article; but I have been in the Middle East and have visited refugee camps, and I believe that if the suggestion which has been made by Mr. Zukerman is followed that it would go a long way to ease tensions and begin

a movement to stabilize conditions in that entire area. As a member of a subcommittee which has studied the refugee problem and general conditions in the Middle East, I commend this article for the serious consideration of those who are interested in peace in that area.

In this matter we are considering the welfare of human beings, Arabs and Jews alike, who for 100 years prior to partition, lived together peacefully. The article follows:

AN OPPORTUNITY FOR ISRAEL

(By William Zukerman)

The suspension of mass emigration of Moroccan Jews has placed the Government of Israel in a dilemma it has never faced before. For the first time in her short history, Israel's basic theory, the ingathering of the exiles, has received a sudden, sharp setback; and a major operation for which many preparations had been made and big funds raised ended in failure almost before it began. How will this affect the entire immigration work of Israel? Where will the manpower for immigration into Israel come from now? What will be done with the money already raised for Moroccan immigration? How will the new fund-raising be kept up with the immediate target removed? These are important questions which make up a crucial problem. Israel and the Zionist movement stand now at a crossing of the roads and a great deal depends on what road they will choose to travel.

This writer is not a Zionist and is one of the last persons from whom Zionists would take advice. But I am a Jew and a human being who has seen 20th century nationalism in action all over Europe and I am horrified at the thought of what may happen in Israel, in the Middle East, and to the Jews of the world—if the wrong road is taken at this crucial moment. I therefore feel impelled to offer a simple suggestion which seems to provide not only an answer to the vital questions raised by the ban on Moroccan emigration, but also to offer an opportunity for Israel to correct a grave error and right a grievous wrong which is at the very heart of the tragedy in the Middle East. I know full well that my suggestion will be received with scoffing by the small of faith and with fury by the fanatics, but I nevertheless advance it in all sincerity for the consideration of those people, Jews and non-Jews alike, who believe that Israel's basic problems are not entirely of a political nature and can best be solved in the framework of morality and humanitarianism.

A UNIQUE PROPOSAL

The simple solution and opportunity, which I envisage, is for Israel to open her doors for a limited number of Arab refugees to return to their lands and homes in place of the Moroccan Jews whom the ban keeps from coming.

According to official Zionist statements, the Jewish Agency was planning for the transfer of 40,000 Jews from Morocco to Israel this year. All the preparations for the transfer had already been made, and extra funds had been raised for this purpose in the United States of America. It is my sincere conviction that if an equivalent number of Arab refugees, or even a portion thereof, were permitted to return to their homes and lands in Israel this year, this would be a gesture of such true humanitarianism and moral grandeur that it could radically change the atmosphere in the Middle East morally, politically, and psychologically. This act of generosity and justice could contribute more than anything else attempted in recent years toward the reduction of bitterness and hatred between the Arabs and Israelis and toward improving the climate for peace in that area.

Despite the unconventionality and apparent unreality of the proposal, I am convinced that it can be realized with less trouble and effort than some of the measures tried in vain by Israel to bring peace in the Middle East during the last few years. I believe this for the following reasons:

I. Such a move on the part of Israel would in the first place be an obvious act of justice, sorely needed in a problem which is intrinsically moral, but which has heretofore been dealt with on a purely political basis. For anyone who can look at the Arab-Israeli conflict without nationalistic bias must feel that the Palestinian Arab refugees who had lived on their soil all their lives, as had their forefathers before them for centuries, are certainly more entitled to return to their own land than are Moroccan Jews who have lived in Morocco for centuries and still have their homes there. If there is room for another mass immigration in Israel now, as the Zionist leaders claim, certainly some of the native Arab peasants, who had been rotting in refugee camps for more than 8 years, should get priority to return to their homes, rather than Arab Jews from north Africa, especially if these latter are now prevented from coming. This is the first dictate of justice which has often been obscured in Israel by political and nationalistic considerations of the new State.

II. An act of humanitarianism such as this would also prove to be of great political benefit to Israel. Only hardened, congential militarists can believe in our age that physical force can ever settle a controversy such as the one between the Arabs and Israelis. And only nationalistic fanatics can believe that Israel can accomplish by force of arms what Great Britain, France, and other Colonial Powers have failed to accomplish. In a century when England gave up Suez and may have to give up Cyprus; when France gave up Indochina, Morocco, and may have to yield in Algeria; when Holland was forced to give up Indonesia, can little Israel force its will on the entire Arab world, even if she had all the arms requested from the United States? Every objective observer outside and even inside Israel is convinced that something besides force is needed to solve, or at least ease the Arab-Israeli conflict.

A dramatic gesture such as the repatriation of several thousand Arab refugee families willing to swear allegiance to the State of Israel could possibly be just the unconventional, phychological approach that is needed at present to reduce tensions and to better relations between the two peoples which alone can secure the political existence of Israel. For it is not enough to demand that the Arabs recognize the fact of the existence of Israel as a condition of peace. Recognition, if it is to be true, cannot be imposed by force, or by diplomatic protocol. It must come from within, the Israelis must help to bring it. This they can do best, as their own tradition teaches, by acts of justice, mercy, friendship, and generosity toward their neighbors, the Arab refugees outside and the Arab minority inside the country. Israel now has a rare opportunity to demonstrate its true desire for friendship and for peace in a dramatic manner that would be recognized by the entire world, including the Arab peoples and would be more effective than thousands of words and government declarations.

It is true that such a step may be difficult to take. It is in direct opposition to the intense nationalism that Israel has come to stand for ever since its inception. It would require the abandonment, or at least the modification, of the highly exclusive principle of Israel's immigration policy which is based on the ingathering of the Jewish exiles only, to include some native Arab exiles who are even more urgently in need of a home. It would require a change of heart from narrow chauvinism to universal humanism as the basis of the new State. It would require courage to admit errors and guilt and make amends for them. But this is a common experience of our period. The English, the French, the Dutch have abandoned, or radically altered their old ideas of colonialism and empires. Even the Communists are now trying to make the world believe that they are giving up their old ideologies, policies, and tactics. Why not the Zionists? Is it not an experiment worth trying in the interests of peace? For nearly a decade Israel has tried various means of force and these have led only to mounting bitterness and hatred which can eventually end in destruction. Is it not time to try the road which for centuries Judaism has preached as the only one that leads to peace—the road of justice, mercy, and humility?

Arabs' Anti-Jewish Campaign

EXTENSION OF REMARKS

OF

HON. ABRAHAM J. MULTER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 13, 1956

Mr. MULTER. Mr. Speaker, I direct the attention of our colleagues to the following item which appeared in the June 1, 1956, issue of Israel Speaks:

ARABS GIVEN FREE HAND IN ANTI-JEWISH CAMPAIGN

(By Zeva Shapiro)

NEW YORK.—"A fantastic allegation, since the Arabs themselves are Semites"—this was the gist of the indignant retort of an officer of the Arab Information Office to charges of anti-Semitic activity released to the public by the American Jewish Congress last April. This classic evasion of the issue fits in with the current Arab line as well as with recent pronouncements by Secretary of State Dulles in response to questioning on official endorsement of Arab discrimination against American Jews.

Mr. Dulles commented before the Senate Foreign Relations Committee a few months ago that the Arabs "have some practices which we may think curious * * *. We, perforce, accommodate ourselves to certain practices they have which we do not like; they, perhaps, accommodate themselves to certain of our idiosyncrasies which they do not like, but on the whole, they have a pretty arbitrary rule largely dictated by the strict tenets of Moslem faith."

Some data on curious practices of the Arab countries were yielded through a telephone check of the Arab consulates in New York this week. "I am very sorry, but we have instructions not to grant visas to members of the Hebrew faith" was the pointed though polite response of a secretary at the Syrian consulate.

The Lebanese consulate was more circumspect: "Do you know anybody there? You must have a reference from an individual or the Government in Lebanon before you can apply for a visa." "Iraq will not grant entry to anyone traveling through Israel"—a representative of that Government explained irately that "the ruling is a provision of the Arab League constitution."

JEWS EXCLUDED

American citizens of the Jewish faith are warned by the Passport Division of the Department of State that they will be denied the right to visit Arab lands. American Export Lines announce that persons of Jewish faith or Jewish name will be excluded

from certain cruise travel privileges in Arab ports. Airlines indicate in their schedules that Jewish passengers will not be allowed to disembark at Arab ports of entry.

Restrictions are not limited to pleasure travel by private citizens, but are being applied to Government and military personnel as well. Reports of Saudi Arabian restrictions against American military personnel at the Dahran base have not disturbed the official calm. A Saudi Arabian ruling prohibits the public announcement of Christian religious services; the display by chaplains of the crosses that are their insignias of rank; appearance in clerical garb except during services on the base.

Dismissing these practices with feeble excuses, State Department spokesmen show a bland indifference to the religious liberties of Americans, thus inviting foreign assaults on the rights of United States citizens.

Secretary Dulles, when asked by members of the Foreign Relations Committee on February 24 of this year, whether the terms of the mutual-security agreement between Saudi Arabia and this country disqualify Jewish servicemen from being stationed at the Dahran base, replied, "It may be."

A brief submitted to President Eisenhower and Mr. Dulles on May 13 scores the failure on the part of the United States to take a stand against Arab anti-Jewish discrimination. So far, the State Department seems to have decided to maintain its passive attitude and overlook the grave implications of permitting a foreign state to pass upon the religious qualifications of Americans abroad.

DISCRIMINATION IN EMPLOYMENT

In the field of employment within the borders of this country, Arab anti-Jewish discrimination has already had more serious consequences and a more blatant quality because it has involved the direct defiance of State fair employment practice legislation.

An ad in a New York City newspaper announced openings for welders in foreign countries. The New York State Commission Against Discrimination received complaints because applicants were asked to state their religious beliefs—a violation of the State's employment code.

After investigating the charges the State commission reported the following facts regarding the circumstances of the case:

"The company advised that it had an understanding with the Arabian Government to screen all prospective employees for work in Arabia before they applied for Arabian visas, for the purpose of excluding persons of the Jewish faith to whom visas will not be granted."

This condition for employment, though in absolute conflict with the terms and explicit purpose of fair employment practice legislation, was not challenged because, as the report goes on to state:

"A representative of the Department of State stressed the importance of not having anything interfere with the existing relationship between the Arabian Government and the Arabian American Oil Co. • • • Should it be disturbed in any way the international interests of the United States would be seriously affected."

ACTIVE COLLABORATION

The contagion has infected the highest levels. Army contractors, engaged in defense projects paid for by all of the American people, have collaborated with the Arab campaign. As one can see in the testimony of Maj. Gen. G. J. Nold, Deputy Chief of Engineers, United States Army, before a Senate subcommittee what was once tacit cooperation has turned into active support. Nold reported that Army contractors were no longer recruiting workers for the construction of military bases in Arab countries in New York where many of the applicants would be likely to be Jewish. From this point of view the Army regarded the Midwest as a more suitable recruiting point.

An inquiry into this affair by the chairman of the New York State Commission Against Discrimination was dismissed with a sanctimonious reply from the then Secretary of the Army, Frank Pace, Jr.:

"These (Army) contractors have not discriminated against qualified Jewish workers for Saudi Arabian projects. They are willing to recruit workers of this faith; however, these workers are unable to obtain the required visas from Saudi Arabia."

The lack of concern communicated by Secretary Pace's perfunctory note has become characteristic of the official attitude which contents itself with disclaiming responsibility for Arab practices against American citizens and with mild assurances that the discriminatory acts are contrary to the wishes of our Government.

Formal expressions of disapproval are less than adequate as a substitute for specific answers to questions such as the following: Has the United States protested to the countries concerned, the nature of its protests, to what extent have they been pursued, what course of action the United States intends to adopt if its complaints are not heeded.

Thus far, there has been no official comment on these questions.

A Worthy Tribute to Chairman Lewis L. Strauss, of the Atomic Energy Commission

EXTENSION OF REMARKS
OF
HON. JAMES E. VAN ZANDT
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 10, 1956

Mr. VAN ZANDT. Mr. Speaker, the June 30, 1956, issue of Business Week carried an interesting story on Rear Adm. Lewis L. Strauss, Chairman of the Atomic Energy Commission, and his policies designed to keep the United States in the lead in nuclear power.

The article follows:

HIS ATOM-POWER PLAN FACES A TOUGH BATTLE

One of the most controversial figures in Washington is Lewis L. Strauss, Chairman of the Atomic Energy Commission.

The 60-year-old Strauss, never a man to duck a fight, now is in the middle of one of his toughest scraps since he became AEC's boss in July 1953. A congressional committee is looking into charges that our program for developing electric power from the atom—a program largely charted by Strauss—is seriously inadequate.

The charges—first leveled last year by Senator ALBERT GORE, Democrat, of Tennessee—really came to life in recent weeks. That happened when other Congressmen and some top Government atomic experts challenged our progress on atomic power during hearings of the joint congressional Committee on Atomic Energy. (Business Week, May 26, 1956, p. 65.)

Doubts: Senator GORE is pushing legislation to force the Government to build and operate six large atomic-power plants. These would be in addition to the 7 large plants (over 50,000 kilowatts of electric capacity) now being built or planned by private groups and Government-industry teams.

Most of the support for GORE's proposal comes from public power groups. But several members of the joint congressional committee and two of the Nation's foremost reactor experts, Dr. Walter Zinn and Dr. Alvin M. Weinberg, also have expressed serious doubts about our effort on atomic power.

What the experts fear, and what the joint committee is investigating, is the possibility that the United States may lose its world leadership in atomic power through sheer lack of aggressiveness. They wonder if we should build more large-scale power reactors. Much of this concern stems from recent announcements by the Russians that they are planning to build 10 big atomic powerplants, with a total capacity of 2 to 2.5 million kilowatts, over the next 5 years.

AEC views: Strauss, with a majority of the AEC Commissioners, insists that we are well ahead of the Russians and the British, who also are building a number of large plants. He feels our development program is good enough to keep us out in front. Only Commissioner Thomas E. Murray, last remaining non-Eisenhower appointee on AEC, disagrees.

Murray approves the Gore scheme in large part. However, he would have the Government build only five large reactors right now, more later if necessary to develop other types.

I. WHAT THE FIGHT'S ABOUT

Both the Russians and the British are going about atomic power development in ways differing radically from our program. The United Kingdom is building several types of small, experimental plants. But at the same time it is going ahead with eight large-scale, gas-cooled power reactors.

The Soviet Union apparently is building some pilot plants, but the emphasis seems to be on the 10 big plants, each of a different type.

The United States, on the other hand, builds pilot or experimental plants for every type of power reactor deemed by AEC's experts as worthy of testing.

Economics and strategy: The differences are a matter both of economics and world strategy.

From the standpoint of domestic economics, the pilot plant approach makes sense for the United States. No one expects to produce atomic power at anywhere near the 6 mills to 9 mills per kilowatt-hour that power from conventional fuels costs in modern utility plants in most sections of the United States. Atomic power is even further from competing with steam plants located near coal, oil, and gas deposits, or with hydroelectric installations.

All the experts believe that the larger the reactor plant, the better your chance of getting cheap power—because beyond a certain point construction costs don't jump in proportion to size. But since large-scale reactor plants are likely to cost in the $50 million to $100 million range, it makes sense to try out new designs in pilots at a tenth or less of the cost.

Britain's needs: The economics are entirely different in the United Kingdom, where conventional fuel must be imported and fuel costs are high. Britain desperately needs more power, so it makes sense to go ahead now with large-scale atomic plants.

Soviet strategy: Motives of the fuel-rich U. S. S. R. are something else again. The Kremlin is certainly aware of the international impact of the United States offer to help friendly nations with peaceful atomic development. So the Russian program of large atomic-power stations may well be a move to get the jump in the power-hungry nations such as Japan, India, and many South American countries, which think of atomic power in terms of large plants.

Weinberg, director of AEC's Oak Ridge National Laboratory, points out: "If the Russians by such development gain more friends than we, they will ignore costs and go ahead." This view is apparently shared by Zinn, until recently head of Argonne National Laboratory, and by Senator CLINTON ANDERSON, Democrat, of New Mexico, joint committee chairman.

II. WHERE STRAUSS STANDS

Strauss disagrees. The AEC chairman already has appeared before the joint committee and put in some telling licks against the Gore bill. While he was about it, he pooh-poohed the fears about our losing the international race for atomic power.

"It is important," he agreed, "that we maintain world leadership in the development of nuclear power. However, this ought to be genuine leadership based on sound scientific progress and technological development. We are confident that our present program now enjoys such leadership."

At last summer's conference on the peaceful uses of the atom at Geneva, he asserted, it was apparent to all observers that the magnitude and quality of our effort and our achievement was far and away the most outstanding.

Sales tell: Since the Geneva conference, United States firms have sold 5 research reactors (to Italy, Japan, Brazil, Spain, and West Germany), and 1 power reactor (to Belgium) abroad. Completion of several additional sales by United States firms is only awaiting the signing of diplomatic agreements with the countries involved.

"So far as we are aware," Strauss says, "no other foreign government or industry has made any such sales."

The implication is pretty clear. Nations that are buying reactors are turning to the United States for them.

Secret report: Sources close to Strauss say that rumors of Russian superiority in atomic power stem from a closed-door report to Congress by the Central Intelligence Agency. Several columnists subsequently reported that CIA said the U. S. S. R. has surpassed us in nuclear power.

CIA officials have formally denied the story. The Agency merely told Congress what it knew about the Russian program, made no interpretation.

Since other United States sources knew of the Russian plan to build 10 big power reactors, it presumably was reported by CIA. Some Congressmen apparently interpreted this to mean that the Russians were ahead, and passed on this impression to newsmen.

Reds' standing: The Soviet Union never has claimed to have more than a single nuclear powerplant, a 5,000-kilowatt station briefly described at Geneva.

Strauss makes no charge that the Russians cannot, or will not build their 10 big plants. It's pretty clear, though, that he doubts the plants will produce power at costs competitive with conventional sources either in Russia or the United States. It's just as clear that he feels we will get much closer to competitive nuclear power in the same interval.

Anti-Gore: Strauss opposes the Gore plan for Government construction of nuclear plants for a number of reasons. Most important are these:

It's contrary to the intent of the 1954 atomic law, which calls for Government-industry teamwork to develop atomic power.

We'll get economic nuclear power faster with the Government building small experimental plants and industry building or taking major responsibility for full-scale plants.

Taking on six big plants would divert large numbers of scarce technical personnel, disrupt AEC's developmental work.

AEC would get into the power business to such an extent it might be distracted from its primary responsibilities in the atomic field.

III. ODDS IN THE BATTLE

There's plenty of opposition to Strauss' view that United States progress with nuclear power is satisfactory.

Scorecard: So far, earth has actually been moved for only one large-scale United States plant to date—the one being built near Pittsburgh by Duquesne Light Co. and AEC. But work will soon start on two more, both completely financed with private funds, near New York and Chicago. Government and industry funds will go into additional plants in New England, Nebraska, and near Detroit. In a more preliminary stage are plans for another Pennsylvania plant.

For more speed: "Unless we do something, the Duquesne plant may provide the only atomic power we'll have by 1960," worries AEC Commissioner Murray.

A Congressman agrees. "It isn't so much that the Russians and British may be doing more," he says. "The fact is that we can build a lot more big plants. So we should."

"We have to set goals, and if that's what the British and Russians are doing, they're right," says a technical man.

Who gets the job? Right now the odds appear in favor of a shot in the arm for our atomic power effort, and against Lewis Strauss. There seems to be enough congressional steam up to get legislation, probably later this year, calling for more big plants. But there does not appear to be much sentiment for dropping the job entirely on AEC.

Of course, a few fast proposals by industry sources to put up additional big plants would slow down any legislation. Failing this, Congress probably will direct AEC to contribute more funds to big projects proposed by private or public groups. All-out Government financing is likely to be only a last resort.

IV. STORM CENTER

Like some of his other major decisions in the atomic fields, Strauss' stand on atomic power development has touched off a storm of angry protest. But then, on one ever disagrees mildly with Lewis Strauss. That's due, at least in part, to the great strength of his opinions.

H-bomb row: During his first stint as AEC Commissioner—he served as one of the first five Commission members from 1946 to 1950—Strauss achieved a reputation for the number and vigorousness of his dissents from majority decisions. Best known was his long row with Chairman David Lilienthal over development of the hydrogen bomb. He was for an all-out development program. Lilienthal and the majority of the Commissioners were against it.

In the end, President Truman ordered the full-scale program.

One-man show? Later, after strauss became AEC Chairman in 1953, there was the fight over the description of the Chairman's job in the 1954 law. It was originally proposed to designate the Chairman as the principal officer of AEC, and give him added managerial responsibilities.

This met with violent opposition from Commissioners Murray, Henry Smyth (who resigned after this hassle), and Eugene Zuckert (who was not reappointed when his term expired in the middle of the debate). By implication, at least, these three charged Strauss with trying to make AEC a one-man show.

Strauss denied having any part of the authorship of the principal officer proposal.

The final language of the law was something of a compromise. The Chairman was designated AEC's spokesman before Congress and the public, but each Commissioner was given equal authority and responsibility for official actions.

Position of strength: But for a reason that has little to do with legal language, Strauss is probably the most influential chairman AEC has ever had. Several months before he took over, he had come back to Washington to serve as a special assistant to President Eisenhower on atomic matters.

Ready access to the White House is always extremely important to any bureaucrat in prestige-conscious Washington. In Strauss' case, there's a lot more to it than that. There is every reason to believe that he is consulted—and listened to—at the White House on all matters relating to atomic policy.

No one believes, for example, that there's the slightest chance the White House will ever reverse Strauss on a major decision, as Truman reversed Lilienthal on the H-bomb.

This implies also that he has some say in selecting top AEC officers—the President appoints all five Commissioners and the General Manager.

Inconsistent?: Critics, who charge Strauss with being consistently inconsistent, cite the principal officer row as a case in point. Former staffers say he agreed before Congress with the principle of equal authority for all five Commissioners, then had reports from field offices and labs channeled through the General Manager's office.

This system, the critics contend, shuts off other Commissioner from considerable information they should have.

Dixon-Yates: The outstanding case of alleged inconsistency involves the aftermath of the Dixon-Yates contract.

During the congressional hullabaloo, Strauss vigorously defended the Dixon-Yates contract. But after the contract was canceled, AEC refused to pay the power companies involved for the preliminary work they had done. The reason given was that the contract was illegally negotiated, because a representative of a financial institution close to the power companies was involved in the negotiations.

Strauss has been bitterly attacked for this reversal.

Dedicated servant: "Some people cite this as a prime example of Strauss' insincerity," says a former AEC staffer. "It is nothing of the kind.

"He is by no means insincere. The orders to enter the contract came from higher authority—probably the Budget Bureau. So did the orders to cancel. Strauss sees himself as a public servant who follows orders from above. So he works sincerely in whatever role such orders impose on him. He's a dedicated man."

V. BANKS, NAVIES, AND ATOMS

This attitude toward his job as AEC Chairman comes out of the background Strauss brought to the position.

At 60, he can lay claim to two highly successful careers—in private business, and in Government service.

After serving with Herbert Hoover's post-World War I relief organizations in Europe, Strauss turned to New York and the investment-banking business, becoming a partner in Kuhn, Loeb & Co. At the time Eisenhower called him back to Washington, he was a consultant and financial adviser to members of the Rockefeller family.

Military emphasis: Most of his Government career has been with the armed services and the closely related atomic-energy program. A naval reservist for 27 years, he rose to rear admiral as the Navy's atomic-energy expert during World War II.

Still slim and erect, he shows other marks of his close association with the military. There's nothing of the bawling sea captain, in fact, quite the reverse, in his speech. But his answers to questions, whether asked by Congressmen or reporters, are quick and decisive. His self-discipline is just as obvious. It makes him a bundle of nervous energy, rather than a bundle of nerves.

Good administrator: AEC staffers uniformly give him good marks as a smart administrator, even including those who do not like the direction in which he is leading the agency.

A large number of staffers are scared to death of him, mainly because they have a second-hand impression that he is hardboiled. Another reason is that Strauss has established a strict chain-of-command operating procedure.

This replaced a setup under which almost any AEC staffer could go to a commissioner with a pet idea.

Too positive: Strauss has had many rough sessions with members of the Joint Committee on Atomic Energy. Some weren't of his own asking. But he did not help himself in such scraps.

At least one Congressman feels Strauss has been too positive in his dealings with Congress, has made Congressmen feel he is talking down to them.

Press relations: A few Washington reporters think Strauss is one of the ablest members of the Eisenhower team. A lot more have reservations.

These stem largely from Strauss's well-known advocacy of stricter secrecy.

He has been a lot more at ease lately with the press.

Uranium diplomacy: Strauss is firm on policy matters under the critical broadsides, even when policy involves United States relations abroad.

One current controversy concerns United States insistence that fuels we supply for foreign reactors be returned to this country for reprocessing—separation of the unspent uranium from plutonium and other fission products. Some contend this offends some countries.

Strauss, however, points that reprocessing plants are enormously costly (only the United States, United Kingdom, and Russia have them), so reprocessing would be uneconomic for many countries. But this policy is subject to change if we can develop a reactor type that can be accompanied by a simple, inexpensive reprocessing plant.

Going slow: On criticism that AEC has been reluctant to conclude agreements to supply reactors abroad, Strauss cites manpower problems. One country inquired about a reactor, then found it had no scientists or engineers qualified to attend AEC training schools.

Until recently, such AEC training facilities have hardly been adequate to serve on any such international basis, but Strauss looks for improvement this fall. Until that happens, though, he contends it would be downright risky to turn over such complicated equipment to untrained hands.

VI. SOLID ACHIEVEMENTS

You can agree or disagree with Strauss' critics on a number of points. But you have to give him credit for many solid achievements.

Most important, probably, has been his role in the atoms-for-peace program. He personally denies producing the original idea. But he must have contributed heavily to legal and mechanical details that made it possible for this country to start exporting first.

And it fell to Strauss to work out the mechanics of bringing industry into atomic development on an enterprise basis, as called for in the 1954 law.

Something that is harder for the layman to appreciate is Strauss' influence with the military, and its effect on nonmilitary atomic work.

Safe man: There was a time when AEC was asked by the armed services to account—in terms of atomic weapons lost—for every bit of fissionable material diverted to peacetime use.

The fact that this accounting is no longer demanded is partially due to the presence of Strauss at AEC's helm. He would never be suspected of diverting needed material from weapons.

This is important. The services have a way of harassing bureaucrats whom they distrust. Such harassment could bog down our two-way—domestic and foreign—programs for peaceful development to an extent that might shock some of Strauss' severest critics.

Our Federal Security Program

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 10, 1956

Mr. MULTER. Mr. Speaker, I am pleased to direct the attention of our colleagues to the following editorial from the New York Times of July 9, 1956:

FEDERAL SECURITY PROGRAM

Ever since the basis for present Federal loyalty-security procedures was laid down by President Truman in 1947, and especially since extension and enlargement of the program by President Eisenhower in 1953, criticism has mounted against the Government's tendency to overstress a formalized security at the cost of individual liberty. The problem isn't easy, for the peculiar nature of the Communist attack requires our country to have an effective security system applicable to its own employees as well as to its physical defense. But security does not exist in a vacuum; and the requirements of our security system must be constantly weighed against the demands of that most basic of all American principles, liberty of the individual under law.

As more and more cases of injustice or stupidity have come to light, the necessity of revising Federal security procedures has constantly become clearer. In a few notable decisions, the Federal courts have restrained some excesses committed in the name of security. But the Department of Justice, which is where one might think the urge for reform would originate, has been exasperatingly slow to see that the kind of internal-security programs our country has been pursuing are shot through with faults that endanger the real security of the United States.

With a grant from the Fund for the Republic, the Association of the Bar of the City of New York undertook more than a year ago a thoroughgoing study and critique of the five Federal loyalty-security programs. The results of that study, carried out by a committee of distinguished lawyers headed by Dudley P. Bonsal of New York, are published in this newspaper today. Both the Fund for the Republic and the bar association deserve thanks for undertaking this sorely needed survey and carrying it through so well. Late in the last session of Congress, a committee was set up to do somewhat the same thing, but it will be months before that group makes its report. Meanwhile, the recommendations made by the Bonsal committee should serve as a rallying point for all who sincerely wish to see the Federal employee security program more effectively meet the demands of both security and liberty. This should not become just "one more survey" to be given a few platitudinous words of approval and then gently filed away.

Probably the most significant of all the recommendations is the one to curtail the program from its present scattershot coverage of some 6 million Americans to one-quarter that number. "We have to choose between a more effective security system in critical posts or a less effective one in all." The spirit of the recent Supreme Court decision in *Cole* v. *Young* points in precisely this direction: that a national security program should apply only to positions affecting the national security instead of to literally millions of persons remotely removed from any real security interest.

It is most disappointing to find Atorney General Brownell now supporting legislation designed to overturn the Cole decision by giving specific congressional sanction to extension of the security system throughout the Federal Government.

Next most important reform recommended by the Bonsal committee is a proposed change in the standards by which security risks are to be judged. Previous formulas would be dropped in favor of the one commonsense element, "the interest of the United States." In this respect, the proposal follows along the lines of new rules recently announced by the Atomic Energy Commission for its own security program. The Attorney General's list of allegedly subversive organizations would either be totally revised or it would be abolished. Security personnel, too often in the past eager beavers more anxious to make a killing than to do justice, would be carefully trained for their jobs.

The committee proposes a long list of procedural reforms (some now in effect) in screening accusations, in bringing charges, and in hearing cases. Uniformity and standardization would be brought into the program where both are now lacking. Confrontation by adverse witnesses would be encouraged though not in all cases required. The rights of the accused would be more carefully safeguarded. A Director of Personnel and Security would be established under the President to supervise the individual agency programs and also the closely related question of classification of information.

The proposals are marked by caution as well as conscientiousness. In some respects, they do not go far enough to undo harm that has been done in the past. The committee itself says its recommendations, except for the one reducing the scope of the program, lie within the general framework of what now exists. But their adoption would help remove a needless dark spot in the picture America now presents to itself and to the free world.

Every Citizen Has Stake in Farm Economy

EXTENSION OF REMARKS
OF
HON. LESTER R. JOHNSON
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 10, 1956

Mr. JOHNSON of Wisconsin. Mr. Speaker, I have voted 3 times on general farm bills since taking my House seat in the 2d session of the 83d Congress. On each of the three occasions I conscientiously attempted to analyze the proposed farm bill in terms of what it meant to agriculture, labor, business, and industry with respect to bolstering and stabilizing our total economy.

In my opinion, agriculture plays a far more significant role than most of us realize in the Nation's business and industrial economy. This conviction explains, in part, my interest in the farm problem and all agricultural legislation.

My second reason for concern with farm legislation stems from the fact that the Nation's farmers are in serious economic trouble. The current plight of farmers is dramatically spotlighted by statistics on declining farm income for the past 3 years and the increase in farmers' debts. Sooner or later the farm depression will affect other segments of our economy. In fact, the chain reaction from the farm depression is already

felt by some industries, and a sizable number of workers are unemployed because of the decline in farm income.

Thousands of my constituents—including farmers, labor, businessmen and professional people—have a stake in specific and general farm legislation. The interest of these groups in the farm problem is understandable because the Ninth District of Wisconsin is classified as 1 of the 88 rural congressional districts in the country.

I voted for the general farm bills because I believed positive action was required to put the brakes on declining farm income and also to boost farmers' income.

In support of my contention that agriculture is important to the total national economy I cite the fact that in 1953—the latest year for which I have a comparative analysis of industries—agriculture ranked first among the Nation's five leading industries. Here is the gross output of each of the Nation's five leading industries for 1953:

Agriculture	$35,430,000,000
Construction (plant and residential)	26,100,000,000
Oil (estimated refined product)	23,000,000,000
Automobiles	13,984,000,000
Steel	12,433,000,000

I realize the average person believes steel and auto are the largest and most important industries in the country. No one will dispute that steel and auto are gigantic and important to the Nation. Steel, for example, is often referred to as the solar plexus of our industrial economy. Nor is there much doubt that when steel and auto are in a slump the country is economically hurt.

However, auto and steel—as I shall discuss later—are affected when agriculture is depressed. In the statistics cited above you will note that the gross annual output of agriculture is larger than the combined annual output of the steel and auto industries. In fact, agriculture's gross annual output represents 32 percent of the total for the Nation's five leading industries.

During the past several weeks a number of news stories appeared in papers on the subject of depressed conditions in the auto and farm implement industries. The recession in the farm implement industry is directly connected with the decline in farm income. I suspect the farm depression has contributed more than its proportionate share to the sag in the automobile industry.

It is difficult to get a clear and comprehensive picture of economic conditions in the farm implement industry because there are some 1,200 firms producing farm machinery. The majority of the firms are small and produce specialized equipment. Most of the farm machinery is manufactured by six major companies.

According to my calculations—based on information in news stories—the six major producers of farm implements have around 40,000 unemployed workers. An Associated Press story for June 16 states:

> International Harvester reports that layoffs in its farm machinery division now totals 23,000 and expects it will go even higher while sizable inventories are being worked off. It (International Harvester) has a layoff plan, like that in the auto industry, which goes into effect September 1.

The same Associated Press story says "total farm implement industry sales last year topped $1.5 billion, soaking up 15 percent of net farm income. This year farm income will be lower, but the drop in farm equipment buying i even greater, as the farmer watches and waits." In my opinion farmers are not necessarily watching and waiting. In many instances, I am sure, farmers do not have the cash to buy needed farm machinery.

Economic surveys prove when farmers have the income they buy a certain amount of machinery each year to replace old equipment. For example, according to information I received from the USDA, farmers bought $6.7 billion worth of farm machinery—at manufacturers' platform prices—for the 4 years from 1950 through 1953.

You will note I referred to "manufacturers' platform price." The "manufacturers' platform price" does not include freight costs and the distributors' markup. Competent authorities estimate that freight costs and distributors' markup represents about 40 percent of the retail price. Assuming this estimate is fairly accurate, it means farmers spent about $11.1 billion for machinery from 1950 through 1953.

It is roughly estimated—because exact statistics are not available—farmers spent about $5 billion for farm machinery in 1954 and 1955. Thus, in the last 6 years farmers spent around $16 billion for farm machinery. It is difficult to understand—in the face of these statistics—why some people feel agriculture is not much of a factor in our business and industrial economy.

I am certain that the editors and publishers of the papers which carried glowing editorials in praise of President Eisenhower's veto of the farm bill will not buy the farm machinery farmers are not purchasing. Even if the implement manufacturers produced streamlined, two-tone tractors with pastel seat covers editors do not have use for surplus tractors. The economic facts of life are that only farmers are able to utilize farm equipment—and if farmers do not have the money they cannot buy machinery.

Earlier in these remarks I stated the farm depression may have some bearing on conditions in the auto industry. My reason for this contention is that farmers not only buy passenger cars, but they also provide a very good market for trucks. In 1953 the total registration in the country for commercial and private trucks was 9,160,280. Of this total, farmers owned 2,550,000—or 27.8 percent—of all trucks. Farmers, as you can see, own more than their proportionate share of trucks. Farm trucks—as is the case with all farm machinery—wear out and must be replaced. Yes, farmers are a good market for trucks when they have money.

Auto and farm implement workers are not the only industrial employees who have a stake in a prosperous agricultural economy. The Food and Materials Requirement Division of Commodity Stabilization Service provided me with the following information. It is estimated, says the division, that farmers during 1954 purchased production items requiring the following quantities of raw materials: 6.5 million tons of finished steel, 50 million tons of chemicals, 285 million pounds of raw rubber, 17.5 billion gallons of crude petroleum.

Agriculture is one of the largest single group consumers of petroleum. Thus, the oil industry has a stake in agricultural prosperity. Statistics for the other industries cited above indicate also that farmers are a good market for steel, chemicals, and tires.

The interdependence of farmers, labor, industry, and business and the mutual concern of these groups with general farm legislation is very well brought home to me by the operations of one factory in the ninth district. I refer to the United States rubber plant in Eau Claire, Wis. The United States rubber plant in Eau Claire, which employs a substantial number of workers living in Eau Claire, Chippewa Falls, and neighboring communities, produces brand-name tires for other companies and organizations.

For example, the Eau Claire United States rubber plant manufacturers all of the tires for National Cooperatives. One of the largest consumers of National Cooperatives' tires is the Farmers Union Central Exchange. I have been informed that Farmers Union Central Exchange last year purchased about 40 percent of the tires produced for National Cooperatives.

The Farmers Union Central Exchange, I wish to point out, serves 250,000 farmers in Wisconsin, Minnesota, North Dakota, South Dakota, Montana, and a part of Wyoming.

National Cooperatives also distributes its tires to other cooperatives serving farmers in various sections of the United States. In view of this, then, it is logical to assume that the Eau Claire United States rubber plant, its workers and the families of the workers have more than passing interest in the economic welfare of the 250,000 farmers served by Farmers Union Central Exchange and the thousands of other farmers buying National Cooperatives' tires.

I was aware of the significance of this situation each time I voted on a general farm bill. I realized that a farm depression can be felt by workers, plants, and businessmen in Eau Claire, Chippewa Falls, and the surrounding communities the same as it can be felt in any other industrial center. Declining farm income can create unemployment in some ninth district communities.

I also realized that a sizable number of unemployed workers in these communities will not help dairy farmers supplying fluid milk and other dairy products to the communities. It is a known fact that unemployed workers reduce their purchases of milk and dairy products. In turn the income of dairy farmers declines and the chain reaction affects the income of business and professional people in the communities.

This is only a brief explanation of what can happen to 1 factory as a result of a farm depression. The same analysis can be applied with equal force to every industrial city in Wisconsin and

all of the other States. I know Wisconsin farmers do not buy the total output of farm implements produced in the Wisconsin plants of Allis Chalmers' Massey-Harris and J. I. Case. Farmers in every State buy the equipment produced by these companies.

Wisconsin industrial plants manufacture a variety of other items—covering everything from power tools to all types of consumer goods—that are sold to farmers all over the Nation. It is my contention that a general farm bill—containing adequate support prices and other stabilizing provisions—means something directly or indirectly to every person in the country. This is my reasoning when I vote for a general farm bill.

I have emphasized this point because in the past few campaigns Wisconsin Republicans attempt to picture supporters of a general farm bill as selling out to cotton, peanut, and grain farmers. Well, cotton, peanut, grain, livestock, corn, hog, tobacco and all other types of farmers buy Wisconsin produced industrial goods when they have the money. Our industrial workers, when they are employed, buy Wisconsin milk and dairy products.

I kept this in mind every time I voted on a general farm bill. Certainly, I could not in good conscience have voted for unemployment of thousands of industrial workers in Wisconsin and other States just because the general farm bill didn't provide what I believed it should have contained for dairy farmers.

Wisconsin, the leading dairy State, is in an unusual position due to the fact that most of our milk production is utilized for manufactured dairy products. The great majority of Wisconsin farmers, for this reason, do not receive any direct benefits from the stabilizing influence of Federal milk market orders. As the leading State for manufactured dairy products, Wisconsin dairy farmers must rely on a general farm bill for economic consideration and protection.

Wisconsin dairy farmers do not receive much congressional support from House and Senate members representing dairy farmers covered by Federal milk market orders. This is understandable because the dairy farmers operating under Federal milk market orders are protected.

It must be borne in mind that there are only two States where dairy farming provides 50 percent or more of the farm income in the State. The two States are Vermont and Wisconsin. In Vermont nearly 70 percent of the farm income comes from dairying, and for Wisconsin it is 50 percent. Incidentally, Vermont ranks 17th in terms of volume of milk production.

Approximately 75 percent of the total milk volume in the country is produced in 13 States. In the top 13 volume producing States dairying ranks first in only 4 States as the leading income producer. Here are the 13 top volume producing dairy States and the rank of dairy farming as an income producer in the various States:

First. Wisconsin, dairying ranks first.

Second. New York, dairying ranks first

Third. Minnesota, dairying ranks second.

Fourth. California, dairying ranks third.

Fifth. Pennsylvania, dairying ranks first.

Sixth. Iowa, dairying ranks sixth.

Seventh. Ohio, dairying ranks second.

Eighth. Michigan, dairying ranks first.

Ninth. Illinois, dairying ranks fifth.

Tenth. Indiana, dairying ranks fifth.

Eleventh. Missouri, dairying ranks third.

Twelfth. Texas, dairying ranks fourth.

Thirteenth. Kansas, dairying ranks third.

In several of the States listed above a substantial number of dairy farmers are covered by Federal milk market orders; therefore these farmers will not urge their Congressmen to support provisions in a general farm bill to aid dairy farmers producing milk for manufactured products.

All of this adds up to the fact that it is a real problem to get the necessary congressional cooperation to raise dairy support prices on manufactured dairy products in a general farm bill. This situation raises the question of what strategy should be employed to get more congressional help in raising support prices on manufactured dairy products. Do we, as some people believe, get the help of other Congressmen by "sniping" away at other farmers covered in a general farm bill, or do we get support by cooperating with these rural Congressmen and persuading them of the justice of aiding farmers producing for manufactured dairy products.

I have pursued the policy of working with other rural Congressmen because I believe this is the only method of securing cooperation. I do not believe it is a sound tactic to alienate all of the Congressmen from areas where farmers producing basic crops are in the majority. Wisconsin congressional Members certainly do not have enough strength to bargain with or wield a political club over all of the other House Members from rural districts.

As a matter of fact, it is difficult to even pass a general farm bill because there are only 88 rural congressional districts in the country. In order to pass a general farm bill it is necessary to get every single one of the 88 House Members from rural districts plus the votes of around 120 Members from urban and suburban districts. This is a political fact of life that must be faced when working for legislation involving price supports for dairy products.

Special dairy legislation—such as the school milk program—does not provide for price supports. Incidentally, I have always supported the special school milk program. I do wish to make it clear that the school milk program does not raise price supports—it only provides a small additional market for fluid milk.

I also wish to point out that not all of the $75 million set up annually for the special school milk program goes to farmers. Dairy farmers' share of the special school milk programs funds amounts to only about $34 5 million out of the $75 million. The $34.5 million represents less than eight-tenths of 1 percent of the total income for dairy farmers last year.

It is estimated that 1.4 billion half pints of milk will be distributed through the special school milk program during the current school year. This sounds like an imposing amount of milk, but when it is translated down to pounds it only amounts to 753 million pounds of milk. The largest milk producing county in the ninth district—Clark—produced enough milk in 1954 to supply almost 70 percent of the milk used in the special school milk program for the last year.

I have stressed these figures to present economic implications of the special school milk program in its proper perspective with respect to dairy legislation. The special school milk program is excellent, and I have always supported it. In fact, my bill—H. R. 11375—which has passed the House, extends the school milk program to agencies that are not now eligible under present authority.

The special school milk program funds—which are spent in every State—do not provide the broad economic base needed for stabilizing the income of dairy farmers engaged in producing milk for manufactured dairy products. Wisconsin dairy farmers must still rely on what protection they can get from a general farm bill. I shall continue to press for legislation to improve the dairy price-support provisions in a general farm bill.

In closing, I wish to reiterate that agriculture is an important factor in our national economy. I hope my colleagues realize that a farm depression does affect the lives of millions of workers in factories, the mines, office, transportation, and service industries. I know many farmers are also aware of the fact that full employment is necessary to give workers the income with which to buy farm products.

In short, farmers, labor, business, industry, and professional people are dependent on each other for continued prosperity. If any one of these groups is hit by a depression for a long period of time, the other groups will be affected in the due course of time.

Farm income has dropped over $3 billion in the last year. Farmers also went into debt last year at the record rate of $2.5 billion. These facts should speak for themselves as to why there was need for a general farm bill this year.

Russia in the Middle East

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Friday, June 8, 1956

Mr. MULTER. Mr. Speaker, the following item from the May–June 1956 issue of the American Zionist speaks

volumes for the ineptitude of our State Department:

RUSSIA'S GAME IN THE MIDDLE EAST

(By Allen Lesser)

(Mr. Lesser, Director of Information of the American Zionist Committee for Public Affairs, is a noted journalist and author. He has been editor of several Anglo-Jewish publications and during World War II he served as Chief of the European Intelligence Section of the U. S. Office of War Information.)

When Moscow radio on May 4 broadcast an attack on Israel for acquiring quantities of new weapons and allegedly whipping up war fever, it gave fresh notice to the West of Soviet determination to accomplish its aims in the Middle East. The broadcast, which also attacked the World Zionist Congress as an instrument of the State Department "for propagation of war hysteria" in Israel, was delivered in Arabic and beamed by shortwave to the Middle East. It left no doubt that Moscow was still on the Arab side.

The aims and objectives of Soviet policy in the Middle East were outlined by Moscow radio broadcasts in the 8 days between April 17 and April 24.

In April of this year, when Israel-Egyptian tension mounted, Moscow began to shift pro-Arab broadcasts more and more to its satellite Polish and Red Chinese transmitters.

The broadcasts by Arab countries, however, continued to boast of Soviet support, and the Syrian Damascus radio even started a rumor that the Soviet Union would enlist a regiment of Moslem volunteers to fight with Egypt against Israel—a rumor to which Secretary of State John Foster Dulles referred in a press conference. Although the Moscow radio itself maintained complete silence on this point, there was nothing on the Arab propaganda transmitters to indidate any fear of a change in Soviet attitude. If Egypt suspected a change when the U. S. S. R. voted for the mission of United Nations Secretary Dag Hammarskjold to the Middle East, the Cairo radio broadcasts did not mention it.

In April, during the hostilities on the Gaza frontier, Cairo radio went all out against Israel and the West on a wartime basis. The Moscow radio, however, either refrained from comment altogether or merely quoted Egyptian communiques, also without comment. This reserve, extending over a week, was broken on April 17 when Moscow radio broadcast in all its languages the statement of the U. S. S. R. Ministry of Foreign Affairs on the Middle East.

This declaration appears to have been received by Nasser as a stunning blow. The first response from Cairo was a broadcast on April 18, expressing mild surprise that the United States had welcomed the Soviet Union's participation in Middle Eastern affairs. Subsequent Arab broadcasts continued to attack Israel but made no more than passing reference to the Soviet foreign policy statement.

The closest approach to comment came on April 22, in a Cairo broadcast dealing with the Yemen Pact. It consisted of one rather involved sentence quoted from an Egyptian newspaper, as follows:

"The inclusion of Russia in finding a solution of the existing problems between the Arabs and Israel has a clear significance, but it will not lead to the desired objective as long as the Arab countries are progressing along the road to full unity."

Not until April 24 was the Cairo machine prepared with a new propaganda line to meet the Soviet policy. As broadcast, the new line took a defensive tone, explaining why Egypt had made the Communist arms deal and insisting that Egypt was not at all disturbed by the turn in Moscow's policy. To emphasize its importance as a major policy statement, the Egyptians trotted out Col. Anwar al-Sadat, their Minister of State and secretary general of the Islamic Conference, to make the statement.

Colonel al-Sadat struck out at Great Britain and Turkey, charging the latter with being the "catspaw" in the Baghdad Pact. He accused Britain of supplying arms to Israel and said:

"The wailing of imperialism and its stooges simply because Russia mentions Israel as a state in its communique will not deceive us, or we should have asked Britain, America, and France to withdraw their recognition of Israel. Or at least let Britain, the champion of the Baghdad Pact, withdraw its recognition of Israel and close its embassy there.

"Our policy was based on Arab resurrection—in which the Arabs depend on themselves, their strength, their determination, their patience, and their disclosure of imperialist tricks. We feel our strength and we know our specific objectives."

Moscow put on a full propaganda display of its Middle East foreign policy statement in daily broadcasts of the Soviet Near Eastern service. For 72 hours Moscow radio, in all languages, broadcast favorable newspaper opinions and comments on the April 17 policy declaration. At the same time in its Arabic language Near East service, Moscow broadcast comments and features to reassure the Arab States that she was still on their side. These broadcasts make clear just what the Soviet Union's price is for peace in the Middle East. They also leave no doubt that at this time the Soviet Union does not want war in the Middle East. Typical of the comments on this point was the article in Pravda which the Moscow radio quoted on April 18. It said:

"The Soviet Union considers that armed conflict in the Near East can and must be avoided and that it is in the interests of all Near Eastern states not to let themselves be provoked into military operations, which is obviously sought by those who are interested in kindling conflicts in the Near East."

Again, on April 21, Moscow said:

"* * * it is necessary to display coolness and forbearance and not to allow the Arab States to get involved in military conflicts."

CONDITIONS FOR PEACE

In its broadcast Moscow laid down four conditions for her cooperation in keeping the peace. The Soviet Union wants first of all the dissolution of the Baghdad Pact; no armed intervention by the Western Powers in the Middle East; an end to the Tripartite Declaration of 1950; and finally, acceptance by the UN and the West as a participant in Middle East affairs. These four conditions are backed up by Moscow's implicit threat to continue and intensify propaganda exploitation of differences among the three Western powers and to keep up the tension in the Middle East.

A Moscow broadcast on April 18 in Arabic, dealing with the reasons for tension in the Middle East charges that the dispute between the Arab states and Israel was aggravated by the Western powers "in order to provide themselves with an opportunity for armed intervention in the affairs of the countries of the Near East."

The Moscow broadcast charged that the United States and Great Britain plan to reoccupy all the Middle East countries. It claims that "increasing numbers of units of the American Army are being transported to the Mediterranean region without the knowledge of the United Nations." The final comment in the broadcast deals with the Soviet government's readiness to "offer necessary support to the United Nations in the steps along the road leading to the establishment of peace in the Palestine region," in other words, to be a participant in Middle East affairs.

Behind this facade of diplomatic language lies the cold steel of Moscow's demands. A broadcast on April 21 continued to drive home the four basic points of the Moscow propaganda theme. It reiterated Soviet opposition to the "use of military groups hammered together by some Western powers, as well as the Arab-Israeli conflict for creating a threat to the national independence of the Arab countries. * * * It is for the sake of involving the Arab countries in a military conflict and over creating a pretext for a direct military intervention that the imperialists are restoring to provocation and are creating a tense situation."

Another Moscow broadcast quoting an Izvestia article refers to the United States and Great Britain as the "uninvited occupiers of the Near East."

MOSCOW THREATENS TROUBLE

A sample of the trouble-making that Moscow holds out as a threat if her demands are not met was presented in a broadcast in English on April 23. Opening with a discussion of the Bulganin-Khrushchev visit to Great Britain and commenting on the importance of the Near East oil for Western Europe, the broadcast explained that Great Britain was losing to the United States in "the struggle of the oil monopolies for the Near and Middle Eastern oil." It cited the London correspondent of the United Press as follows:

"He wrote that today the overt struggle for the control of the world's richest oil-bearing region become the main problem underlying the bold challenge of the Arab world to British rule in the Middle East. This is a dangerous struggle inasmuch as its roots are entangled with Anglo-American relations, the danger of war between the Arabs and Israelis, and the Western plan of defense against the Communists."

The sincerity of the Communist protestations that they were not responsible for the current Middle East flareup may be judged in part by a statement in Moscow's Near East broadcast on April 18. Expressing great concern over the fate of the Arab refugees, the broadcast said:

"The Soviet Union considers it essential that measures be taken as soon as possible to ease international tension in the Palestine area without any external interference and to improve the bad conditions suffered by hundreds of thousands of Arab refugees who have been deprived of their homes and means of livelihood."

The records of the United Nations Relief and Works Agency for Palestine Refugees in the Near East, however, show that not a single penny toward its budget has been contributed by the Soviet Union since the establishment of the agency in December 1949.

The Moscow radio offensive leaves no doubt that the U. S. S. R. is still on the side of the Arabs and that there will be no real peace in the Middle East unless their demands are met.

Harry S. Ditchburne

EXTENSION OF REMARKS

OF

HON. BARRATT O'HARA

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 10, 1956

Mr. O'HARA of Illinois. Mr. Speaker, it is with deep grief that I announce the death last week in Chicago of Harry S. Ditchburne, a veteran Republican leader and in 1933 the nominee of his party for State's attorney of Cook County. From 1927 to 1933 he was the ace prosecutor on the staff of the State's attorney. While we were of different polit-

ical parties and in many widely publicized murder trials of the era were on opposing sides, he always for the prosecution, I always for the defense, we held for each other a feeling of esteem and of affection. He was a great prosecutor, one of the all-time greats in the history of the criminal courts of Cook County, thorough in preparation, resourceful in presentation, impressing juries with his sincerity and his fairness.

It has been a quarter of a century or more since Harry Ditchburne and I were pitted in the courtrooms in homicide trials, first in the old criminal court in the near North Side, then at 26th and California when the new building was erected. In the intervening years I have seen him seldom. But the news of his passing comes to me as a shock. Illinois has lost one of her great sons, the bar one of its richest ornaments. To his widow, Bernice, and his sister, Mrs. Alex Mitchell, I extend my deepest sympathy.

Poznan Uprisings

EXTENSION OF REMARKS
OF
HON. THOMAS J. DODD
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 10, 1956

Mr. DODD. Mr. Speaker, the heroic uprising of the patriots of Poznan on June 28 has caused a great deal of thinking and discussion throughout the United States and the free world generally.

This revolt of the Polish workers against the tyranny of communism came at a time when it seemed the free world was slipping down the path of appeasement.

But the heroism of the Poles, it is hoped, has checked a dangerous drift in the conduct of our foreign affairs and has reawakened the conscience of some statesmen and reminded some politicians of their 1952 election promises with respect to the many nations and millions of people enslaved within the Communist empire.

But the tragic fact remains that we still do not have a positive policy toward the nations and people enslaved by communism.

In its July 5 edition, the Catholic Transcript, of Hartford, Conn., carried a timely and thoughtful editorial on the revolt of the Poles in Poznan.

The editorial is appropriately titled "Our Nonpolicy."

It points up the fact that we do not have a policy toward the enslaved people, that fatalism and futility have been allowed to take over in the absence of a policy and that we have failed our leadership of the free world by failing to develop a policy which would cause the Western democracies to act in concert when rebellions against tyranny like that in Poznan occur.

When the East Germans revolted on June 17, 1953, we had no policy, and consequently, no action was taken to support the German patriots in their demands for freedom.

The Eisenhower administration had only been in office a few months—hardly enough time to work out the fundamentals of the Eisenhower policy of liberation for the enslaved people of the Communist empire. Consequently, American action in support of the German rebellion against Russian tyranny was limited to an exchange of diplomatic notes with the Kremlin and offers of food for the hungry workers.

Now, 3 years later, when the Poles have risen in revolt to remind the whole world of their enslavement and their passion for freedom, we stand as if paralyzed by the bravery of the Polish patriots.

Yes, we have again exchanged notes with the Kremlin and have again offered food to the fighters for freedom.

But how futile are these actions, how sterile these gestures compared to the sacrifices of the Polish patriots. All this, because the moral courage is lacking to forge a policy based upon sound American political and moral principles.

Only a week or two before the Poznan revolt the administration was advocating a kind of cooperation with the Communist regimes in the occupied nations of Central and Eastern Europe in order to encourage them to demand some political independence from Moscow.

This same policy was advanced as justification for continuing American aid to the Communist dictator Tito.

In certain circles in our Department of State, this is known as the policy of political evolution which is advocated as a substitute for the law of nature, which holds that man's historic answer to tyranny, degradation, and exploitation is revolt.

In my judgment this policy of political evaluation is nothing more than a clever extension of the cynical containment policy of George Kennan. The impracticality, not to mention the immorality, of such a policy is demonstrated by the fact that but a few days before the inspiring uprising of the Poles, this same George Kennan pronounced publicly that it was time we gave our formal and final approval to events which have taken place in Eastern Europe during and following World War II. That is what he means when he says, "There is a finality, for better or for worse, about what has now occurred in Eastern Europe."

The editorial of the Catholic Transcript points out that no such finality is recognized by the Poles and their fellow sufferers.

It is high time we developed a positive policy toward the many nations and millions of people enslaved by communism. The American people have been called upon each year to put up well over $40 billion for our national defense requirements.

They are entitled to a national policy which is consistent with our American political traditions. We must completely reject fatalism and futility in the development and in the exercise of our foreign policies.

The Catholic Transcript of Hartford, Conn., has made a notable contribution toward the development of a positive policy with respect to all the nations and people enslaved by communism. Its editorial of July 5 crystallizes the basic issue which has long faced our Government.

Members of Congess will find this editorial both stimulating and challenging.

It reads as follows:

OUR NONPOLICY

Cunningly contrived though the ostensible criticisms of the Kremlin by Communist leaders abroad may be, by contrast the revolt of the Poles in Poznan was not something artificially arranged. Here was an expression of rankling discontent with Communist tyranny and of an irrepressible passion for freedom. It seems to have been crushed, but even in defeat it speaks resoundingly to the world of both the agony and the dauntless spirit of a people whom we of the West helped a totalitarian monster to enslave.

It must prompt us to consider what our policy toward these gallant people should be. We have had none to date. True, an occasional vague generality about the victims of Red aggression, and of our own stupidity or indolence, is piously spoken. But neither our own Government nor the concert of Western democracies has worked out a course to be followed when rebellions like that in East Germany or in Poland occur. Thus a great opportunity is lost. On each such occasion we return to our witless way of treating the Communist governments as legitimate, and even our cowardly way of voicing sentiments like those of George Kennan to the effect that "There is a finality, for better or worse, about what has now occurred in Eastern Europe." No such finality is recognized by the Poles and their fellow sufferers. Why, then, should we have a nonpolicy of fatalism and futility?

Trouble in the Middle East

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, July 9, 1956

Mr. MULTER. Mr. Speaker, the following article by Constantine Brown, from the Washington Evening Star of July 9, 1956, again tells a story that seems to be known to everyone but our Secretary of State:

IS MID-EAST EXPLOSION NEAR?—ISRAEL SUSPECTS ARAB CONFEDERATION—RUSSIANS SEEN FOMENTING TROUBLE

(By Constantine Brown)

New fears have arisen in Washington about the possibility of an explosion in the Middle East this summer. Rumors and reports, denied in turn by the Arabs and the Israelis, concerning troop movements and concentrations have come thick and fast in recent weeks.

According to observers on the spot, the Israelis are worried about the new moves, for an Arab confederation if it became an accomplish fact might enguif their country. This concern of Prime Minister Ben-Gurion is translated by some Arab leaders into the belief that Israel is getting ready for a preventive war.

Qualified observers in Washington feel that the time has passed for the Israelis to start a preventive action. It is true, they say,

that Israeli ground forces are still superior quantitatively and qualitatively to the combined Arab armies. But it is pointed out that the Arabs have now a definite superiority in the air.

The men in the Kremlin have supplied Egypt (and to a lesser extent Syria) with first-class offensive aviation. Egypt now has a sufficient number of bombers to destroy Tel-Aviv, Jerusalem, and Haifa within half an hour.

Egyptian pilots trained in the U. S. S. R. and in Egypt by Soviet experts can handle these planes skillfully. Thus at the Israelis' slightest move to rush the Arab forces which are on the Israeli borders, their three principal cities could be obliterated.

Israel not only lacks means to retaliate but does not have the necessary fighting planes to oppose air strikes. The Israelis have asked Washington for the sale or 3 or 4 dozen fighter planes.

Secretary of State Dulles explained that this country cannot provide arms to either side lest the balance of power be upset, and thus America would share a part of the responsibility for new and violent outbreaks in that explosive area. He told the Israelis that the United Nations had the machinery to cope with aggression.

Mr. Dulles said that the administration was sympathetic to Israel's difficulties and would attempt to obtain Canada's promise to sell the needed fighters. And, indeed, when Foreign Minister Lester Pearson came to Washington last month Mr. Dulles urged him to do something for Israel.

Mr. Pearson is reported to have agreed to deliver 20 to 25 planes to the Tel-Aviv Government. But on his return to Ottawa he was overruled by Prime Minister St. Laurent, who insisted that for domestic reasons it was essential that America provide at least some token planes. Only under such conditions would Canada commit herself to selling fighter planes to Israel.

The new acute state of affairs in the Middle East is ascribed by American high officials to the intervention of the Soviets. More specifically, it is attributed to the recent talks of Foreign Minister Dmitri Shepilov with the Arab chiefs in Cairo, Beirut, and Damascus.

Comrade Shepilov is outwardly advocating an improvement in Soviet-American relations. But he failed to indicate to the reporters to whom he talked last week that during his quick official trip to the Middle East and to Athens he had tried to place some new fuses in the powder barrel in that area.

Shepilov obtained the promise (some say the commitment) of Egyptian President Nasser to place at the disposal of the Soviet the air and naval power bases along the Suez Canal which are pledged by treaty to be available to Britain in case of need.

In exchange the Kremlin diplomat assured the Arabs that the U. S. S. R. will be able to hold back the Western nations in the event of Arab-Israeli hostilities.

Shepilov furthered the idea of an Arab confederation, not for the purpose of promoting a better understanding and peace in the Middle East, but as an instrument to remove us from the area extending from the Suez Canal to the Persian Gulf.

The practical objective for dislodging America and Britain from the Middle East is the peaceful conquest of the vast Arab and Iranian oil resources without which Russia cannot risk another aggression.

If it is necessary to sacrifice Israel to attain this oil objective, then it cannot be helped, according to the tenets of the Soviet foreign minister.

Ten years ago the U. S. S. R. supported the creation of the Israeli State. The Russians felt then that the best way to get a wedge in that region was to create the inevitable dissensions between Arabs and Jews. They may have indulged then in mere speculations. But they appear to have been profitable. Today we barely hold our own in Iraq, Iran, and Saudi Arabia.

Fourth of July

EXTENSION OF REMARKS
OF
HON. JOHN J. RHODES
OF ARIZONA
IN THE HOUSE OF REPRESENTATIVES

Friday, June 29, 1956

Mr. RHODES of Arizona. Mr. Speaker, under leave previously granted, I would like to include in the RECORD for the attention of the House an editorial that appeared in the June 29 edition of the Sunnyslope (Ariz.) Journal whose publisher is John Wagner.

I read many articles over the Fourth of July but this is one of the best it has been my privilege to read, and I feel that it should be brought to the attention of the Congress.

The editorial follows:

FOURTH OF JULY

Flags flying, family picnics with watermelons and fireworks are the insignia of our old-fashioned American Fourth of July observance.

It is also the day when our American motorists tune up their cars and equip them with new tires and parts for that holiday trip.

All of this relaxation is our way of expressing our happiness that we are still a free Nation.

Can you imagine a Fourth of July celebration in Russia? A nation whose beliefs are founded on a disbelief in God. The Great All In All who has given us this fine earth on which to work out our own salvation?

Instead of being free as the birds as we Americans are, the Russians are constantly shadowed. Fearful to talk to strangers, especially Americans who are in Russia on visits or business missions.

Our Founding Fathers have left us a legacy in this great Fourth of July holiday that no other nation enjoys. We love our freedom so much that we want other nations to share it with us. We have practically bailed out these bankrupt nations since World War II and have tried to show them the way to a better and freer way of life.

But alas. Even in this country and, yes, right in our own bailiwick we have some who sympathize with the way of the Soviets.

It would be a glorious thing to just trade off these people here for the Russians over there who earnestly want freedom and are fed up with the Soviet mode of living. No doubt the Russians would be the greater beneficiaries. They would get something they never had. And our grumbling Americans would get something they never bargained for.

Ever since the first human trod this earth no nation has enjoyed a greater freedom and wealth of living as we Americans have and do enjoy.

Our standards of living are practically at the highest point that can be reached. Where slaves and ill-paid workers carry on the most menial tasks in other countries, we in America just press a button and we have what we want.

Our refrigerators, heaters, coolers, stoves, washers, radios, and televisions are luxuries not enjoyed even today by many of the wealthy residents in other lands.

All of these are a commonplace thing in our homes. Even our cars are equipped with pushbuttons to raise and lower windows, and today are being refrigerated for our comfort.

Skeptics in other nations can't believe what they hear and read of America. Many do not give credence to the tales that touring Americans tell of our country. They believe that it is just another bragging American shooting off his loud mouth.

Soap and matches which can be bought here at a very low cost are unheard of even in Europe. Even touring Americans visiting some of the better hotels in Europe are charged extra for a small bar of soap. Also charged extra to take a bath.

Even with so-called scarcity of water in our hotter climates we still can take several baths a day if we want to without adding too much to our utility bill.

Our great American holiday reminds us of those brave men and women who struggled during our Revolutionary period to be freed from the yoke of dictators. They wanted to be free to worship God as they saw fit. They did not come here to establish a government which does not believe in God. They knew that a great power rules this universe, and they wanted to pay homage to such a Creator.

Today we enjoy all of the benefits that those early Americans fought and bled for. They left us a government that has never been equaled on the face of the earth.

Fourth of July on the surface is a day to picnic, relax, and enjoy fireworks. But its deeper significance is our observance of the day in memory of those who gave us freedom.

Wilson Versus the Field

EXTENSION OF REMARKS
OF
HON. LEON H. GAVIN
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES

Thursday, July 5, 1956

Mr. GAVIN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the New York Daily News of July 9, 1956:

WILSON VERSUS THE FIELD

Why is it that Defense Secretary Charles E. Wilson, about 2 out of every 3 times he breaks into print or the newsreels, is found to be having a fight with somebody?

The latest Wilson tussle occurred last week, with the Secretary and various members of the Senate Armed Services Air Force Subcommittee trading insults on the subject of speeding up delivery of B–52 intercontinental jet bombers.

An alarmed Congress has voted Wilson an extra $960 million over the President's defense budget, and wants him to spend most of the money on B–52's. Wilson says in effect that he isn't as scared as are some Members of Congress, that the big planes are coming off the assembly lines fast enough, and that he'll use his own judgment about spending the additional hundreds of millions.

When he isn't in a row with congressional politicians, Wilson is usually in some argument with military men, generally Air Force men. For example, Air Chief of Staff Nathan F. Twining, following his recent visit to Moscow, said we're ahead of the Russians in quality of aircraft but probably not in number. Wilson is much more optimistic than that, and often says so.

We aren't experts on these matters. But it does seem only fair to point out that Defense Secretary Wilson is a man on a hot

spot for reasons which do credit to all concerned, including Wilson.

He's the civilian chairman, you might say, presiding over the 3 branches of 1 of the world's greatest military setups—Army, Navy, Air Force.

Each service has a lot of officers, to say nothing of enlisted men, who think their outfit could lick any nation or combination of nations on earth singlehanded. Therefore, it's practically an article of faith in each separate service that it should get everything it asks for in the way of money and war gear.

NOBODY LOVES THE UMPIRE

It is entirely proper and patriotic, we feel, for the three services to think this way. As one prominent officer once put it: "Our military people are not hired primarily to see how little they can get along with; they are hired primarily to seek to get enough material to meet their responsibilities."

But if all three branches of the Armed Forces had a free hand to grab everything they could, they might bankrupt the Nation. It would all be done from the worthiest, most patriotic motives; but we'd be busted just the same.

The Secretary of Defense is hired partly to see to it that we'll get the biggest possible bang for each buck in case of war, and also that the Armed Forces don't gobble up every buck in sight.

Like the umpire in a ball game, therefore, the Secretary of Defense is bound to be loved by few if any people. Fighting men and battling politicians can be counted on to be after his scalp 24 hours a day. The more conscientious and effective he is, the more fiercely they'll hate him.

All of which, it seems to us, is an indication that Mr. Wilson is turning in a good job up to now, and deserves the thanks of the taxpayers, at least.

The Defense Secretary's problems might ease off considerably if we could ever get real unification of the Armed Forces.

It is true that the civilian managements of the services were unified by the National Security Act of 1947, setting up the Department of Defense with the secretaries of the Army, Navy, and Air Force outranked by the Defense Secretary.

IKE TO TRY UNIFICATION?

But, as a recent official Army staff paper pointed out, we now have "triplication" instead of unification among the fighting men themselves. Each branch is as fierce a rival of the other two as it ever was, and struggles to get the biggest appropriations and a monopoly on the latest weapons.

Maybe the answer, as this Army paper says, is to abolish the Joint Chiefs of Staff and put the whole military establishment under a single chief of staff. Maybe all branches ought to be put into one style of uniform.

We don't know. But there are rumors that President Eisenhower, if he is reelected, intends to make genuine unification an early order of business in his second term. We don't know of a more important single service the President could perform in the near future.

Anti-Semitism in Russia

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 10, 1956

Mr. MULTER. Mr. Speaker, the following two items appeared side by side in the New York Times of July 9, 1956. They shed much light on the Russian attitude, official and unofficial.

FOREIGN AFFAIRS—ANTI-SEMITISM BEHIND THE IRON CURTAIN

(By C. L. Sulzberger)

LONDON, July 8.—Ugly intimations of anti-Semitism, tolerated if not encouraged by the Communist regimes in power, are again appearing in Eastern Europe. There are hints that Marxist leaders, bewildered by the great post-Stalin debate, are either permitting or encouraging a new search for racial scapegoats to avoid blame for past or present ideological confusion. And, according to available evidence, Khrushchev is personally connected with this unpleasant recurrence of racial prejudice.

When Khrushchev was Prime Minister of the Ukraine after World War II he issued regulations barring Jews from important local positions. He was the first premier of a Soviet republic to prohibit activity of Jewish theaters, schools, and publishing houses. He forbade writing and acting in the Yiddish language and tolerated an anti-Semitic outbreak in Kiev so serious that Stalin sent Malenkov to investigate.

Khrushchev and Suslov are reputed to be the leaders of an anti-Semitic group within the present Moscow Presidium. Last March, when Soviet leaders attended a state funeral in Warsaw for the late President of Poland, Bierut, Khrushchev made several indiscreet observations that tended to confirm his reputation for prejudice. He was heard to remark: "Even a second-rate Kowalski [a typically Polish name] is more useful than a first-rate Rosenblum [a typically Jewish name]." During a meeting of the Polish Communist Central Committee he observed: "You have too many Abrahamoviches here."

PREJUDICE DENIED

When the Soviet boss was in London he was questioned on this subject by British labor leaders. He denied that there was any anti-Semitism in the U. S. S. R. Nevertheless, in May a group of French Socialists saw Khrushchev, Mikoyan, Shepilov, and Suslov in Moscow and pressed them on the issue.

The Russians argued there was no Soviet anti-Semitism and that such prejudices were merely a survival from capitalism. Mikoyan hastened to explain that fragmentary nationalism still existed in the U. S. S. R.—"even in Armenia, my own country"—because one could not extirpate all capitalistic remnants in thirty-odd years.

It was asserted that Soviet Jews wished to be assimilated into the rest of the population and for that reason did not have their own cultural institutions; that only because young Jews desired to study in Russian were there insufficient pupils for Jewish schools.

Shepilov said that the Jewish theater had been closed because it fell into disrepair and cost the state too much to fix. Mikoyan concluded that Stalin's famous doctors' plot had nothing to do with anti-Semitism but was merely another nefarious Beria conspiracy. Mikoyan cited a list of Jews holding important Soviet positions—curiously omitting Kaganovich.

Despite such explanations, Khrushchev expressed some odd opinions at the time of Bierut's funeral. Although there are now only about 50,000 Jews in Poland, where Hitler's most dreadful furnaces burned, there is a long Polish tradition of anti-Semitism. The Communist regime has not succeeded in erasing this—if, indeed, it ever tried.

SYMPTOMS IN POLAND

The two principal Warsaw bosses now are Marshal Rokossovsky and Ochab, who succeeded Bierut. Rokossovsky has a reputation in the army for anti-Semitism and is held responsible for dismissing several hundred Jewish officers. Ochab is a table-thumping militant and Khrushchev nominee. One of his first moves after gaining power was to fire Jakub Berman, detested party theorist and a Jew.

Jewish refugees from Poland report: "Anti-Semitism always existed among the masses. Now it comes from above. It is an echo of what is happening in Russia. It is said that Khrushchev is more prejudiced even than Stalin. In the Ukraine anti-Semitism is becoming increasingly intense."

Certainly, unpleasant symptoms are being reported. In May, five Jews were killed during riots in Kiev, the Ukrainian capital. A few days later the synagogue in Lodz, Poland, was desecrated. Polish newspapers are so full of articles condemning anti-Semitism that one is forced to conclude the disease is rampant. Do these editorials represent camouflaged attacks on Ochab by other party factions?

It is one of Europe's tragedies that along the broad belt between the Black Sea and the Baltic there is a powerful tradition of anti-Semitism. Embers of this still exist despite the Nazi holocaust. When the Communists took over, several of their leaders were Jewish intellectuals. This was emphasized by their opponents. The only outstanding Jewish Communists remaining in authority are Kaganovich in the U. S. S. R., Rakosi in Hungary, and Minc in Poland.

Are ancient prejudices to be revived during the great anti-Stalin political post mortem? As the Communists struggle for power among themselves and seek to readjust their ideology, do they intend to seek Hitlerian scapegoats? Is this a calculated aspect of Moscow's effort to seek favor with the Moslem Middle Eastern lands?

PLIGHT OF JEWS IN RUSSIA—HOPE EXPRESSED THAT KHRUSHCHEV'S STATEMENT PORTENDS FREEDOM

(The writer of the following letter is the author of Scapegoat of Revolution.)

To the EDITOR OF THE NEW YORK TIMES:

The Times of July 2 in a dispatch from Cairo reported that Soviet boss Nikita Khrushchev boasted in an interview for the Egyptian daily Al Ahram that "we have thrown them (the Zionists) out of our country (U. S. S. R.)." Mr. Khrushchev's words, if correctly quoted, have a sardonic quality, for the issue has never been the exclusion of Zionists, it has been their incarceration and banishment to slave labor camps in the remotest regions of the vast Soviet Empire.

Zionism has always been repugnant to Communist ideology. Karl Marx was the inspiration of this attitude because of his perverse misreading of the role of Jews in western civilization and his gleeful pinning on Judaism of responsibility for the evils of capitalism. Lenin, personally free of religious bias, was none the less impatient with anyone who conceived the Jewish people as more than a caste, and, writing at Lenin's suggestion a paper on the question, Stalin said that the Jewish people was "yet to prove that it even exists," and queried mockingly, "can one seriously consider petrified religious customs and tenuous residual psychological strands?"

SINGLED OUT

It was natural, then, that communism, when it came to power, should single out Zionism for unwelcome attention. This meant stark tragedy for Russian Jewry, whose majority was predisposed toward Zionism. Zionist activity in Russia, as elsewhere, included the maintenance of Hebrew cultural institutions, schools and publishing houses, and also training farms, some of them organized in farm societies of the ancient Essene pattern, where young men and women prepared themselves, with pristine religious faith, for pioneering in Palestine.

The Communists commissars, occasionally on a local level without prior consultation with their superiors in Moscow, moved in rudely and ruthlessly to suppress this movement and all its manifestations.

Economic discrimination and a diversity of social and legal impositions were put into effect by the Communist commissars to "persuade" members to disaffiliate from Zionist organizations, Hebrew culture circles and pioneer training farms, to discontinue all correspondence with relatives in Palestine and overseas and to terminate subscription to Palestine Hebrew newspapers. However, disaffiliation was insufficient. The Communists demanded that the Zionists denounce their friends to the police and publicly renounce Zionism. Few yielded, and the result was that the majority became victims of police persecution.

FORCED CONFESSIONS

Although Zionism was formally banned only in the fall of 1924, none but the most courageous dared under the circumstances to identify himself as a Zionist. Membership rosters were seized by the secret police, and Zionists soon found themselves facing interrogators who forced them, by means which Khrushchev himself has exposed in such bizarre fashion, to "confess" that they had acted as "agents for the entente," "imperialist saboteurs," etc.

Public trials of Zionists were discontinued in the mid-twenties because they had a strange way of backfiring against the prosecution. Hauled into court, the Zionist defendants, some as young as 14, repudiated their confessions and reaffirmed their faith in the manner of religious martyrs.

Wherever communism has come to power since World War I, with the notable and laudable exception of Yugoslavia, the Soviet pattern of persecution was repeated. Hebrew was banned, Zionists were rounded up and banished on the charge of acting as "imperialist agents." Notwithstanding their sharp criticism of Secretary of States Dulles' policy on arms for Israel, they are even now accused behind the Iron Curtain of being "informers for Dulles." In recent months, however, there has been some let-down in Rumania, to the extent only that some Zionists were released from prison and permitted to depart for Israel.

If Mr. Khrushchev has been quoted correctly by Al Ahram, then it might be suggested that he study more thoroughly the records of the "execrable Beria." He will learn that far from having "thrown them out of our country," his regime is keeping Zionists under lock and key. They could wish for nothing better than to be permitted to resume their lives in the freedom of Israel, and so would multitudes of Russian Jewry, whether Zionist or not, if the Kremlin continues to deny them the right to cultural freedom.

JUDD L. TELLER.

NEW YORK, *July 4, 1956.*

Our Heritage of Heroes

EXTENSION OF REMARKS

OF

HON. GLENARD P. LIPSCOMB

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 10, 1956

Mr. LIPSCOMB. Mr. Speaker, under leave to extend my remarks I would like to commend to the attention of my colleagues the following address by the Honorable Roger Alton Pfaff, judge of the superior court of Los Angeles county, on the occasion of Memorial Day observances at Forest Lawn Memorial Park, Glendale, Calif., on May 30, 1956, entitled "Our Heritage of Heroes":

OUR HERITAGE OF HEROES

(By the Honorable Roger Alton Pfaff, judge of the superior court of Los Angeles County)

Ninety years ago at the close of the Civil War the women of Columbus, Miss., gathered the garlands of early spring and placed these flowered offerings on the graves of Confederate and National soldiers alike. This tender tribute touched the heart of the North and out of this compassionate gesture by these unnamed southern gentlewomen was born the beautiful custom we now call Memorial Day.

Today we join with millions of our fellow Americans in reverent remembrance of our honored dead. This day of memory has become throughout the years more than a patriotic occasion. Rather it has become a spiritual celebration, a time for quiet contemplation, and devoted dedication to the divine political principles our forefathers proclaimed nearly two centuries ago and for which more than 1 million of our fighting sons and daughters have sacrificed their lives upon the altar of their country's need.

Let us never forget the mighty acts of unselfish devotion and willing sacrifice by these American patriots of yesteryear. These were men imbued and ennobled by a sublime cause—the protection and preservation of Americanism—of the American way of life. What is Americanism?

Americanism is the sum total of nearly 200 years of struggle by the American people to effectively promote, practice, protect, preserve, and perpetuate those fundamental and divine principles of liberty, equality, and justice, to the end that no American ever need know fear of any man, nor envy of any man, but shall instead enjoy peace and righteousness under God.

We Americans can be justly proud of our mighty achievements.

For nearly two centuries we have maintained a republican, representative form of government based upon the divine rights of man.

We have created and preserved a democratic, capitalistic, economic system which has been fostered and perpetuated by the fundamental principle of the greatest good for the greatest number.

We have carved out of an unfriendly wilderness the most palatial national abode, with the highest standard of living ever dreamed of or enjoyed by any people in history.

We have proved that men of good will, regardless of their race, religion, or national origin can live together in peace and prosperity.

We have provided a social climate that offers unlimited opportunity for success and wealth to the fit and protection and security for the unfit.

We have fought seven bloody wars, not for territorial acquisition or national aggrandizement, but for the noble ideals of freedom and world peace. And we have done something more. When the guns were silenced we have sacrificed our substance to succor and rehabilitate our vanquished foe.

We have declared, as our national policy, the inalienable right of all men to be free and self-governing and furthermore have practiced what we preached by granting independence to the people of our former possessions.

We are a Christian Nation. America was conceived and created by godly men. Our jurisprudence is out of the Old Testament. On the coin of the Republic we boldly declared "In God we trust." America has achieved her greatness, not primarily because of her natural wealth—many others have such physical resources—but because the foundation of our form of government and way of life is firmly embedded in the rugged rock of our Judeao-Christian spiritual heritage.

Although we take pride in our past, a cardinal American characteristic is to constantly strive for future betterment. Henry Van Dyke summed it all up so beautifully when he said:

"I know that Europe's wonderful,
But something seems to lack,
The past is too much with her
And the people looking back.
But the glory of the present
Is to make the future free.
We love our land for what she is
And what she is to be."

For too many years last past there has been a determined effort on the part of the so-called intelligentsia—and in more recent years the disciples of dialectical materialism—to decry and condemn the teaching of orthodox history, which instills love of country and patriotism in the youth of our Nation.

The debunkers of our national heroes have told us that it is passé, and that we are immature to eulogize our great men; that we are provincial and nationalistic when we revere our flag; that we are foolish and infantile to be willing to fight and even die in defense of our native land.

Yet it has been our heritage of heroes and their glorious example of unselfish devotion to God and country that has inspired many a boy born in humble circumstances to achieve greatness. It was Abraham Lincoln who declared that as he read Parson Weems' laudatory Life of Washington by the flickering light of the fireplace in a humble log cabin he became inspired to educate himself and devote his life in service to his fellow man.

Let us remember today the battle cry of the intrepid Patrick Henry when he fearlessly declared "I know not what course others may take, but as for me, give me liberty or give me death!"

Let us listen with humble hearts to the immortal words of Nathan Hale when he proudly declared, "I only regret that I have but one life to lose for my country."

And in these days of Communist world conspiracy, when we hear misguided if not disloyal Americans declaring that governmental institutions have no right to demand of public servants an oath of loyalty, let us heed the words of the Father of Our Country. When traitorous Tories attempted to infiltrate his colonial army and even to poison him, Gen. George Washington issued the command, "Put none but Americans on guard tonight."

Let us here rededicate ourselves to the supreme American pledge of all time written by young Thomas Jefferson and to which the Founding Fathers fearlessly subscribed their names, "We mutually pledge to each other our lives, our fortunes, and our sacred honor."

There was not one single word in that famous Declaration of Independence that even slightly hinted at appeasement or solicited a political deal with despotism or an offer to compromise principle.

To compromise one's ideas is democracy; to compromise one's principles is immorality.

Memorial Day is not a tribute to war. It is a day of memory to our heroic dead who gave their last full measure of devotion that liberty, justice, and human rights might be protected and preserved for all posterity in a world of peace and brotherhood.

America's greatest living hero, General of the Army Douglas MacArthur has perhaps best described these honored dead when he declared, "By their sacrifice they come closest to the image of their Creator who died on the cross that the human soul might live."

A Voice for Liberty

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, July 9, 1956

Mr. MULTER. Mr. Speaker, I am pleased to direct the attention of our colleagues to the following article about Dudley Baldwin Bonsal, which appeared in the New York Times of July 9, 1956:

A VOICE FOR LIBERTY: DUDLEY BALDWIN BONSAL

When city bar leaders chose Dudley Baldwin Bonsal to head their study of the Federal loyalty-security program, they picked a man who stands for liberty—both by tradition and by his own international work.

The first Bonsals (the name is pronounced BON-sel) came to America as English Quakers. They helped found Pennsylvania in 1682 with members of the Worrall family, from whom Mr. Bonsal's wife, Lois, is descended. On his mother's side, Mr. Bonsal derives from Richard Morris, who had come to New York under the Dutch even earlier. His great-great-grandfather, Gouverneur Morris, produced the 1778 Continental Congress statement that American independence must be recognized before any peace negotiations with the British.

Yesterday's Bonsal committee report for the Association of the Bar of the City of New York urged due-process reforms in the Federal civilian security risk program. Liberty, it said, must be upheld not only here but as "a continuing appeal to the oppressed in every land."

Efforts toward that world vsion were made by Mr. Bonsal as one of the 16 members of the International Commission of Jurists. The commission sprang from a congress of 150 lawyers from 43 countries, convened in Berlin in 1952 to learn about Communist perversions of law in East Germany.

Mr. Bonsal believes that if lawyers throughout the free world—particularly those on the borders of Communist countries—"reach an understanding about what communism is and means to the administration of justice this can be a very strong weapon in the cold war." This understanding the Commission promotes.

Allen T. Klots, then president of the Bar Association, selected Mr. Bonsal for the security study because he had already shown conscientiousness, integrity and ability to harmonize views. He had served on the association's executive committee, and is now its chairman; he had also headed its foreign law committee.

Mr. Bonsal is a 6-foot, healthily pink man of graciousness and charm. His law practice with Curtis, Mallet-Prevost, Colt & Mosle at 63 Wall Street has concentrated on private internaitonal law—representing American companies with interests abroad, foreigners with problems here.

From 1942 to 1945, he was chief counsel for the Office of Inter-American Affairs in Washington. He attended the 1945 Inter-American Conference on Problems of War and Peace in Mexico City as a United States delegation aide. Long counsel for the Foreign Bondholders Protective Council, he spent 7 months on a German debt conference in London in 1951.

He is the son of Stephen Bonsal, a topflight foreign correspondent who won a Pulitizer prize in history when he was 80 years old. He was born in Bedford, N. Y., on October 6, 1906. During his father's travels Dudley Bonsal attended elementary school in the Philippines and Switzerland.

He now lives in Bedford Village, N. Y., where he is a Protestant Episcopal vestryman. In the winter he stays in an apartment in the city. His daughter, Mrs. Lois Osler, has given him a grandson; his son Stephen has just been graduated from Yale. One brother, Philip, is United States Ambassador to Colombia; the other Richard, grows tobacco at Leonardtown, Md.

A registered Democrat, Mr. Bonsal splits a ticket unmercifully. He voted for President Eisenhower in 1952. For 1956, he hasn't made up his mind.

Hollow Celebration

EXTENSION OF REMARKS
OF
HON. ALBERT P. MORANO
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 10, 1956

Mr. MORANO. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include the text of a letter which I wrote to His Excellency Romuald Spasowski, the Polish Ambassador to the United States, in reply to an invitation to attend a reception in celebration of the national holiday of the Polish People's Republic on July 23.

My first thought upon receiving this invitation for the Communist celebration was the picture of thousands of dispirited Poles, men, women, and children, faced with the threat of ultimate starvation in a city called Poznan—a city supposedly flourishing under the Communist "people's republic," the founding of which will be celebrated on July 23.

This is the "people's republic" government which has refused the humane offer of the United States to provide food for these starving people of Poznan.

It is the same "people's republic" which turned tanks and guns on the oppressed humans of that city, humans whose only crime was that they dared to claim the rightful heritage of all mankind—the right to be free.

I am sure there will be no dancing in the streets of Poznan on July 23.

More than likely the citizens of Poznan will spend the day in quiet prayer—prayer for the end of the "people's republic"—prayer for the return of their freedom and their dignity.

Following is the text of my letter to the Polish Ambassador:

JULY 9, 1956.

His Excellency ROMUALD SPASOWSKI,
Ambassador Extraordinary and Plenipotentiary, Polish Embassy, Washington, D. C.

DEAR MR. AMBASSADOR: Mrs. Morano and I regret that we are unable to accept your invitation to attend the reception in celebration of the national holiday of the Polish People's Republic on July 23.

Were we able to attend, I am certain that my conscience would not permit me to enter into the spirit of the "celebration" knowing in my heart that across the seas the people of Poland are in agonizing quest for food for their bodies and freedom for their souls.

I could not in good conscience accept your hospitality, the offerings of the festive table and bar, full knowing that in Poznan today valiant men, women, and children are facing starvation because they dared to seek the freedom willed them by God.

What a true celebration it would be if you could urge your government to reconsider, and on this day you, Mr. Ambassador, were able to announce the acceptance of the United States Government's humane offering of food for the hungry people of Poznan. This, indeed, would be cause for a celebration.

And the true celebration will come, I am sure, when the shackles of oppression are fully lifted, and the Poles regain their national prestige and the pride of a free people; in truth, that day will be a genuine national holiday in which your people too will join the celebration, wholeheartedly and with the same spirit of free men and women with which they formerly celebrated their national holiday of May 3.

In this celebration all Americans would happily participate.

Sincerely,

ALBERT P. MORANO,
Member of Congress.

Shortage of Materials for Arrow Shafts

EXTENSION OF REMARKS
OF
HON. LESTER R. JOHNSON
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 10, 1956

Mr. JOHNSON of Wisconsin. Mr. Speaker, under leave to extend my remarks, I would like to include letters I have received from Richard E. McArdle, Chief of the Forest Service of the United States Department of Agriculture, and from Wesley A. D'Ewart, Assistant Secretary of the United States Department of the Interior.

The letters are in answer to a letter from the National Bowhunter which I put in the CONGRESSIONAL RECORD on pages A4692–A4698 of the June 12, 1956, issue with respect to Government policies regarding shortages of material for arrow shafts.

I am glad to give the Department of Agriculture and the Department of the Interior an opportunity to answer the National Bowhunter article. The two letters follow:

UNITED STATES
DEPARTMENT OF AGRICULTURE,
FOREST SERVICE,
Washington, D. C., June 18, 1956.

Hon. LESTER R. JOHNSON,
House of Representatives.

DEAR CONGRESSMAN JOHNSON: This letter is in response to your request over the telephone for comments on your extension of remarks which appear on page A4692 of the June 12 CONGRESSIONAL RECORD. We are glad of this opportunity to supply you with information in respect to Forest Service policies for sale of Port Orford cedar stumpage suitable for manufacture into arrow shaft stock.

Port Orford cedar grows in commercial quantities only in about three counties in southwestern Oregon. A substantial portion of the remaining Port Orford cedar stumpage is on the Siskiyou National Forest. There is also a considerable volume on Bureau of Land Management lands and on privately owned lands in Coos and Curry Counties.

The most suitable wood for arrow shaft manufacture is dead Port Orford cedar. This type of material is usually obtained from small, scattered patches of windthrown or standing dead trees. Most of these dead

tree groups are the result of forest fires of many years ago. With improved fire protection in recent years, there are hardly any additional deadenings to replace those which are being utilized. Hence opportunities to cut dead Port Orford cedar are becoming quite limited.

Until recently dead and down Port Orford cedar was relatively plentiful and users of Port Orford cedar for products other than arrow wood were able to satisfy their wants from quantities of Port Orford cedar developed in normal sales of other timber. At present, users of Port Orford cedar for other products are interested in purchasing any material merchantable as sawlogs, and are particularly interested in the higher quality logs which are suitable for arrow wood bolts. The only class of material for which competition is restricted to arrow wood manufacturers is that which contains high quality wood but which has been checked so severely that it will not yield lumber products. Practically all the known readily accessible sources of this latter class of material have been exhausted.

National forest timber is sold through competitive bidding except for small amounts, not exceeding $2,000 in value, where only the applicant is interested in the sale. At present levels of demand for dead Port Orford cedar suitable for arrow stock manufacture, several operators are interested in purchasing practically every lot which can be developed for sale. The forest service is therefore making its sales of Port Orford cedar on a competitive bidding basis.

One Oregon manufacturer of Port Orford cedar arrow dowels has raised strenuous objections against letting sales of Port Orford cedar suitable for arrow wood through competitive bidding. Because of the scarcity of raw material and the strong demand for it, it is impossible to supply all who want this class of stumpage through negotiated sales. Hence noncompetitive sales to selected parties would be indefensible favoritism.

The regional forester at Portland, Oreg., has agreed to offer as much volume of dead Port Orford cedar as can be located and found suitable for sale. In addition he will offer for sale live trees suitable for arrow stock from uncut stands of timber. At least the equivalent of 500 cords of green material on an individual tree selection basis will be offered for competitive bidding this year. These special sales exclusively of green Port Orford cedar are for the purpose of giving the arrow stock industry an additional source of wood.

In brief we want to cooperate with the cedar arrow industry in developing a competitive sales program suitable to the industry's needs, but we are unwilling to give this industry or individual arrow stock manufacturers preferential treatment by making noncompetitive sales of material which other users also want to purchase.

Sincerely yours,

RICHARD E. MCARDLE, *Chief.*
By EDWARD C. CRAFTS.

UNITED STATES
DEPARTMENT OF THE INTERIOR,
OFFICE OF THE SECRETARY,
Washington, D. C., July 9, 1956.

Hon. LESTER R. JOHNSON,
House of Representatives,
Washington, D. C.

MY DEAR MR. JOHNSON: Reference is made to your extension of remarks on pages A4692 and A4693 of the June 12, 1956, edition of the CONGRESSIONAL RECORD and to your recent communication with the Bureau of Land Management regarding shortages of material for arrow shafts.

I am deeply concerned about the growing shortages of such specialty products material as arrow stock, burl, figured wood, etc. This shortage is not confined, however, to specialty products material. There is an acute shortage of material for the entire timber industry in western Oregon.

The Bureau of Land Management administers much of the forest land under the jurisdiction of the Department of the Interior in western Oregon. To the extent possible with available funds, facilities, and personnel, it is making every effort consistent with good forest management to offer for sale the maximum amount of timber for general as well as specialty use.

In those instances where it is known that there is more than one prospective purchaser, Bureau timber is offered for sale either by sealed bid or at oral auction, and the highest qualified bidder is awarded the contract. Where it is known that no such competitive interest exists some timber is sold on a negotiated or noncompetitive basis at fair market appraisal.

During each of the past 7 years the Bureau of Land Management has invited prospective timber purchasers in western Oregon to submit advance notices of their respective needs in order that consideration could be given to those suggestions in developing an annual sale program for the following year. Suggestions of that sort from arrow stock manufacturers are welcome and can be expected to result in sale offerings for Port Orford cedar. This means of preparing sale programs has been accepted generally by the timber-using industry as being equitable for all concerned. In many instances the tracts listed in the sale programs have been suggested by prospective purchasers who have located the material involved, made an estimate of the quantity of timber in the area, located nearby public land survey cornors, and, when use of privately owned roads is involved, have secured written permission of the owner for any purchaser of Bureau timber to use the road or right-of-way. While these activities usually require some trouble and expense on the part of the applicant, he has no assurance that he will be awarded the contract for the timber when sold. The recipient of the contract is determined by the competitive bidding process.

It is my understanding from a recent report from one of our Oregon field offices that requests for Port Orford cedar, to be used in arrow stock, have been received from several sources and that a keenly competitive demand for this material exists. The competitive conditions for Port Orford cedar are so similar to those of Douglas fir and other commercial species in western Oregon that it does not appear to be in the public interest to grant certain prospective purchasers of Port Orford cedar privileges of purchase, which are not equally available to prospective purchasers of all Bureau timber offered for sale.

In an attempt to relieve current shortages of arrow stock material, the Bureau's western Oregon field offices have been instructed to make every effort to offer at least 500 cords of such material for sale during 1956. An estimated 288 cords were offered for sale in Coos Bay, Oreg., on June 22, 1956.

During the past 5 months the Bureau has processed and offered for sale tracts of timber which include an estimated 3,326,000 board feet or 6,652 cords of Port Orford cedar. It is recognized that some of this material may not be suitable for arrow stock, however it is reasonable to assume that a portion of it would be suitable and could be obtained by arrow manufacturers. In making use of such material some of which may be live timber, it is possible that the arrow makers would find it necessary to arrange for seasoning prior to turning out the dowels. It is understood, however, that the process of seasoning Port Orford cedar is well known. Inasmuch as the supply of suitable material which can be obtained from old dead trees is nearly exhausted, it appears probable that the producers of arrow stock will find it necessary to install facilities for the seasoning of lumber cut from green timber or buy rough stock from mills which are equipped to produce seasoned lumber.

It is my understanding that the Forest Service in the Department of Agriculture is undertaking a similar effort to market Port Orford cedar. I hope that these past and proposed sales, along with material available from other sources will enable the arrow industry to maintain continuous, full capacity operations.

The Bureau of Land Management had a recent request to export a large volume of Port Orford cedar logs on grounds that the purchaser of the timber could not use such material for plywood. This indicates that Port Orford cedar logs were for sale.

Port Orford cedar on the C. & C. lands administered by this bureau in western Oregon is not available for export to foreign countries. The export problem is controlled by the marketing area system which requires local manufacture of timber cut on those lands. The purpose of these marketing areas is to carry out a statutory requirement that timber be sold, cut, and removed in such a manner as to provide a permanent source of timber supply and contribute to the economic stability of local communities and industries.

Sincerely yours,

WESLEY A. D'EWART,
Assistant Secretary.

Working Together

EXTENSION OF REMARKS
OF

HON. HAROLD C. OSTERTAG

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 10, 1956

Mr. OSTERTAG. Mr. Speaker, on June 28 I inserted in the RECORD an account of some farmers in western New York who banded together to plant the fields of an ailing neighbor, Edward Sheehan, of Warsaw, N. Y., who had been hospitalized by pneumonia.

Today I wish to insert a brief sequel to that story, in the form of a letter from Mrs. Charles D. Thomson, Sr., of Jachargen Farm, Warsaw. Both the incident and this supplementary information are, in my judgment, moving testimony to the essential goodness and neighborliness of our country, and illustrate the characteristics we should like to see extended to the peoples of the world—if and when we can cut through the redtape of power politics to reach them.

Mrs. Thomson's letter follows:

DEAR CONGRESSMAN OSTERTAG: Thank you very much for the CONGRESSIONAL RECORD of June 28, 1956. We are indeed grateful to you for taking time out of your busy day for such things.

We should like to tell you that there were two names unintentionally omitted from the list of neighbors who helped in this project. Perhaps you could add them to your list and send them a copy—they should be commended along with the rest.

They are: Mr. Norman Smith and Mr. Winton James, of Warsaw, N. Y.

Incidentally, my husband was the organizer of this project, but without the cooperation of everyone it could never have become a reality. These same neighbors had helped him out in time of sickness, so he realized how much it can mean to a farmer.

This is a great country we live in—all faiths were working together that day in the fields. Such things can help fight communism—can they not?

Sincerely yours,

Mrs. CHARLES D. THOMSON, Sr.

Patriotism Recognized

EXTENSION OF REMARKS
OF
HON. LAWRENCE H. SMITH
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES

Saturday, July 7, 1956

Mr. SMITH of Wisconsin. Mr. Speaker, under leave to extend my remarks, I am including an editorial that recently appeared in the Sunday Standard Times, New Bedford, Mass., on the subject of patriotism.

At a time when some well-intentioned people are imbued with the idea that world government is the solution for all of our international problems, this timely editorial points out that even the State Department recognizes that there is such a thing as patriotism. Some call it nationalism. Whatever it is, it is an important ingredient in the American way of life.

The publishers of the Sunday Standard Times are to be complimented for this important editorial.

PATRIOTISM RECOGNIZED

Robert C. Hill, Assistant Secretary of State, recently made some historic references to the value of patriotism. Discussing the Communist masters of the Soviet Union, who have sought to sell the American people upon the thesis that the Communist system represents the tide of the future, he remarked:

"I think you will concede that in some intellectual circles the very word 'patriotism' has become anathema. It is frowned upon as old-fashioned and somewhat ridiculous.

"Now it is axiomatic that a nation is as strong an its economy is healthy and as its people are unified. Such a nation is hard to beat, either by force of arms or through infiltration. That is why there has been a long, covert, intense campaign to make patriotism a nasty word, an absurd, archaic concept. For only if it can weaken our patriotism, and thus our unity, can communism defeat its mightiest opponent (the United States)."

These remarks are historic because the State Department for many years has supported, by action or implication, that type of thinking which suggests Americans should consider their own country last, if at all.

If this seems a harsh appraisal, consider the repeated refusals of Government, State Department-inspired, to give tariff or quota relief to domestic industries strangled by imports.

Consider as well the United States participation in the General Agreement on Tariffs and Trade, an organization dedicated to free world trade. GATT already has resulted in increasingly serious trade concessions, principally at the expense of the United States. GATT, which never has been presented to Congress, was born in the State Department.

State Department leadership has been in the forefront of all the architectural proceedings which resulted in such major international organizations as the U. N., the ILO, and in less well-known world exchanges of things cultural, economic, and propagandistic, including UNRRA, foreign aid, and the United States Information Agency.

The accent in all of these "world" operations has been on the subordination of nationalism, and on the soft-pedaling of patriotism. Most of them have meant sacrifice and concession of rights, goods, services, or privileges by Americans for the benefit of someone else.

Thus, with Mr. Hill's utterances (which appropriately were made in the shadow of Faneuil Hall, Boston), the State Department has acknowledged publicly for the first time in years that patriotism might have a place in the American scheme of things. This can only bring the light of new hope into those shadowy corners of the national "attic" where patriotism has been placed along with the memories of economy in government and low taxes.

Bar Association Report on Our Security-Loyalty Program

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Thursday, July 5, 1956

Mr. MULTER. Mr. Speaker, a special committee of the Association of the Bar of the City of New York has just completed a year's exhaustive study and research on the Federal security and loyalty programs of our Federal Government. It has issued a 300-page report which is must reading for every Member of Congress. The committee consisted of W. B. Bonsal, chairman; Whitney North Seymour, vice chairman and a former president of the association; Henry J. Friendly; Hon. Harold M. Kennedy, a former United States district judge in Brooklyn; George Roberts; Richard Bentley, a former president of the Chicago Bar Association; Frederick M. Bradley, of the District of Columbia; Monte M. Lemann, of New Orleans, a former member of the National Commission on Law Enforcement and Observation; and John O'Melveny, of Los Angeles.

Following is the text of the summary of the report as issued by the committee:

SUMMARY OF CITY BAR REPORT ADVISING FEWER UNITED STATES LOYALTY SCREENINGS

SECTION 1

The problem

Communism is the weapon as well as the creed of the most aggressive and imperialistic of modern nations. It is a threat to the United States from the outside, intensified by the developments of modern science. Communism is also a threat to the United States from the inside because of the agents it employs to do its work here.

The measures for the protection of national security against communism are varied. The most important are those taken to promote positive security by advancing the economic and political strength of the Nation and by maintaining its sense of unity and self-confidence. A second set of measures is devoted to military security, which to a large degree is dependent on the continuing development of offensive and defensive weapons. A third set is concerned with international security. This involves the strengthening of the Nations of the free world and their common resolution to defend themselves against Communist aggression.

The protection of internal security is also an area of great importance. Communism has sent many agents and lured dupes into its espionage apparatus. In the recruitment of its dupes it has followed a policy of deception which strives to identify communism with the ideals it has done so much to defeat, democracy and liberalism. To protect internal security there are numerous measures. Some are penal in character and would punish through the criminal laws such offenses as treason, espionage, sabotage, and advocacy of the overthrow of the Government by force and violence. Others are preventive, and would discover unreliable persons and bar them from critical areas. Counter-espionage is the most important of them.

Civilian personnel security, to which this report is directed, is another of these internal security measures. The purpose of the personnel security system is to remove or block persons who through disloyalty or for other reasons might be dangerous to the national security in Government service or in particular types of private employment.

Balance and judgment urged

These numerous and varied means for the protection of national security must be seen as an integrated whole. Each of them should be fostered where its contribution is most important for national security. No one of them should be overdeveloped and thus harm or interefer with the others. This calls for balance and judgment in their development and use.

There are now several personnal security programs. One is the program for Federal civilian employees under Executive Order 10450, which is applicable to 2,300,000 persons. A second is the industrial security program of the Department of Defense. It covers the nearly 3 million persons who, as employees of contractors with the military departments, have access to classified information. A third program is that of the Atomic Energy Commission, which extends to its own employees and to those of its contractors' employees who have access to classified information. They come to about 80,000 persons. Then there is the port security program which applies to about 800,000 seamen and longshoremen. Finally, there is the international organizations employees program which extends to over 3,000 Americans in the employ of these organizations.

These programs operate under standards and criteria which are detailed in the governing law. The standard most widely used is that the employees retention in employment or continued access to classified information is clearly consistent with the interests of the national security. The more detailed criteria used under the programs aid in the application of the standards.

The programs are administered through procedures which fall into the following stages:

1. Investigation to ascertain whether there is adverse security information on the employees.
2. Screening to consider whether the information is substantial enough to call for the filing of security charges.
3. Hearing to determine whether the employee meets the security standard.
4. Appeal or review, in some agencies only.
5. Final decision by the head of the agency.

Civil service system used

Intimately connected with these personnel security programs are two other subjects. One is the civil service system. Its procedures, rather than the personnel security programs, are employed to remove the great majority of those members of the civil service who are found not to be trustworthy and dependable. The second is the system of classification of information. It classifies

the information to be kept secret in the interests of national security, and in so doing it largely determines the range of application of the personnel security programs. These two subjects are discussed in chapter IV.

In planning personnel security attention must not be directed to security alone. There is another value which must be preserved and guarded. It is individual liberty. Liberty is a quality to which this Nation since its foundation has been devoted and which it has cherished. To ignore or even to slight liberty would be to destroy our character as a people and as a nation.

The personnel security programs were initiated by 1 of the 2 major political parties and were revised and renewed by the other party, each presenting what was in effect a crash program for an emergency. What was once thought of as an emergency has turned into a long-continuing danger. Now it is time for careful study so as to plan a personnel security system for the duration of the cold war.

As a result of its study the committee has arrived at the findings which follow:

SECTION 2

The findings

The personnel security system should be maintained to help counter the continuing Communist threat. The programs should be modified in important respects to correct the weaknesses which have developed. These two basic findings of the committee are in accord with the views expressed by almost every one of the numerous persons with whom the committee conferred.

In evaluating the personnel security system the commitee has been guided by the need to protect national security and at the same time to adhere to the American tradition of individual liberty. Other security measures must also be taken into account, such as existing statutes which bar Communists from all Government positions. With these considerations in mind the committee has found weaknesses in four aspects of the programs:

1. There is a lack of coordination and supervision of the various personnel security programs.

2. The scope of the personnel security programs is too broad in that positions are covered which have no substantial relationship to national security.

3. The standards and criteria do not sufficiently recognize the variety of elements to be considered, including the positive contribution which an employee may make to national security, and they do not readily permit a commonsense judgment on the whole record.

4. The security procedures fail in various ways to protect as they could the interests of the Government and of employees.

These findings have led the committee to make the recommendations which appear in the following section. The recommendations appear again in chapter VIII at page 137, together with statements of the committee's reasons for the recommendations. At the end of each recommendation in the following section there is a parenthetical reference to the page of chapter VIII upon which that particular recommendation and its supporting statement will be found.

SECTION 3

The recommendations

A. Coordination and Supervision

1. The director of personnel and information security

1. The office of director of personnel and information security should be established in the Executive Office of the President.[1]

2. The director should be appointed by the President subject to confirmation by the Senate and serve at the pleasure of the President.

3. It should be the primary responsibility of the director to conduct a continuous review of and supervision over:

(a) The personnel security programs, in order to assure efficiency, uniformity, and fairness of administration, consonant with the interests of national security.

(b) The classification of information, so that only such information shall be classified as the interests of national security actually require.

4. In the performance of his responsibility the director should make recommendations to the President which, when embodied in regulations prepared by the director and approved by the President, would be binding upon the departments and agencies concerned.

B. Scope

2. Scope of personnel security

1. Clearance under the personnel security programs should be required for all sensitive positions and for no others.

2. The head of each department or agency should designate as sensitive only those positions within his department or agency the occupant of which would—

(a) have access to material classified as secret or top secret in the interests of national security, or

(b) have a policymaking function which bears a substantial relation to national security.

3. The President, on recommendation of the director, should specify criteria in accordance with which the head of each department or agency should classify positions.

3. Classification of information

The director should continuously review and, after consultation with the agencies involved, make recommendations to the President concerning the standards and criteria and methods to be used in the classification of information and its declassification when secrecy is no longer important to the interests of national security. These recommendations, when approved by the President, would be binding upon the departments and agencies concerned.

C. Standards and Criteria

4. Standard for personnel security

1. The personnel security standard for all sensitive positions should be stated as follows:

"The personnel security standard shall be whether or not in the interest of the United States the employment or retention in employment of the individual is advisable. In applying this standard a balanced judgment shall be reached after giving due weight to all the evidence, both derogatory and favorable, to the nature of the position, and to the value of the individual to the public service."

2. There should be no reexamination of cases already determined because of the change in standard here recommended, whether clearance has previously been granted or denied.

5. The employee's associations

A person's associations with organizations or individuals may properly be considered in determining his security suitability. But a conclusion against his security suitability on the ground of such associations should not be reached without adequate basis for determining that he shares, is susceptible to, or is influenced by, the actions or views of such organizations or individuals.

6. The Attorney General's list

1. The Attorney General's list of subversive organizations should be abolished, unless it can be and is modified and revised in the following respects:

(a) The list should not include any organization which has been defunct more than 10 years. (Information as to such organizations, however, would be available under the procedures set forth in paragraph 2 of this recommendation.)

(b) The list should give information as to the period and the general nature of the subversive activity of each organization listed.

(c) The list should be kept up to date by periodical supplements eliminating organizations which have been defunct over 10 years and adding new organizations found to be subversive since the last publication.

(d) The list should include only those organizations which have been given notice and an opportunity to be heard in conformity with the requirements of due process of law.

(e) The lists should contain a statement that mere membership in any of the organizations listed is not in itself to be construed as establishing the subversive character of a member unless membership has been made illegal by statute.

2. The Department of Justice should upon request make available to security personnel and boards relevant information in its files concerning all organizations, whether defunct or not, the character of which may be pertinent in a pending inquiry. Such information may be taken into consideration in the inquiry together with all other evidence presented.

D. Personnel

7. Security personnel

Personnel engaged in security matters should be individuals whose qualities and standing will inspire confidence in the fair, wise, and courageous administration of the programs. To this end the Director should establish training courses for security personnel. The training should include intensive and thorough instruction in:

(a) the nature of communism and the techniques of Communist espionage and infiltration in the United States and in other countries;

(b) the political history of the United States and of the world, especially in this century;

(c) constitutional and legal principles; and

(d) the relative reliability of various kinds of evidence.

E. Procedure [2]

8. Central screening board

1. A central screening board should be created in the Civil Service Commission. This board should have the responsibility, except as set forth in paragraph 3 below, of determining whether or not security charges should be filed against any person covered by a security program, whether a Federal or private employee.

2. The central screening board should act in panels of not less than three members. At least 1 member of each panel should be a lawyer, and at least 1 member should be a person whose only Government employment is his work on the board.

3. Subject to further action by the director, the Atomic Energy Commission and the Department of Defense should continue their present methods of screening to determine whether or not security charges should be filed, unless they wish to utilize the services of the central screening board. The director should determine whether any other department or agency may establish or maintain its own screening board.

9. Screening procedure

1. Screening boards should afford the employee an opportunity for an informal con-

[1] "The director" in these recommendations means the director of personnel and information security.

[2] Such highly secret investigative agencies as the Central Intelligence Agency and the Federal Bureau of Investigation would not fall within these recommendations except as the President may determine upon the advice of the director.

ference with the board or its representatives to answer adverse security information.

2. When a screening board determines that charges should be filed, it should prepare a specific statement of charges. If a person charged contends that charges are not specific enough to enable him to prepare his defense, the board should, in the exercise of reasonable discretion within the limits of security requirements, determine what additional information shall be furnished him.

3. Charges should include all adverse security information which is to be considered in making a security determination, except in extraordinary circumstances where security considerations clearly forbid.

4. Every employee against whom a security question is raised should be entitled to have an attorney advise and aid him in preparing statements to be submitted to a screening board, and should be entitled to assistance of counsel during his appearance before the board, with such participation by counsel in the proceedings as the board deems proper.

10. Treatment of charged employees pending disposition of charges

Pending the final disposition of charges against Federal employees or employees of private employers:

1. The pay of suspended employees should continue.

2. Employees under charges, if not retained in the positions held when charges are filed, should be transferred without loss of pay to nonsensitive positions instead of being suspended, whenever this is practicable and consistent with the interests of national security.

11. Hearing boards

1. Every charged employee, other than a probationary employee, should be entitled to a hearing before a hearing board of three members to be appointed by the head of the charging agency. One member but not more than one member of the hearing board should be an employee of the charging agency, at least one member should be a lawyer, and at least one member should come from outside the Government service. In the alternative, a hearing board may be composed entirely of persons outside the Government service but in such case also one member should be a lawyer.

2. The director should maintain a panel of qualified private citizens who are willing to serve on hearing boards, and appointment of the citizen members of such boards should be made from this panel.

3. In the appointment of the members of hearing boards consideration should be given to the value of continuity of service.

12. Hearing procedure

1. The charging agency should be entitled to have an attorney present at the hearing. He should have the duty and responsibility to see to it that all relevant facts known to him are brought out, whether favorable or unfavorable. The attorney should not participate in the deliberations of the board or be present at them.

2. It should also be proper for the charging agency to have other representatives, such as a security officer, at the hearing, but such representatives should not participate in the deliberations of the board or be present at them.

3. Every charged employee should be entitled to have an attorney present at the hearing to represent him. The attorney should have the right to offer evidence and examine and cross-examine witnesses.

4. Hearing boards should prepare written findings of fact and conclusions. These should be furnished to the charged employee for his use with only such deletions as are required in the interests of national security.

5. The charged employee should be furnished a copy of the transcript of the hearing for his use in the proceedings.

6. The security hearing should not be public.

13. Appearance of witnesses and confrontation

1. Except as provided below, screening boards and hearing boards should have the power in their discretion to subpena Government witnesses and witnesses for employees and to permit the submission of evidence by depositions, interrogatories, affidavits, letters, and other written statements.

2. When a subpena is granted, reasonable allowance should be made for traveling expenses and a per diem fee.

3. It should be the policy of the Government to permit the employee to cross-examine adverse witnesses before a hearing board when the hearing board believes this important for the development of the facts, unless the disclosure of the identity of the witness or requiring him to submit to cross-examination would be injurious to national security.

4. The identity of an informant who regularly provides or is employed to provide secret information should not be disclosed by requiring his appearance before a screening board or a hearing board or otherwise identifying him, whenever the head of the department or agency which obtained such information shall certify that the identification or presence of such an informant would be detrimental to the interests of national security. To the extent practicable and consistent with the interests of national security, certificates should be accompanied by data which would aid the board in evaluating the evidence given by the informant, including a statement of whether he obtained the information at first-hand or through hearsay.

5. As to all other witnesses, including casual informants, and with due consideration of the national security and fairness to the employee—

(a) the screening board should determine whether it desires a witness to appear before it for interview; and

(b) the hearing board should determine whether the witness should be produced for cross-examination, or whether because of special circumstances he should be interrogated by the board without the employee being present, or whether his evidence should be given to the board in other ways, such as by an affidavit or a signed statement. So far as consistent with the requirements of national security, a hearing board should make available to the employee the substance of all evidence it takes into consideration which was given by any witness whom the employee has not been permitted to cross-examine.

6. In determining the probative effect of information given by informants who are not made available for cross-examination by the charged employee, under the exceptions contained in paragraphs 4 and 5 above, screening and hearing boards as well as appeal boards and agency heads should always take into account the lack of opportunity for cross-examination.

14. The attorney for the charged employee and his fees

1. Every employee under investigation by a screening board or against whom charges are filed should be entitled to obtain an attorney of his own choosing to represent him.

2. In the event an employee is cleared at the screening stage, he should be reimbursed in the amount of his reasonable attorney's fee, the amount to be fixed by the screening board. If the proceedings reach the stage of an agency hearing board and if the employee is later cleared, similar reimbursement should be authorized, the amount to be fixed by the hearing board.

3. Employees of private employers contracting with the Government should be entitled to reimbursement by the Government for attorney's fees on the same basis as Government employees.

4. Bar associations are urged to make provision through lawyer reference plans or otherwise for adequate representation of employees in security proceedings.

15. Final determination

The head of the charging agency should have the power to make the final security determination.

16. Successive security determinations

1. It should be the policy of the Government to prevent insofar as is practicable and consistent with national security the repetition of security proceedings on substantially the same facts as to the same person, whether in the same agency or in different agencies.

2. In the absence of new evidence a security clearance should not be reopened.

3. When there is new evidence a security clearance should be subject to reopening only with the concurrence of the screening board and the head of the agency concerned. If a new hearing is directed, all relevant evidence, whether or not presented in the earlier proceeding, may properly be considered in making the new security determination.

4. The regulations to be promulgated by the director should include provisions for reciprocal recognition of clearances wherever feasible, and such regulations, upon approval by the President, would be binding on the agencies affected.

17. Applicants for positions and probationary employees

1. So far as consistent with the interests of national security, an applicant for a position covered by the programs who is denied employment should, upon request, in accordance with regulations to be established be furnished with a statement of all adverse security information concerning him, such statement to be as specific as security considerations permit, or a statement that there is no such adverse information.

2. An applicant furnished with a statement of adverse security information should have the right to file an affidavit denying or explaining it. Such affidavit should be placed in the personnel file which contains the adverse security information and should be part of any report of an investigation of the applicant.

3. A governmental agency should also afford an informal interview to an applicant for, or a probationary employee in, a sensitive position so that he may have an opportunity to explain adverse security information, in any case where the general counsel of the agency recommends that an interview be given because of the importance of the employment of the person to the agency.

F. Name

18. Name of the program

The name of the personnel security programs as a whole should be: The Federal Personnel Security System.

The committee believes that with the adoption of these recommendations the future personnel security system would be substantially free of the weaknesses and defects which have appeared in connection with the present programs. National security would be adequately protected and no reasonable citizen could feel that this was being achieved at the sacrifice of our basic principles of liberty and our sense of fairness.

Resolution of Sympathy for the Captive People of Poland

EXTENSION OF REMARKS
OF
HON. THOMAS J. DODD
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 10, 1956

Mr. DODD. Mr. Speaker, on Sunday, July 8, in Hartford, Conn., nearly 1,000 Connecticut Polish Americans passed a resolution of sympathy for the captive people of Poland.

It was my privilege to appear at this great demonstration of faith and freedom. The Polish-American Congress of Connecticut has rendered a great service to the free world by this public protest and by adopting this resolution of sympathy.

At a time when there are so many people in the world who have forgotten what freedom really means, the courage of the Polish people as demonstrated in the Poznan uprising is a tremendous tribute and inspiration to the cause of freedom.

It is of great significance that the revolt in Poznan was led by young men and women. These are the people who have been raised under Communist tyranny and who have been subject to intense Communist propaganda. Yet human craving for freedom and liberty and justice has overcome all of the indoctrination and all of the false information and all of the distortion of education.

The young people of the free world who have had every opportunity to know and enjoy freedom can learn a great lesson from the young Polish people who have never had such an opportunity.

The resolution adopted in Hartford reads as follows, and I commend it to the attention of my colleagues:

RESOLUTION

We, the people of the State of Connecticut, gathered under the auspices of the Polish American Congress, District of Connecticut at the Polish National Home in Hartford, Conn., startled by the recent events in Poland, in particular the shocking massacre of helpless, hungry citizens of Poznan, express our indignation and solemnly protest such barbaric treatment of Polish citizens.

We call upon the free world to join in the growing chorus of indignation at the heedless disregard of basic liberties of man, to protest the violent rape of the freedom from want and the freedom from fear, to protest the wanton refusal to receive offered help, to protest the sacrifice of human lives for the sake of preserving absolute authority bogged in helpless political fear of its own people and bowed and chained to autocratic power in a distant capital.

We call upon the United States, its able and energetic leaders, and the whole free world to pierce the iron curtain, to deliver from the cross of communism and bondage, a freedom-loving peace who in the face of hopeless odds, in the face of tanks and armor, dared callenge their hated Kremlin-ruled leaders.

We call upon the United States to exert its mighty influence in the halls of the United Nations and through every avenue open to our great Nation that Poland receive for its people the offer of assistance so generously tendered.

We call upon the United States to demand fair trails for those who dared fight in defense of the freedom from want.

We call upon our great Nation to firmly resolve that peaceful coexistence is impossible unless peaceful existence is guaranteed to the people of Poznan and Poland.

We call upon the United States to firmly resolve that Poland must be free, that our guaranty of freedom must be honored, that we are bound to this pledge by the blood of the citizens of Poznan.

We call upon our Nation to recognize that the bitter struggle for freedom cannot cease till the whole world is free. Poznan has shocked us. The violence of Poznan is an angry outburst against a world that forgets. Let us resolve that their sacrifice shall not be in vain.

Respectfully submitted by the people of Connecticut gathered at the Polish National Home, Hartford, Conn.

Russia Undeniably Is Changing, but She Must Be Judged by Her Own Standards, Not Ours

EXTENSION OF REMARKS
OF
HON. PETER W. RODINO, JR.
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 10, 1956

Mr. RODINO. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include the following article which appeared in the Belleville Times of Friday, July 6, 1956. Mr. Heinzen, the writer, has had vast experience as a correspondent on the European scene for many years. Mr. Heinzen takes a good look at Russia today and points out a few salient facts which make worthwhile reading. I am sure that the article will be found highly informative and significant.

ONE MAN'S OPINION

(By Ralph Eric Heinzen)

RUSSIA UNDENIABLY IS CHANGING BUT SHE MUST BE JUDGED BY HER OWN STANDARDS, NOT OURS

On this Independence Day, taking stock of the world situation dominated, as it is, by the controversy stirred up by the Kremlin's "new look" it becomes this One Man's Opinion that the Soviet Union is going through a set of experiences which have their parallel well back along the road of our own past. The Russians are not trying to lead the world down a path of their own making; they are still trying to catch up with our world after having started from far behind us. The unhappy truth is that they are catching up fast.

Both the United States and the Soviet Union were born of revolution; ours 180 years ago, theirs barely 39 years ago. Our evolution from a colonial status to our present wealth and productivity was slow and our position as the world's dominant power is of barely a decade's duration. In 39 years, Russia has been converted to modern technology, most of the progress having come from her wartime contact with the Western World during the war.

In attempting to assess any values to the changes which have taken place within Russia in recent months, most aptly demonstrated by the inspired demolition of the Stalin myth, it behooves the Western World to judge Russian policy, Russian production and Russian propaganda by Russian standards and scales, not by our own.

Regardless of the fantastic progress that Russia has made to become the world's No. 2 power in 10 short years, her political concept, her industrial production, her social standards are still primitive.

The Soviet Government enjoys authority among its people that the Western governments enjoyed in the Tudor period of our history. The average residents in the Soviet Union of today would no more think of open political action against the state than did the average Englishman in the reign of Henry VIII.

Back to Napoleon

They have a one-party political system. So did the Western World down to the Cromwellian revolution. A two or more multiple party political system involves the right of open political action against the government. This is less than 300 years old in Western society.

Soviet citizens may be emerging from political as distinct from objective justice. The West has begun to enjoy objective justice since about 200 years ago.

The Russians now have the foundation of a modern industrial system. They are about where Britain was at the end of the Napoleonic Wars and the United States was on the eve of World War I in 1914.

A new industrial complex emerging under primitive standards of justice within the context of a 15th-century one-party political monopoly system enjoys more competitive advantages against a modern Western system.

Perhaps the biggest single advantage is that the Soviet system has the ability to keep wages in balance with production; an ability which the Government of Britain already may have lost and which the United States Government may not be able to retain.

Satisfied with life

A companion advantage is that the Russian laboring class, having had so little in the past, is much more aware of a slight advance in its standards of living than of greater advantages enjoyed by working people in other countries.

One can speculate endlessly over the extent to which the Communist goal of communizing the world is a menace to our Western way of life. The Moselms, too, still intends, in theory, to convert the whole world to his religion. If he regained the military advantage over the Christian world he might well renew the forward march of Islam which we halted by the Crusades in the Middle Ages.

One need not speculate about the industrial advance in the Soviet Union today. It is as plain and dominant a feature of our times as was the forward stride of American industry between World Wars I and II.

Future favors newcomer

Unless something drastic happens, we will witness the rise of a modern industrial state in the Soviet Union over the next 2 decades which will match in speed and scope the rise of the American industrial system.

During its rise it will enjoy, on a larger scale, the competitive advantages which the Old South in the United States has been enjoying in recent years over New England, and for much the same reasons.

The early stages of advance are quicker than the later ones, particularly when there is an ample supply of cheap labor and lower and less expensive standards of social security. Competitive coexistence will not be on an equal basis until such time as Soviet living and social-welfare standards rise to the same level as those now enjoyed in the West.

But the Russian system which is coming into increasing competition with ours is not fueled by the dynamism of a new concept.

It is fueled by the dynamism of a primitive society moving into the fast stage of industrial expansion. The competition will become meaningful when the time levels come together—which must be several years in the future.

Threshold of new era

It is possible to argue inconclusively and disagree sharply over whether Stalin's economic policies speeded or delayed the development of industry in the Soviet Union.

This argument is immaterial to us today. The important thing we of the West must grasp and to which we must adjust our thinking and our policies is that the Soviet Union is on the threshold of modern industrialization.

Perhaps the Soviet state would have reached this point earlier had it been spared the ordeal of Stalin. Perhaps, as others believe, Stalin really gave us of the West more time to prepare for the emergence of a massive new industrialized state in the world by his stifling home policies. The essential fact remains that the passing of Stalin occurred at about the time when the groundwork for a modern industrial society had been more or less completed in the Soviet Union.

There is a disagreement inside the Kremlin today over the proportion of the output of Soviet industry which should be allocated each year to the respective tasks of broadening the industrial basis still further and of providing consumer goods.

More consumer goods

This is, however, argument over degree, not over substance. The substantial fact is that there are enough factories in the Soviet Union to provide both a steady increase in the flow of consumer goods and a steady increase in the scope and size of the industrial complex.

It is feeding its own growth and supplying more consumer goods each year. Productivity and the standard of living are going up at the same time. There is no visible reason why both should not continue to grow and grow very rapidly, during coming years.

This condition is the most important single force bearing upon policy decision in the Soviet Union today.

The men of the Kremlin are Communists. What they assume communism to mean influences their thinking and their decisions. But they are also men sitting on top of a vast complex of mines, oil wells, transportation systems, factories, and retail outlets, all of which are operating at a steadily faster and more productive rate.

What do they do with this vast machine? Do they concentrate on making it bigger or on distributing its produce to the people of the Soviet Union? How much bigger do they want it to become? Is slave labor essential to its continued growth or has it become a drag on the system because slave labor cannot consume so rapidly as free and well-paid labor?

Private capital is being accumulated in the Soviet Union today, in the hands of the Communists. As the Soviet industrial system revolves in ever faster motion, there will be increasing accumulation of capital. It will seek outlets as it did in the transition from feudal to capitalist society. Will it find the outlets?

So far the Soviet state finances itself largely out of a concealed sales tax. It has not yet begun to tax accumulated wealth as Western states do.

The maximum income tax is 10 percent and the maximum inheritance tax is 13½ percent. This system puts the bulk of the tax burden on the poor, particularly on the peasant. This encourages the accumulation of private capital. How long does this go on? What does it do to the practice of communism?

The answers lie obscurely in the future. The essential fact is that factors other than Communist theory bear heavily on the process of policymaking in the Kremlin.

Canned Fire in the Sweep of the Winds

EXTENSION OF REMARKS

OF

HON. ALFRED D. SIEMINSKI

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Monday, July 9, 1956

Mr. SIEMINSKI. Mr. Speaker, should the random rain of a thousand thermonuclear missiles—canned fire—explode in the stratosphere or on earth, one wonders whether our control of the elements by then will have been fine enough to sweep the air with winds that would deactivate the radioactive particles as they traveled up, out, and away from man.

That question on the control of the elements is prompted by a rather interesting observation made to me by Mr. Scoyen, former superintendent of the Sequoia National Park, during a forest fire in Kings Canyon, Calif., last September.

As we stood on a road overlooking the canyon, Mr. Scoyen traced with his hand the line of travel of the fire and told how at one point the fingers of the fire seemed to reach out to choke to death the oldest living thing on earth, the General Grant grove of beautiful Sequoia trees, 2 and 3 thousand years of age, antedating even the birth of Christ.

And as his hand came to rest by his side, Mr. Scoyen looked over his shoulder and told how the fire had unexpectedly jumped across the road and burned some $7 million worth of timber that need not have been destroyed. Like one sighing at the loss of something sacred, Mr. Scoyen pointed down the canyon in front of us and said with a wistfulness, "if only we had known how to read the little breeze that climbed up the canyon this way before it burst into a big wind, we could have cut a fireline in time to have prevented the fire from jumping the road and saved that $7 million worth of timber for Uncle Sam."

At the time of the little breeze, the fire traveled through the canyon away from the road where we stood.

Perhaps, Mr. Speaker, there is yet some law of nature to be discovered, some law this side of the Creator that influences the destiny of man. Perhaps in time, Mr. Speaker, man might yet learn to hurl tornadoes and hurricanes like javelins into the sky to disperse and destroy man's foolishness against man.

Let us hope there will be those who will snatch this canned fire and use it for the greater comfort and glory of man.

LAWS RELATIVE TO THE PRINTING OF DOCUMENTS

Either House may order the printing of a document not already provided for by law, but only when the same shall be accompanied by an estimate from the Public Printer as to the probable cost thereof. Any executive department, bureau, board, or independent office of the Government submitting reports or documents in response to inquiries from Congress shall submit therewith an estimate of the probable cost of printing the usual number. Nothing in this section relating to estimates shall apply to reports or documents not exceeding 50 pages (U. S. Code, title 44, sec. 140, p. 1938).

Resolutions for printing extra copies, when presented to either House, shall be referred immediately to the Committee on House Administration of the House of Representatives or the Committee on Rules and Administration of the Senate, who, in making their report, shall give the probable cost of the proposed printing upon the estimate of the Public Printer, and no extra copies shall be printed before such committee has reported (U. S. Code, title 44, sec. 133, p. 1937).

GOVERNMENT PUBLICATIONS FOR SALE

Additional copies of Government publications are offered for sale to the public by the Superintendent of Documents, Government Printing Office, Washington 25, D. C., at cost thereof as determined by the Public Printer plus 50 percent: *Provided*, That a discount of not to exceed 25 percent may be allowed to authorized bookdealers and quantity purchasers, but such printing shall not interfere with the prompt execution of work for the Government. The Superintendent of Documents shall prescribe the terms and conditions under which he may authorize the resale of Government publications by bookdealers, and he may designate any Government officer his agent for the sale of Government publications under such regulations as shall be agreed upon by the Superintendent of Documents and the head of the respective department or establishment of the Government (U. S. Code, title 44, sec. 72a, Supp. 2).

PRINTING OF CONGRESSIONAL RECORD EXTRACTS

It shall be lawful for the Public Printer to print and deliver upon the order of any Senator, Representative, or Delegate, extracts from the CONGRESSIONAL RECORD, the person ordering the same paying the cost thereof (U. S. Code, title 44, sec. 185, p. 1942).

CONGRESSIONAL DIRECTORY

The Public Printer, under the direction of the Joint Committee on Printing, may print for sale, at a price sufficient to reimburse the expenses of such printing, the current Congressional Directory. No sale shall be made on credit (U. S. Code, title 44, sec. 150, p. 1939).

PRICE OF THE CONGRESSIONAL RECORD

The Public Printer is authorized to furnish to subscribers the daily RECORD at $1.50 per month, payable in advance.

Remit by money order payable to Superintendent of Documents, Government Printing Office, Washington 25, D. C.

CHANGE OF RESIDENCE

Senators, Representatives, and Delegates who have changed their residences will please give information thereof to the Government Printing Office, that their addresses may be correctly given in the RECORD.

Appendix

SUNFED as the Friends See It

EXTENSION OF REMARKS
OF
HON. FRANK THOMPSON, JR.
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Monday, June 25, 1956

Mr. THOMPSON of New Jersey. Mr. Speaker, over the past few months there has been a great deal of talk, both in and out of government, about the need for a reappraisal of United States foreign policy. It now seems apparent that, at least in the Senate and House Foreign Affairs Committees, such a restudy will take place.

It is my hope that out of such a study will come a more viable foreign policy than the one we seem to have at the present time. In particular, it is my hope that our experts will see the necessity for greater American participation in the economic programs of the United Nations. I should especially like to see American agreement to and support for the Special United Nations Fund for Economic Development. In my opinion, we could take no more worthwhile step in securing friends and allies throughout the world than through approval of this program.

The Special Fund, or SUNFED as it is called, has been receiving increasingly wide support recently. Our United Nations Ambassador, Henry Cabot Lodge, has indicated that he supports the program. Adlai Stevenson has also spoken out in favor of it. It is my feeling that many of my colleagues in the House would vote for such a proposition and the Senate as a whole supported the program when it was included in the current mutual security authorization bill.

Recently, I have had a magazine article appearing in the Friends' Quarterly called to my attention. This article is entitled "SUNFED: Friends Take a Look at the Special United Nations Fund for Economic Development." This article, written by William R. Fraser, considers the entire SUNFED program in some detail. I should like to include it as a part of my remarks since I feel that no organization outside of government is in a better position to evaluate a program of this type than the Society of Friends. This body has been working directly in the field of international relations—particularly economic and social development—for many years. The views they express are, therefore, based on wide experience and I believe are most worthy of consideration. The article follows:

SUNFED: FRIENDS TAKE A LOOK AT THE SPECIAL UNITED NATIONS FUND FOR ECONOMIC DEVELOPMENT

(By William R. Fraser)

This article reflects some of the thinking which has been done in the past few months by a group of Quaker economists, Friends associated with the United Nations, and Friends having practical experience in the administration of international technical assistance. Friends need not toil long on the basic question whether we as a religious society ought to be concerning ourselves with matters requiring a knowledge of economics. The obligation seems to be quite clear.

"To understand by careful and prolonged study the economic and social problems of our generation is an obvious duty for us all." (Friends Face Their Fourth Century, p. 58.)

"The elimination of economic inequality and the furthering of social justice are tasks of great urgency. Friends must stimulate and support all efforts which they feel would achieve these aims." (Op. cit., p. 64.)

"Let us join together throughout the world, to grow more food, to heal and prevent disease, to conserve and develop the resources of the good earth to the glory of God and to the comfort of man's distress." (A Message to Men Everywhere, Oxford Conference, 1952.)

THE NEED FOR ECONOMIC AID

In some 60 countries throughout the world men and women drawn from as many nationalities, each with his or her special training and experience to share, are working to impart to others in urgent need of it that technical skill and experience without which economic development is bound to be slow. This international program for the interchange of skills and knowledge has already shown that it can bring rich returns in human progress. But in itself it is not enough. Economic development calls also for the capital investment needed to build roads and factories, dams and power stations, by which the skills learned can be put to full use.

SUNFED

Current proposals for a Special United Nations Fund for Economic Development involve supplying a strategic part of the capital needs of underdeveloped countries through funds supplied by governments and to governments through the agency of some kind of United Nations machinery. Such funds are to be used primarily for purposes for which capital is not readily available through a flow of private investment funds, through the operations of the Bank for Reconstruction and Development, or from sources within the underdeveloped countries.

The principal type of capital need that cannot be met from these other sources is for the "social overhead" investments such as roads, schools, hospitals, and the like, which cannot be made to yield cash profits, at least not without thereby impairing their usefulness, and which do not yield foreign exchange to service even low-interest loans from abroad. In a prosperous country these needs can be financed from tax revenues or by internal borrowing, though the latter alternative is not without its dangers of producing inflation. In many underdeveloped countries securing capital internally for such needs might be possible only through harsh measures approaching the severity of those often adopted by dictatorial regimes, or through heavy taxation that would seriously interfere with the flow of private capital and with economic development in other directions.

Even where capital investment is potentially possible the influx of foreign capital is often inhibited by the risks, real or imaginary, which the investor feels are involved in investing in a country subject to political instability or perhaps only to mildly progressive or equalitarian tendencies. Among the risks are expropriation or nationalization with what is felt to be inadequate compensation; restrictions on the withdrawal or repatriation of profits and capital, and unduly severe or discriminatory taxation. The situation has in it some elements of a vicious circle; the fact that the investment is thought to be risky leads the investor to require, and feel justified in requiring, a higher rate of profit by reason of the risk; while the high rate of profit in turn leads the government of the underdeveloped country to feel that higher taxes are justified, or even tempts it to move toward nationalization. There may be occasions where a SUNFED investment might serve as a bellwether by demonstrating that the risks are not as great as private investors sometimes imagine, and might create conditions in which investment can then prove fruitful.

Private or government capital

Where arrangements are entered into by a donor and a recipient country great care has to be taken to avoid the domination of one party by the other. Some of the arrangements between the United States of America and countries receiving aid are less complicated than, say, the administration of the United Nations Technical Assistance Program, which involves the matching of requests for projects with available personnel, and also the balancing of projects against the funds which are related and which are not all in convertible currency. Operations controlled by a national legislator and a national executive encounter fewer obstacles and seem to reach larger proportions than is yet possible for any international administration. On the other hand, dependence upon one large donor tends to be resented, to breed suspicion, and perhaps also greater dependence. Many countries prefer international aid because it is less open to control by foreign "political strings." The recent report of the Randall Commission in the United States of America tends to recommend that armaments and military aid should be given by United States of America in the form of gifts, whereas other enterprises which the United States of America may encourage in underdeveloped areas should be financed by loans. But large loans are not an unmitigated blessing to an underdeveloped country, since the servicing of loans may run the country into debt. It should be noted also that there is a difference between offering equity capital and loan capital to an underdeveloped country, in that a different type of obligation is thereby laid on the country. Too much loan capital may lead to too heavy an obligation in the form of debt servicing and loan repayment, whereas too much equity capital may lead to

a form of economic imperialism, though the tendency toward this has been to some extent halted by the national laws enacted by countries in Southeast Asia.

While the flow of private capital for the development of underdeveloped areas may influence the foreign policy of the source country, the use of private capital may be less closely conditioned by national security considerations, and by the general foreign policy of the donor country. In this sense, private capital may have an advantage over Government aid. There may also be a feeling among recipients that aid from another government is charity, while capital invested by foreign entrepreneurs is expected to yield a profit to the investor and thus frees the recipient country from any moral obligation to be saying thank you. Unfortunately, private capital has in the past occasionally displayed less likeable characteristics. Sometimes too small a proportion of the profits have been ploughed back, too much of the profits may have been withdrawn for the benefit of the absent investor, and top administrative posts have often been reserved for citizens of the investing country.

Emotional and moral problems

All forms of aid raise difficult emotional and moral problems which we must be prepared to tackle sympathetically. This sympathy may come from a thorough identification of the giver with the recipient, or perhaps even from a deep understanding by each of the other's problems. A good debate in a committee of the General Assembly can and should produce such understanding. The quality of personnel sent to a country in connection with enterprises financed by foreign capital is of paramount importance in the establishment of a good cooperative relationship.

We must recognize, too, that there are risks inherent in promoting development which are likely to produce fundamental changes in the present social patterns. This mean. that an enterprise undertaken should be carefully planned and intelligently advised by persons caring for the social development of an area and its culture. Nor should we assume that such development will have any immediately pacifying effect. While poverty and misery may give rise to discontent in a country, discontent may become more active as development proceeds and as the population begins to realize that it need not forever content itself with the poor conditions it had known in the past. There is little point is discussing now whether it is wise for underdeveloped areas to undertake projects which will lead to industrialization and urbanization. Most of these countries are determined to develop their resources and to expand their industries, and not to remain simply producers of raw commodities for other industrial countries. Our attitude should be to examine what we can do to assist in creating conditions in which economic development can go forward.

As one area of the world is developed, there is a risk that the terms of trade hitherto obtaining between it and the more advanced countries may change to the disadvantage of the latter. It could be claimed that acceptance by an "advanced" country of such deterioration in its terms of trade might be considered a contribution to general world development, but this is not a comforting theory for those who are employed in an industry which has to contract, or for the inhabitants of an industrial country whose standard of living is dependent on imported foodstuffs and raw materials. We ought to be clear, when advocating the development of under-developed areas, that this could well involve sacrifices for our own western countries, but we must not, however, give way to any sense of pride in having undertaken a "sacrificial" enterprise. Any such sense of pride would quite corrupt the motivation behind the giving of economic assistance and would further complicate the already delicate relationships that are bound to exist between donor and recipient.

Adverse movement in the terms of trade is possible but not certain. An adverse change in the volume of trade is improbable since a high volume of trade, all other things being equal, appears to be easier to maintain between developed countries with complex needs than between poor countries. Changes adverse to particular industries are indeed probable but they should not exceed the power of adjustment of a lively economic system. Friends should be prepared to play their part in advocating the necessary measures for such lively adjustment.

Self-help

In order that the recipient country should not be "pauperised" and feel resentful at having to accept aid, the principle of self-help should be vigorously upheld. Capital supplied by other governments for the development of "social overheads" or "non-self-liquidating projects" should be matched by evidence in the home country of a determination to develop industries which the roads and schools are designed to serve. Assurance should also be given by recipient countries that proper provision will be made in their national budgets for the maintenance and the replacement of capital assets acquired through international economic aid. Such cooperation in drawing up plans for joint enterprises has already been demonstrated by UNICEF, which has set a good pattern for consultation between government planners, United Nations experts and representatives of donor countries. An advantage of this procedure is that some small surrender of independence on the part of all concerned takes place in favor of closer interdependence.

In requesting these assurances donor countries should avoid going to the other extreme of treating the underdeveloped countries as if they were underdeveloped children. It is said that insistence on this sort of assurance from countries which may in any case be politically unstable has made the International Bank unpopular, and there is a case to be made for the contention that the only way to encourage the reasonable use of foreign capital is in fact to trust to the commonsense of the users.

Development of armament

The resolutions passed at the last General Assembly tend to link economic aid to future reductions in arms budgets. This tendency aroused the fears of potential recipient countries who foresaw that no additional international capital might be forthcoming until the Great Powers had achieved sufficient trust in each other to undertake substantial reductions in their arms budgets. Friends will probably feel that if international economic aid is morally justified it should not wait on the implementation of disarmament. In fact, the uses to which such economic aid will be put should tend to ease the great political and social changes taking place in underdeveloped countries, and by turning discontent into constructive enterprise such aid may contribute to the pacification of the world. Although small reductions in arms budgets are not likely in themselves to increase the security of the world, since governments are likely to continue to jockey for military advantage so long as armaments are maintained at a high level, yet Friends would probably welcome a diversion of even small sums of money toward more constructive purposes.

We have not considered in any great detail the size of the budgets for economic aid which should be recommended. The proposed minimum at present stands at $250 million, which is very small in relation to the amount spent on armaments. The sum may, however, be acceptable for initial pilot projects.

Assurances needed?

Friends would probably want some assurances to be required from each recipient country to the effect that profits derived from international assistance would be distributed throughout the classes of that country and should not accrue only to those who already have higher incomes. Friends might also have something to say about the assurances needed in order to encourage the flow of private capital. Not all the needs of an underdeveloped country should be met by intergovernmental aid of the type which SUNFED presents, but if private capital is to flow then there will have to be some assurances of fair dealings. The acceptance of a code of behavior on the part of the recipient countries would encourage both private and public investment. Friends have some experience of the insistence on honest trading and upon confidence as a basis for commercial transactions, and it would seem that we could rightly apply this past experience to present problems.

Balancing food and population

We ought to be aware of the fact that if the available international capital is spread evenly, and therefore thinly, over large areas, the benefits of economic development in the form of higher industrial production and a rising material standard of living may only come after an interval of some years, and meantime disparity between population and food supplies may have increased. If, on the other hand, capital is concentrated in a few places, then political jealousies may be aroused, and if some small centers in a backward area are rapidly developed, then there would be larger problems of population increase and of population movement to be faced. Against these pessimistic views may be set the hope that improved health leads fairly quickly to higher productivity in agricultural regions. Development may involve some risk of inflation, but there are also steps which could be taken as anti-inflationary measures, such as the allotting of agricultural surpluses from North America to areas where there are new industrial concentrations of population. We do not think that the fear of population increase should be a deterrent against the developments of a country's resources, for the facts determining population increase and the equilibrium between population and food supply are not yet clear.

We have touched here on several large issues which we cannot explore more fully in this article, for obviously more earnest thought and study are needed. It should be apparent now that any undertaking of this nature will be complicated and will require sympathetic and far-sighted planning, as well as high moral purpose.

When Lawmakers Go the Other Way

EXTENSION OF REMARKS

OF

HON. LEON H. GAVIN

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 11, 1956

Mr. GAVIN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by David Lawrence:

WHEN LAWMAKERS GO THE OTHER WAY—LIBERALS REPORTED BLAMING EISENHOWER BECAUSE CONGRESS CUTS FOREIGN AID

(By David Lawrence)

The so-called liberals are having no difficulty nowadays fixing the blame for the refusal of Congress to continue its giveaways

to foreign countries in as large a quantity as before. They are saying that President Eisenhower is culpable. The line taken is that somehow the President did not browbeat Congress, that he did not exercise his leadership, or that he was sick or indifferent or something.

But the truth is the sponsors of bigger programs of foreign aid are themselves largely responsible for the failure of Congress to appropriate as much as or even more money than the President requested.

For the palpable propaganda to get Congress to spend more money abroad was started a few months ago by the so-called liberals and was carried on vigorously by their auxiliaries here and abroad, particularly by certain sections of the press and even by many members of the New York clique who have access to the President. They overplayed their hand. Members of Congress became suspicious and resentful.

The argument was widely made that America was too much concerned with military alliances, that this was a time to win men's minds, that was needed was something imaginative in the way of foreign policy, that the United States must not insist on extending aid to foreign countries with strings attached, and that the Russians were being successful in their policies of competitive coexistence. Also a lot of dispatches were coincidentally sent from abroad designed to prove that America was losing prestige.

The Congress, however, didn't fall for any of this, though there were a few speeches planted here in Congress by the so-called "liberals" to emphasize their arguments. Such speeches were difficult for some of the Democrats to make because their own brethren simultaneously were engaged in cutting down the President's program in an effort to put him on the spot.

As a matter of fact, if political theory were realistically applied, the finger of criticism would be pointed today not at President Eisenhower but at the Democratic Party which controls both houses of Congress. The Democratic leaders told the Nation in the 1954 campaign that they would cooperate with the Republican President. The rank and file of the Democrats, however, have not followed their own leadership.

So today the song is different. Now it's the President who is said to be at fault for not leading vigorously enough, and it's the Republicans in his own party who are being held responsible by these critics. Indeed, the President is being openly urged to split with his own party, to call his own leaders names, to purge them.

All this overlooks the plain fact that for nearly 20 years now no party in Congress has been sure of a majority on important issues and no President has been able to lead his party in that sense. The reason is that there are four major blocs in Congress. Both parties are divided.

Eisenhower's leadership, for example, isn't a bit more effective than was Truman's or Roosevelt's on legislative issues. Thus, Truman faced continuously a split Democratic Party on civil rights and on labor legislation. The Taft-Hartley Act was passed over his veto by a coalition of Democrats and Republicans. Roosevelt again and again had the same experience with such a coalition. It beat his Supreme Court bill. He tried the purge system—butting into party primaries—and lost in almost every instance. Yet Eisenhower is being urged today to intervene in the Wisconsin Republican primary and thus assure victory for a Democratic nominee.

As leadership goes, Eisenhower is doing about as well as can be expected in dealing with a southern Democratic bloc that is against Federal aid for education, a northern Democratic bloc that wants it, a Republican bloc of independents who vote against giveaways of all kinds and a Republican bloc of administration stalwarts who go along with him on almost everything.

The internationally minded spenders ought, however, to be happy with the results. They should consider themselves lucky to get $4 billion out of Congress. The other $900 million which has been cut out of the program will go for armament. The Air Force enthusiasts will see to that, and, incidentally, isn't it a Democratic Senator who is leading the fight for more and more money for airpower and an unbalanced budget? One wonders how a Republican resident can exercise leadership over Democrats in Congress who are aspirants for the Presidency.

Citation to the New York World-Telegram and Sun

EXTENSION OF REMARKS
OF

HON. FREDERIC R. COUDERT, JR.

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 5, 1956

Mr. COUDERT. Mr. Speaker, under leave to extend my remarks, I include the address of the distinguished president of the Board of Education of the City of New York, Hon. Charles A. Silver, upon the occasion of a citation to a great newspaper and the able men who manage it, the New York World-Telegram and Sun, for notable journalistic services to the schoolchildren of our city.

ADDRESS BY MR. CHARLES H. SILVER, PRESIDENT OF THE BOARD OF EDUCATION, AT PRESENTATION CEREMONIES OF CITATION TO THE NEW YORK WORLD-TELEGRAM AND SUN, JUNE 26, 1956

In a very few minutes it will be my privilege to present, on behalf of the entire Board of Education of the City of New York, a beautifully imprinted symbol of appreciation. This heartfelt citation is inscribed with the name of one of our great metropolitan newspapers in recognition of three decades of devoted service to our school system.

And yet it is so much more than that. A sheet of paper bearing a scant hundred printed words will be tendered in token of gratitude to a great instrument of public information which has published and distributed numberless sheets of paper with untold millions of printed words. It is a simple ceremony for which we have gathered here today and one whose human significance might be lost unless we see in those lines of print the everyday living drama of 7 million people, unless we hear in the roar of the giant presses the thunder of man's conscience, the birth cries of history created in each day's headlines.

Behind those headlines are the men and women who gather, record, and edit the news; theirs are the names that should appear on our citation; theirs is the enormous daily task of taking mankind's pulse and telling us the temperature, condition, and trend of the world community in which each of us plays a part.

In a very real sense, the life of everyone of us is the life we read about in the daily newspaper. It is the direct and immediate source of our most dependable knowledge of men and events. Today's front page foreshadows the future of civilization.

The newspaper is the most powerful force at work molding men's minds, influencing our actions, fashioning and changing our topics of conversation, even affecting our very choice of language. The editorial pages point the footprints of humanity on the march. The news columns picture the way we behave like human beings—and, sometimes, the way some of us do not. The daily paper is an endlessly continued tapestry of our tragedies, comedies, sins, triumphs, and follies.

It is more than the program of this play we call life; it is the prompt book, the script itself, the entrances and exits, the action, the dialog, and the daily surprises of unpredictable human nature.

As such, a newspaper bears a tremendous responsibility and becomes the greatest educative force we know. We, of the board of education, are striving to develop the talents and teach the arts of living to almost a million young people who emerge from our classrooms each year. Here, in our vast, sprawling city, we pride ourselves on the accomplishments of the largest public-school system in the world. And yet there is a larger and far more effective system of public schooling than ours, and that is the newspaper. It reaches and teaches hundreds of millions of people every day of the year in almost every corner of the globe. It deals in the most precious merchandise of all, words, and, through words, ideas.

Yes, my friends, we are here to do honor to a seemingly lifeless thing, contrived out of paper and ink.

But it is what is on that paper that counts. It is how much of the human spirit that flows in that ink which matters. It is the people who stand behind the news and opinion which appear in the newspaper that we actually propose to acknowledge and applaud by these exercises today. For even a newspaper as valuable and vital to the daily activities of our huge metropolis as the New York World Telegram and Sun is only the shadow of the men and women who make it, and it is our sincere and happy purpose to honor them for all they have done for our city and for the children of our city's schools.

That is why we salute Roy W. Howard, editor and president of the New York World-Telegram and Sun. You have kept your newspaper free of all partisan ties and independent of any political pressure. You have fought valiantly and tirelessly for good government in city, State, and Nation. You have opposed all things and persons you believed to be wrong, and you have championed whatever you felt to be right.

The name of Lee Wood, executive editor of the World-Telegram and Sun, is known to every man and woman who sits at a newsdesk or pounds a rewrite typewriter. I could say that Lee Wood is a journalist's journalist, but I think he himself would prefer to be called a newspaperman. Here we have no remote ivory-tower observer of world affairs, but a hard-hitting, shirt-sleeved worker at the task of publishing an honest daily report of the news. A man of strong personal opinions, he is known always to be ready to hear the other fellow's point of view. A man who moves in the electric atmosphere of the largest international issues, he is yet aware, at all times, of the little everyday problems of 8 million New Yorkers.

In any galaxy of newsdom's most notable figures, you, Lee Wood, must command a foremost place. The warmth of your own personality has made the World-Telegram and Sun reflect a deeper humanity and compassion. The courage of your own crusading spirit has carried over into its columns, reflecting your own integrity, your love of truth and zeal for freedom of thought and expression.

You have encouraged your feature writers and reporters to walk in the footsteps of the earlier giants of journalism, to give the news fearlessly, impartially, and accurately. You have promoted the cause of peace throughout all the world, yet you have not

ignored the obligation to pursue justice within your own local sphere of influence.

You have trusted in the intelligence of your readers, in the ultimate victory of good over evil and in the ability of an informed public to govern itself. You have preached the democratic ideal and you have given expression to the American dream in the inspired words of the motto that rings from your own masthead: "Give light and the people will find their own way."

Finally, we pay tribute to your constant emphasis of the growing importance of education in the news. Few men have as clear an understanding of the problems and aims of education as Jack Jacowitz, editor of the World-Telegram and Sun's daily school page. He has covered this vital news field for more than a quarter of a century. He knows the complex factors involved; he has battled widespread misconceptions and has beaten back the occasional irresponsible attacks on our school system. He has watched the forward march of education in our city from an on-the-spot post and he has reported his observations with clarity and fairness, rendering an unusual service for which we are constantly grateful.

Through the tireless and earnest efforts of Jacob Jacowit and his excellent staff, you have focused a steady beam of enlightened interest on every area of our local and national educative activities. You have turned the spotlight of your school page and your news columns on the vital function of education to defend the borders of freedom against all who would advocate any form of physical or intellectual enslavement. You have fought to assure a better tomorrow for the children growing up into good citizenship in our classrooms of today.

In recognition of all this, I have the profound honor of presenting to you this plaque in the name of the Board of Education of the City of New York, on which is inscribed this citation:

"AN APPRECIATION

"For more than 30 years the school page of the New York World-Telegram and the Sun has reported on the world of education.

"More particularly, the school page has mirrored the life of our vast and complex New York City school system. It has presented news of our daily proceedings. It has traced our growth and expansion; it has provided a convenient forum for teachers, supervisors, and parents; it has praised accomplishments and criticized weaknesses.

"Because of the accuracy and thoroughness of its news and the spirit of fairness which characterizes its criticism, the school page has made itself a valued and welcome visitor to our schools and homes.

"So much do we prize the school page that we give it a permanent place, in bound volume form, on the shelves of the teachers' reference library of the board of education. Now that we have received the 1955 volume from the bindery, we deem it fitting to express to the New York World-Telegram and the Sun, to its management, and to the able and conscientious staff of the school page our appreciation of a job well done."

Whose Road Program?

EXTENSION OF REMARKS
OF
HON. ROBERT L. F. SIKES
OF FLORIDA
IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 11, 1956

Mr. SIKES. Mr. Speaker, under permission to extend my own remarks and to include extraneous material, I wish to have inserted in the CONGRESSIONAL RECORD an article by Mr. Win Pendleton, of the Florida Press Bureau, 1147 National Press Building, Washington, D. C. This article, which has to do with the highway bill, recognizes the work of the Honorable Cecil Webb, one of Florida's former road board chairmen in the origination of this fine legislation:

WASHINGTON SEESAW
(By Win Pendleton)
WHOSE ROAD PROGRAM?

The road bill has passed. It took Congress more than 18 months to write one that they could agree on. The Republicans call it Ike's program. The Democrats are claiming credit for it because this is a Democratic Congress. Also, it's election year.

But let's check the record. Let's recall the occasion of the original presentation of the idea and give a wee bit of credit where credit is due.

On March 17, 1954, Cecil M. Webb, then chairman of the Florida State Road Board, visited President Eisenhower in the White House and proposed the biggest Federal road-building program in history.

On July 12, 4 months later, in New York City, Vice President RICHARD M. NIXON outlined this plan publicly. NIXON read a speech that President Eisenhower had planned to deliver. But due to the death of his sister-in-law, the wife of his brother Milton, President Eisenhower was unable to make the speech himself.

At that time, no mention of Cecil Webb was made by Vice President NIXON, although the plan was essentially the same that Webb had proposed on his March 17 visit to the White House. There was one difference worth noting: Webb had suggested an expenditure of $30 billion over a period of 6 years. President Eisenhower called for a road program costing $50 billion to be spent over a period of 10 years.

The bill that Congress passed last week provides for $32.9 billion during the next 13 years. That isn't exactly the way Cecil Webb had planned it, but it shows he was on solid ground.

Some people laughed at Webb for taking his idea directly to the President. Some people in Florida said he was just trying to show off. Even some members of the Florida delegation here treated Webb as though he should stick to making Dixie Lily grits and corn meal—and leave roadbuilding problems to them.

But, it should be noted that Congressman BOB SIKES, dean of the Florida delegation, did have faith enough in Webb's plan to arrange for the White House visit. And when Webb talked to President Eisenhower, SIKES sat in on the conference.

Among the high Florida road officials who went to the White House with Webb were Senator George Tapper, of Port St. Joe, then chairman of the State legislature's road committee; Sam Turnbull, State highway engineer; F. M. "Son" Turner, Jr., board member from Pensacola.

Later, as chairman of the road department, Webb published his plan in a booklet entitled, "Florida's Plan for Better Highways." This was a copy of a speech which he made to the committee on administration of the American Association of State Highway Officials in Seattle, Wash., November 8, 1954.

This is all in the record.

So, during the next few years, as this great network of 41,000 miles of interstate roads is under construction—remember who first took the idea to the President.

Sometimes when you hit a beautiful new stretch of completed highway on this network, or maybe complain and fuss about a miserable detour where the new roads are being built, take time out to remember the old motto which says, "There is no limit how much a man can accomplish if he doesn't care who gets the credit."

And remember, too, the visit that Cecil Webb made to President Eisenhower, in the White House, on March 17, 1954.

H. R. 5550

EXTENSION OF REMARKS
OF
HON. THOMAS B. CURTIS
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES

Thursday, July 5, 1956

Mr. CURTIS of Missouri. Mr. Speaker, it looks as if it were quite unlikely that H. R. 5550, a bill to authorize the United States to enter into the OTC will be brought out on the floor of the House for debate in this Congress.

I regret this. Regardless of whether entry into the OTC is authorized or not, the subject matter is one that needs as much public debate and consideration as possible. My personal views are that the Ways and Means Committee needs to conduct further studies and hearings upon the broad subject of the delegation of congressional powers to the Executive in the field of the regulation of foreign trade if we are to adequately advise the House on OTC or any other matter in this area.

Inasmuch as the OTC probably will not be debated in this Congress, I am herewith inserting in the RECORD the supplemental views I wrote to accompany the report of the Ways and Means Committee on H. R. 5550, in which I discuss this general subject in some detail:

SUPPLEMENTAL VIEWS OF THOMAS B. CURTIS ON H. R. 5550

I joined in voting H. R. 5550 out of committee primarily because I felt that it was a measure of such importance that it should be presented to the House. This matter of United States foreign trade needs as much public airing as it can get. This committee has held lengthy hearings on the aspect of our foreign trade presented by H. R. 5550. However, a major question for this House to decide is whether these hearings provide sufficient data upon which the House can base an intelligent vote.

The first question to be resolved in considering H. R. 5550 granting the President authority to join the United States in the OTC is whether this can be considered intelligently on its own bottom without relation to the GATT.

AREA COVERED IN COMMITTEE HEARINGS

The decision was made to confine the subject to the OTC by the manner in which the hearings were set up, by the selection of witnesses and by the understanding given to witnesses that the subject matter before the Committee was limited. The executive-department witnesses who appeared before the committee supported this approach. They argued that the delegation of power sought by the executive in H. R. 5550 did not require congressional consideration of GATT, even though Congress has never had the question of GATT directly before it.

On the other hand, the chairman of the committee was very fair in permitting the witnesses to be questioned extensively on the subject of whether approval of OTC amounted to an approval of the GATT; and also on the subject of the jurisdiction, procedures, and operation of the power allegedly

delegated by the Congress to the Executive to enter into GATT.

However, if the various executive department heads who testified before this committee had been instructed that they were to be prepared to discuss the GATT and the executive department's authority to enter GATT, a great deal more pertinent information would have been made available to this committee and to the House membership through the hearings. As it is, much of the information in the printed hearings merely was supplied for the record and there has been no opportunity to question the witnesses on this material. Furthermore, the persons from the executive department who have first-hand information on the manner in which trade agreements operate and are negotiated, particularly members of the Committee on Reciprocity Information, of the Departmental Trade Agreements Committee, of the Tariff Commission, and of the United States Board of Trade Negotiators for GATT were not called before the committee for statements and examination.

CAN OTC BE CONSIDERED WITHOUT CONSIDERING GATT?

H. R. 5550 grants to the executive the power to enter into OTC, an organization designed to make GATT more effective and more permanent. It seems foolish to try to consider OTC without knowing what GATT is; what the President's authority to enter GATT consists of, its limitation, if any; how the President has exercised this authority; what procedures have been established for United States industry, agriculture, and labor to present their views and to have their views considered in the negotiation of trade agreements and with what degree of formality these procedures have been established; what control the Congress has retained in this area of regulating foreign trade, which is so explicitly designated in the Constitution as a power and responsibility of the Congress.

The position of the executive department witnesses that approval of OTC does not require a study of GATT is difficult to understand in the face of the fact that three times the Congress has explicitly stated in legislation collateral to GATT that by approving this legislation it is neither approving nor disapproving GATT. These congressional caveats spring from a series of doubts. Doubts as to the authority of the Executive to enter GATT at all and more serious doubts as to whether the authority of the GATT exceeds the President's authority to enter into multilateral trade agreements. Doubts about the procedures under which the Executive has exercised whatever his authority may be. Doubts as to whether foreign trade barriers have actually been decreased and whether foreign trade has actually increased as the result of GATT.

The Randall Commission, which was certainly friendly to the GATT, recommended that the subject matter of the GATT be presented to the Congress for its approval. Many of the nongovernmental witnesses appearing before the committee in favor of H. R. 5550 were forthright. They said, of course, Congress approving H. R. 5550 meant approval of GATT. Several witnesses stated that Congress by extending the Trade Agreements Act of 1934 from time to time with full knowledge that the Executive had used this act as the source of his power to put the United States in GATT had given approval to GATT, in spite of the insertion of the caveat clauses.

To sum it up then. It is time Congress considered GATT. To vote intelligently on H. R. 5550, establishing the OTC, we must consider GATT. The caveat clauses from a practical standpoint are meaningless. A caveat clause in H. R. 5550 saying that approval of H. R. 5550 neither approves nor disapproves of GATT is meaningless.

WHAT COURSE CAN BE TAKEN?

So let us look at GATT with the information we have been able to gather to see (1) whether we have enough information to go on and, (2) if we have, whether it is to the best interests of our country to approve or disapprove OTC and GATT.

My personal views are that this committee has not obtained enough information about GATT and the United States Government's relation to it to intelligently understand it. The hearings on H. R. 5550 were not set up to study GATT and most of the information about GATT in the printed hearings comes from data supplied for the record in answer to questions. As I pointed out before, there was no opportunity for asking questions about this data or questioning the witnesses who had first hand information about the manner in which the Executive Department enters into trade agreements under GATT. The best place, of course, to amend our procedures in writing trade agreements is in the extension of the Trade Agreements Act when it comes up again in 1958, but it could have been done at this time in considering the OTC.

Not having enough information about GATT would indicate that H. R. 5550 should be defeated. This, however, is not necessarily so. Two other possibilities exist. 1. To recommit the matter to the committee for further study. Of course, the public has been conditioned already to look upon this as a defeat of OTC; but if a further study by the committee were really made by going into the matter of GATT, this would not be a defeat, but a delay. 2. To approve OTC provisionally, on the theory that for the very immediate future our country stands to gain from a more rigid enforcement of the present trade agreements made under GATT and what defects there may be in the GATT and the manner in which Congress delegated power to the Executive to enter into GATT, can be corrected at a later date.

There is much to my mind that recommends this second course. I trust that the following discussion based upon our limited studies of GATT will bring out some points that bear on the course of action this House should pursue.

DELEGATION OF POWER BY THE CONGRESS OVER FOREIGN TRADE

Has the Congress constitutionally delegated the power to regulate foreign trade which the Constitution vests in the Congress, to the President, in the Trade Agreements Act of 1934 as amended?

There were some witnesses who questioned whether the Congress could constitutionally delegate any of its power to regulate foreign trade to the Executive. In my judgment, there is no question that the Congress can delegate its power in this area if it does so in a correct manner.

The constitutional question becomes, Did the Congress in the Trade Agreements Act of 1934 as amended delegate its power in a correct manner? This raises two basic points: (a) Was the delegation of power sufficiently limited as to extent? (b) Was the delegation of power sufficiently defined in the manner in which it should be exercised?

One witness who felt that the language in the Trade Agreements Act, although very broad and general, was sufficiently definitive as to the extent of the power conferred, cited similar broad and general language delegating power over interstate commerce by the Congress to the executive in the act creating the Interstate Commerce Commission. However, the Congress in delegating these broad powers created a very specific agency to carry out these powers, the Interstate Commerce Commission. Congress did not create a similar type agency to carry out the powers over foreign trade delegated in the Trade Agreements Act.

To fully study this question, however, the powers of the Tariff Commission, an agency previously established and of some years standing, must be reviewed. It is interesting to note, however, that the Trade Agreements Act in delegating whatever power that it did in the area of foreign trade did not refer to the powers previously granted to the Tariff Commission although it must be remembered that the Reciprocal Trades Act itself is an amendment to the Tariff Act of 1930. It is further pertinent to note that the two major amendments to the original Reciprocal Trades Act, the escape clause and the peril point provision confer additional powers on the Tariff Commission. Yet there has not been a clear delineation of powers in this area between the Tariff Commission and the executive under the Trade Agreements Act.

Furthermore, the executive department by Executive Order No. 10082 of October 5, 1949, established the Committee on Reciprocity Information and the Interdepartmental Committee on Trade Agreements to handle certain matters which arise in the United States preparation for entering into multilateral trade agreements under GATT. It is not quite clear just where the Tariff Commission fits in this scheme of things, particularly as in this same Executive order the Tariff Commission is directed to file an annual factual report of the operation of the trade agreements program with the Congress. This portion of Executive Order No. 10082 was enacted into law by the Congress last year in the extension of the Trade Agreements Act. These reports by the Tariff Commission are by no means confined to the subject of tariffs; they cover a wider area of foreign trade. Yet apparently the Tariff Commission has been given no jurisdiction in this area other than to "at all times keep informed concerning the operation and effect of provisions relating to duties or other import restrictions of the United States contained in trade agreements. * * *"

Regrettably, though these reports have been filed with the Congress for several years, no Committee of the Congress has been designated to receive these reports, study them and in turn report to the Congress on them. Many Congressmen bewail the loss of power of the Congress to the executive branch of the Government, some even call it usurpation of power—yet in all too many instances—as in this specific case—the loss of power comes from the Congress failing to exercise the prerogatives it has retained for itself. I am hopeful that in the future the Ways and Means Committee will receive, study, and if necessary, hold hearings on the Tariff Commission's annual report on the operation of our trade agreements. Had we been doing this in the past we would be in a position now of making a more intelligent and meaningful report to the House on H. R. 5550.

Furthermore, the Tariff Commission in its inception was designated to be an arm of the Congress. Just what it is an arm of today is questionable. This broad subject of the status of the Tariff Commission in multilateral trade negotiations and agreements remains unstudied by this committee and, as near as I can tell, it remains unstudied by anyone.

CREATION OF EXECUTIVE COMMITTEES

However, even though the Congress may not have created an agency similar to the Interstate Commerce Commission to carry out the delegation of authority to the executive branch of the Government over the regulation of foreign trade, and though the Tariff Commission's position in this area is rather vague and undefined, the executive department has done some definitive work itself.

By Executive Order No. 10082 it created the Committee on Reciprocity Information. This Executive order is set out in the hear-

ings and should receive the study of the House. The Executive also created an Interdepartmental Committee on Trade Agreements. Its structure and duties are not as well defined as those of the CRI. The personnel of the ICTA seems to be identical with CRI. The relationship of these executive committees with the Tariff Commission is likewise vague and undefined although there is a relationship.

The purpose of these two committees, essentially, seems to be to provide a forum whereby industry, agriculture, labor, and other groups concerned with the operation of the trade agreements and the possible negotiations of future trade agreements may present the facts and arguments surrounding their particular situation and concern.

The function of these committees is not that of administering the peril-point provisions. That is specifically a function of the Tariff Commission, although apparently the Executive uses these committees and whatever findings they make in order to exercise the further prerogatives he has to not abide by the findings of the Tariff Commission.

The difficulty in dealing with the CRI and the ICTA from the standpoint of industry, agriculture, and labor seems to be, according to the testimony of witnesses who had dealings with them, that one never knows what action the committees have taken, if any. Whether any findings have been made and, if made, whether they are reduced to writing and forwarded and, if forwarded, to whom. There is no opportunity to know whether the data and arguments presented by a special interest have been considered, ignored, or partially paid attention to.

BOARD OF TRADE NEGOTIATORS

Above all the difficulty experienced by industrial, agricultural, and labor groups lies in the fact that neither the CRI, ICTA, or the Tariff Commission have any function in the actual negotiation of the trade agreements. Who compose the United States Board of Trade Negotiators is a question mark. There has been no formalization of the Board of Trade Negotiators by Executive order. Apparently the personnel may change from day to day, the number of negotiators may change, the qualifications of the negotiators may be anything. In fact, there is no real name for our group of negotiators. I have referred to them as the Board of Negotiators because I don't know what else to call them. How the board obtains information about American industry, agriculture, and labor is uncertain. Theoretically the CRI and the Tariff Commission pass information to them. But this is pure theory. If the CRI reduces its factfinding to writing and recommendations and then passes this data in this form to the Board of Negotiators it does so as the result of no established procedure. Furthermore, any such findings or data, according to the Government witnesses, is secret.

One thing seems to be certain, however, that on the United States Board of Negotiators there are to be no special economic interests represented nor are special interests permitted to be around to give advice in the area of their special interests, either before or during negotiations. Nor does any group know what the Board regards as factual information about its economics, upon which it conducts the negotiations.

Certain witnesses have raised objections to this procedure on the grounds that other nations do not follow similar practices. For example, there was testimony that in recent negotiations involving textiles one of Britian's negotiators was a person in the textile industry who because of his special knowledge in the field was able to give Britain great advantage over the United States negotiators who were unfamiliar with the detailed economics of the industry.

It seems clear to me, without hearing further testimony, that the Congress has not done a proper job in spelling out in detail the procedures which should be followed in negotiating trade agreements. There is little question but that American industry, agriculture, and labor do not know where to go or how to go in presenting their cases before negotiations are entered into.

I am not talking now about a matter which has reached such an extreme position that the peril point or escape clause provisions in the Trade Act come into play. I am talking only about the ordinary negotiations where our negotiators should be in a position of strength through knowledge and where our economic groups should be assured that our negotiators are dealing in knowledge and not in ignorance. Above all, our economic groups at least should know by name and qualifications who our negotiators are and not be placed in the position of having their economic welfare placed in the hands of unknown persons operating under no known set procedure.

(I again want to point out that the information supplied for the record by the State Department on this subject was not available at the time of the public hearings, so there has been no opportunity for this committee to dig into the data for checking.)

ARE THERE SUFFICIENT PROCEDURES ESTABLISHED IN THE DELEGATION OF AUTHORITY?

Whether the congressional inaction of this area is such that the delegation of authority to the Executive is so vague and undeterminative as to be unconstitutional is almost academic. Certainly the congressional action is ill advised and not conducive to the national economic well-being and has put our citizenry in a position of not knowing how either to promote or to protect their economic welfare in the area of vast importance to them such as foreign trade is.

If Congress thinks it advisable to confer upon the Executive vast powers over the regulation of foreign trade, it should do so in a fashion that the citizens' basic right to petition the Congress is protected by adequate administrative machinery. I suggest it was the need of the people to have this right in regard to their economic interests that prompted the writers of the Constitution to confer the powers over both interstate trade and foreign trade to the Congress rather than to the executive department. I believe that the difficulty we are presently experiencing and have been experiencing with increasing difficulty in continuing with the reciprocal trade formula for handling our foreign trade does not lie in the concept of granting the executive the broad power to negotiate multilateral trade agreements or of Congress divesting itself of the power to write the details into our tariff schedules, but rather lies in the fact that our citizens feel that they have not had a fair opportunity to have their cases heard and considered * * * that faceless negotiators, loyal Americans and dedicated public servants though they may be, have through ignorance been hurting badly various domestic economic interests.

Furthermore, there was nothing more than the most general sort of testimony concerning the overall betterment of our foreign trade through GATT. The statements made were so general that one could only conclude that the witnesses felt the matter did not require proof. The only specific data presented to the Committee during public hearing on the economics of foreign trade whether it has increased or decreased, what the trends and causes were, was from Professor Glenn O. Saxon, of Yale. He argued from the data he presented that foreign trade had not increased as could have been anticipated in light of the increase in overall world gross national products. Certainly this committee should have more information than it has on the economic statistics of world trade. The data was supplied by the State Department on this subject for the record, but again this data, though interesting, pertinent and valuable, has not been subjected to examination or public scrutiny. It is a mystery to me why the witnesses for the executive department did not come prepared to testify at the public hearings with data rather than with general conclusions. The whole issue before the Congress and the people of our country in this area is what governmental action will help us best in increasing our foreign trade. It is important that we dig in and study this to see how well we really have been doing under our present approach and not just take it for granted that we are doing well.

GATT'S JURISDICTION IS GREATER THAN UNITED STATES PRESIDENT'S AUTHORITY OVER FOREIGN TRADE

There are many additional areas of confusion in this foreign-trade picture. The present Executive states through his Cabinet representatives that his sole authority to regulate foreign trade through the reciprocal trade formula and to enter into GATT comes from the Trade Agreements Act of 1934 as amended. It is important to review the testimony in previous hearings on the subject. This has not been a consistent position of the Executives. There have been claims to certain implied powers. The report of this committee, I understand, contends that the language in the Trade Agreements Act has implications which broaden the scope of the Executive authority. This committee did not discuss such a theory, and any such conclusion stated in the committee report is not yet the considered judgment of the committee. This matter should be clarified.

Be that as it may, the authority of the President to enter GATT stems from an amendment to the Tariff Act of 1930 which is called the Trade Agreements Act. Section 350 of that act states "whenever he (the President) finds as a fact that any existing duties or other import restrictions of the United States or any foreign country are unduly burdening or restricting the foreign trade of the United States he may act."

Article I of GATT states as follows:

"2. The contracting parties desire to contribute to these objectives through this Agreement by entering into reciprocal and mutually advantageous arrangements directed to the substantial reduction of tariffs and other barriers to trade and to the elimination of discriminatory treatment in international commerce."

It is quite clear, furthermore, from reading the preamble of GATT and the preamble of the Trade Agreements Act that the word "trade barriers" used in defining GATT's jurisdiction is an extremely broad term and encompasses considerably more than "duties or other import restrictions," even if the broad interpretation of these words claimed by the Executive and approved in the Committee Report is accepted. Health measures, currency exchange, quotas, etc. are just a few items included as "trade barriers" which would not be considered properly under the terms "duties and import restrictions" as they are used in an amendment to the Tariff Act of 1930.

The very fact that the United States obtained a waiver from the other countries to GATT in regard to our agricultural quotas set up in the Agriculture Act bring home the fact that GATT is considerably beyond the scope of authority delegated by the Congress to the Executive to enter into trade agreements.

A PRACTICAL REASON FOR ENACTING H. R. 5550

A practical point made in behalf of OTC is that foreign countries have utilized "trade barriers" other than "duties and import restrictions" extensively, some of which are

considerably more restrictive to modern trade than duties and conventional import restrictions. By creating OTC it is argued these other barriers to trade used by other countries but which they have agreed to eliminate by agreement, may be eliminated.

It is for this practical reason I have suggested that it is probably to the immediate advantage of the United States to enter provisionally into an organization that will make the trade agreements under GATT more enforceable. We have already made concessions along the lines of tariff reductions, but the reciprocity which we have anticipated has been long in coming. OTC would assist in the very immediate future in getting rid of some of these foreign trade barriers.

But in trying to gain this momentary advantage the Congress is certainly putting its stamp of approval on executive action in entering into a general agreement on trade which contemplates subject matters way beyond the subject matter Congress specified, in its delegation of power to the Eexecutive in the Trade Agreements Act. It could be said that the United States entry into GATT applied only to the subject matter contemplated in the Trade Agreements Act, but that it was perfectly proper for the United States to get concessions from the other countries of GATT on these other trade barriers. But then I would think we would have the question on the part of other countries of whether they have the same understanding of the limitation of the United States participation in GATT. Obviously they do not have the same understanding because some of the other countries in GATT raised the question on the United States agricultural quotas which was outside the United States Executive's delegated jurisdiction to deal with in the first place.

Should we continue in this uncertain state of either fooling our friends abroad or fooling our own people at home? Isn't it the better course of wisdom and valor to clear the matter up for all concerned? And as quickly as possible?

AMENDMENTS TO H. R. 5550 MADE BY THE COMMITTEE

The committee tried to correct some of the alleged dangerous possibilities in H. R. 5550 by amendment. First, language was inserted which attempts to limit the powers of the Executive in the area of foreign trade to those powers already delegated in the Trade Agreements Act. However, the idea of a previous Executive that certain implied powers exist in the Executive over the subject of foreign trade was left unexamined and untouched and, as stated, the Committee Report gives credence to an extended interpretation of the language in this act.

An amendment was adoted putting some responsibilities, authorities and qualifications on the head of the United States delegation to the OTC. Senate confirmation of this appointment is required. This is a big improvement.

An amendment to enlarge the voting power of the United States was discussed but not formalized and put to a vote. Information was given to the committee in executive session that the subject of voting power was discussed at the conference which gave birth to the OTC but that criteria such as population and amount of foreign trade were found to be more faulty than sovereignty as a basis for apportionment of vote. Why a compromise which reflected all these criteria could not have been developed remained unanswered. The writers of the United States Constitution when confronted with a very similar problem regarding the voting powers of the big and small States in the Federal Congress were able to successfully reflect a compromise between population and sovereignty. It seems little short of ridiculous that the concept of sovereignty should be so rigid that a nation of 165 million people and an annual gross national product of $400 billion should be classed in trade matters with nations of a million or less people and less than $100 million gross national product.

EFFECT OF CONGRESSIONAL DISAPPROVAL OF H. R. 5550

Finally, I come to the feature of this proposed legislation and the circumstances surrounding it which cause me the greatest concern. In discussing the course of action this Congress might take, I said in reference to a recommittal of this bill to the committee for further study: "Of course, the public has been conditioned already to look upon this as a defeat of OTC." So have the foreign nations in GATT been conditioned to look upon a recommittal of this bill, or anything but an almost blind passage of OTC by the Congress, as not only a defeat of OTC but a defeat of the entire conception of multilateral trade agreements. The executive witnesses as well as nongovernmental witnesses who testified for H. R. 5550 have resorted to this argument time and again during hearings and during executive sessions. It is a powerful argument. But I raise the question of who is responsible for this conditioning of the minds of our citizens and the minds of citizens and governmental leaders of foreign states on a matter which should be the subject of considerable objective study by the Congress?

Indeed, is the question of handling foreign trade and the implication of the establishment of OTC so simple and so cut and dried that no honest arguments can be presented other than those that openly and intentionally are designed to kill the technique of multilateral trade agreements? There are those who are convinced that the Reciprocal Trades Act and GATT have not benefitted the United States or world trade and who, therefore, seek to cut it down as much as possible and to even eliminate it, if that were possible. I do not agree with this position. I think that in spite of the poor case made for the GATT that it has accomplished an overall benefit for our country and foreign countries by contributing to an increase of foreign trade. However, I also think that it has accomplished much less than it could have accomplished if it were better organized and more clearly set up. Certainly I believe that it could have accomplished what it has accomplished without the accompanying damage it has done to certain segments of our domestic economy. I do not believe the OTC is the best way to remedy these basic structural defects in our procedures for negotiating multilateral trade agreements through GATT. The best way is to restudy and then rewrite the delegation of congressional authority to the President over foreign trade.

The failure of the representatives of the executive to present economic data to this committee on the status of our foreign trade and the effect the GATT has had upon it, if such effect can be determined at all from what economic data there is, is such as to negative their case that through GATT we are following the best course possible to increase world trade. It is true that the Congress has been badly at fault in not following yearly the progress of our foreign trade through the reports submitted to it by the Tariff Commission, but that surely does not excuse the executive department from not recapitulating in detail the data of these annual reports and presenting additional pertinent data at the formal public hearing where the general subject of foreign trade is up for review.

Furthermore, the failure of the executive witnesses to be prepared to discuss in detail the procedures established and followed in entering trade agreements under GATT and, indeed, their affirmative presentation of the preposterous idea that the Congress could intelligently approve the United States entering into OTC without studying GATT, further negatives their case.

The failure of the majority of the members of the committee to attend or follow the hearings on this matter, coupled with the poor presentation referred to, convince me of one basic thing. The conditioning of the public mind on this subject has been so well done that an objective study into the problem of foreign trade by the Congress was neither desired nor intended by the State Department personnel who are essentially responsible for this presentation. The theory seems to be the more ignorance there is the more certain the blind approval.

I am not convinced, as some persons are, that there is anything sinister in the attitude of the State Department bureaucracy who have taken charge of the regulation of foreign trade. (I have been impressed by the comprehensive data the State Department officials have presented to this committee for the record, when asked. However, I again point out that without this data being available to the public and made the subject of examination and questioning by our committee its value is greatly limited.) Rather, I am convinced that the attitude of the State Department personnel is one of basic loyalty to the overall welfare of our country, and I am further convinced that the individual persons occupying this particular drawer of the Federal Bureau are very able, hardworking and conscientious citizens. However, I do find an attitude of certainty that they know best what is in the welfare of the United States and that the Congress and the special economic interests that seek to influence and, on occasions, can influence the Congress, do not. Indeed, they feel that it is their duty to protect the overall welfare of the United States against what they regard as the shortsighted and selfish interests of all special economic groups.

This, of course, is benevolent dictatorship. Perhaps they do know best but I doubt it. I still feel that the collective wisdom existing in our citizenry is the best wisdom our society can obtain, not the wisdom of any small group, even though they be the wisest men in the society. It behooves us to follow procedures which best will enable this collective wisdom to be brought to bear upon the problems that face us. The institution of the Congress is no more than a set of procedures whereby the wisdom of our people may be gathered together and brought to bear upon the problems of our day. When Congress delegates its authority to the Executive, as it should, in various areas including the areas of foreign trade, it should do so in a fashion that this basic feature is preserved. This, in my opinion, is not the situation in respect to the regulation of our foreign trade today.

An Army doctor whose job it was to interview the Korean war prisoners in order to try to learn the techniques of Red Chinese brain washing made a significant statement in an interview which was published in the February 24, 1956, U. S. News & World Report:

"Question. Did the Communists feed prisoners propaganda?

"Answer. They certainly did.

"Question. What was the aim of this propaganda?

"Answer. To lower their opinions of America.

"Question. How?

"Answer. They began gently, capitalizing upon a sure-fire theme: the unpopularity of the Korean war. This was a subject dear to the heart of many a soldier."

The Constitution provides that only Congress may declare war, for the specific reasons that the writers of that great document felt, and rightly so, that any war in which our society is engaged must have the support of the people. One of my friends in the State Department said to me at the time of the Korean war—but if it had been referred to

the Congress, Congress might not have done the right thing and it was necessary for our national welfare under the circumstances to move into Korea at once.

Yes, similarly it is true if the GATT in all its ramifications were referred to the Congress it might not be approved, but I suggest following the course we are still following bears with it even greater dangers than any momentary setback. Personally, I believe that Congress would have approved the Korean war if the problems were forthrightly presented to it just as Congress would approve the GATT if it was presented forthrightly to it and there were proper procedures established for preserving the basic rights of our citizens in promoting their proper economic interests.

Propaganda Campaign Against High Hells Canyon Dam

EXTENSION OF REMARKS
OF
HON. EDITH GREEN
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 11, 1956

Mrs. GREEN of Oregon. Mr. Speaker, many of us had hoped that the legislation to build High Hells Canyon Dam, shortly to come before the House, could be given sober, factual consideration and be debated solely in terms of the public interest involved. Unfortunately, lavish resources are being expended to obscure and distort the facts. This disservice to the public welfare appears to have as its purpose the promotion of the interests of a private utility corporation and as its means a campaign of thoroughly fallacious propaganda. The proponents of High Hells Canyon Dam are anxious to let the facts speak for themselves. They are confident of the verdict if it is based on fact. The opponents of High Hells Canyon Dam seem afraid to let this issue be settled on the facts. So outrageous has their misrepresentation become that the Portland Oregonian has felt it necessary to denounce this anti-High Hells Canyon propaganda.

I ask unanimous consent to insert at this point in the RECORD, the Oregonian's very effective indictment of this propaganda campaign:

[From the Portland Oregonian of July 5, 1956]

PHONY TAX ARGUMENT

We have no patience with the kind of attack on a proposed Federal dam in Hells Canyon of the Snake River being conducted by the Council of State Chambers of Commerce and injudiciously assisted by such local organizations as Oregon Tax Research.

The council has broadcast over the country a table showing an assumed cost of $508,300,000 for the Federal Hells Canyon project as allocated to each State on the basis of its respective share of the present Federal tax revenues. By this means is shown the tax cost of each State for Hells Canyon, ranging from $762,450 for Maryland to $75,990,850 for New York.

Oregon Tax Research not only circulates these figures but includes a reprint of an editorial in the Oklahoma City Times headed "Oklahoma, Can You Spare $5,000,000?"

This is a disservice to the Northwest and the Nation which can scarcely be explained by politics or tax conservation. Carried to its logical conclusion, this line of argument is that multiple-purpose projects have no benefits to the Nation as a whole; that there is no repayment of Federal investment in such projects; that natural resources must be developed solely by private investment.

Leaving aside the advisability of Federal or private construction of dams in the Snake, does Oregon Tax Research intend to say that the Federal Government should not have built Bonneville, Grand Coulee, Chief Joseph, McNary, The Dalles, Detroit, Lookout Point, and other great multipurpose projects which now are the backbone of the Northwest's economy? Does this agency dispute the Eisenhower administration's formula for repayment of 93 percent of the costs of McNary and similar dams from revenues of power sales? Does it assert that Oklahomans have no responsibility to contribute taxes to flood control in Oregon, and Oregonians no responsibility to help pay for flood control in Oklahoma?

In singling out Hells Canyon to raise the false issue of tax burdens by States, the Council of State Chambers of Commerce offers the same phony and emotional argument for use against other proposed Federal projects in the Northwest. These figures are not new. They were entered into the CONGRESSIONAL RECORD last year. They can be used as an excuse for voting against a Federal dam at John Day, should the partnership bill not be approved.

Whatever agency wins in Hells Canyon, this line of attack is negative, defeatist and harmful to the Northwest's interests. It is also misleading, because it does not consider repayment from power revenues, and because it fails to recognize the national interest in power, flood control, navigation and irrigation.

Yes, Co-Ops Have Tax Problems, Too

EXTENSION OF REMARKS
OF
HON. NOAH M. MASON
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 11, 1956

Mr. MASON. Mr. Speaker, throughout this session, there have been undercurrent rumblings of an attempt by certain cooperative lobbyists to induce the Congress to pass a law that would saddle our farmers with personal income tax on co-op patronage dividends which the courts have declared without market value. The cooperative press now admits this nefarious proposal.

You will recall, Mr. Speaker, that in 1951 Congress adopted legislation which purported to tax all earnings of farmer cooperatives either to the co-op corporation or to the farmers who received its patronage dividends. That tax was to apply not only to patronage dividends paid in cash, but also to those paid in stock or scrip or by what are called book allocations, meaning that the recipient is credited with money on the corporation's account books, though he may never in his life get it in cash dollars and cents.

The law was, of course, a complete and absolute phony. Under it, a co-op corporation could dodge all Federal income tax merely by going through the motions of allocating every penny of its earnings to farmer-members, while it kept the actual cash for whatever purposes its managers might devise. And if the poor farmer had to dig down into other earnings to pay tax on the dead horse he received that was strictly his worry.

Well, Mr. Speaker, a good many farmers did worry and some of them complained to the courts, and the courts ruled that the farmers certainly didn't have to pay income taxes on co-op patronage dividends that were received by them in the form of possibly worthless paper.

That threw the fat into the fire, and gave renewed substance to the demand I have made for many years—currently in H. R. 43—that cooperative corporations themselves should pay full Federal income tax on all their earnings before the distribution of those earnings in any form whatsoever.

So the co-op lobbyists got busy again, urging legislation which would make the farmer the goat. I must confess that I do not see how Congress can legislate value into something that the courts have ruled to be without value. Nor do I understand how the co-ops expect to hornswoggle their farmer-members into paying the income tax that the co-op corporations ought by rights to pay—especially when the farmers find out what is being done to them.

For the RECORD, here is the co-op proposal, as it appeared in the June 28 issue of the Cooperative Builder, of Superior, Wis., under this headline: "Yes, Co-ops Have Problems Too—Hear This: Co-ops Disown Tax Loophole Offered 'Em." The article was supplied by the Cooperative News Service:

YES, CO-OPS HAVE TAX PROBLEMS TOO—HEAR THIS: CO-OPS DISOWN TAX LOOPHOLE OFFERED 'EM

WASHINGTON.—Co-op refunds will be taxed the year the farmer gets them, regardless of what form they're in, under a proposal co-ops are asking Congress to consider.

Four nationwide co-op groups believe parts of the 1951 tax law need clarifying.

Jerry Voorhis, the Cooperative League's executive director, explained that co-ops supported the 1951 act, even though some of them paid more taxes, because it was "based on sound principles." It recognized, he said, that refunds to customers aren't income to the co-op; that co-op earnings (such as dividends it pays on stock and funds added to surplus) are income to the co-op and should be taxed as such; that co-op refunds (whether paid in cash, stock, debt certificates, or any other form) are income to the co-op patron if they affect his business.

CONFUSION

However, later court decisions confused this third principle, Voorhis said. Beginning with the Carpenter case, courts held that some noncash refunds did not represent income until they were redeemed in cash.

"By failing to prosecute this case very effectively or to appeal it to the Supreme Court, the Government developed a no-man's land," Voorhis said. "Under the law, co-ops weren't taxed on their refunds. Under the court decisions, co-op patrons couldn't be taxed on some noncash refunds."

WANT NO PART OF IT

The co-ops propose that the form of the refund make no difference. "We simply want to close up a tax loophole the courts handed us," Voorhis said.

The four groups working on this are the Cooperative League, National Council of Farmer Cooperatives, National Milk Pro-

ducers Federation, and National Federation of Grain Cooperatives.

More specifically, the four groups propose that co-ops' refunds represent income to farmers if made in the form of "capital stock, revolving fund certificates, retain certificates, certificates of indebtedness, letters of advice, or in some other manner that discloses in writing to the patron the amount of the patronage distribution or credit."

The co-op proposal rejects "fair market value" as a guide in determining the amount of a co-op refund. "The amount of a non-cash patronage allocation is the dollar amount specified therein."

Co-op refunds that don't affect a member's farming or business operation remain as they were. That is, refunds on consumer goods which don't affect a member's income—refunds on food, gasoline for the family car, household appliances, etc.—continue to be nontaxable.

The American Dollar

EXTENSION OF REMARKS
OF
HON. WILLIAM E. McVEY
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 11, 1956

Mr. McVEY. Mr. Speaker, one of the most disturbing elements in our domestic economy has been the course of the American dollar. The public has witnessed a decrease in the purchasing power of the dollar, amounting to almost one-half of it. There have been compensating factors to the workingman through increases in salary, but at the same time, life insurance policies of long standing have been cut in half of their former value. Savings deposits, bonds, pensions, and social-security payments have been depleted to a similar extent.

The administration which is now in power promised, before the election in 1952, a sound dollar. Let us see whether this promise has been fulfilled. In order not to become involved too extensively in statistics, decreases in the value of the dollar since 1939 are quoted for certain periods, rather than for month by month, down to the present time. A résumé of this situation is as follows:

(1935–39 consumer prices=100)

Date:	*Value of the dollar*
1939	101.4
1946	75.0
1950	58.8
1952	52.7
1953 (January)	52.0
1954 (January)	52.0
1955 (January)	52.0
1956 (January)	52.0

From the above table, it does seem that the promise of the administration with regard to a sound dollar has been kept. The period, beginning in January 1953, has been given because that marks the event when the Eisenhower administration took office, and there has been no downward drift of the dollar since that date. The figures quoted may be verified by the Library of Congress in Washington, D. C., the most impartial and authentic source of information to which we have access.

It is possible that the American people do not realize fully the meaning of this accomplishment because not everyone is aware of the fact that in France today approximately 350 francs can be purchased for an American dollar, as contrasted to the time when only 5 francs were available for the same amount of money. The development in France has been duplicated in most of the countries in Europe. In Italy, for example, 625 lira can be purchased for $1. We have seen an inflationary spiral destroy the currency of those countries one after another. There was a time, after the severe inflation in Germany, when a billion marks could be purchased for $1.50—notwithstanding the fact that at one time, only 4 of those marks represented the same value as the American dollar.

With the stabilization of the American dollar, there has been a stabilization of most of the elements in the American economy. There may be other accomplishments to which we may point with pride, but there is not one which means more to the great mass of the American people than the stability of the purchasing power of our currency.

The Devil To Pay at Hells Canyon

EXTENSION OF REMARKS
OF
HON. HAROLD C. OSTERTAG
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 11, 1956

Mr. OSTERTAG. Mr. Speaker, the attempt to turn back the clock at Hells Canyon by substituting public power development for the private undertaking which has already been launched there adds up to the grossest kind of power politics. Private enterprise has been licensed by the Federal Power Commission to do the job there, and it is doing the job. It should be allowed to continue. There is no justification in reason or in commonsense why the cost of this project should be borne by the people of the country generally. Under private enterprise, the costs will be borne by those who profit from the development. Thus the area will benefit, labor will benefit, the localities will benefit, and our free-enterprise system will benefit. If the Federal Government steps in, however, none of these benefits will accrue, and the taxpayers generally will be the poorer.

Under leave to extend my remarks, Mr. Speaker, I include in the RECORD, excerpts from some recent correspondence I have received on this subject from constituents and others:

ROCHESTER, *July 5, 1956.*

DEAR MR. OSTERTAG: Having just finished reading a magazine article on the Government plans for power development at Hells Canyon in Idaho, I would like to register my protest at any further attempts by public-power interests to promote Government power development in the Northwest.

It is my belief that the Government has never come forward with accurate and reliable figures up to this time which would indicate that it is able to do a better job for the country as a whole than private interests have done up to now. When such figures are available, and with due allowances made for taxes, providing the Government can make it cheaper than private interests, I shall be in favor of public power, but not before that time.

Very truly yours,

JOHN I. NUGENT,
Vice President, Manufacturing Ritter Co., Inc., Rochester, N. Y.

EMPIRE STATE CHAMBER OF COMMERCE,
Albany, N. Y., June 29, 1956.

We think the Federal Power Commission should be sustained in its grant of a license to finance, build, and operate the facilities at Hells Canyon by a publicly owned, privately financed power company. We think the Senate- and House-approved Hells Canyon bills should be rejected.

Sincerely yours,

WILLIAM A. MILLS,
Executive Vice President.

JUNE 30, 1956.

Hon. HAROLD C. OSTERTAG,
House Office Building,
Washington, D. C.:

Respectfully request that you vote against Hells Canyon bill. Plans of private taxpaying industry to meet needs of these areas should be encouraged. Taxpayers should not be saddled with $508 million dam cost.

GORDON W. MCCURDY,
McCurdy Co., Rochester, N. Y.

JULY 2, 1956.

DEAR CONGRESSMAN: For the public good, please vote against Hells Canyon bills, which should be rejected for the reason same should be privately financed by a power company.

Sincerely,

F. X. MATT,
Chairman of the Board, West End Brewing Company of Utica, N. Y.

HOUSE OF REPRESENTATIVES,
July 2, 1956.

DEAR COLLEAGUE: I have just received petitions signed by 491 workmen employed on the construction of the Brownlee Dam in the Hells Canyon area on Snake River in my district. These men will lose their jobs if work on the dam is stopped. These petitioners requested me to get this information to Members of Congress.

In their own words they say:

"This construction project is now providing jobs for over 700 of us now, and employment is steadily increasing. Another 500 workers will obtain jobs here within a month, and the whole region benefits from this work.

"The Federal Power Commission made the decision for Brownlee, Oxbow, and Hells Canyon. We are at work here. Let's build, not destroy; and let's stop the legislative threats to our jobs."

With best wishes,

Sincerely,

SAM COON.

Maine 4–H Clubs Lead the Nation

EXTENSION OF REMARKS
OF
HON. CLIFFORD G. McINTIRE
OF MAINE
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 11, 1956

Mr. McINTIRE. Mr. Speaker, under leave to extend my remarks in the

RECORD, I insert an article which appeared in a recent issue of the Bangor Daily News, a newspaper of wide circulation in my congressional district.

Mr. Speaker, all of us are familiar with the splendid accomplishments of our 4–H Clubs in preparing our youth of today to take over the leadership in the agriculture of tomorrow.

The State of Maine has vigorously encouraged its young men and women to participate in 4–H Club work, and our State's youth—under the able and stimulating leadership of local leaders, county club agents, and Associate Director George E. Lord, and State Club Leader K. C. Lovejoy—has responded brilliantly, as is attested to by the following article:

MAINE 4–H CLUBS LEAD THE NATION

4–H Clubs led all others in the Nation in 1955 in the percent of members completing their projects.

Associate Director George E. Lord of the Maine Extension Service said today Maine has been the leading State in this feature of 4–H work for several years.

Last year, of the 5,567 young people enrolled in the 4–H Club work in the State, 95 percent completed their work.

New Power at Sea

EXTENSION OF REMARKS

OF

HON. BOB WILSON

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 11, 1956

Mr. WILSON of California. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the San Diego Union of July 1, 1956:

NEW POWER AT SEA: FROM MOBILE OFFENSIVE, EARLY DEFENSE

(By Rembert James, military editor, the Copley News Service and the San Diego Union)

A deadly family of new weapons, a force of air, surface and underwater craft so fast and maneuverable they would have been called impossible before World War II, plus a theory of strategy and tactic born of atomic explosives—these three things have combined to revolutionize the art of war at sea.

This is the conclusion any impartial observer must reach after inspection of the United States Navy in 1956.

The Navy's ultimate goal is an American fleet armed with nuclear-tipped missiles and powered entirely by atomic engines that can run for years without refueling.

This goal is 10 years—possibly 15 years—away. But the Navy already has revolutionized its traditional capacity to guard America's sea lanes.

With what it has now, the Navy is ready, willing and able to undertake the offensive—if need be—from mobile bases that could become America's most important line of action in any atomic war, large or small. And the latent power of an offensive, in the classic axiom of strategists, is the best weapon of defense.

From its aircraft carriers it can launch 1,700 combat planes, some of which are capable of reaching out more than 1,500 miles to deliver nuclear bomb loads equal in explosive force to more than 400 million tons of World War II TNT.

The greatest of these carriers is the U. S. S. *Forrestal*, soon to be joined by the new *Saratoga*, types of modern ships that have brought about the rebirth of naval airpower.

To go with such ships the Navy has a half dozen new airplanes that are credited by Navy men with extraordinary performance and usefulness. One is the Douglas A3D, a twin-jet bomber in the 600–700 miles-per-hour class, capable of carrying a hydrogen bomb to a target 1,500 miles from the carrier's deck. Three squadrons of these planes are now ready.

A second plane that the Navy is counting on heavily is Chance Vought's F8U Crusader, a supersonic fighter, which underwent tests aboard the *Forrestal* in April. Big production orders were placed for it after the tests.

Along with this airpower, the Navy has new and potentially vast capabilities in other directions.

The Navy already has 12 guided missile ships, including the world's first guided missile cruiser division. The cruiser division fires surface-to-air missiles to down enemy planes.

Six others of the 12 missile vessels fire surface-to-surface missiles that can destroy enemy surface ships or shore targets.

And designed to meet the challenge underseas is that symbol of the new atomic age—the nuclear submarine *Nautilis*, a vessel whose performance has been called fabulous by Navy Secretary Thomas. Her engines are still running smoothly after more than 30,000 miles, two-thirds of that distance submerged. They still do not need refueling, and probably will not for another 30,000 miles.

The Navy's primary job is to seize and keep control of the seas that cover 70 percent of the world's surface.

As Adm. Arleigh Burke, Chief of Naval Operations, and his admirals see it, the naval task force, built around airplane carriers, will operate dispersed over an ocean area two-thirds the size of Illinois.

Such a task force, with its far-ranging planes and missiles, could appear at any time off an enemy coast and rain down destruction. Then it would vanish to strike again the next day 600 miles away.

Advantages that the Navy believes are inherent in a naval force are:

1. Its mobility, permitting it to attack an enemy's heartland from a choice of many positions at sea—either with missiles or airplanes.

2. The same mobility, making it relatively immune from attack by an aimed, ballistic missile (an enemy would have to find the task force and attack it with planes, submarines or electronically guided missiles). The Navy believes it can shoot down enemy scout planes and intercept or outrun enemy submarines.

3. A naval force, operating at sea, shifts to the sea the impact of enemy attack—keeping the war away from heavily populated United States cities and those of its allies.

4. Operating at sea, an American naval force is immune from political complications—it cannot be thrown out of its foreign base because it keeps to the high seas and has no foreign base.

There is one other advantage that the Navy claims for its task force. This is that no enemy can afford to launch a surprise attack on the United States while a naval striking force is roaming the high seas—the retaliatory power of such a force is too great. The enemy must first find and attack the naval force, and the search effort to locate such a constantly moving force would give away the enemy's intentions.

Does the Navy have its wartime role worked out and approved by the highest Government officials in Washington, or is there a conflict with the Air Force over who does what?

The answer is that no question of such a nature ever is settled once and for all time. Too many changes are taking place, especially in guided and ballistic missiles.

This much is certain: the Navy no longer is in a defensive position as to roles and mission in relation to the Air Force and strategic bombing.

Potential targets have been divided up, with the great number of clearly strategic ones assigned to the Air Force, but with the Navy getting the job of hitting targets that involve control of the seas.

The Navy's strength has been given new recognition lately by President Eisenhower, who reminded Americans that "we have got a tremendous air power, a mobile air power, in the sea forces."

Defense Secretary Wilson said the same week that "everybody knows the Navy has a strategic striking power."

NAVY'S ROLE

The following text is excerpted from the nonclassified testimony last week of Navy Secretary Charles S. Thomas before a Senate subcommittee investigating United States airpower:

"There is, for the free world, no sound alternative to this collective undertaking (with allies). Isolation, long ago our refuge, today would only insure our encirclement by a hostile world. To carry out our collective security commitments, we must have access to our allies by the seas. We cannot fulfill our agreements without a strong modern Navy * * *

"For this our principal offensive weapon is the mobile airbase carrier task force. * * * We have recently developed and have on hand an antisubmarine weapon which will revolutionize antisubmarine warfare. * * *

"Freedom of action and variety of response are vital factors which the Navy alone provides. By maintaining flexible military machinery in our Armed Forces, by avoiding assumptions that an enemy will use any single strategy, we will not handcuff ourselves to bleak extremes of total destruction or helplessness. * * *

"In case of war, this (*Forrestal* class carrier) will be our principal naval weapon with which we control the seas and project our power from our own shores onto the enemy's territory. It represents a 10,000 foot concrete runway compressed into a 1,000 foot hull. This compressed runway moves rapidly on the 70 percent of the earth's surface (covered by water). We do not have to have agreements with other countries, pay rent, or ask anyone's permission to take these aircraft anywhere. They (100 modern aircraft) are on sovereign United States Territory wherever their moving base takes them. * * *

"With our newest planes now being introduced into the fleet, there will be few important targets in the world which, if called upon, the Navy could not reach with atomic weapons."

School Integration

EXTENSION OF REMARKS

OF

HON. ADAM C. POWELL, JR.

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 11, 1956

Mr. POWELL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter:

JULY 4, 1956.

Mr. DAVID LAWRENCE,
President and Editor, U. S. News & World Report, United States News Building, Washington, D. C.

DEAR SIR: I am a subscriber to U. S. News & World Report. I have read with great care

and concern the 53 pages of the current issue (July 6) devoted to integration in the public schools in Washington; an interview with Robert E. McLaughlin, president, District of Columbia Board of Commissioners; the excerpts taken from the book, The More Perfect Union, written by Dr. Robert M. MacIver, and published in 1948; and, finally, your long editorial entitled, "Conformity by Coercion?"

I think you deserve great credit for making your position and that of the publication you direct unmistakably clear. No one can read your editorial, speciously contrived though it is, without knowing that you, David Lawrence, do defend the right (?) of a segment of the dominant white majority in this Nation to degrade by coercion and any other means, legitimate or illegitimate, a minority of some 17 million Americans purely on the basis of their color.

You certainly cannot expect members of this minority group of Americans to accept your doctrine of the right of Americans to discriminate and to reject the ideals of the Declaration of Independence, the Bill of Rights, and the teachings of Jesus Christ. You have gone to great length and pains to set out your point of view, a point of view which rests on the assumption of inescapable superiority-inferiority relationships between color groups such as black and white. I wonder if you will admit that there is another point of view, that of the victims of discrimination, and that their point of view might have the same validity as your own. I wonder also whether you are willing to give a point of view which is a direct challenge of your own the same opportunity to be read by the same persons who read your editorial.

It is because I believe in your essential integrity (though disagreeing with your reasoning) that I write this reply to your editorial in the hope that you will see fit to enter this reasoning as part of the debate raised by differences in respect to segregation and integration.

You begin by emphasizing the necessity at this time of coming to grips with the issue of enforced integration in the Nation's schools. As an issue, you describe it as legal, moral, sociological, and political.

However, you ignore consideration of the issue from any of the foregoing aspects, and clothe it with a mantle of your own—conformity. To you the issue is simply conformity or nonconformity in organized society. This issue, you write, has for generations confronted mankind.

On your own, you then gratuitously transform the issue into a "perennial conflict" between theoretical equality and actual equality. This is an artificial prop, used later by you, to justify sin and crimes committed against the helpless minority by the white majority.

Does it not occur to you, Mr. Lawrence, that there is a necessity of coming to grips with the issue, not of enforced integration, but of enforced segregation.

You deplore the Supreme Court decision against public school segregation. You say that that decision makes law, but "disrespect for a law written by agents of the people in contradiction of the real will of the people leads to disobedience, disregard, or repeal."

All right. Granted. Did the millions of Negroes in the Deep South have anything to do with laws enacted to segregate them? Were not these segregation laws enacted to coerce Negroes into a conformity for debasement patterned by the dominant white majority? If Negroes were the dominant group, Mr. Lawrence, would you agree that they had the right to discriminate against whites and to segregate them in any manner which suited their fancy? You know better than that.

Always, there is begging reference by some persons to the 18th amendment and its failure. Because, in the opinion of many people and most voters, the 18th amendment did more harm than good, this experience is used to show what happens when a law is imposed that cuts across the realistic interests of the people. Rarely is the situation to which this prohibition experience applied analagous. There is certainly nothing analagous between the person right to get drunk, or to engage in harlotry, and the license, under law, to infringe upon, restrict or deny the rights of other citizens.

When you insist, Mr. Lawrence, that the majority group has the right to discriminate against me, where do you stop? You believe the majority group should have the right to discriminate in the schools. How about in the courts? How about at the polls? Do you believe I should have the right to vote, intrinsically, or at the pleasure of the majority? Which side of the street should I walk upon if the maority has a preference? Which jobs are for me and my children if the will of the majority, unfettered by law, unrestrained by conformity (?), is to determine a role and a place for me in American society?

You write: "We have, for example, said, in effect, that, because the people in the northern, eastern, and western parts of the United States constitute a numerical majority, their will must prevail over the people in Southern communities."

You don't like that—if true. All right. Would you have the will of the minority of Americans in eight Southern States prevail over that of the vast majority of the people in the other States? If so, Mr. Lawrence, what are you going to do about our position of leadership in the world of today? How are we going to operate vis-a-vis the Soviet Union?

If the kind of America you would have is to be one where white men have the right to treat a colored minority of 17 million as they please, what kind of future are you preparing for your grandchildren in a world that will be dominated by colored peoples?

Surely, Mr. Lawrence, you are not naive enough to believe that you belong to an inherently superior race, or that whites are inherently superior. Does it not occur to you that, during the last four or five hundred years, gunpowder, not brains, has made the difference between the majority colored world and the minority white world? And isn't one of the reasons you detest Russia the fact that Russia has betrayed her kind (white) and made arms (the big difference) available to those colored peoples who were not able to defend themselves?

The firearm is on both sides of the world today. It can no longer be used by one side (the white side) to impose inferiority on the other (the colored side).

If the 8 Southern States are allowed to enjoy their right (?) to discriminate today, if they will not conform to the realistic situation in the world today, then America as a whole must pay the penalty in the future for renouncing its ideals and relinquishing the stewardship of our Nation to a minority of Southern whites who were prepared to pull down the temple rather than forego their racial snobbery.

There is no good reason why there should be segregation in any public school district in the United States, but you are pleased to inject the bugaboo of possible intermarriage on a grand scale if the races began attending the same schools.

If that is true, Mr. Lawrence, what kind of an admission are you making? Are you saying that the bonds of attraction between young whites and young negroes are so strong and so irresistable that older whites have to set up artificial barriers (segregation) to keep these young whites and young negroes out of one another's arms? Or, are you saying that the young negro male possesses the power to hypnotize the young white female? As a consequence, here parents must send her to a school where she'll be protected from the allure of Negro swains. Would you be willing to admit that any of this is true? If not, what are you afraid of?

You have great facilities for research and investigation. Negroes and Whites have been going to mixed schools in Northern, Eastern, and Western States for decades. What evidence is there that this propinquity in the schools has led to intermarriage? There is none. Is there some difference about Southern whites or Southern negroes? Must one believe, as you suggest, and some southerners (tongue in cheek) proclaim that, once the barrier of segregation is removed, Southern white boys will want to marry negro girls rather than pursue relationships both clandestine and illegitimate?

You raise a question as to the validity of the 14th amendment. Would anyone have expected the rebel States to accept gleefully the provisions of this amendment? Sure, legislatures of the erstwhile rebel States ratified the 13th amendment abolishing slavery. But slavery was already gone. It was a dead institution. There was no way for the rebel States to reenslave the freedmen. An old way of life, obnoxious economically to Northern labor and industrial interests, had expired; and the plantation aristocracy knew there was no way to revive it.

But the 14th amendment was different. It had to do with behaviour. The rebel States said then that they did not want to behave as the amendment prescribed. They don't want to behave today—although they lost the war.

Your references to the philosophers, Santayana, Chesterton, de Tocqueville, and Hobbes, in support of the theory that a nation may have ideals like ours and still not be willing, through its members, to implement those ideals on an individual or personal basis, cause one to wonder whether you have ever read any of the philosophy of Jesus Christ. At no point do you quote Him. In your long, long rationale for segregation, you completely ignore the role of Christ's teachings in the everyday life of man.

When Christ exhorts to "do unto others as ye would have them do unto you," does that mean you would appreciate having Negroes do to you what southern whites now do to them if the tables were turned and the Negro became the dominant majority?

You quote Abraham Lincoln on "social equality." Your quotation comes from a campaign speech, a debate with Stephen Douglas in 1858. Was Lincoln expressing real convictions, or was he trying to win the debate, to win popular approval as against Douglas? Lincoln is very difficult out of the context of his times. The Smith Act today would send men to jail for expressing opinions much less violent and revolutionary than some expressed by Lincoln before he became President.

Jefferson, you write, warned against judicial tyranny. This is a caution against the present Supreme Court. Jefferson also warned against slavery. Did you forget that one?

It was Jefferson who wrote into the Declaration of Independence that all men are created equal. He said nothing about each man having the right to the same amount of money or property. That is a ridiculous extension of meaning on your part. The American ideal is for equality of opportunity. That is all. But there can be no equality of opportunity as long as one group (the strong) is granted the right (?) to discriminate against another group (the weak).

You conclude that "conformity by coercion is not liberalism. The answer is to be found in voluntarism." What is that, please? Where does voluntarism end and license begin? What is my voluntarism in relation

to your voluntarism? Your voluntarism gives you the right (?) to force me into a separate, inferior school—if you are strong enough. Does my voluntarism give me the right to reject the status your voluntarism provides for me?

The simple fact, Mr. Lawrence, is that, for better or for worse, you have made and are making your magazine and yourself an instrument to help perpetuate all that is worst in American life. In this sense, you are performing a disservice to the country.

America needs and can use all the gifts and strength and love and loyalty of all the different peoples which inhabit it. She needs unity and a common front as to the rest of the world. We need to marshal ourselves under the fatherhood of God and the brotherhood of man. But, for you, there is no such fatherhood, no such brotherhood. There is a right to discriminate.

God forbid that the American people should widely accept your dictum. Then indeed would America begin her eventual decline.

Yours very truly,

P. L. PRATTIS,
Executive Editor, The Pittsburgh Courier.

Van Zandt Deserves Reelection

EXTENSION OF REMARKS
OF
HON. RICHARD M. SIMPSON
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 11, 1956

Mr. SIMPSON of Pennsylvania. Mr. Speaker, it is gratifying to read of a well-deserved tribute being tendered a colleague in Congress because often there is a tendency to criticize and ridicule the legislative branch of Government and treat its Members in a contemptuous manner by magnifying our shortcomings while declining to acknowledge the serious attitude with which we perform our appointed tasks.

In the Pennsylvania delegation to Congress, we have a highly respected Representative in the person of JAMES E. VAN ZANDT of the 20th District of the Keystone State. JIMMIE, as he is affectionately known, is a human dynamo in the performance of his congressional duties as he represents his constituents with honor and fidelity. That he has succeeded in this respect is shown by the fact that he has served the people of Blair, Centre, and Clearfield Counties since 1939 with the execption of 3½ years which he spent as a naval officer in World War II.

The Clearfield Progress, published at Clearfield, Pa., and one of the most influential newspapers in central Pennsylvania, in the March 2, 1956, issue paid tribute to the sincerity and effectiveness of JIMMIE VAN ZANDT as a national legislator in an editorial titled "VAN ZANDT Deserves Reelection." So that JIMMIE'S many friends in Congress may read this fine tribute to an able and distinguished public servant, I am inserting the editorial in the RECORD as it echoes the sentiments of all those who know JIMMIE VAN ZANDT, admire his ability and many fine qualities and treasure his friendship.

The editorial follows:

VAN ZANDT DESERVES REELECTION

It has not been the general policy of the Progress of recent years to endorse political candidates. More than one election has taken place without the endorsement of this newspaper of even one candidate, let alone an entire party slate. That will continue to be our policy, even more so in the future than in past elections, for we are more and more convinced that endorsement of political candidates by this newspaper, for what it is worth, should be based on the caliber, ability, and record of the candidate, regardless of party affiliation rather than the mere fact that he represents one or the other of the major parties.

It is with this policy in mind that we offer our support and endorse to the fullest extent Congressman JAMES E. VAN ZANDT in his campaign for the Republican nomination in the April primary for another term and for reelection in the general election in November. We have nothing against Mr. VAN ZANDT'S opponent, John R. Stewart, but we feel Mr. VAN ZANDT'S present status in Congress and Washington is too valuable an asset to the district to give up.

We doubt if there are many congressional districts in the entire United States that have a Congressman of the ability and stature of JIMMY VAN ZANDT, or have a Congressman who works as hard for his district as he does. Certainly, there are no Members of the House of Representatives at Washington who have more knowledge of and serve better the needs and interests of their districts while at the same time serving their country on a national level.

Mr. VAN ZANDT'S record in Congress is well known to the voters of the Blair-Centre-Clearfield Counties district and needs no detailed listing at this time. His record in the Armed Forces, as a veteran, and as a citizen of our area also is well known and above criticism.

As a result of his years of service as this district's Congressman and his background as a Navy officer, Representative VAN ZANDT has earned a prominence that few Congressmen enjoy. He is a member of two of the most important committees of Congress—the House Armed Services Committee and the Joint House-Senate Committee on Atomic Energy. As such he brings distinction to the Blair-Centre-Clearfield Counties district that few congressional districts enjoy. With each term of office, he has gained in stature in Washington as a result of his ability and knowledge of the problems that face our Nation.

With all of his duties on the national and international level as a result of his important committee duties, Representative VAN ZANDT has never forgotten that his real job is to represent the folks back home to the best of his ability. He has worked tirelessly to improve the economic conditions in his district. Not all of his efforts have succeeded, but he has never once neglected the welfare of his constituents, and he has never stopped trying to improve the economic conditions of those who elected him to office. His policy of answering all letters from his constituents is noteworthy and his attendance record in congressional sessions matched by few.

He continues to be an important liaison between such important economic contributors to the area and the Government as Curtiss-Wright Corp. and the Pennsylvania State University. He has worked for the interests of the railroads and those employed, past and present, by the railroads; he has been equally diligent in the interests of the coal industry, small business and other industry of the area; a veteran himself, he has worked for the best interests of the veterans.

In every way, Representative VAN ZANDT has earned reelection to Congress in the general election next fall.

Burke Airport

EXTENSION OF REMARKS
OF
HON. EDWARD J. THYE
OF MINNESOTA
IN THE SENATE OF THE UNITED STATES
Wednesday, July 11, 1956

Mr. THYE. Mr. President, there appeared in the Washington Post and Times Herald of Wednesday, July 11, 1956, an editorial headed "New Chance for Burke"—meaning, a new chance for the Burke Airport. In this session Congress should enact legislation authorizing and providing an appropriation for the airport; certainly before adjournment Congress should make some definite decision on the Burke Airport. It is a necessity.

Mr. President, I ask unanimous consent to have the editorial printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

NEW CHANCE FOR BURKE

Evidently the concern sparked by the air tragedy over the Grand Canyon has pushed the administration into action on the Burke Airport. The $34 million appropriation request by President Eisenhower, though very welcome, is also very late. The question is whether it comes too late for Congress to act on it at this session. There are some who suggest that the request was deliberately delayed in the Department of Commerce. We prefer to think that the administration acted in good faith after finally becoming convinced that there is no realistic alternative to a second Washington airport. In any event we hope that Congress will face the facts more quickly than did the administration. Interim use of Baltimore's Friendship Airport for overflow traffic, as recommended by Secretary Weeks, will be a palliative but can in no sense be considered a permanent cure for the congestion here.

Construction of the Burke Airport has an indirect bearing on the broader question of preventing collisions through electronic methods of air traffic control. A committee under Maj Gen. Edward Curtis is studying this problem as a follow-up to the Harding survey for the Bureau of the Budget; we hope that the committee will come up soon with specific recommendations for tying in new facilities with the air-defense radar network and that it will suggest a formula under which users of the airways will bear part of the cost. The 24 "near misses" reported over Washington National Airport point up the problem here. Irrespective of the meaning of these reports, the early construction of a second Washington airport will be of real help in reducing present and potential hazards in this area.

Views differ on just how great these hazards are. The National Airport manages to handle an amazing amount of traffic in good weather, though no one can be sure just what is the saturation point. In bad weather, however, the facilities are severely taxed, and relief is imperative if the delays and cancellations are not to grow worse. The continued growth of air traffic, and the imminence of jet transport planes, make further clogging inevitable. Prudence and foresight call far Congress to end the 5 years of costly indecision, overrule the special-interest pleas of Maryland legislators who are trying to pawn off Friendship as a substitute, and start construction of the Burke Airport now.

The Robinson Clay Products Co., Akron, Ohio, Celebrates its 100th Anniversary Reflecting a Century of Progress in the Clay-Products Industry Based on Quality and Service

EXTENSION OF REMARKS
OF
HON. JAMES E. VAN ZANDT
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 10, 1956

Mr. VAN ZANDT. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to pay a well-deserved tribute to the Robinson Clay Products Co., with headquarters and general offices in Akron, Ohio, upon its 100th anniversary.

This enterprising and forward-looking firm operates one of its modern plants at Clearfield, Pa., which is located in my congressional district and which it acquired in 1920 from the Clearfield Sewer Pipe Co.

The Clearfield plant of the Robinson Clay Products Co., which is modern in every respect, plays an important part in the economy of the Clearfield area, providing employment for many families in that section of Clearfield County, where it is recognized as one of the basic industries.

In congratulating the Robinson Clay Products Co., its officers, and employees on a century of progress, I am joined in saying "Happy anniversary" by my colleague from Ohio, Representative WILLIAM H. AYRES, who represents the Akron district in the Congress of the United States.

Mr. Speaker, the Robinson Clay Products Co. is noted for its constant research and modern business methods which have enabled it to develop the latest technique in the manufacture of vitrified clay pipe and related products. As a result, it operates eight modern plants in Ohio and Pennsylvania, manufacturing quality products in the vitrified, refractories, and pottery, china, and glass divisions. In addition, branch offices are maintained in major cities in the eastern part of the United States and in Chicago, Ill.; Indianapolis, Ind.; and at Toronto, Ontario, Canada.

From a humble beginning in 1856 and fortified by undying faith in the future of America and its free enterprise system, the founders of the Robinson Clay Products Co. and their successors throughout its entire history have dedicated themselves with zeal and devotion to producing quality products and rendering unparalleled service to their customers. Such zealous devotion to quality and service has enabled the firm to make constant progress as evidenced by the fact that today it is recognized as occupying an enviable position for leadership and progress in the clay-products industry.

In recognition of the Robinson Clay Product Co.'s 100 years of progress, research, and development of new products, for its outstanding industry cooperation and contributions, for its progressive marketing and merchandising methods, for its continuing effort in bettering the American way of life—all of which have materially aided in elevating the clay industry to its high position in our American production economy—a distinguished-service citation was presented to the Robinson Clay Product Co. by the Brick and Clay Record, the Nation's oldest trade publication in the clay-products field.

In presenting the 100-year plaque to Mr. W. E. Robinson, president of the Robinson Clay Product Co., Mr. J. J. Svec, assistant publisher of the Brick and Clay Record, said:

> We are especially proud to be able to start this practice of presenting 100-year plaques with the Robinson Clay Product Co. because of its fine record in progress and development in the Robinson clay-product plants which has been made available generally to the industry. The belief that an industry can grow only as rapidly as its individual members is the basic premise upon which Robinson operates, and, therefore, all its improvements, both in product and plant, are readily made available to the remainder of the industry. This is an outstanding example of the American free-enterprise system.
>
> Another example of outstanding industry cooperation by the Robinson Clay Product Co. is in regard to the National Clay Pipe Manufacturers, Inc., a trade association representing the vitrified-clay sewer-pipe manufacturers of the United States. From its inception, this company has backed the efforts of the national group and has cooperated to the fullest extent.
>
> Although the Robinson Clay Product Co. does not stand alone in this type of cooperation and leadership, it is without doubt one of the foremost leaders in this field.
>
> The Robinson Clay Product Co.'s efforts along this line go beyond clay-pipe manufacturing and into the refractories industry and the whiteware industry as well. The Brick and Clay Record congratulates the Robinson Clay Products Co. on its 100th birthday and wishes this fine organization another century of successful operation.

The Robinson Clay Products Co. started with a one-kiln stoneware pottery. Tom Robinson, a skilled young potter, found a clay deposit in 1856 near Middlebury, Ohio. He formed the Summit Pottery Works, which was the beginning step in the formation of the Robinson Clay Product Co. and its present-day growth and expansion to eight separate plants. Backing and advice came from his father, William Robinson, Sr., his brother-in-law, Richard Whitmore, and an old friend of the family, Thomas Johnson.

The Summit Pottery Works at first turned out only stoneware, but production facilities and demanded increased so that, in 1863, the business moved to a larger building in Middlebury, which today is a part of Akron. Distribution was by the old Ohio Canal, when weather permitted, by railroads, by wagons, and by direct sale by peddlers. Through one of the many peddlers, the Robinsons learned of a large slip-clay deposit in Michigan, which is still producing.

Following the Civil War and the burgeoning days of the 1870's, progress of the Summit Pottery Co. was rapid. In 1873, Akron absorbed Middlebury and the Baltimore & Ohio Railway laid a new rail line almost directly through the pottery section of Middlebury. As a result of better facilities, the Robinsons progressed and profited proportionately.

It was about this time that sewage became recognized as a health menace and the public began realizing the necessity for sanitary sewer systems in urban areas.

Convinced that the construction of sanitary sewerage systems would establish a permanent market for clay pipe, the Robinsons built a plant for its manufacture in Akron in 1879. This addition was known as the Robinson Bros. Co. and was operated separately from the pottery works.

Motivated by the market boom, in 1887, Robinson Bros. and Richard Whitmore incorporated under the name of Whitmore-Robinsons & Co. Whitmore-Robinsons and Robinson Bros. were both expanding rapidly and, in 1891, Whitmore-Robinsons purchased the Wenz-Wagner Co., a fire-brick industry at Dover, Ohio, and changed its name to the Crown Fire Clay Co.

In 1899, the Royal Sewer Pipe & Fire Brick Co., of Midvale, Ohio, was acquired by the Robinson Bros. The Dover and Midvale plants are still owned and operated by the Robinson Clay Product Co. and are now designated as factories 5 and 6. The acquisition of these two plants marked the entry of the company into the refractories field.

A change of distribution methods in 1900 precipitated the merger of the Whitmore-Robinsons Co., the E. H. Merrill Co., and Markle & Inman Co. into the Robinson-Merrill Pottery Co., with branches and outlets all over the fast-growing eastern section of the United States.

In 1902 the company purchased the Canton & Melvern Fire Brick Paving Co., and this property was subsequently rebuilt for the manufacture of clay pipe. During these years of progress there had been additions to the principal personnel. Within the year following the formation of this partnership, William Robinson, Jr., joined the firm, and Thomas Johnson retired. In 1861 James B. Manton, who had married the senior Robinson's youngest daughter, was admitted to the firm.

In 1865 Henry Robinson, another son, joined the firm, and it was Henry who was to become the first president of the firm of Robinson Clay Product Co. when it was incorporated, in 1902.

In 1906 Henry died, and Byron W. Robinson took over the presidency until his death 2 years later. H. B. Manton, who joined the firm as a bookkeeper, was elected president and served in that capacity until his death in 1941.

William Eber Robinson, son of Henry, became the fourth president of the Robinson Clay Product Co., succeeding H. B. Manton in 1941. William Eber Robinson is president of the Robinson Clay Product Co. today.

Among the many glowing tributes tendered Robinson Clay Products on its 100th anniversary was the award of a scroll presented by the Akron (Ohio) Chamber of Commerce commemorating the occasion.

An additional highlight of the centennial year that elicited keen interest was the unveiling of a mural depicting the growth and progress of the company from a one-kiln pottery to its present leadership in the clay products industry.

In a lighter vein, among the avalanche of anniversary messages received by Robinson officials is an autographed photograph to President W. E. Robinson from Art Carney, CBS television star of Jackie Gleason's TV series The Honeymooners. Art, who has been nationally recognized as the "ambassador of clay pipe" is photographed in a characteristic pose in the manhole of a "cool" sewer. The famed "sewer worker" salutes President W. E. Robinson with the following autographed inscription: "To Eber: I've used your pipe for years. Best wishes. Art Carney."

The famous CBS television star by his anniversary greeting was in truth echoing the sentiments in real life of the thousands of satisfied customers of the Robinson Clay Products Co. who down through the years have found the name "Robinson" in the clay products industry synonymous with the firm's motto, "Quality and service," which has become its hallmark as one of the leading manufacturers of vitrified clay pipe and related products. This army of satisfied customers join Art Carney and all of us in a mighty anniversary chorus as we salute the Robinson Clay Products Co. and express our best wishes for continued success and achievement in the business and industrial life of our Nation.

Courageous Stand

EXTENSION OF REMARKS
OF
HON. BOB WILSON
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 11, 1956

Mr. WILSON of California. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the San Diego Union of July 4, 1956:

COURAGEOUS STAND

Political opportunists were shown for what they are when Defense Secretary Wilson refused to be stampeded into expanding the Air Force more than he and President Eisenhower consider necessary. He told congressional critics that the extra billion dollars appropriated by Congress for the Air Force will be spent "when they are needed" and not for a stepup in B–52 bomber production.

Mr. Wilson's Democratic-led critics seek to put all the Nation's air eggs into the B–52 basket. And that in the face of Mr. Wilson's assertion that the United States soon will have an intercontinental ballistic missile which will make the B–52 obsolete.

That hardly sounds like a man who has been accused of placing a balanced budget ahead of the Nation's security requirements. It sounds like a Defense Secretary who wants full value for money spent. Unlike his critics, Mr. Wilson does not subscribe to spending money just because it's available.

Mr. Wilson's stated defense mission is to bolster the Nation's security without boastfully flexing America's muscles before the world. This he and Mr. Eisenhower are doing. While the extra billion dollars was for show, politically, and internationally, Mr. Wilson's policies are not. Sword rattling invites suspicion abroad. It has no place in Mr. Wilson's design.

Secretary Wilson has made it clear that thrift is not a vulgar word. As he said, "The security of the Nation comes first in military planning but the economic soundness of the country is part of that security."

Land Rackets Exposed

EXTENSION OF REMARKS
OF
HON. CLIFTON (CLIFF) YOUNG
OF NEVADA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 11, 1956

Mr. YOUNG. Mr. Speaker, it was recently brought to my attention that the Federal Bureau of Investigation is investigating certain land locators who are under suspicion of fraudulent activities connected with applications for the disposal of public lands in Nevada under the Desert Land Act.

One pertinent fact about this matter would seem to warrant nationwide attention. I am, therefore, taking this means of calling this newest brand of public land racketeering to the attention of my colleagues.

Although the promoters use the bait of Nevada lands, they offer it throughout the Nation and every State is thus involved.

It is my hope that in today detailing the procedure of the land locators in question it will serve to alert every State. I hope, also, that a better understanding of the operator's unethical practices will serve my colleagues in their efforts to alert their own constituents as to this menace.

The general method of operation followed by land locators engaged in fraudulent operations is something like the following.

The individual operators form a partnership or corporation. A firm name is selected which suggests that the firm is engaged in developing or operating farm lands.

The firm prepares a brochure giving the location and characteristics of the lands to be developed. The favorable characteristics are played up; the unfavorable characteristics are minimized or omitted. The fact that the land may be obtained from the United States at a price of $1.25 per acre is emphasized. Since the brochure is to be directed to city people who have ready cash, and who have had little or no experience with public land matters or with farming, the firm offers not only to prepare the application but also to develop the land as necessary for final proof.

Misstatements of facts, such as the regulations and procedures under the Desert Land Act, may appear in the brochure.

Large fees are specified. A going rate charged by land locators operating in the Pacific Southwest is $10 per acre—$3,200 for a 320-acre application—for preparing an application for a desert land entry, including the State water permit, irrigation plan, and other information to be submitted to the Land Office. The regulations of the Department of the Interior do not prohibit the preparation or delivery of an application by a third party, providing that the applicant personally inspects the land and signs the application.

Based on the brochure and other advertising and salesmanship, arrangements are entered into with various applicants, usually from urban areas outside the State.

When the applications are filed the Bureau of Land Management examines them for accuracy and completeness, and if they are in order, field investigation is made. In Nevada the State law provides that if a well is used for more than domestic purposes, a State permit is required. The State law does not require that the permit be obtained before the well is drilled. However, a usual practice is to obtain a permit before filing a desert-land application with the Bureau of Land Management.

Upon investigation it may be found by the Bureau that the climate, soils, or water supply, or all of them, may be inadequate for purposes of irrigated farming on a commercial scale as contemplated by the Desert Land Act, or that the lands are not more valuable or suitable for agriculture than for grazing. If the latter is the case, the lands are classified as improper for desert land entry, and the applications are rejected, subject to a right of appeal.

Where applications are rejected the land locator firm may offer to prepare an appeal for the applicant, or as an alternative, to prepare an amended application by which the application would be transferred to other lands which had not been classified by the Bureau. By this means the dissatisfaction of the client can be temporarily forestalled.

Land locators sometimes give a verbal guaranty that the moneys paid to them by their clients as their fees for services rendered will be refunded if the entry applied for is not allowed by the Bureau of Land Management. In other cases, a verbal or written agreement is entered into that all fees paid the land locator have been earned in full when the Land Office issues a receipt for filing fees paid with the application.

The first type of guaranty is of no greater value than the word of the locator firm, which usually is not worth much, because after a short period of exploitation the firm may completely disappear and be unavailable from which to obtain a refund.

The second type of guaranty is essentially valueless since the mere filing of an application and the payment of filing fees gives no necessary assurance whatever that the appication will be allowed.

The end result of an unethical land locator's operations all too often is that he suddenly disappears, leaving behind a trail of unpaid bills, fictitious checks, and clients who have been fleeced.

An insidious element in this type of operation is that the client somehow places his trust in the firm merely because of its indirect association with the disposal of public lands. Dissatisfied clients are apt to misplace the blame for the incident and direct it at the Bureau of Land Management.

Message Addressed to the Polish People in Poland by His Excellency August Zaleski, President of the Polish Republic-in-Exile

EXTENSION OF REMARKS
OF
HON. TIMOTHY P. SHEEHAN
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 11, 1956

Mr. SHEEHAN. Mr. Speaker, Dr. Julius Szygowski, Minister Plenipotentiary of the Polish Government-in-exile, has supplied me with copies of messages he has received from London which the Polish Government-in-exile and the President of the Polish Government have directed to the people of Poland following the recent demonstration in Poznan.

These statements illustrate the position of the legal Polish Government and are of interest not only to people of Polish ancestry but to all Americans who sympathize with the nations enslaved by the Communists.

The message, addressed to the Polish people in Poland by His Excellency August Zaleski, President of the Polish Republic-in-exile, is as follows:

MESSAGE ADDRESSED TO THE POLISH PEOPLE IN POLAND BY HIS EXCELLENCY AUGUST ZALESKI, PRESIDENT OF THE POLISH REPUBLIC (IN EXILE)

Citizens of the Polish Republic, I was horrified to learn of the numerous victims fallen to the criminal repressions used by the agents of Russian communism now in power in Poland against the heroic demonstrators protesting against the political and economic subjugation of Poland. I salute the memory of the Polish patriots who lost their lives and express my deepest sympathy to their families and all those who were wounded and who have suffered in any other way. Whilst fully aware of the fact that conditions in Poland are driving the population to despair and to active demonstrations against the Communist regime, I must warn you not to waste the vital strength of the nation by actions which in no way are commensurate with the sacrifices they imply. You must remember that not only is Poland herself under foreign occupation but surrounded by countries full of Soviet troops. In these circumstances all demonstrations and any kind of armed action can be suppressed by brute force with loss of life and national resources. I do not doubt that the time will come when liberation will be possible. At such a time the legal constitutional Polish authorities who are carefully watching the world situation from abroad will themselves appeal to the country for action. Until that moment save your strength and do not allow yourselves to be incited by people acting precipitately or by agents provocateurs in foreign and not in Polish interests.

AUGUST ZALESKI.

LONDON, *June 29, 1956.*

The message by the Polish Government-in-Exile is as follows:

POLISH GOVERNMENT IN EXILE, LONDON, ENGLAND

With regard to the riots which took place on June 28 in Poland, the Polish Government in exile wishes it to be known that they consider the statement of the Russian agents who are at present ruling Poland ascribing the cause of these riots to the activities of some imperialist agents and reactionary underground as utterly baseless.

It is an indisputable fact, that the economic situation in Poland under Communist rule is generally precarious and at the present time (before the new harvest is in) it is verging on a state of famine. This in our opinion is the direct result of the fact that Polish economy is run under orders from Moscow and largely in the interests of Russia with an utter disregard of the interests of Poland.

In these circumstances it is only natural that discontented and hungry workmen are apt to stage some demonstrations.

It seems that they have chosen Poznan for such a demonstration because of the International Fair which is being held there. They probably wanted to let the West know of their plight. From the reports of some of these visitors given to the British press it seems clear that at first the demonstration was of quiet character and the demonstrators cried "We want bread." It was the action of the authorities which changed this peaceful demonstration into a bloody riot.

It is to be feared that the Russian stooges governing at present in Poland will take this opportunity created by them to quell the so-called thaw, which, as is generally known, has taken greater dimensions in Poland than in any of the countries behind the Iron Curtain owing to the fact that Poland with her western civilization is always taking any opportunity to regain her freedom.

The House Should Be Ashamed of Itself

EXTENSION OF REMARKS
OF
HON. CLEVELAND M. BAILEY
OF WEST VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 11, 1956

Mr. BAILEY. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I wish to call the attention of my colleagues to an editorial in the Providence, R. I., Journal of July 8, under the caption "The House Should Be Ashamed of Itself."

The editorial makes some pointed comments that are timely and worthwhile. The editorial is as follows:

THE HOUSE SHOULD BE ASHAMED OF ITSELF

A Federal school construction bill died a-borning in the House this week in as shameful a debacle as has been seen in this entire session of Congress.

It died because President Eisenhower and his administration failed dismally to provide the leadership for compromise and the pressure for passage that might have saved the program.

It died because large segments of both parties wanted it to die for various reasons; it died because those who favored it were swept aside in a sea of bitterness and passion.

At the graveside now, both parties shed crocodile tears and brand each other as the killers, hoping for votes among the mourners when the November elections roll around.

There's no doubt many a Representative voted against the bill because of a firm belief that the Federal Government ought to keep out of education on the grounds that education is a local issue.

But the bill wasn't debated or killed on this issue.

It was killed because the issue of racial segregation in Southern States opened the gates to a welter of passion and to the conniving of small men who would make votes on that issue.

Republicans are telling Negro voters that the GOP favored an antisegregation rider but couldn't get Democrats to change the finance formula the GOP didn't like.

Northern Democrats urge their own support of the antisegregation rider and blame some southern Democrats and northern Republicans for defeat of the education proposal.

Southern Democrats are keeping quiet, but their elation must be great. And Representative ADAM CLAYTON POWELL, Negro Congressman from New York, who sponsored the rider, has proved nothing everyone didn't already know.

In the floor fight which came close to parliamentary chaos at one point, there was no attempt to compromise the finance formula, although such a compromise was not out of reach.

There also was no willingness on either side of the segregation line to seek under committee auspices a formula of understanding which might have been a real contribution to the racial problem.

So the bill is dead, and until November the Nation's voters will be under a crossfire of charges and countercharges which will profit none except—they hope—candidates for office.

Meanwhile, in hundreds of communities which are up against it financially, schoolchildren will continue to squeeze into overcrowded classrooms and trudge to split sessions.

Nice going, gentlemen of the House.

National Airport at Point of Saturation

EXTENSION OF REMARKS
OF
HON. PETER F. MACK, JR.
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 11, 1956

Mr. MACK of Illinois. Mr. Speaker, I have long advocated additional airport facilities for the Washington area. This airport is second only to Midway in Chicago in aircraft movements and it is first in the density of aircraft in the traffic area. This high density is caused by the military bases which also use the airways and traffic control centers in entering and departing their traffic patterns.

Mr. Speaker, under leave to extend my remarks, I would like to include a very interesting article which appeared in the Washington Evening Star yesterday by Charles J. Yarbrough. This article is as follows:

HARRIED NATIONAL AIRPORT CONTROLLERS STRUGGLE DAILY TO KEEP PLANES APART

(By Charles J. Yarbrough)

Harried air-traffic controllers got National Airport through another uneventful day yesterday.

It was a day when the sullen sky seemed to droop limply over the monument and sightseers could barely discern the Capitol dome from the observation deck.

It was a day when a Capital Constellation drank up some 80 gallons of fuel while sitting on a taxiway with 12 other aircraft waiting permission to take off.

It was instrument weather.

INSURANCE BUSINESS GAINS

Downstairs in the concourse and at the counters, air travelers were beginning to thicken again after a brief recession following the Grand Canyon air tragedy. Air insurance business was up. "People just don't

discuss that crash," one insurance merchant said.

Somewhere along the line a plane had created a 5-minute traffic delay and it wasn't hard for that 5 to build up to 15.

Nor did it help when an approaching plane had to circle the field because it was getting no indication that the nose wheel was down and locked. Controllers could see the wheel was down, but the pilot was getting no light on his indicator to prove it was locked.

The fire truck and the crash wagon rolled, but nothing else on the field moved until the emergency was over. The light came on as the nose wheel touched the runway.

Another half a hundred air travelers were safely down.

THREE HUNDRED AND EIGHTY THOUSAND PASSENGERS IN JUNE

It was almost another routine day for the traffic controllers, routine meaning busy.

During June, when National set another monotonous record, the controllers either brought down or sent away safely an estimated 380,000 passengers.

During the month National handled 24,822 aircraft movements, an all-time high. The daily record also fell on June 15, when the tower handled 939 movements—takeoffs and landings—in 24 hours.

There is no reason to believe that July won't set another record.

What, then, is saturation?

"ROOM FOR ONE MORE"

"The saturation point is hard to define," says chief controller Paul Moore, 47, of 4305 Nineteenth Place NE., who has been at National since it opened. "We thought years ago we'd reached it. But like the old saying, there always seems to be room for one more."

How then do they do it?

National, by comparison, has one of the best traffic control systems in the business. It is the only civil airport in the country equipped with both approach and departure radar control which is of such great help to controllers in their terrible responsibility of keeping airplanes separated.

They work an 8-hour day, sometimes longer on a day such as yesterday. They're on their feet almost 4 hours at a stretch, microphone in one hand, telephone in the other and plenty to do with a third if they had it. They take a break by doing another 4-hour stint in the darkened flight rule room peering at radar screens.

ONE HUNDRED AND SIXTY WORDS A MINUTE

They'd better not make a mistake.

They're talking at something like 160 words a minute to get them away from the ramps, on the taxiways, off the runways and to prescribed altitudes and still keep them at a minimum of 3 miles apart.

At the same time, they're bringing others into Washington's high-density zone at different altitudes, getting them into the pattern and bringing them down.

Here's a 90-second sample, taken from a tape recording made on the new-record day, June 15:

Controller: "AF 4648 clear for an immediate take-off on runway 33."

Pilot: "48 rolling."

Controller: "American 578 continue approach. There is a Commander rolling on runway 33. You will be No. 1 on runway 36."

Pilot: "American 578 about a quarter of a mile out."

Controller: "I have you in sight American 578. You are cleared to land on runway 36."

Pilot: "578 cleared to land."

Controller: "349, if you will move up I may be able to get you out. Hold clear of the runway."

Pilot: "American 349 will hold clear."

Pilot: "United 720 is pulling up over the approach lights. We are at about 1,600 feet. Over."

Controller: "United 720 start a left turn around and call base leg in the vicinity of the temple."

Pilot: "United 720."

Controller: "617 continue approach. The Convair will be cleared shortly."

Pilot: "Roger 617."

Pilot: "American 578 clear down runway 33."

Controller: "A left turn up the northwest runway 578 and change to ground control."

Controller: "AF 8617 is cleared to land runway 36."

Controller: "82 Alpha, if you are ready, take position runway 33 and hold."

SYSTEM INADEQUATE

For all the efficiency of its personnel and the good of its electronics National's system is inadequate simply because of the lack of air space.

The tower has handled as many as 68 operations in an hour—a pace impossible to maintain, says Mr. Moore. The June 15 record of 938 operations in 24 hours broke down to an average of 34.48 an hour.

All of which means that the traffic load is not spread. On a heavy day last January there were only two aircraft movements at National between 3 and 4 a. m. But between 8 and 9 a. m. the tower handled 62 and from then until 9 p. m. the controllers never had less than 43 an hour.

REMEDIES PROPOSED

Some answers:

Gear electronic aids up to the traffic volume. One expert points out that "we know now how to put signals into a cockpit to tell the pilot what to do without using voice communications. We have gadgets that will allow the pilot to report his position without voice.

"But until the operator, the pilot, the controller and the technical men can reach agreement on one system and build it, we won't have the answer. If the electronic people knew the day-to-day problems of the controller it could be done—and vice versa."

24-HOUR TRAFFIC

Another solution might be radical enough to take airline scheduling from the airlines to insist on a traffic spread over the 24 hours.

Another, and one currently stirring, is dual runways and dual instrument landing systems under which simultaneous takeoff and landing operations could be carried on.

"You gotta keep those airplanes apart," a controller said.

It was almost a plea.

The Mischief Worked by the Court

EXTENSION OF REMARKS

OF

HON. TIMOTHY P. SHEEHAN

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 11, 1956

Mr. SHEEHAN. Mr. Speaker, the recent Supreme Court decision opening Government employment to subversives in nonsensitive positions calls for speedy action by the Congress in order to safeguard our national interest.

It is acknowledged that the purpose of the Communist followers is to bing on socialism, destroy freedom, and to liquidate our form of government.

I cannot conceive of any moral code or rule which requires a nation or government to be a party to its own destruction, and therefore cannot agree with the fallacious reasoning on which the Supreme Court based its decision.

The Chicago Tribune in its editorial of Tuesday, July 10, points out most forcefully the pressing need for immediate remedial legislation. The editorial is as follows:

THE MISCHIEF WORKED BY THE COURT

Congress has been urged by both Attorney General Brownell and Philip Young, Chairman of the Federal Civil Service Commission, to undo the Supreme Court's recent decision opening Government employment to subversives. Mr. Brownell and Mr. Young ask the prompt enactment of a bill introduced by Representative WALTER, of Pennsylvania.

On June 11 the Court rendered a decision removing at least three-quarters of all Federal workers from accountability under the loyalty-security program. It held, in ordering the reinstatement of Kenneth Cole, an employee of the Food and Drug Division, that a payroller could be removed only if he held a sensitive position in which his subversive sympathies might do active damage to the Nation.

The minority of the Court remarked that it is impossible to say what Federal job is sensitive: "The janitor might prove to be in as important a spot securitywise as the top employee in the building."

Mr. Young said that, since the Court's ruling, the Civil Service Commission had been compelled to restore 17 persons with clear records of subversion to Federal duty. He said that each month 21,000 persons enter Federal service, and that the effect of the decision will be to drop the security guards against most of them, the jobs for which they make application being classified as nonsensitive. Experience of the Commission has shown that some 2,400 applicants for Government jobs each year have backgrounds of subversive activity meriting thorough examination, but most of these people are now immune from any clearance.

The mischief caused by the Court in its ruling must be considerable, for Mr. Young in the past has never indicated any disposition to join what the liberals call "the witch hunters". But on this occasion he was moved to write a six-page letter to the responsible committee in Congress.

The Walter bill would simply retore the security program to the status it held before the Supreme Court intruded itself, as the minority opinion said, into Presidential policymaking. The case for this legislation is obvious and it should be promptly voted.

School Construction Legislation

EXTENSION OF REMARKS

OF

HON. CLEVELAND M. BAILEY

OF WEST VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 11, 1956

Mr. BAILEY. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I desire to call the attention of the Members to a recent radio broadcast by Mr. Edward P. Morgan of the American Broadcasting Co., in which he makes some pointed comments on the action taken by the House on the school construction legislation.

The broadcast was a severe indictment of the House membership for the petty prejudices they displayed in their efforts

to thwart the wishes of a vast majority of the American public who favor Federal grants-in-aid for schools. The broadcast follows:

The headlines say the House killed the school bill. I submit the school bill was never really alive. It was stillborn in a stifling atmosphere of smugness and niggling prejudice. Even if it seemed to respond, momentarily, to artificial respiration in the House it almost would surely have been strangled by the binding twine of filibuster in the Senate anyway.

How much longer is experience going to have to teach us before we learn what we keep telling ourselves—that education is gripped in a gathering crisis as one of the most urgent problems of this land. There has been study after study, report after report, on the crying need for more and better classrooms, for more and better teachers. Observers who move about the country say school aid is the one common issue everywhere. And yet what we get is a kind of curled-lip service from politicians, who couldn't be more extravagant with talk about how nothing is too good for American education and who couldn't be more parsimonious with action. What the House action showed yesterday in killing the Kelley bill was more than anything else a lack of conditioning of Members of Congress to present needs and a clinging, as New York Timesman James Reston put it, to "the habits of mind and political reactions of the past."

Federal aid to education was not defeated along partisan lines. Republicans are already trying to saddle the blame on the Democrats but they should not be permitted to get away with it. The administration's leadership was singularly uninspiring. More Republicans than Democrats voted against the bill. And fewer Republicans voted for the bill in final form than voted earlier for the Powell amendment, which stayed in. But the Democrats have nothing to be proud of in their own split. And they suffered from extremism in two directions—from the unrealistic insistence of New York's Representative POWELL on a nonsegregation rider to the stubborn opposition of southerners on almost all counts.

The principle of the Powell amendment, I think, is sound: States which defy Supreme Court decisions should sacrifice Federal aid. But the way the amendment was handled tended to veer the effort from the main target, which was more schools. Yet a look at proceedings in the House indicates the segregation issue was not the decisive one. It was a loathing on both sides of the aisle to accept the broader philosophy that if the school problem is to be solved the Federal Government must help. These prejudices must be recognized as sincere but where do they leave us?

Are we to continue to let the caliber of education suffer because we can't adjust to the demands of the situation? There is nothing divine about Federal aid but what have those against it to suggest in its place?

Even as the House was mangling the first major effort at Government assistance to schools yesterday, a Senate Subcommittee on Juvenile Delinquency issued a report pointing out that was only part of the problem. For 50 years, it said, teachers' earning power has been in sharp, steady decline and yet 205,000 new teachers are needed this year.

How are the Russians handling the education problem, by the way? The head of the Encyclopedia Britannica, ex-Senator William Benton recently went to the U. S. S. R. to find out. "By 1960," he reports, "in spite of acute labor shortages, all children are to be kept in school from 7 to 17. Every Russian youngster is to be given an education, a Communist education, of course, comparable to high standards of study and learning in an English public school or a French lycee but without the same emphasis on the humanities. The Soviet standard is far higher," says Benton, "than that of even the best American high school. It is perhaps comparable to a couple of years at a top college."

Is it possible that the Communists know their Thomas Jefferson better than we do? "If a nation expects to be ignorant and free," Jefferson once wrote, "it expects what never was and never will be."

American Taxpayers Cannot Support Foreign Countries Forever

EXTENSION OF REMARKS
OF
HON. MORGAN M. MOULDER
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 11, 1956

Mr. MOULDER. Mr. Speaker, there was a time in the history of our country when the American patriots of the Original Thirteen Colonies rebelled against being taxed to maintain the military and economic power of a foreign country. The extent and amount of tax moneys then being collected to serve a foreign power is a petty sum in comparison to the colossal total sum of $141 billion that American taxpayers of the United States have paid to foreign governments since the beginning of World War II, and published estimates of the total amount that American taxpayers have contributed to foreign countries since the end of the last war range all the way from $55 billion to $67 billion, and I am reliably informed that more than $3 billion of this incredibly huge foreign giveaway was actually used to reduce the public debts of the receiving foreign nations when at the same time we were increasing our national debt. In other words, our Government borrowed money to pay the debts and operational expenses of foreign governments. The United States thereby increased its own national debt by $3 billion so that foreign governments could reduce their national debt by the same amount. This single $3 billion item is now costing the American taxpayers $90 million a year in interest charges. Just how much more ridiculous can we afford to be?

Why, if we accept the lowest published amount of our total postwar foreign aid, $55 billion, then on that basis the American taxpayers must in the future dig up more than $1,500,000,000 every year just for annual interest alone on the amount that foreign aid handouts have added to our Federal debt during the past 10 years. Back in the days before we quit minding our own business, $1,500,000,000 was enough to pay all the expenses for all Departments of the United States Government for full 2 years.

It is difficult to comprehend $55 billion, and my conception is not fully clarified by the calculation that if we received $1 for each minute that has elapsed since the birth of Christ, we would have slightly more than $1 billion. We can grasp a better understanding of the value of $55 billion by adding the assessed valuation of all the property, real and personal in the 13 biggest cities of this country: New York, Chicago, Philadelphia, Los Angeles, Detroit, Baltimore, Cleveland, St. Louis, Washington, San Francisco, Boston, Houston, and Pittsburgh, which amounts to a grand total of about $55 billion. We would be shocked by the suggestion that the industry and property of these 13 great cities, if it were physically possible, be shipped overseas and divided as gifts to foreign nations. Yet, our Federal Government has done precisely that in effect during the past 10 years.

Mr. Speaker, of one thing we can be sure: Respect never can be bought. The mere attempt to do so breeds disdain and irritation. What have we received in return for the handout of all of these foreign-aid billions? Has the handout program produced good will for the United States and strengthened the defenses of the free world against communism? Is there now any place on earth where affection and respect for the United States is greater and where the prestige of our Government is higher than it was 10 years ago? Where in the free world are those protective bastions against the spread of communism that our multibillion dollar giveaways were supposed to construct?

Right in the face of our continued worldwide generosity, the Kremlin Communists have quadrupled the population of their slave empire and extended the Iron Curtain to include more than a third of the earth. More than a half-billion dollars worth of our foreign aid went to India. Nevertheless, that country turned the visit of the Soviet dictators, Khrushchev and Bulganin into a triumphal tour. The most enthusiastic reception of those visiting Communist leaders was staged in an Indian town built with American money. The weapons we gave to France for her defense against communism are now being used by the French Government to suppress revolutions for national independence by the native Moslems in France's North African colonies. Because we paid all expenses incurred by France in her futile war to hold French Indochina, France will now ask us to provide additional billions for the suppression of the North Africans.

Meanwhile, France apologizes for the unpardonable act of a mob that wrecked the United States Consulate in Tunis last March 9. Ironically, France offers to pay for the property damages. If these violent foreign outbursts of love and affection for the United States become general throughout the world, still more foreign aid will probably be requested to enable the various governments to reimburse us for incidental destruction of American lives and property.

Mr. Speaker, just before the last general election in England our Government tossed a cool $200 million to Mr. Eden's government so that Mr. Eden could reduce British taxes and thus win the election. Naturally, there was no suggestion of American self-interest in this item of our giveaway program. The English people already love us $10½ billion worth, that being the amount of our postwar aid to Britain before Mr. Eden's tax-cut bonus. Our foreign-aid experts tell us that we must be carefully

considerate of the attitudes of these foreign governments; otherwise, these governments may refuse to take our money. Mr. Harold Stassen said as much to the Senate Permanent Investigating Subcommittee.

We have dangerously overextended ourselves. Our direct Federal debt of $280 billions is more than the public debt of all other nations put together. The softened attitude of the Eisenhower administration, beginning with the Geneva Conference a year ago, has cost us friendship and respect throughout the world. The Russian leaders after Geneva saw to it that Iron Curtain peoples understood they no longer had any hope of rescue by the United States.

Even if our giveaway policy could have been of value under any circumstances, it has been offset by the weak-kneed attitude of the administration toward Russia and China—countries that have tortured and killed our sons. Mr. Eisenhower has permitted General Twining, head of the Air Force, to accept an invitation to Moscow. Opinion is growing in foreign circles that after next fall's election Bulganin and Khrushchev will be invited to visit the United States, where it may be certain they will bring encouragement and joy to every Communist sympathizer. Moreover, it is now expected that the General Assembly of the U. N. will vote for the admission of Red China.

With the defeat of Hitler, Yugoslavia, under the dictatorship of Tito, became a full-fledged Communist satellite of the Kremlin. But just then, for some reason, Stalin refused to accept our offer of postwar Marshall plan money and commanded all of his satellite stooges to spurn the American giveaways. However, Tito, a born opportunist with a well-developed nose for the buttered side of his bread, took a self-serving second look at the American offer. He then staged a convenient public quarrel with the big Kremlin boss and immediately became a hero to the American State Department. Although he promised us nothing except a professed independence from Soviet Russia, we urged Tito to accept our economic and military aid with no questions asked, and no strings attached. He has received to date approximately $2 billion in consideraiton merely of our own tortured official conviction that, somehow or other, this self-confessed Communist bandit would be a defense bastion against Soviet aggression. Now Tito is back in triumph to the Kremlin, arm in arm with Khrushchev, marching in Tito's own words, "along the path of Marx, Engels, and Lenin."

Mr. Speaker, I want to know why the Eisenhower administration is giving our foreign-aid money to nations which are selling vital strategic war materials to Soviet Russia and to Red China. It has been revealed that, with the official but top-secret consent of the United States Government, our allies have been shipping 200 separate items of strategic machines and machine tools to Communist governments for the past 2 years. Of these items, the chairman of the Senate Permanent Investigating Subcommittee listed four types of mills and machines, some of which sell for a half a million dollars each. All of these are indispensably necessary to the manufacture of jet engines, guided missiles, aircraft, artillery weapons, and heavy ordnance.

By permitting the newest machine tools to be sent to the Soviet bloc, we allowed them to save from 3 to 5 years in engineering research and development. One prominent Member of Congress has said "that it would be better for the United States to permit shells, guns, or guided missiles to be disembargoed and sent direct from the United States to the Soviet Union, because these could be used against us only once. However, machine tools can and will be used to make armaments which may be used against us many times."

Mr. Stassen said that if he gave the list of these strategic materials to the United States Senate, he would be serving the enemy and maligning our allies. Please remember that, in many instances, the foreign factories in which these strategic materials are now made were built with American foreign-aid money. Our own American industries are prevented by law from shipping such materials directly to Communist countries.

On the other hand, we are giving the taxpayers' money to foreigners who use that money to produce the prohibited items and then proceed to sell them to our enemies at a profit. Nevertheless, at his press conference on March 7, President Eisenhower insisted that this procedure is desirable. He said that our allies now have an excess productive capacity; that they must continue to export to the Soviet Communists, unless we are to continue to give economic assistance to Western Europe indefinitely. But with or without this Communist trade, indefinite foreign aid is precisely what the President recommended to Congress last January 16. At that time, he urged that our current foreign-aid spending be doubled for what he called a long-term program for building and maintaining the economic strength of the free world. At that time, the President admitted that our foreign spending department had a backlog of seven billion unspent dollars, but this, he said, would be rapidly reduced. So it looks as if the Communists will continue to get their guided missile machines, and the bankruptcy of the United States to boot.

Mr. Speaker, the bill now pending before us for a vote today proposes to give away an additional $3,665,920,000 which amounts to more than the total assessed property valuation of the States of Nevada, Arizona, New Mexico, South Dakota, and Utah combined. During the past 10 years, our foreign-aid program has cost more than the totaled assessed property valuation of the States of New York and Pennsylvania combined.

Through various foreign aid programs the United States Government is giving away to foreign countries fine seed, tractors, combines and other farm machinery, and also providing and paying for construction of irrigation and flood control projects in foreign countries, as well as for hospitals and highways. Our Government has paid out and continues to expend hundreds of millions of dollars to advance increases in foreign agricultural production. Thus our Federal Government has increased foreign farm production as fast or more than Secretary Benson cut farm production acreage in the United States, and to the detriment of export of our own farm products.

No other nation in the world is giving its money or resources away to another country—not even their close neighbors. Neither have we ever received the benfit of such assistance from any foreign government. In fact the British have never offered to reimburse us for the hundreds of millions of dollars loaned to Great Britain during and following the First World War—nor any thought whatsoever of paying damages for burning our Capitol and the White House in 1812.

Each and every one of our 48 States and every congressional district in the States has cities and communities in need of additional educational facilities, school buildings, roads, highways, flood-control protection, hospitals and other public improvements. And every tax-paying American citizen needs and would like to have his or her taxes reduced.

The deficit of this one foreign-aid bill would save enough money to build many school buildings, roads, highways, and hospitals which are so badly needed at home.

The surest and most powerful protection we can provide against communism is to keep our own national economy strong and build our own military might so powerful that none will dare to challenge us.

Mr. Speaker, I have opposed this foreign aid giveaway program in the past and I will vote against this bill, H. R. 12130, which appropriates $3,675,920,000 of American taxpayers' dollars for giveaway to foreign countries.

Oil Imports Must Be Cut

EXTENSION OF REMARKS

OF

HON. FRANK IKARD

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 11, 1956

Mr. IKARD. Mr. Speaker, in the Sunday July 8 issue of the Sunday Wichita Falls Times was an excellent editorial entitled "Oil Imports Must Be Cut" and since this is a subject of vital importance to every person in the entire United States, I include this editorial in the RECORD:

OIL IMPORTS MUST BE CUT

Texas oil producers, beset with rising drilling and production costs and shortages of steel, continue to suffer from excessive oil imports that have grown to such proportions that they present a real threat to our national security should a major emergency develop any time in the future.

It is to be hoped that importing companies will heed the latest warning issued by Dr. Arthur S. Flemming, chairman of the President's Cabinet Committee on Fuel Resources, that they must drastically reduce

their import schedules for the third quarter of this year.

But we hold little hope that all companies will cooperate. Some have complied with Flemming's other past requests that imports be reduced but other companies have elected to increase, month after month, the amount of foreign oil they are bringing into this country.

Therefore, if such importers continue to ignore the pleas for a cutback in foreign oil shipments there is only one alternative. That is for Government action, under the Trade Agreements Extension Act of 1955, to bring crude oil imports within the 1954 relationship recommended by the cabinet committee in February 1955 and recognized by Congress in amending the Trade Agreements Act.

We would like to remain as far away as possible from Federal Government controls over private business, but if importers continue to insist upon excessive foreign oil shipments their business ceases to be private business and becomes a matter of public welfare and interest since such imports will serve to cripple the domestic oil industry and prohibit the incentive needed for finding additional petroleum reserves here at home.

Compliance by the importers with Dr. Flemming's latest warning and request will at least be a partial step in the right direction, although imports would continue to be far in excess of the original formula arrived at by the President's Advisory Committee.

It is time for the national administration to quit dilly-dallying about the imports question and carry out the intent of the provisions of the Trade Agreements Extension Act of 1955.

If immediate cutbacks are not made in imports of Middle East oil—and we do mean immediate—it is time for positive action. If the national administration cannot carry out the intent of Congress in enacting the legislation now on the books, then it is time for Congress to adopt more drastic legislation that will not permit any Federal official or advisory committee to ignore the situation.

The domestic oil industry needs protection against excessive foreign oil imports and every effort must be extended to provide that protection if our national security is not to be endangered.

Address by Rear Adm. Burton B. Biggs, Independence Day Celebration, Huntington, W. Va.

EXTENSION OF REMARKS

OF

HON. M. G. BURNSIDE

OF WEST VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 11, 1956

Mr. BURNSIDE. Mr. Speaker, under leave to extend my remarks may I call to the attention of my colleagues a most excellent speech given at the Independence Day celebration in Huntington, W. Va., by Rear Adm. Burton B. Biggs, United States Navy. The speech follows:

Mayor Thuerer, distinguished guests, ladies, and gentlemen, it is an honor and a pleasure for me to take a small part in your celebration today. Since West Virginia is my home State, it is a particular personal pleasure to be in one of this State's most beautiful and progressive cities. This is true in spite of the fact that it took me quite a long time to get accustomed to cities. It so happens that I was born in the mountains of Fayette County, a matter of some 12 miles from the nearest railroad. The standing joke concerning my arrival on leave from the Naval Academy was that I would always be sure to get off at the proper station on the railroad. It was so easily identified by the conductor's announcement, "Hawks Nest, change to T. M. and W. (two mules and a wagon)." The mules and the wagon have disappeared but there is still no rail connection to that point. You may let your imagination run riot concerning the stories which my Naval Academy classmates conjured up concerning my native heath. They were not all from Texas but there were plenty of others who could tell a tall story. In spite of all these experts, I am sure that our friends from Ohio and Kentucky present here today will testify that they have been forced to become accustomed to certain peculiarities of West Virginians which put us in the tall-story class as well. I am forced to admit that our State is not as big as Texas but that we can give even them a run for their money in almost any other department.

In spite of the fact that the citizens of Huntington would have to form a sheriff's posse to find where I was born, I feel rather close to Huntington. Among your citizens is the son of the man who was responsible for my entering the Navy. It was Captain John E. Vawter who recommended to Congressman Adam B. Littlepage that he appoint me as a midshipman. I hasten to pay my grateful respects to their memory.

One hundred and eighty years ago today the Declaration of Independence was signed. That document set forth a number of basic principles upon which our country has been able to build this great Nation. Those principles are just as important today as they were when written. Our forefathers who took up arms to maintain and defend those principles did not require too much military training. Their equipment was of the simplest type and was with few exceptions in constant use in their pursuit of a livelihood. Today that is not the case. Our military weapons and equipment are extremely complicated and it requires much time and concentrated training to prepare our personnel to use these instruments. In order to do our part effectively, the Navy has set up a Reserve program under the Reserve Forces Act of 1955 which became law on August 9, 1955.

Our Reserve program provides for the enlistment of young men in the Naval Reserve for a period of 6 years. This enlistment contract also requires 2 of the 6 years years to be served on active duty with the fleet. Other provisions of the law provide for an 8-year enlistment with 6 months' active duty. Fleet units are at present large and complicated and the jobs our men perform are specialized elements of a large closely integrated unit. In view of these facts, we of the Navy feel that less than 2 years of active duty with the fleet is insufficient training for our ships' companies. Even 2 years is not excessive and at times in certain specialties it could be considered too short. In fairness to the Nation, to the Navy, and in particular to the young men whose training and safety is our responsibility, we feel bound to insure that these young men have sufficient training and experience to assume their full measure of responsibility in case they are called upon to defend our country in time of war.

In addition to the Navy qualification of our Reserve during these 2 years, we hope to return them to their communities as self-reliant members of the community. Naturally, we are interested particularly in having a considerable percentage of these young men decide to remain in the Navy and pursue their career with us. Whether they elect to remain in the Navy or to return to civilian pursuits, we wish them to be sure of their seasoned competence to perform in any assignment. We also expect that they will supplement their active duty training with training in our Reserve units such as the one you have here.

We have a total of 319 Naval Reserve training centers in commission. The one here in Huntington is 1 of 185 which serve for both sailors and marines. In some of the larger centers space is provided for the other military departments. There are in addition 28 Naval Reserve air stations devoted to training our naval pilots and technicians. These stations are in operation the year round. At present we maintain 72 schools for the training of our Reserve officers plus 25 extensions of these schools. We expect to have 20 more of these schools in operation by this fall. We must maintain and continuously modernize these educational plants in order to keep our Naval Reserve currently informed of the latest developments.

We are pleased that our Enlisted Reserve has grown by approximately 100,000 in slightly over a year. We expect this rate of growth to continue for several years. Regardless of the number of our personnel, we have one goal—quality. The level of training, the concentration of knowledge, and the continued improvement of their specialized knowledge shall continue to be the points of maximum emphasis. We, of the Regular Navy, must always remember that, for example, in World War II there were 20 reservists to every regular. Should there be any argument as to who won the war?

While the reserve of personnel for our Armed Forces is of great importance, there is another reserve that is of equal weight. If the industry back of an armed force is not trained and ready, that armed force is helpless. On the part of the Navy the Office of Naval Material is responsible for this essential item. I have heard accolades handed out to various cities but you should have heard a member of the Office of Naval Material telling me about the city of Huntington.

It appears that slightly less than 2 years ago this city had a problem of unemployment but your leaders did not call it by that name. The problem, as they stated it, read this way: "How can small-business men of Huntington, W. Va., cooperate to make the maximum use of their production resources to obtain more commercial and Government business?" The positive approach: not where can our people go to get a job but how do we go about creating jobs for them in our own city? This is now known as the Huntington approach.

Your "small industries committee" in its report gave the background: On December 11 and 12, 1954, our congressional Represenative, in cooperation with the Huntington Manufacturers Club and the chamber of commerce, arranged meetings of local manufacturers, labor organizations, and Government officials concerned with procurement. The Government officials attending, representing the Department of Navy, the Army, the Air Force, and the Small Business Administration expressed a positive interest in helping the small industries of the Huntington area obtain opportunities for bidding on defense contracts.

Fourteen manufacturers prepared brochures to help promote their products and many individual contacts were arranged with Government procurement officials who further indicated interest in helping Huntington develop a broader defense production program.

On June 21, 1955, an industrial workshop was arranged in Washington at the Navy Department by Huntington manufacturers. It was the first workshop held by a defense agency for small business firms. As a part of this effort, the manufacturers had personal conferences with representatives of the

various naval bureaus. Meetings were also arranged with Air Force procurement officials and Small Business Administration people concerned with organizing production pools. Following the Washington meeting, Huntington businessmen formed a committee to work on the problem of pooling their respective production capabilities in order to broaden their area of competition. Several avdisers were obtained from Government and industry to help outline a program of action during the week of July 18, 1955.

It is interesting to note that a total of approximately $3,729,782 in defense contracts has been awarded small firms in the Huntington area since January 1, 1955. This indicates that there are actual opportunities for Government procurement by small business firms in Huntington.

The Office of Naval Material in Washington has been keeping in close touch with your congressional representative and your industries' committee and the "Huntington approach" is continuing to pay off to the benefit of the Navy and of Huntington. In fact, it appears that what has gone before is only the beginning. Let us hope that the 14 to 1 odds on Huntington quoted in the brochure prepared by the members of your production pool will become 140 to 1.

It is this type of coordinated planning and execution that wins in any kind of endeavor. Numberless examples can be cited during the period of any war where but for the coordinated support of industry and the Armed Forces would have been ineffective. During World War II and the Korean conflict I was in a position to be very appreciative of this support. As has been mentioned, I was a fleet logistics officer during World War II and a service squadron and later force commander during the Korean unpleasantness. Many definitions have been proposed for logistics and logistics officers. The variety of names that are applied to a logistics officer knows no bounds. The most descriptive and one of the few usable in polite society is "vice president in charge of staff and things."

It is immediately apparent that a logistics officer has a keen appreciation of the fact that the stuff and things he is expected to have ready must be produced, packed and transported. If industry does not do a large proportion of this work, the logistics officer finds himself vice president in charge of Mother Hubbard's cupboard. To avoid this untoward condition we must have a widespread Huntington approach with the objective so aptly stated by your production pool members.

"In war or in peace these patriotic firms will cooperate fully to produce for United States defense."

During World War II the U. S. S. *West Virginia* was a concrete example of the way know-how and industrial might changes the course of wars. On December 8, 1941, the U. S. S. *West Virginia* was resting on the bottom of Pearl Harbor—sunk but her flag was still flying. This battleship was raised, repaired, and to some extent modernized. She met an enemy fleet in Surigao Strait in the Philippines and took a heavy toll of the ships trying to get to our landing beaches in the Leyte-Semar area. She continued to operate in various combat areas until the final day when the Japanese surrender took place in Tokyo. When this momentous event happened in Tokyo Bay, the *West Virginia* once more hoisted the flag that had flown over her battered hulk on December 8, 1941. Today this gallant ship is in the moth-ball fleet but the industry that put her back together has continued to improve and build bigger and faster ships armed with the latest type of weapons.

It is worthy of note that your production pool has pledged to produce in war or in peace for the defense of these United States. In my opinion the peacetime production is by far the more important of the two. It is only during times of peace when we can learn the techniques which save time, money and more important, lives in time of war. If we make serious mistakes in peace time, production usually costs us money but we do not necessarily lose a battle and many lives thereby. We had a lot of practice forced upon us prior to World War II actually breaking on our shores. We had that glorious gift of time. In these days of high speeds and long ranges of various types of equipment and weapons there is little doubt that the gift of time will be denied us. The answer is we must train our industry right along with our military forces.

Back in 1920 to 1922 the United States fleet developed what was called an approach formation. There was no radar to give you timely warning of the enemy's nearness so it was essential that the fleet be in a formation when in enemy areas which would lend itself to a rapid and accurate shift to battle formation. It is obvious to me that your congressional representative and your industry committees had the same idea and it fitted exactly into the type of procedure which the Office of Naval Material has been working on. Let us hope that we are not forced into battle formation. It is appropriate, however, that we continue to have our Huntington approach well organized and manned so that any would-be aggressor may observe and be warned.

Mutual Security Act of 1954

SPEECH
OF
HON. WALTER H. JUDD
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 6, 1956

The House in Committee of the Whole House on the State of the Union had under consideration the bill (H. R. 11356) to amend further the Mutual Security Act of 1954, as amended, and for other purposes.

Mr. JUDD. Mr. Chairman, first I want to join the other members of my committee and of the House in paying tribute to our very able and distinguished chairman, the gentleman from South Carolina, DICK RICHARDS. He is not only a wonderful leader of the committee but he is as fine a gentleman as I have known. When our study mission in Asia last fall heard that he had announced his intention to retire from the Congress, we sent a cablegram urging him to reconsider. Unfortunately his mind could not be changed. It is our loss. We certainly wish him well in the years ahead.

Mr. Chairman, it is too bad that the many good programs in this bill about which there is little or no controversy are therefore given very little discussion, by us or attention by the public. The result is that a lot of people here and around the world, in their preoccupation with the things we argue about, do not realize a fraction of the real good that is being done by the programs being carried on without fanfare which really represent our country at its best.

It is hard in a democracy to put our best foot forward, because even if a bill finally goes through with all the funds that have been asked, the things that are said in debate sometimes hurt so badly they partially neutralize, if not more than offset, the good that our money and other forms of aid do.

But, since most of the money authorized in this bill goes for military assistance of one form or another under title I, and since most of the opposition this year seems to be to that portion of the bill, I, like the rest, have to give priority in these remarks to the military considerations.

Why has the executive requested funds for a military-assistance program, which is roughly three-fourths of the bill as it now stands? There is only one reason, and that is because the security of the whole free world, and that means the security of our Nation, are gravely threatened.

What is the threat? There is only one threat, and that is, of course, the avowed purpose and the unwavering will and the increasing capacity of the Communist world conspiracy to seize control of the whole world by one method or another.

Lest anyone have any misunderstanding on that point, Mr. Khrushchev recently reaffirmed it, stating that Communists would abandon their concepts and their program of world communization only "when shrimps learn to whistle."

Mr. Chairman, there can be no real peace or relaxation for us until the Communist movement fades or changes.

Our peace and freedom can be secure only when their purpose is changed or their will is weakened, or their capacity to conquer the world is reduced.

We cannot do much directly about changing their purpose or weakening their will; those must be done from within the movement or by pressures within the countries already conquered. But we can do something about reducing their capacity—their ability to impose their will on the free world. And the whole mutual defense assistance title of this bill, of course, has to do with that one task. It is to keep our enemies from ever getting to the point where they have the power to cow or to conquer the world.

There are two main means by which we can try to achieve that objective. One is to prevent the enemy from winning any more victories that will make him stronger. That is why we must resolutely oppose resumption of trade with Communist countries. That is why we must oppose the admission of Communist China into the United Nations. We must not do anything that will give the Communists more prestige, more power, more influence, because that would just build up the capacity to destroy us of an enemy that is openly dedicated to our destruction.

The other means is the positive effort to keep our own country strong and sound, and to help other free countries become strong and sound also, so that they can defend their independence and block any further gains by the Communist cancer anywhere.

In a sentence, our job is to prevent any increase in the strength of our enemy and to build up the strength and unity of ourselves and our allies.

Well, how well is the Kremlin doing? And how well are we doing in this worldwide struggle?

Let us look first at the overall picture with the individual countries and problems of which the various sections of the bill deal. It seems to me, looking at it in the large, the Kremlin is making three major shifts in the tactics by which it pursues its never-changing objective of world conquest and follows its ever-changing strategy of world revolution. Each of those three shifts, if successful, will increase our danger, not decrease it.

The first is a geographic shift. The Kremlin naturally tried to push to its west following the end of the war, because Western Europe is the most important prize, second only to ourselves. It tried to get Greece as a means of flanking Germany and picking off weakened, infiltrated, and divided Italy and France. We met the push with firm resistance in Greece.

The Kremlin then tested us with the Berlin blockade—which served also to divert our attention from its operations in China. The West responded with the Berlin airlift, refused to be intimidated, and the Kremlin backed off.

It then threatened all sorts of disasters if we did not abandon NATO. But we did not fold up. We do not give in to threats; it is when they smile and talk peace that we seem to lose our heads. We went steadily ahead to build and arm NATO. It did not lead to the threatened disaster. The Kremlin made no move against NATO.

Then the Communists everywhere warned that if we and Western Europe were to organize Western European Union and allow Germany to regain her full independence and to rearm, there would be dire consequences. To underline its threat, the Kremlin unilaterally abrogated the Soviet Union's pacts of friendship and nonaggression with Britain and France. But the Western World kept its nerve and stood firm. The Paris pacts were signed. Germany was given her independence and authority to rearm. Did it lead to war as predicted? No, indeed. Instead, the Kremlin proposed a chummy little conference to settle peacefully the problem of Austria.

It was clear that faced with strength in the West, the Soviet leaders were not going to start a war there. They promptly changed their approach and said, "Let us work out a stabilization of the European front. Let us have a security pact. Let us neutralize Germany."

Anything to free themselves from having to tie down most of their strength facing the West, because there was not very good fishing in Europe for the time being.

At the same time they were pushing to their east. They got control of Manchuria at Yalta and of North Korea just before V–J Day. They pushed ahead like a glacier over weakened and exhausted China. While we were bemused by the myth that we should not resist them in earnest because they were not really Communists, only democratic agrarian reformers, eager to improve the lot of the long-suffering Chinese, and to cooperate with us in building freedom and peace in Asia.

When they had overrun China, they moved into South Korea from which the blind and the faithless had persuaded us to withdraw our forces. Once more we responded as we generally do to brazen aggression, and turned them back. Once more they played their usual trick when faced with firmness. They said, "Let us have a truce." It was not, of course, because they wanted to end the struggle, but because they wanted to win at the conference table what they could not win on the field of battle. They wanted to shift from Korea, where they could not win, to Vietnam, where they had a better chance. They got North Vietnam.

The two objectives that they wanted next, naturally, were the great natural resources of southeast Asia and the industry of Japan. China's great usefulness is to furnish the base and the manpower with which to move to control of southeast Asia and of Japan. But there was one major obstacle standing in the way. That was the island of Formosa, with a good many strong airbases on it. Unless they can seize or persuade us to neutralize Formosa, so as to get its airfields and armies off their flank, they dare not go too far south or move against Japan. That is why they have to get Formosa, if they can. That is one reason why we cannot let them have it.

Just as they had with respect to our aid to Germany in Europe, they blustered that if any one gave military help to free China, it would greatly increase the danger of war; and that nobody could stop them from taking Formosa. Our President said in a press conference, "Well, they will first have to run over the 7th Fleet." Apparently they took a good look at the 7th Fleet and decided not to attempt to seize Formosa. Instead, they pulled the same old trick again—it seems always to work. They said, "Let us go down to Bandung and talk peace."

Confronted with strength and firmness on their west and strength and firmness on their east, they shifted their major efforts for the present, to their south. Here they face, in the Middle East and in south Asia, not strength and firmness, but awful weakness, division, and disunity. In the Middle East three explosions are taking place, all made to order for the Kremlin: First, Greece against Turkey and England over Cyprus. Anything that weakens Greece, anything that weakens Turkey, anything that weakens good relations between them, and between them and Britain can only hurt them and help the Kremlin.

Then there is the Arab-Israel explosion. It involves an area with more than half of the known reserves of oil in the world. It is the bridge across to Africa, that great, undeveloped by stirring giant of a continent about which the gentlewoman from Ohio [Mrs. BOLTON] spoke so illuminatingly and instructively this afternoon. And through it runs the Suez Canal, control of which would enable the Kremlin to cut East from West. Obviously, here is a prize, second only to Western Europe. Besides, mastery of it by the Kremlin would lead relatively easily to mastery of Europe.

Then there is the third explosion, the North African colonies against France.

One can hardly imagine a more ideal situation that the Middle East and North Africa for the Communists to exploit with their usual pattern of stirring up even more trouble and disorder. If the Kremlin can gain control in the Middle East now, it can come back to its eastern and its western fronts later.

In South Asia are other weak spots. Here is a vast area, from the Middle East clear over to New Guinea and the Philippines, which was controlled for centuries by European powers. While they differed among themselves, they still maintained, throughout the area, order of a fairly uniform pattern.

The European controls with their stabilizing influence are ended and the area, as someone has put it, has been Balkanized, just as Southeastern Europe was by the breakup of the Austro-Hungarian Empire after World War I.

Here are these newly independent countries with a fourth of the world's population—Pakistan, India, Ceylon, Burma, Vietnam, Malaya, and Indonesia—all striving to pull together their internal factions, develop national unity, establish sound political institutions, and build a sound economy.

Their first desire is to preserve their freedom from alien control; their second is to improve the lot of their people by industrialization, better agriculture, health, education, and so forth; the third is to develop democratic government. We wish them well in all three. In the meantime, they are weak, divided, and insecure. The cohesion of the area has been destroyed. They might be easy prey to Communist machinations and guile, bribes, and threats. Naturally the Reds, both in Moscow and in Peiping, want to fish in those troubled waters to their south.

And naturally most of the governments there want to be neutral in what seems to some of them to be only foolish quarrels between the United States and the Soviet Union, with both of whom they would like to be friends. Some of them are as blind to the Communist threat as many in America have been—and still are. What they need, as many of them see it, is just a chance, with friendly assistance from the outside, preferably from both sides, to try to get their own internal houses in order.

Obviously South Asia offers several ideal trouble spots for the Communists to exploit with their plausible prescriptions of quick cures for all ailments.

One of the special weaknesses in the area is the fact that several of the countries are so preoccupied with ancient feuds with their immediate neighbors that they fail to appreciate the over-all Communist peril. For example the Indians seem more disturbed about their dispute with Pakistan over Kashmir than they are about the Communist glacier moving down on them from the north.

A couple of weeks ago we heard here an eloquent and moving address by the President of Indonesia. His country already has 80 million people, the sixth largest population in the world. The 2,000 islands are spread over an area 3,000 miles long and 1,500 miles wide. They have vast undeveloped natural and human resources. You would think Indonesia's internal problems would be

enough to keep the country's leaders busy for some time. But many of them are more concerned with their dispute with the Dutch over a million or so Papuans in West New Guinea, whom they do not have—perhaps half of whom are still living in the trees—than they are about the 80 million people they do have.

In the whole area from Korea and Japan to Greece and Turkey, there are these local feuds which loom so large to the participants that the Communist danger is considered secondary, or even not fully realized.

This is true also of the Arab-Israeli dispute. What each side needs most of all in order best to serve its own people's needs, is peace and a settlement of the differences between them so that they can stand together against the common enemy of both.

Yet the bitterness and the hatreds and prejudices, and the suspicions and fears, and the sense on each side that it has been done a great historic injustice by the other—these keep them so preoccupied with the conflict between themselves that the Kremlin seems to have almost an open door, or even an invitation, to move in and destroy the independence of all.

I do not say this in criticism. It is a human reaction. It is like a patient who goes to a doctor with a painful boil. The doctor on examination finds the patient has also TB or a cancer. The doctor tends to forget all about the boil in his concern to tell the patient what he has to do to prevent this more serious affliction taking his life. But it is the boil that is causing the patient pain. His main interest is in relief from that and he will go to some other doctor who will take care of his immediate discomfort due to the boil rather than worry just now about the possible danger to his life from the cancer.

In contast to these weaknesses in Asia which the Kremlin can so successfully exploit to its advantage, there are some strong points in that area. This bill has a lot to do with preserving and further strengthening them. One is Korea, one is Taiwan, one is Pakistan, another is Turkey. In those four bastions, lying around the Communist bloc, are more than 2 million well-trained and equipped soldiers. It is possible for those countries to keep them in the field only because of the assistance provided in this bill.

Korea has the second largest standing army in the free world, Turkey the third, and Taiwan the fourth. In these major bastions, plus Japan, the Philippines, Thailand, and Iran, There are two and one-quarter million soldiers right on the job. They have splendid morale and the will to defend their countries, but they cannot do so unless they have assistance and support from the United States.

Occasionally somebody comes along and says that we are using other countries' men to fight our battles. That is categorically untrue. We are not trying to get other people to fight our battles for us. We are trying to give other peoples, in response to their request, the capacity to fight for themselves, to defend their own freedom. That does serve our interest, to be sure, just the same as our aid to Mr. Nehru, if it enables him to keep his country free and out of the control of the Communists, serves our interest in addition to serving his. But our objective is not to get other countries to provide cannon fodder for us, as our enemies charge; it is an effort to give these people the ability to retain their own independence—even their neutrality if they prefer that.

There is no reason why we should refuse to help a friend just because it also helps ourselves. In fact, I believe that whenever we do what is right for others, it will turn out to be beneficial to ourselves, too.

About one-third of the military assistance in the original executive request this year for $3 billion was scheduled to go to those four bastions I have mentioned. If we vote to cut down the assistance to those allies, I do not think, Mr. Chairman, we are going to be saving money. I am sure it will mean still greater expenditures.

For example, we had eight divisions in Korea. Now we have two divisions there. Why do we now have 2 instead 8 divisions? Only because we have built up and are supporting 21 South Korean divisions. It costs about 10 times as much money to keep an American soldier on duty for a year—disregarding the dislocations to his own life and income and family from his being in the service—as it costs to keep our Korean or free Chinese soldier in the field. If we cut funds for Korea so that it has to reduce drastically its armed forces, then we will certainly have to send more American units back into Korea. Does anyone want that? It will cost more money, not less, than we are authorizing in this bill.

I get letters, and so do you, saying, "Why send all this aid abroad? Why not use the money to build highways, hospitals, schools, and give better old-age assistance to needy Americans, or to reduce our taxes here at home?"

The argument is based on the belief that, if we do not spend this money for our defenses abroad, we will have that much more to spend on ourselves here at home. Unfortunately, it is a false belief. We will not have more to spend for things needed by civilians here; we will have to put all that money, and more, into expansion of our own Armed Forces. We will have less to spend for the well-being of our people, or for reducing the national debt or cutting our taxes.

This mutual-security program is about 10 percent of our total defense budget; that is all. If we reduce this 10 percent for those countries that lie around the only threat there is to our security, and those bastions are weakened, I do not hesitate to predict that it will cost us far more just to rebuild enough power of our own to approach the strength we now have through the existence and the combined strength of these allies.

Mr. GROSS. Mr. Chairman, will the gentleman yield?

Mr. JUDD. I would prefer to complete my statement.

Mr. GROSS. Is the gentleman going to have any time in which he can yield?

Mr. JUDD. I do not know. I am willing to stay here, no matter how late, to answer questions.

Mr. GROSS. So am I. For that reason, Mr. Chairman, I make the point of order that a quorum is not present.

The CHAIRMAN. The Chair will count. [After counting.] One hundred and five Members are present, a quorum.

Mr. JUDD. Mr. Chairman, the first shift that the Kremlin is making, lessening for the moment its pressure against Germany and Europe on its west, and against Korea, Formosa, Japan, and southeast Asia on its east, does not mean that the Communist threat to those areas is removed or even reduced. It means the Soviet Union is merely taking advantage of the situation whereby it accepts temporary stabilization of its eastern and western fronts where it is confronted with strength, in order to press to its south and into south Asia where it is confronted only with weakness and disunity. In my opinion, its present tactics make it more dangerous to us rather than less dangerous; and permit less relaxation of tension on our part, rather than more.

The second shift that the Kremlin is making in its world maneuvering is from power and threats to deception and tricks. It is doing exactly what a good football coach does when he has tested out his opponent's strength by a few power plays and finds he cannot break through the line. Stopped on the ground and unable to make gains through the line, the coach does not spend the rest of the afternoon calling the same power plays that do not work. No, he shifts to end runs and forward passes and trick plays. That is what the Communists are doing.

Our Secretary of State, Mr. Dulles, has said the Kremlin has been compelled to make these shifts because of the success of our policies. That is true. But, the fact that we have stopped its power plays on the ground does not mean that we can let down, assuming that we will be equally successful in stopping their trick plays and their open field offenses.

Furthermore, if we relax or open up too much in order to defend ourselves against their passes and their deception type of warfare, they can promptly shift back to power plays and come right through our line. They have not weakened their military power. That is, they are at least a double threat now, instead of a single threat.

They could not easily get through Turkey and the northern tier in the Middle East, so they threw a forward pass over it right into Egypt's arms.

They met firm resistance in southeast Asia, so they are seeking to throw a forward pass over southeast Asia to Indonesia.

Faced with firmness in Germany and Austria, they are seeking to throw passes to infiltrate France and Italy; or to flank western Europe, including Spain, by an end run through North Africa.

The fact that we have pretty good defensive plays to block their power plays does not mean there is any guaranty—unless we are extraordinarily smart, clever, and on top of the ball every min-

ute—that we will be equally skillful and successful in defeating this new tactic.'

Then there is a third shift that the Kremlin is carrying out, namely, a shift from vinegar to honey. Our mothers taught us we could catch more flies that way. Apparently the new leaders in the Kremlin are belatedly learning it, too—learning that Stalin's old policy of intransigence and threats was a mistake. It only stiffened our resolve. So they are making a drastic change in approach. They could not intimidate us with their tough tactics; we do not fold up under threats. So they are shifting from vinegar which only kept us awake and made the free world stronger and more united, to honey which regularly has lured the tired, or the gullible, or the peace dreamers into their traps.

What does this mean for us? It means that we have got to have better honey than they have—not necessarily more honey, but better honey.

Our program must be clearer, more attractive, and more convincing.

Mr. Chairman, when we are faced with a situation like the dangerous and frustrating one that confronts us in this year of 1956—every year the fundamentals are the same but the details this year are different—there are about three courses, it seems to me, that we could decide to follow.

First, we could say that since the mutual-security program has not succeeded as we wished—here we are with at least as great trouble as in previuos years—therefore, let us give up the program as a failure and stop all aid.

Second, we could say since we have not yet achieved that security and the unity in the free world which we hoped for—therefore we should double our aid—more of the same.

I do not think that either of those is the way or would give us any hope of improvement. The first would abandon the rest of the free world to the Reds; the second would only complicate the confusions and irritations that are developing. Either of them, in my opinion, would worsen our situation.

The third course is to improve our aid, to take a good look at it, and determine what parts are succeeding, are hitting the target; what portions are not succeeding, are not hitting the target; and then readjust the whole effort accordingly.

Because, Mr. Chairman, I am convinced and I think our study mission from the Committee on Foreign Affairs was convinced during its trip last fall through 25 countries and colonies from the Dardanelles to Japan and Korea, that the key thing in making the program more successful today is not the amount of our aid, but the manner in which it is given.

As the gentleman from Massachusetts [Mr. WIGGLESWORTH], who accompanied us, used to say, it is not so much how much we give as how we give it.

What we must have is not necessarily a bigger program but a better one.

The first question almost everyone asked when we returned was: How much do you think we should appropriate for foreign aid this year? But that is not the essential or the most important question. It is not the size of the program, but the intelligence of it, the quality of it, that will determine its success or failure.

How can we make it a better program—one that gets down to the grassroots better than it has done heretofore? The answer to that question will not be found in recriminations or regretting the past or bemoaning those projects which were ill-conceived or badly managed and therefore quite properly failed.

Rather, the answer is to be found in hard-headedly restudying the whole enterprise. In the beginning we were pretty much venturing into a new field without blueprint or even compass. Now we have been at it for 8 years; we have available a great deal of data based on experience. We need to do a lot of homework on what that experience can teach us. We must make a long overdue reappraisal, not to assess blame for the past, but in order to win the future.

May I make about five main suggestions:

First, we must ask ouselves, what is our primary target. What are we trying to accomplish? I believe our primary target is, or should be, not just to make people fatter or healthier or stronger or richer or more productive; rather it is to win their hearts and minds, their confidence, both in the countries being helped and behind the Iron Curtain.

This is where the Communists generally have left us far behind. They have spent much less money; they have done far less to improve the economic condition of other peoples, but somehow they have been more skillful in their approach to those peoples.

We have done a better job with the tangibles; most countries we have helped are better off economically and stronger militarily. The Communists have done a better job with the intangibles; they have often given the impression of being more interested than we in the welfare of the people than in the power of their military establishments.

Surely the greatest paradox of our time is that we who believe and are constantly saying that our remarkable material achievements are the result of spiritual causes, have somehow got ourselves before the world as trusting primarily in material things—food, guns, and dollars. Whereas the Communists, who proclaim themselves materialists and deny even the existence of spiritual forces or values, have nevertheless managed to get themselves before much of the world as idealists, challenging men to forego material things, at least for the present, in order to work for things of the spirit—equality, comradeship, democracy, peace, relaxation of tension, and so forth.

Sometimes I wish our mutual security agencies had in them more men who had run for office. For the first task of the personnel of our International Cooperation Administration is the same as that of the office-seeker, namely, to win voters—to win the confidence, loyalty, support of people. Whatever other qualities he may or may not have, he succeeds only if he is able to win the confidence and support of a majority of the voters in his city or district. That is the job of those who work in ICA all around the world. The material improvements we bring are good in themselves, but their objective is also to win people's confidence so that they will want to stand together with us for freedom and security and prosperity for all.

Only as our programs win the hearts and minds, the confidence of people, and strengthen their will to defend their freedom, are we justified in spending all this money to increase their capacity to defend their freedom—their economic well-being and their military strength. To increase their capacity without winning their confidence is, in my judgment, an act of self-deception on our part.

Second, having determined our target—the winning of people's hearts and minds—we have to streamline the program to the essentials. Whatever hits that target, strengthen it, give it greater emphasis. Whatever fails to hit that target, or even worse, alienates people, drop it, or modify it.

In many countries we are doing too many things. And we are trying to do them too fast. We are like a teacher who would try to advance a pupil from the second grade to the twelfth grade in 2 years. We have to be a little more patient and not expect spectacular results overnight. We are dealing with people with long histories, strong traditions, deep suspicions. To crowd them too much is to defeat our own efforts.

We have to learn more about them; and be willing to learn from them. After all, they know quite a bit about their own country and have some ideas as to what to do about their problems. Our ignorance, and the resulting arrogance, lead us into a subtle form of imperialism, unrecognized because we know our purposes are benevolent.

There is also such a thing as an imperialism of efficiency. In our enthusiasm to help, we almost take them over. A man in Burma told us in 1953, "You Americans are so aggressively friendly." An efficient American arrives, looks around, and promptly starts in, "This is what you ought to do about your agriculture, your railroads, your schools, hospitals, and housing." Our very zeal produces an irritation that in some countries is approaching resentment. That is, we lose rather than win confidence. These peoples have fought up to 300 years to get freedom from one alien control, that of Europe; they react violently against what sometimes seems to them almost another alien control—this time by us. They want first of all their full independence, no matter how much they need our material aid, our technical skills.

In Vietnam, we found our representatives working hard and selflessly—at 89 different projects. When we suggested that might be spreading ourselves a little thin, one said, "But it's much better than it was. We did have 240."

Now, Vietnam is a country that has survived thus far only by a near miracle; it is hanging on by a thread. Some 10 or 15 main projects may well determine whether it pulls through or goes down. Why not simplify the program to those life-or-death essentials? If the

country makes it for 5 years, then we can go ahead with the frills, with more elaborate developments. The immediate need is the basic programs; too much beyond them only scatters our efforts, complicates our operations, and confuses the people of Vietnam.

Third, we have to have a long-range program. Why? Because we have a long-range problem. One does not solve a long-range problem with a short-range program. But a long-range program is not the same as long-range commitments or contracts for specific projects.

What did we do after Pearl Harbor? Did we say, "Let us declare war for 1 year; and then we will stop and debate for 2 months whether or not to fight Japan a second year"? No; we declared war to fight until we won. We committed ourselves to a long-range struggle.

But we did not commit ourselves to specific operations or strategies. We did not lose flexibility in the conduct of the war. We did not decide right then that we would put greatest emphasis for the whole war on landpower or on airpower or on naval strength. We retained control of the operation. But the world knew, both our allies and our enemies, that we had declared war to the finish. The world could count on us and so had confidence in us.

That is the interest of the amendment prepared by our chairman, the new statement of purpose and policy in the bill before us. It says to people who may be uncertain about us that as long as the threat to our common freedom exists, we are in it to win.

The program must have both continuity and flexibility—as the President's mutual-security message to us pointed out. The two are not in conflict. Continuity is necessary to keep flexibility on the track; flexibility to give success to continuity of effort.

The most important thing said in this whole cold war period, in my opinion, was said by General MacArthur in this chamber, "Once you get into a war, there is no substitute for victory." That requires long-range purposes and policies.

If we are going to identify ourselves with Korea, then Korea has to pull through.

If we are going to put ourselves on the side of Turkey, then Turkey has to make it.

If we are going to ally ourselves with West Germany, then West Germany has to win.

The world must see that it pays to be an ally of the United States; that we have not only the power, we have the will to stand by our friends; that they can count on us to the extent that they, in turn, are willing to do their utmost.

We have not made that clear to all countries yet. We have got to have a long-range program.

Fourth, we have to have better personnel.

They need to be better selected. It is not enough to be good technicians or engineers. They need to be broader gage. Their job is not just to build dams or dynamos or fertilizer plants; it is to win the respect and good will of people. The way some of our men, although highly competent technically, tend to throw their weight around, or deal with the local people with a patronizing, condescending attitude, is thoroughly insulting.

They also need to be better trained and prepared. You do not send out a military man to head a big operation with only a year or so of training. He has gone through West Point or Annapolis. The Communists do not send people into these countries with a few weeks' briefing. They have been trained for months, sometimes years, until they know their jobs. They are all-around professionals.

My dad used to say to me when I was in a big hurry to get something done, "You never lose by taking time to sharpen your tools. You will have more done at the end of the day."

We have been at this program now for 8 years, most of the time on a crash basis. We have not taken the time to sharpen our tools. We would do better and have more accomplished at the end of a year if we devoted more time and effort to training our personnel so that they know more about the people and the language and the history and the overall needs of the country to which they are going.

They need to stay longer. Most go for 2 years. Well, almost anyone is willing to sign up for 2 years to go halfway around the world and have the experience of a lifetime. But by the time he gets adjusted and on top of his job, it is time to go go home. Fortunately, more and more are signing up for a second tour when their usefulness will be much greater.

Mr. Chairman, I would suggest that in general we should not recruit for less than 3 years. Those who are not willing to stay 3 years would select themselves out. In most cases that would be a good thing. More can be done with half as many—if they are the right kind and better prepared.

And then they need to identify themselves more closely with the people. The President of a country that is one of our best friends said, "Your people work long and hard at desks in the capital cities, but our country is made up largely of farmers. They can't come in to see you during office hours; they are out in the fields. Besides they would be reluctant to come into your spick-and-span offices in their bare feet. Why don't you have office hours in the tearooms in the villages one evening or two a week? That is where the Communists are. You work with your papers and blueprints and programs; the Communists work with the people."

Our representatives also need to conduct themselves less ostentatiously than some of them do. Their success will depend not so much on how much they do for, as on how well the work with, the people among whom they are to live. To win the confidence of those people, we must identify ourselves with them.

Once we have determined more clearly our target, streamlined the program to its essentials, set ourselves to the long-range task, and secured better personnel, then, fifth, we need to decentralize much of the controls now held too tightly in Washington. Too often, operations get bogged down in redtape. In the proper concern to avoid mistakes or waste, almost everything has to come back to Washington for decision or approval. But that takes too long. The fiscal year is half over before the year's program gets started. More decisions need to be made in the field. If we have more first-class men there who are better trained and know their job, they can be given greater authority, and can make more decisions on the ground.

Mr. Chairman, in summary, about three main facts stand out as we evaluate the years of effort in scores of countires. One fact is that some of the projects unquestionably have failed. Some of our personnel have produced more antagonism than good will.

A second fact is that, despite the failures, most of the world is still free—and it would not have been free without this mutual-security program. Therefore, it has succeeded remarkably well in its overall objective.

The third fact is that the program has saved us money, net. Without it, we would have had to spend more, not less, because we would have had to expand greatly our own armed forces. If MSA were to be cut off, we would not have more money for schools, hospitals, highways, old age assistance, or tax or debt reduction here at home, as many assume; we would have less.

The question, therefore, is not whether to continue the program; but how. How can we improve it so that it will do a better job in the future than in the past?

This whole problem is not a test of our strength, as a nation, or of our resources; it is a test of our character.

It is a test of our maturity, our decisiveness, our steadfastness.

Our relations with some of the nations still on the fence, even with some of our closest allies, have not been going too well. It is a time of testing of them, yes, but equally of ourselves. We must make it clear to all that those who stand by us will never be let down.

One thing that tends to pull some toward the Communist side is the fact that the Communists do not hesitate to speak right up for those who lean in their direction—witness today in the Middle East and South Asia. For us to appear indecisive, unable to differentiate between our real friends and our enemies, will not lose us the friends and not win over the enemies.

Mr. Chairman, our difficulties are largely because we have not quite identified our basic problem. We have measured it too much in terms of supplying food, guns, and dollars. That we have done and can do. But men do not live by bread alone—or guns or dollars. We have not paid enough attention to the things of the spirit.

Men want to be apart; but they also want to be together. They want to be free; but they also want to belong, to be important, to be needed, to be appreciated. The Communists have understood that better than we have.

We have been able to succeed with the individual problems which we understood and set our hands to. Once we identify as our greater problem this task

of winning the confidence of men, their minds and hearts, and set ourselves to accomplish that, I have no slightest doubt that we can and will succeed with it too.

Program for American Prosperity

EXTENSION OF REMARKS
OF
HON. ALEXANDER WILEY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Wednesday, July 11, 1956

Mr. WILEY. Mr. President, the American people are determined to enjoy ever-greater prosperity. Naturally, my own deep interest is in assuring full employment and full purchasing power in the hands of all our citizens.

We of Wisconsin rightly feel that we should enjoy an ever-higher standard of living. And so, I seek more jobs, bigger pay envelopes, more income for all segments of Wisconsin. Prosperity, freedom, and peace—these are my goals for Wisconsin and for all America.

Along these lines, I send to the desk the text of an address which I delivered in Footville in my State, in Rock County, outlining several steps to assure strength for the American economy. I ask unanimous consent that the text of this address be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

HON. ALEXANDER WILEY, OF WISCONSIN, SAYS UNITED STATES MUST ACT TO SPUR PROSPERITY BY AN ALL-AMERICAN PROGRAM; URGES BROAD EFFORTS PARTICULARLY FOR VETERANS, FARMERS, OLD FOLKS

(Excerpts of address delivered by Hon. ALEXANDER WILEY, Republican, of Chippewa Falls, at Memorial Park Celebration, Footville, Wis., Rock County, on July 1, 1956)

I am delighted to join in this celebration with you.

Always, it is a pleasure to be among you, and to exchange views on our mutual problems.

The celebration today and on the Fourth of July—next week—are both joyous, and solemn, occasions. For it is, at these times, that we remember, with grateful hearts, others' sacrifices for ourselves and our country. And we rededicate our labors and our ideals to the protection of our freedom and of our hard-won progress.

My purpose in addressing you tonight is to share with you a few thoughts on how we may best serve our beloved America, serve our inspiring flag, how we may best protect ourselves from all enemies—both foreign and domestic.

A DESERVED TRIBUTE TO THE LEGION

It is appropriate that it is under the banner and emblem of the American Legion that we assemble tonight. For few organizations in our land have better served Old Glory than this greatest of all veterans' groups.

REMEMBERING GROUPS NEEDING OUR ATTENTION

It is of veterans that I basically speak tonight—the veterans of all our past conflicts, the gallant defenders of America to whom we owe so much.

But I speak as well of other groups in our land to whom I believe our Nation should turn its particular attention, as well—

Our farmers, for example, who have suffered extremely serious times.

Our old folks, caught, also, in the inflationary price squeeze.

AN ALL-AMERICAN PROGRAM

For these groups, for all groups, I recommend an all-American program tonight—a program in the public interest.

Here it is:

1. Highways: Start action as soon as possible under the Nation's vast new $37 billion road-improvement program.

This Federal-State project will pump new economic health into our own and other States—into our great tourist industry, our farm-to-market transportation. It will help reduce highway accidents, will cut traffic jams, will vitalize new communities.

2. Waterway: Speed construction of the channels on the upper St. Lawrence seaway—another mighty impetus to Wisconsin industry and agriculture.

BATTLE AGAINST ANTICONSERVATION FORCES

3. Conservation: Protect the Nation's outdoor heritage—our precious national resources—our forests, parks, lakes, and streams.

Speed up action under the newly approved anti-stream-pollution bill which will enable communities to cope with the serious sewerage problem.

Meanwhile, battle against greedy interests which attempt to exploit 100 percent public resources—belonging to all 167 million of us—for purely private gain.

PROTECT UNITED STATES FROM SUBVERSIVE FORCES

4. Preparedness: Assure all-out United States preparedness against the greatest single menace in the world today—aggressive, atheistic Communism

Strengthen our anti-Red laws here at home.

Continue fearless investigations of subversion.

Build up our arms program.

This means accelerated production of super-implements of war such as guided missiles, super-sonic jet planes, modern tanks, atomic guns, and ships, and the adaptation of other miracles of scientific technology.

5. Social security: On the civilian front, look better after the needs of our 14 million senior Americans, aged 65 years and older.

Pass the liberal House of Representatives version of Social Security improvement legislation.

It includes a fairer break for elderly women—aged 62 through 65 and beyond, yes, for working women, or retired women—single, married, and widowed.

6. Education: Protect our greatest assets—our young people.

Carry out the program of the White House Conference on Education so as to meet the problem of the Nation's overcrowded classrooms, swollen by our huge birth rate—4,100,000 babies alone last year.

HOUSE VERSION OF VETS' BILL CERTAINLY NOT GOOD ENOUGH

7. Veterans: Serve the heroes who served America. As I stated at the outset, stand by our gallant defenders.

What does this mean precisely?

It means having the United States Senate take up at the earliest possible date the whole issues of veterans' pensions and compensation, including survivors' benefits.

Let me say categorically, that I do not believe that the much-amended version of this pension bill, as approved by the House, last Wednesday, is anywhere good enough.

It definitely does not satisfy the current difficult needs—in these inflationary times—of our veterans with service-connected disabilities, and of veterans' widows and dependents.

These days, too many of our elderly veterans and their loved ones face extremely serious problems of eking out an existence.

Surely, this Nation—the richest Nation on earth—can afford to provide adequately for those who saved America on the blood-soaked battlefields of the Argonne Forest and Normandy and Iwo Jima and Taegu.

So, I say, let's really do justice by our veterans. Lets enact a comprehensive pension bill—not one full of omissions and flaws—but one worthy of the name of a greatful people, a grateful America.

Meanwhile, let's improve medical facilities for our veterans, let's extend the GI home loan program at least for another 3 years, and let's oppose the unsound Bradley Commission recommendations which would arbitrarily slash veterans' benefits.

OTHER ISSUES OF INTEREST

Now, friends, I have referred thus far to 7 fields of action of an All-American Program.

Time will only be available to cover just one additional area—our farm problem.

Of course, if time were to permit, I would be more than delighted to touch upon a great many other areas of our national economy which well merit our attention.

I am thinking, for example, of the problems of our Nation's law enforcement consider the combatting of the terrible problem of juvenile delinquency—a situation, involving 1,300,000 youngsters every year, getting enmeshed in trouble with the law.

I am thinking, too, of the problem of assuring integrity in American politics and American elections.

That means, for example, passing the honest elections bill. It has long been pending on the Senate Calendar, but it may be scuttled in the closing rush for adjournment.

I am thinking, too, of the Nation's health needs, or our housing needs or the needs of the Nation's airports (which are already jammed with planes and traffic).

And there are a great many other needs as well.

THE NEED FOR JUSTICE FOR FARMERS

No all-American program would be complete, however, without detailed reference to that great group of our fellow citizens which feeds this Nation; that great group which provides the backbone for our entire way of life.

I refer, of course, to the agricultural segment of our population.

I need not tell you in detail, my friends, that the rural areas have definitely been hard hit by serious economic problems.

I am not speaking simply of the farmer who has been caught in a terrible cost-price squeeze—costs going up, milk checks going down, or relatively stationary.

I am speaking, too, of the merchant in the town who has to sell to the farmer, and of everybody else who depends for his living on the farmer's purchasing power.

So, I say to you, my friends, that one of the great undone tasks in our country today is to assure a fairer break for the American who earns his living on the soil.

I say to you that it is unfair that prosperity should be booming for virtually every single other group in our population, while the farmer lags far behind in getting his fair share of the increased income.

I certainly don't want to see other groups' prosperity lowered in the farmer's behalf; and the farmer doesn't want that.

I simply want to see the farmer's own income raised. I want the farmer to get a fair break without, in any way, prejudicing the interests of America's consumers—our consumers of milk, butter, cheese, ice cream, nonfat dry milk solids.

After all, the farmer isn't even getting 50 percent of what the consumer is paying on the average for his bottle of milk.

I want the farmer to get a fair share of the consumer's dollar.

Simultaneously, I want the consumer to be able to afford to drink an ever-increasing

quantity of milk and to eat more delicious, nutritious cheese, for example.

I certainly don't want to see more farms forced out of business because of the inability of the farmer to get his cost of production, plus a reasonable profit.

MY EFFORT TO RAISE MILK PARITY SUPPORT

The farmer who sells manufacturing milk has faced particularly difficult times.

That is why I have been trying to raise minimum parity supports for manufacturing milk to at least $3.45 per hundredweight—a mere 20 cents may sound like a good deal to someone who is not too well familiar with farm problems. But that figure represents just around 8 cents per quart of milk, which is in turn only a third of what the consumer may be paying.

I haven't succeeded, as yet, with the Department of Agriculture in getting even this modest $3.45 level established, but I certainly intend to continue my efforts.

INCREASE DAIRY CONSUMPTION

As you all know, we have just marked the conclusion of another June Dairy Month. I hope that its conclusion will not mean that America will now forget the need to assure justice for the dairymen.

We need to observe Dairy Month—12 months a year. Every single month, we need the precious calcium of milk, as well as all the other body-enriching and body-building elements which "Nature's Most Perfect Food" provides.

Most important of all, every American must become acquainted with the fact that it is in his own interest voluntarily to increase his own consumption of dairy items.

The so-called milk surplus would disappear overnight if Americans would just drink a single glass of milk more per day.

And so, I pledge my continued efforts for the farmer, for a fair price for him. I pledge to work, too, for a modernized parity formula which reflects his real costs, and for other essential actions—like the prompt carrying out of the new soil bank program—in his behalf and in the public's behalf.

CONCLUSION

Thus, my friends, I have spelled out a few points in an overall program for our country. It is not designed, as I have said—within this limited time—to be anywhere near a complete program. But at least, it will serve as a good beginning, I think, to satisfy the needs of our expanding America.

This country faces unlimited horizons. It faces vast, exciting new frontiers.

There need be no limit on the growth of our country or on the progress of our country.

And so, under the leadership of right-thinking, right-acting persons, such as is so well provided by the American Legion in every community of our land we will go forward.

And as we come to celebrate Independence Day, 1956, we will inaugurate a whole new era, we trust, of peace and prosperity for our beloved land.

Secretary of Defense Charles E. Wilson

EXTENSION OF REMARKS

OF

HON. EDWARD J. THYE

OF MINNESOTA

IN THE SENATE OF THE UNITED STATES

Wednesday, July 11, 1956

Mr. THYE. Mr. President, there appeared in the Duluth Publicity of July 6, 1956, of which Mrs. Frieda J. Monger is the editor and publisher, a timely editorial entitled "Big Man in a Big Job."

I ask unanimous consent that it may be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

BIG MAN IN A BIG JOB

The whole country knows that since he first became Secretary of Defense, the able and greatly experienced Charles E. Wilson has steadily brought order and reduction of waste in his Department. Also with the practiced eye of one of the former greatest manufacturers of equipment, he is especially concerned with the rapidity of obsolescence of new airplane models when expanding the Air Force. He knows what he is doing.

Mr. Wilson is especially concerned with the growing serious threat to our national economy due to the confiscatory rate of crushing peacetime income taxes which if continued could hamstring our military effort in a future war.

Too many Washington politicians, smarting under the results of the necessary scrutiny and pressure which Mr. Wilson lays on spending, appear to lie in wait for a chance to leap on and twist the meaning of some word he may utter at a press conference, in order to make the going harder for him. Perhaps they hope to finally make him quit, although he is no quitter.

War is only one of the important avenues of maneuver in competition for world trade, the ultimate goal. Private enterprise of the United States holds its lease on prosperity only through its ability to undersell its competitors. It can successfully compete with foreign private enterprise, but not always with foreign government agencies or industries financed with United States taxpayers' money by the United States Government.

Instead of focusing attacks on Mr. Wilson, some of these Congressmen who rove Europe and Asia might better discover and report the change in Russian tactics to the beginning of a grand effort in economic warfare and competition with the West on the greatest scale the world has ever known. Soviet manners are changing but not the goal.

It appears that the Russians, who expected the West to sink into deep depression after the last war, having guessed wrong, have now shifted their major plans for future attack to economic competition. They now appear to have recognized that the West has built the Western World as we know it today by a system of government which gives freedom of action to the individual, thereby releasing individual energy, as compared to their totalitarian system which bottles it up. But they also hope to go the West one better with a still more efficient Asiatic system as they think, whereby they eliminate the equal opportunity for every man which is basic in Western political economy, and especially in the United States. They think this equal opportunity is our great weakness which they can exploit. Of course, they know very well that to give equal opportunity to all in a nation would soon develop a parliamentary system which would destroy the dictatorship which is necessary for communism to establish.

Thus we hear that in place of the equal opportunity for all, they conduct a search for brains—for the ablest men whom they promote to commanding positions in industry with higher salaries even than in the United States, and with various other inducements for achieving the lowest possible costs. These relatively few able, top men in industry can now pass on their houses and gardens and the accumulation of rubles in their bank accounts to their children with negligible death taxes. Income taxes in the highest bracket are generally reported to reach only 13 percent. There are already many very wealthy men in the management of Russian industry whose rubles, deposited in the banks, supply the Russian Government with an unlimited savings flow for their borrowing.

But for labor they plan to continue the present iron discipline backed by the Army, slave-labor camps where necessary, long hours, and the lowest bearable scale of living. This more efficient plan, as they believe, will within a few years make it possible for Russia and her satellite countries to undersell every nation in the world. They expect to industrialize some 900 million people in Europe and Asia. They are confident they can raise their steel production from the 50 million tons of 1955 to 75 million tons by 1960, and to 100 million tons later in the sixties. They already have the second largest machine-tool industry in the world which is rapidly growing.

For Western consumption they still talk about their Socialist state and a union of workers, etc., but in Russia there are no unions and not even socialism, which is totalitarian and next door to communism. They maintain the same old ruthless dictatorship to which the Russian masses have long been accustomed. Promotion of the international working class movement covers up the internal design to raise costs abroad with a temporary higher standard of living, so that the Russians can better compete later on. It is astonishing how the Communists continue to talk about their Socialist revolution—merely a term for western Socialist world consumption—when socialism is not even planned, but instead the iron rule of a cruel dictatorship using terror, threat, and force.

To slow us up in the West, and especially in the United States, they promote all brands of socialism over here which will raise our costs and lower the rate of production. They want labor in the West to take it easy. Through their agents over here they hope to help along inflation in the United States and to scare us into every possible Government expenditure, as for instance the building of the Egyptian dam at a cost of over a billion dollars, for which the Egyptians would give the credit to Russia for being so smart as to get the dam for them without cost to Russia or Egypt, rather than give any credit to the United States which would put up the money. They well know that only when the United States Government expenditures have been cut down will moderate curbs become really powerful in restraining the wage-price spiral.

Thus Russia appears to be quietly turning to thorough preparation for a vast, long-range economic war, while boldly drawing world attention to their aeroplane developments to deceive the West, knowing that both their own and the Western World aeroplane equipment must constantly continue to become more obsolete.

Reflections on Independence Day

EXTENSION OF REMARKS

OF

HON. STYLES BRIDGES

OF NEW HAMPSHIRE

IN THE SENATE OF THE UNITED STATES

Wednesday, July 11, 1956

Mr. BRIDGES. Mr. President, I ask the unanimous consent to have printed in the Appendix of the RECORD an editorial from the July 5 issue of the Hampton Union, Hampton, N. H., one of New England's leading weekly newspapers

which is edited and published by a young and aggressive journalist, Edward Seavey. I think the editorial, which comments on my speech in the Senate on "The moral issues of American foreign policy" and Mr. Seavey's reflections on Independence Day, is one deserving of the attention of all Americans. For this reason I ask that it be placed in the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

REFLECTIONS ON INDEPENDENCE DAY

We wonder how many, if any, of the thousands of holiday-minded vacationists on their way to the seashore or lake yesterday took a few moments out to reflect upon the true significance of the Fourth of July.

For it is much more than a summer holiday—being the day set aside to commemorate the adoption of the Declaration of Independence on that day in 1776.

In case you have forgotten your school days and memory lessons, the preamble to the Constitution contains this phrase: "We hold these truths to be self-evident, that all men are created equal that they are endowed by their Creator with certain inalienable rights, that among these are life, liberty, and the pursuit of happiness."

There are many today who are justly concerned about the loss of these hard-won freedoms as a direct result of the gigantic give-away program known as foreign aid.

With almost life or death urgency placed on our program of largesse to ungrateful nations by one-worlders, it is refreshing to hear some plain talk on our so-called foreign policy and especially from our own United States Senator STYLES BRIDGES, who has proven in the past that he understands the real threat of communism to this Nation and to the rest of the world's free people.

In a hard hitting speech on the floor of the United States Senate last Wednesday, BRIDGES spoke on The Moral Crisis in American Foreign Policy, which should provide us all with some food for thought as we reflect upon the meaning of Independence Day.

Senator BRIDGES warned his colleagues, "How we conduct our foreign policy, and whether we successfully handle the issues confronting us, will determine not only the fate of Americans now living, but the fate of generations to come—and perhaps the fate of our world. It is because of these awesome pending decisions that I ask for searching examination of our foreign policy—what it is and what it should be to best serve our people.

"I think we might well spend a few moments reviewing the fundamentals and thereby clear the air. Let us see whether we can determine the essentials for a foreign policy that would truly and effectively advance our national interests.

"So much has been written—so much has been said—and the confusion becomes so great, that we have lost sight of the simple obvious fact. That fact is that the purpose of our foreign policy is to promote and protect the true interests of our people. No one will deny this simple statement of purpose, and yet we go off into such incredible confusions.

"The real interests of our people: what are they? The ideals of the Republic: what are they?

"Our real interests are the preservation of our freedoms—our way of life. As individuals we want to realize ourselves morally, spiritually, economically—to live in decency and to raise our families in the best traditions of our free society. As Americans we want to be citizens of a Republic which provides a government under a constitution which guarantees those rights.

"Because of war and circumstance, the United States has become the leader of the free world. The power of example is of overwhelmingly critical importance. To the extent that we are determined to maintain our own freedom, our friends and allies will be disposed to follow our example.

"As Americans we want to remain free to live according to our democratic traditions—to work, to hold property, to raise our families, to live in our town, city, State, and Nation free from the danger of attack and foreign conquest.

"By foreign conquest I don't merely mean military conquest. I also mean intellectual and spiritual conquest. The time has passed when only men's bodies are conquered. We now live in a world where the dictators are as much interested in the conquest of men's souls and minds as that of their bodies and their land.

"Real security, which once defined in only military terms as being freedom from the danger of armed invasion, has a wider meaning now. Security now means not only physical defense against our enemies. Security now also means defense against spiritual and intellectual demoralization.

"I am concerned with our moral and spiritual security as I am with our military security. We are nearly all cognizant of our military security. Needless to say, our military security presents serious problems—but most of us are alert to these problems. Once aware and alerted, I have great confidence in American technological skill, American economic know-how, and American resourcefulness. These talents are a great asset in building a military defense.

"It is with the moral and spiritual side of our problem that I am greatly concerned. I don't say Americans are morally weak. I do say we are morally confused. Nowhere is this moral confusion worse than among our so-called liberal intellectuals. This confusion tends to paralyze the mind and will. The more extended the paralysis, the greater is the Communist victory.

"There are moral questions on which we cannot be neutral. The recognition of physical torture as a deliberate instrument of government, the employment of secret police, the use of summary trials and executions behind closed doors, the dragooning of forced labor—these and other practices of tyrannical despotisms have been abhorrent to our people.

"We can exercise self-restraint, I hope, in our international relations. We can respect the rights of other nations. We can understand the yearning of colonial peoples for their freedom because we ourselves were a colonial people once upon a time. We can refrain from meddling with the traditions and religion and customs of others. We certainly don't want to say 'Do it our way, or else.'

"But, by the same token, we cannot tolerate the systematic effort of Moscow to impose communism upon nations and peoples who do not want it. That is what the Kremlin has been doing for decades. Here a murderous coup d'etat as in Czechoslovakia. There a wrecking job done by infiltration as in Indochina. To suppose that the piecemeal absorption of other countries by the Communists is of no direct concern to us is insane.

"Those self-styled liberals who defend the 'right' of the Russians or Czechs, the Chinese or North Vietnamese, to go Communist are talking nonsense. They might just as logically defend the right of inmates of concentration camps to be slaves. The captive peoples did not 'go' Communist—they were driven into the Kremlin's prison of nations, hermetically sealed against escape.

"Let us never forget, also, that the Red Empire is not limited to the countries already behind its iron and bamboo curtains. Every Communist Party in what remains of the free world, every false-front organization operating under Moscow discipline, every guerrilla warfare contingent under Communist direction, is an integral part of the Red Empire. We are not dealing with a group of conventional nations but with a world-wide conspiracy dedicated to making this one world—one Communist world.

"The necessity of international political life makes it necessary for Foreign Offices, including our State Department, to treat Soviet Russia as if it were 'just another country,' but we know it is nothing of the sort. In reality, Soviet Russia, its satellites, and its allies are the core of an apparatus of power and coercion which penetrates in varying degrees, every nation on every continent of this earth.

"So why the new optimism? Why the disastrous letdown of our vigilance?

"If only our optimists today could be induced to do their homework in Communist history. They would realize that in the middle thirties, under cover of Stalin's pretense of live-and-let-live united fronts, the Soviets forged the weapons of subversion and infiltration which they exploited to the full when the line was changed.

"They would recall how generally it was then accepted that communism had matured, that it had ceased to be interested in world revolution, that Stalin the realist was concerned only with improving conditions in his own country. Those who tried to warn the world that communism had not changed its nature but was temporarily employing cunning instead of brute force, were denounced as Red baiters and alarmists.

"Yet, today we are neck deep in the same confusions and illusions, as if the 1930's had never been. In order to soothe our nerves and our conscience, we are fed with fairy tales about new looks in the Communist world and the magic of collective leadership.

"I am tired of this kind of talk, and I am especially tired of being told that I am an alarmist. I am no Johnny-come-lately in watching the Communists pitch curves at the so-called liberals.

"Now, we have the new look in Russia. What is the reason for it? We can only speculate.

"My own guess is that the reason is double. The first part of the reason is that their domestic political situation forced a new piece of window dressing. The rest of the reason is that those in charge of the Communist machine, never giving up their goal of world dominion for an instant, now believe that an exhibition of sweetness and light will soften up the West.

"The present Communist rulers cannot wash the blood from their own hands. Their helpless subjects have as yet no alternative but to pretend to accept the alibis.

"If ever there was a moment when the revulsion of mankind should have found forthright expression, it is now. The most extreme of the charges against the Soviet regime—those which our muddled pro-Sovieteers once denounced as inventions and slanders—have now been confirmed by the culprits themselves.

"But we see no such revulsion. It is as if free men had lost their capacity for telling good and evil apart—their capacity for indignation at the spectale of millionfold crimes—even the crimes of which they themselves were the victims.

"In the conduct of our foreign affairs, I am driven to conclude we have lost the compass of moral principle. More and more we operate in gray areas. Somewhere between good and evil. The excuse between good and evil. The excuse, of course, is 'political realism.' But history is our guaranty that such realism is a snare and a delusion.

"It was a false expediency which produced Munich and Yalta and the chain of appease-

ments on which our Soviet enemy has been nourished to his present dimenstions.

"What have we got in exchange for the billion dollars we gave to Tito? We fed him, bolstered him when Stalin tried to crush him, we supplied and equipped his army. And what do we get for our pains?

"We get a Tito honeymoon staged in Moscow. We get a statement from Marshal Zhukov to Tito that in war the Kremlin and Tito will fight 'shoulder to shoulder.' We get an official statement that Tito and the Kremlin 'will make stubborn efforts' to see that Red China is admitted to the U. N. Are we supposed to forget that the U. N. voted Red China an aggressor in the Korean War and that the ban has never been revoked? We get an official statement that East and West Germany must be reunited, not by plebiscite and popular vote, but by a negotiated deal. We get an official statement that Formosa must be handed over to Red China. Americans paid $1 billion for this.

"Let us bear in mind that every American compromise, however it may be explained, is multiplied in other countries into surrenders. Our job, to ensure our own security and to secure the survival of freedom on this earth, is to galvanize the stragglers, the fearful, the intimidated, by examples of moral valor and spiritual dedication. Such is the rule of leadership which, though we never sought it, we can reject only to our own peril.

"That, my friends, is what I meant when I said that attitudes and basic principles are no less decisive than actions and policies. An attitude of compromise on essentials, phony friendships with gangsters at any price, leads to one set of decisions. An attitude related to deep-rooted moral values leads to an opposite set of decisions.

"We dare not excuse a failure of nerve and a failure of principle, for those witness a weakening and threaten a collapse of our whole moral structure. If the present drift to cynical grayness, where once we knew the difference between black and white, is not arrested and reversed, we shall lose our ability to defend ourselves. Indeed, we shall have little left that is worth defending."

New Hampshire can be proud of its senior Senator for setting the record straight on our foreign aid and foreign policy program. It remains to be seen whether Americans will heed his warning.

Father Flynn of Minnesota

EXTENSION OF REMARKS
OF
HON. EDWARD J. THYE
OF MINNESOTA
IN THE SENATE OF THE UNITED STATES
Wednesday, July 11, 1956

Mr. THYE. Mr. President, an editorial entitled "Father Flynn" appeared in the Minneapolis Tribune of July 9, 1956. The editorial concerns Father Flynn, of St. Thomas College, who died at the very young age of 54. Father Flynn was a great educational leader. He was an inspiration to all who were fortunate enough to make his acquaintance. For that reason, I ask unanimous consent to have the editorial printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

FATHER FLYNN

Many, many people, not only in Minnesota but all around the country—Protestants and Jews as well as members of his own Roman Catholic faith—will feel a deep personal loss in the death of Father Flynn ("The Very Rev. Vincent Joseph Flynn" always seemed a too formidably formal designation for this hearty, friendly priest). His humanitarian activities leaped geographical, political, and religious boundaries and made friends everywhere. One always knew he was a very busy man, but it was only on his death and the listing of all of his wide-ranging civic, scholarly, and church affiliations that many of us realized fully how much of himself he gave to other causes than that of his immediate affection—St. Thomas College and Military Academy.

Father Flynn will be remembered in many places of the world as a scholar, a churchman, an educator, etc. But perhaps the people of this community may be excused if they remember him not so much for his more austere pursuits but for his readiness to be a friend to all.

Fishing for Leisure Time Use

EXTENSION OF REMARKS
OF
HON. JOHN D. DINGELL
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 11, 1956

Mr. DINGELL. Mr. Speaker, an address by my good friend, Richard H. Stroud, executive vice president of the Sports Fishing Institute, is of considerable interest to all Americans, since it so clearly outlines the problems which face the people of our land. It is of great importance because it sets up the basis of a program whereby conservation can be shown to be a matter of concern to all Americans, and whereby it can prosper for the benefit of all, by wise and powerful interaction:

FISHING FOR LEISURE TIME USE

The fisheries profession is a small one. But it faces squarely one of the greatest challenges to confront American civilization today. If it has the needed guts, intelligence, and imagination, it can in the next few decades establish the profession as a vital factor in the national welfare.

That challenge is: How shall our society make proper use of increasing amounts of leisure time brought on by a rapidly decreasing workweek? The 40-hour workweek is standard in industry, if not among fishery workers, and many people already work only 35 hours per week. Indeed, with the rapid growth of automation, the 30-hour week is close at hand. Some economists predict that Americans of this generation may yet find themselves yielding up their switches and push buttons to relief crews after working perhaps only 3 days per week.

At the same time there is growing evidence that the stress of modern living and the decreased physical activity accompanying it is wreaking havoc upon our society. The incidence of psychosomatic and of coronary and other physical ills has risen to near-epidemic proportions and is approaching the level of a national crisis. Leading medical authorities in these fields have testified before Congress or reported to leading medical groups their findings to this effect.

The solution to this serious problem is to provide an acceptable antidote. It must be not only painless but also attractive and eminently worthwhile. It must be completely relaxing of mind and body, yet it must require modest physical exertion. Sport fishing provides us with a near-perfect answer.

Already, fishing is well established as the most popular of all participation sports. At last count about 18¾ million citizens bought angling licenses. California was the only State that licensed most of its salt water anglers. Accounting for unlicensed anglers in all categories, a total estimate of 30 million Americans who fish for recreational purposes is believed by many to be conservative.

These figures serve only to emphasize that our combined efforts to shorten the time between bites are important. We might as well face the prospect now, that, where 1 out of every 4 walking Americans now fishes for sport, perhaps every other American may do so tomorrow. This could mean a three-fold increase in fishing pressures in our lifetime.

Such a growth of angling participation should be actively encouraged. We shouldn't be so concerned over increasing fishing pressure that we strive to suppress it. More than one great nation crumbled with the growth of leisure time which failed to develop a form of outdoor recreation or some other philosophy requiring proper husbandry of its natural resources. It does not seem too far-fetched to suggest that outdoor recreation such as sport fishing may hold our very salvation as a nation.

SPORTSMEN PLAY KEY ROLE

In any such event, it would appear likely that two of our current major fish management problems—superabundance of underutilized pan fish and abundant unharvested rough fish—will become our chief fish management assets. By this time, too, it should be apparent even to newly matriculated fishery biologists that the sportsman is an ally and not an enemy. College and university professors may finally recognize the need for fishery students to study the social sciences, psychology, and human relations.

We should never overlook the importance of the sportsman in our work. We exist for his benefit. Nevertheless, the sportsman has a vital role to play in creating suitable working conditions that make our efforts on his behalf possible. The fact is, we can't get along without each other.

Creation of proper working conditions constitutes a continuing and important challenge to the organized sportsmen. In most States low salary scales are a serious deterrent to progress in fish conservation. The average pay of professional fishery workers is only about two-thirds that of laborers in the building trades. If it were not for dedication to the job, and confidence in the future, few men would remain in this field.

A few States are beginning to realize that this is a serious problem. In one north central State, for example, the sportsmen are taking positive steps to correct this inequity. They realize that their fish and game director is grossly underpaid at the current $5,000 figure set by statute. He administers annual budgets of over $1,500,000. Even more important, his work strongly influences the condition of a recreation business amounting to over twenty times as much. No industry of comparable size would think of paying such a ridiculous low salary to its chief executive officer.

Consequently, the organized sportsmen have set up a Statewide, nonpartisan action committee to rectify the situation. It is dedicated to bringing about statutory changes to raise the director's salary to some figure between $10,00 and $15,000. This is still "peanuts" by industrial standards. But it will do much to help solve the salary problem for fishery and wildlife scientists. If successful it will be one of the outstanding conservation achievements of the decade.

MAXIMUM SPORT FOR THE MOST PEOPLE

As I see it, people are the most important part of fish and game management. All research and management activities should have as their ultimate objective to benefit people as a social unit in some way.

Such a philosophy rejects a single-use concept of natural resources. It definitely em-

braces a broad multiple use concept. And it demands greatly enhanced and broadened outdoor recreational opportunities.

Conservation needs a cause that is more appealing to the general public than ill-defined and vague intangible values. It needs a cause that is more influential at the conference table than mere dollar volume of business generated.

If we continue to place the emphasis in conservation planning only on the maintenance of suitable conditions for fish and game itself, we will continue to fight a losing battle of attrition against the stronger forces of resource exploitation in the utilities and industrial fields. If, however, we emphasize the creation, development, and maintenance of outdoor recreational facilities for the benefit of the general public—in the forms of fishing, boating, hunting, etc.—we gain new and potent muscles.

The sport of angling, for example, provides a bond of mutual interest that cuts straight across all racial, social, economic, religious, age, and sex distinctions.

If provision of maximum recreational opportunity for leisure-time use by people becomes the goal and the guiding force for our efforts, the natural resources must become properly managed for wise multiple-use purposes. This provides the new cause, together with the potential weapon—mass public opinion—needed to prevail in that cause.

I have nothing against intangibles as such. For example, I see no reason why it should not be possible to measure, and translate into dollar equivalents, the benefits accruing to national public health from frequent indulgence in proper outdoor recreation such as sport fishing. I see no reason, either, why it is not possible to measure and translate into dollar equivalents similar benefits accruing to worker efficiency on the industrial production line. The chief obstacle in the way, admittedly large, is money to undertake the needed studies. This, too, may not be insurmountable.

The implications of significant findings in these areas are staggering. Positive findings would provide overwhelming economic advantages for conservationists at any conference table.

WATER NEEDS FOR RECREATION CRITICAL

One of the best places to start is also nearest home. The most essential commodity for recreational fishing is water. Unless we get moving right now, we may run out of water for this purpose and in a hurry. For some unknown reason, representatives of the United States Soil Conservation Service are beating the drums for the lawmakers in many Eastern States to substitute Western States doctrine of prior appropriative use of surface water resources in place of the long-established one of riparian rights.

Essentially, the western doctrine holds that the first man to grab the water gets it, and may the devil take the hindmost. Eastern riparian rights doctrine holds that a water user shall pass the water on downstream unimpaired in quantity and quality. The latter has become generally modified to allow reasonable use to the extent that the water is not materially impaired for downstream users. It is a sound evolutionary change.

Irrigation in eastern agriculture poses a new problem of material consumptive use of water supplies. Already, at least 18 States east of the Rockies have water study commissions currently at work drafting proposals for revision of the State water laws.

The movement toward increased consumptive use of water must be carefully regulated if eastern public sport fishing, a nonconsumptive use of water, is to survive. We are not opposed to overhauling our water laws. They probable need it. But the western principle of prior appropriative use of water is a serious menace to angling and other important forms of outdoor recreation.

The doctrine of riparian rights, though old, has been a valuable weapon in the anti-pollution fight. Without it sport fishing might well have disappeared from many Eastern States.

If outdoor recreation is to be maintained or expanded in the next decade conservationists will also need to become aggressive. They will have to see to it that they occupy prominent places on the State water study commissions. And they must see to it that recreation is firmly and clearly established in law as a primary beneficial use of water resources. Otherwise, the special-interest water users and patronage-minded legislators will sell outdoor sports down the river. Only there'll be no river, just an empty ditch.

The proper action is to join up with the water study groups and indoctrinate them with the vital need for outdoor recreation. But this strategy generates a further responsibility to determine adequate standards of water quantity needed to accommodate increasing recreational demands. We already have acceptable standards of water quality. They alone are not enough to meet this new challenge in the face of increasing consumption of water supplies by agriculture and industry.

This is one of the reasons that make it imperative to plan resource use with conditions for people, rather than for fish or game, uppermost in mind. For example, we can readily assure that well-aerated pollution-free water will flow down the creek by enforcing present-day quality standards. Yet the quantity of water might amount to a comparative trickle. The water in a fluctuating reservoir might be pure as the driven snow—and cover no more area than the skating rink at Rockefeller Plaza.

Under these circumstances some fish could survive, fishing for the general public could not. Remember, too, that water sports include boating, water skiing, and swimming, in addition to fishing and hunting. Indeed, fishing has become inseparable from boating on many waters and these sports are growing hand-in-hand. The Outboard Boating Club of America has indicated that over 65 percent of all motors and boats sold are used primarily for fishing purposes.

How then should conservationists define adequate standards for water quantity? Certainly not on the basis of fish habitat needs alone. They must be set in consideration of human habitat needs for outdoor recreation which the fish and game make possible. We'd better be clairvoyant here—and soon. If not, we may wake up and find ourselves in the role of the Ivy League Sunday quarterback whose alma mater lost on homecoming day. It will be too late then.

Postal Rates

EXTENSION OF REMARKS
OF
HON. EDWARD J. THYE
OF MINNESOTA
IN THE SENATE OF THE UNITED STATES
Wednesday, July 11, 1956

Mr. THYE. Mr. President, I have in my hand 2 editorials on the same subject, 1 of which was published in the Washington Sunday Star of July 8, 1956, under the heading of "Sound Vote on Mail Rates," and the other appeared in the Washington Post and Times Herald of Wednesday, July 11, 1956, under the heading "Realistic Postal Rates."

Mr. President, I believe very firmly that postal rate legislation should be enacted at this session of Congress. For that reason, I ask unanimous consent that the two editorials be printed in the Appendix of the RECORD.

There being no objection, the editorials were ordered to be printed in the RECORD, as follows:

[From the Washington Sunday Star of July 8, 1956]

SOUND VOTE ON MAIL RATES

The House has taken proper and courageous election-year action in voting to raise postal rates enough to bring in an estimated $430 million annually. We hope the Senate, which thus far has shown little interest in the matter, will concur.

Operations of the Post Office Department consistently have been run at a loss—in recent times approaching a half billion dollars a year. The explanation has been simply that those using the mails the most have not been paying a fair price for the service received. The net effect, of course, is that the taxpayers as a whole have been subsidizing a Government venture that benefits some groups far more than others. The formula contained in the bill just passed would correct this inequity by putting the service on approximately a fair pay-as-you-mail basis. Ordinary first-class-mail rates would be raised from 3 cents to 4 cents—bringing in an estimated additional $296 million. Domestic airmail rates would be raised from 6 cents to 7 cents an ounce—calculated to bring in another $16 million. Small increases in several other categories would yield about $120 million more.

President Eisenhower and Postmaster General Summerfield have been strong advocates of the postal increase as a matter of good business practice. The opposition has been primarily partisan and political, headed in the House by Democratic leader MCCORMACK, of Massachusetts, on grounds the increases would hurt small business concerns and average families. Fortunately the House Post Office Committee and the Rules Committee—both under Democratic chairmanship—broke with the party leader on the issue in order to permit a vote on the floor. The result was not only a victory for the administration, but for responsible management in the Federal Government.

[From the Washington Post and Times Herald of July 11, 1956]

REALISTIC POSTAL RATES

The House did a good piece of work in its surprise approval of the bill to increase postal rates. House Democratic leaders, who opposed the increase, deserve credit for bringing the bill to a vote in which they were overriden by Republicans. This newspaper has supported the bill vigorously for two principal reasons: (1) our belief that among all the hidden subsidies granted by the Government there is perhaps the least excuse for subsidies in artificially low mail rates that often serve to benefit, not the impoverished individual user, but commercial business; and (2) our conviction that newspapers and magazines, which have for years been favored with ridiculously low second-class rates, ought of all groups to pay their own way.

It is a pity that passage comes so late in the session and that the Senate has not held hearings on the controversial measure. Nevertheless, perhaps the example of the House will serve to stir action in the Senate, which passed a similar bill unanimously in 1951. We suspect that there is less political dynamite than legislators may fear in the proposal to increase first-class rates to 4 cents for regular mail and 7 cents for airmail. Few persons really would like the idea that when they stepped to the stamp window they were accepting a Government handout—which would be the real meaning of continued failure to place postal rates on a cost basis.

The Importance of Continuing the Antipollution Battle

EXTENSION OF REMARKS
OF
HON. ALEXANDER WILEY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Wednesday, July 11, 1956

Mr. WILEY. Mr. President, on my recent trip throughout Wisconsin, I found a deeper interest than ever before in a subject that has always been of tremendous significance to my State, and that is the battle against stream pollution.

I was pleased to be able to report to the people of my State that the Federal Water Pollution Control Act had been extended.

It was a particular source of pleasure that, included in this extension, is a program for grants-in-aid to the States for sewerage treatment facilities.

Thus, when I visited the twin cities of Neenah-Menasha, I cited the fact that up to a maximum of $250,000 could be made available for the Twin Cities' own projected sewerage disposal plan.

I have in my hand now the text of a brief release which I issued on the occasion of my visit. It cites the fact that I am now doing everything I can to help accelerate the actual appropriation of funds under the Water Pollution Control Act. An authorization is, of course, no good unless there is an actual appropriation under the authorization.

I have in my hand, too, the text of a splendid feature, which was written by one of the top experts in the field of agriculture and conservation of my State, Mr. Lewis C. French, of the Milwaukee Journal staff. It is entitled "The Fight for Clean Water."

It tells in a factual, graphic manner the many-sided battle to clean up lakes, rivers, and streams.

I ask unanimous consent that the text of Mr. French's splendid article, as published in the June 3 issue of the Milwaukee Journal, be printed in the Appendix of the RECORD, along with the text of the press release, which I issued in Neenah-Menasha.

There being no objection, the article and release were ordered to be printed in the RECORD, as follows:

[From the Milwaukee Journal of June 3, 1956]

THE FIGHT FOR CLEAN WATER—FEDERAL GOVERNMENT ENTERS ANTIPOLLUTION CRUSADE IN WHICH WISCONSIN HAS LED; CONGRESS SET TO ACT THIS MONTH

(By Lewis C. French)

While a summertime visitor to Milwaukee, California's Gov. Goodwin S. Knight gazed with sheer envy at the waters of Lake Michigan.

Scanning that shimmering lake—perhaps Wisconsin's most precious natural asset—the California governor thought of the costly efforts to get usable water enough for his thriving State. There were aqueducts tunneling through mountains, reservoirs costing millions, and great pumping stations to get distant river water. Still these measures fell short.

But look at lucky Milwaukee and Wisconsin: As far as the horizon and beyond, an almost unlimited supply of fresh water, and to the north, Lake Superior, even larger and colder.

Then as a guest of a Fox Point resident, the governor stepped into a shower bath and turned the faucet, expecting a cooling spray of that lake water.

But not a drop of water from that nozzle.

"Incredible—what goes on here?" asked the governor, a bit bewildered. "And with all that lake water for the taking at your front door."

WISCONSIN PIONEERED IN POLLUTION CURBS

Milwaukee officials have promised water system improvements to prevent the taps from running dry in the future, but that is only one aspect of the State's water problem. At least as important is protection of the purity of Wisconsin streams and lakes, both for beauty and sport and as a healthful water supply for all the State's people.

Congress is slowly awakening to an urgent fact that Wisconsin recognized some years ago: Clean water is more than a natural resource—it is a necessity of life.

It is a matter of pride that Wisconsin showed the Nation and the free world the way to keep the wild rush of roily waters from eroding the thin skin of fertile topsoil. This was done on the pioneer soil conservation project at Coon Valley in southwestern Wisconsin, started in 1933.

Then seeing the danger to its abundant water supplies from the poison of pollution, Wisconsin—prodded by conservation groups—revised its water laws in 1949. The State stiffened its regulations to force municipalities and industries to meet higher standards of water purity.

Today, Wisconsin is far out in front nationally in this campaign for curbing pollution. Now Uncle Sam is joining the crusade.

UNITED STATES TO GET TOUGH

At long last the United States Government through its Public Health Service and the Department of Agriculture proposes to get tough and even to spend some money protecting the purity of water supplies.

"The problem of water pollution control grows more pressing with population growth and with the development and expansion of industry," President Eisenhower said in his health message on January 27. "The present acts dealing with water supplies should be strengthened and made permanent."

Congress must do something soon, for on June 30, the 1948 Water Pollution Control Act—an inadequate piece of legislation—will expire.

The national lawmakers now have stronger measures pending. One calls for $2 million a year, 1956 through 1960, to help States and interstate agencies "establish and maintain adequate measures for prevention and control" of water pollution. The Federal Government would pay between one-third and two-thirds of a project cost.

The other pending measure would authorize $1 billion, with no time limit, for aid to municipalities in building sewage plants. The Federal contribution would be limited to one-half the cost, and not more than $500,000.

INDOOR PLUMBING RAISED DEMAND

The Nation's water problem is essentially to stop pollution. There are three great demands for water: The public, industry, and agriculture. There is water enough for all if it can be kept pure and reutilized.

All over the United States, including the farms and the crossroads hamlets, prosperity and higher living standards have moved sanitation indoors. Everybody wants running water and a bathroom.

Now every time you flush a toilet, it takes around 7 gallons of water. Take a shower. Down the drain goes 25 gallons of soapy water. Wash the dishes, and 2 more gallons. Most new automatic washers take around 25 gallons. Bath time for the kids, and count on around 30 gallons for each one, for the Saturday night washtub bath is a thing of the past.

And every drop of this household water in everyday living must be purified, made safe by expensive treatment equipment.

The Wisconsin committee on water pollution, making accurate chemical and biological tests, has found that many of our rivers, some of our lakes and even certain parts of Lake Michigan are badly polluted. Some areas, such as beaches at Green Bay where the Fox empties, cannot be used. There have been times when public use of several Milwaukee beaches stopped and waters of other industrial cities were placed on the questionable list.

INDUSTRY IS BIGGEST DESPOILER OF WATER

The Wisconsin committee often encounters resentment from the small villages. One of the greatest problems is that of the part-time farmer, living near an industrial center, putting in modern sanitary improvements. The urban workman seeking elbow room and a piece of land moves into his fringe urban-rural area. He, too, demands indoor plumbing. But too often these residents do not like the costs of building the sewers and treatment systems meeting the stiffer State standards.

Both Wisconsin and Michigan are making decided progress abating the nuisance of these toxic wastes. In Wisconsin there is but one county without sewers in its cities and villages, and of the communities with sewers, those having 97 percent of the population are connected to treatment plants.

"The biggest offender in despoiling water is industry," reads a Government report.

The rate at which our factories, mills, and powerplants gulp water is amazing. And it keeps going up and up. Some of the larger industrial plants use more water than whole cities.

The Milwaukee brewer needs around 300 gallons of water for a barrel of beer and one of the reasons Milwaukee became so famous for the brew was its fine water supplies. The Schlitz Brewing Co. alone uses 1,684,267,000 gallons a year. The A. O. Smith Corp., with its steel fabrication using water under pressure to test every length of pipe and for countless production operations, used 1,641,600,000 gallons last year.

The Wisconsin and Michigan paper mills need around 250 tons of water for a ton of sulphite wood pulp, and there are mills in Wisconsin using 30 to 40 million gallons a day. Every large paper mill often uses more water every working day than does a city of 50,000 people.

Hence the need for Wisconsin's strict pollution controls, backed up by the new Federal program.

"Industry is putting almost twice as much waste into the waterways in 1955 as in 1930," reads the Government survey. "The expected growth of synthetic and nuclear production with their poisonous byproducts magnifies the problem."

The Federal estimates are that the demand for clean and fresh water will more than double by 1975, industry needing at least 105 percent more, 70 percent more for municipalities and around 42 percent for irrigation.

In Minnesota two corporations have applied to the State for permission to pump 10,000 gallons a minute from ground waters to put into a reservoir and "sell to industry."

WELL LEVELS DROP

Whose waters are these underground supplies which percolate through the porous rock formations?

"Title to such water should rest with the State, in control of all people, and, when the right to use water is conferred, it should not carry with the permit the right to abuse the water," contends O. L. Kaupanger, secretary of the Minnesota emergency conser-

vation committee, Minneapolis, Minn., an alert civic group trying to check pollution of streams.

Wisconsin has laws limiting how much can be pumped, prior rights being vested in municipal users. Yet artesian well levels are dropping fast over most of Wisconsin.

Water demand now averages around 145 gallons a day for human use, compared to 95 gallons at the turn of the century. Add industrial requirements and your individual share is around 1,217 gallons a day.

Municipalities will have to spend $5.3 billion in the next 10 years to keep water usable, according to the United States Public Health Service. Industry will have to spend about as much; and if the States do not rap the knuckles of offenders, Uncle Sam will.

PROBLEM OF FAIRNESS TO SOME CITIES

"The only way we can win this pollution battle is with Federal aid," is the statement issued by the American Municipal Association. "We maintain water pollution is a national problem and that the Federal Government has a clear-cut responsibility to work with the States and municipalities toward its solution."

How much Uncle Sam will chip in is before Congress for decision.

If the billion dollar appropriation is made available it presents a problem to Wisconsin and Michigan. Both these States have stern State committees on water issues. Both have required many cities to stretch their finance and issue bonds to build modern treatment plants. And all these plants were built with the costs borne by the cities, not a cent from the State or the Federal Government.

"It does seem unfair now to come along and propose to share costs unless they make the legislation retroactive," says Theodore Wisniewski, of Madison, director of the Wisconsin committee. "We've set a time limit for compliance, citing the penalties. It is manifestly unfair for the backward cities in the other States to have such help if it be denied to those paying the bill in full in Wisconsin."

There is now sure to be an issue of State versus Federal rights on water controls. Industry, fearful of the stern look and whack of Federal health officers, will scream for State rights. "Let the States handle the pollution problem. They are doing all right."

BLOOD-RED WATER

But too long in the past, industries had pretty much their own way on disposing of wastes into streams. Here in Wisconsin some paper mill operators, dominating the economics of modest size cities, rode roughshod over the protests of local people.

On the Mesabi Range in the iron country, the powerful corporations used all the water they needed and seldom was a voice raised over the blood-red silt ruining white water streams.

In upper Michigan the copper mines strewed tailings along the rivers and lakes and not a voice was lifted, until the tough State committee was empowered to stop all pollution.

Under the new proposed Federal legislation the Surgeon General could declare any stream or lake a public nuisance from pollution.

Then he would inform those polluting the waters and the State to set a time schedule for a cleanup. If there were no compliance and no enforcement by the State, suit could be brought in the Federal court.

WISCONSIN A PARTY TO INTERSTATE PACT

With most States now having antipollution agencies protecting water supplies, the trend is for interstate agreements or compacts. The finest of these are the eight States of the Ohio River Valley in which uniform minimum standards are established.

Wisconsin found out early the reason for these agreements. For the minute the committee, finding positive evidence of gross and harmful pollution, would name the offender at a hearing, where would be the threat: "We will move out of the State." There would be an impressive listing of employees and payrolls.

The answer to this attempted block to proper enforcement was for the interested States to sign agreements to set standards and exchange information on offenders.

Wisconsin made compact first with Michigan and Minnesota. Then came the compact for the upper Mississippi River cleanup with Wisconsin, Minnesota, Iowa, and Illinois.

So, now when a corporation says it will move before it will spend money to obey the antipollution laws, the State committee, in effect, says: "Mister, you are not going any place without protecting water supplies."

SENATOR WILEY SAYS FEDERAL POLLUTION FUNDS URGENT—PLEDGES ALL-OUT BATTLE TO HELP TWIN CITIES

An immediate all-out drive to secure Federal funds under a "vital new antipollution law" was pledged today by Senator ALEXANDER WILEY, Republican, of Chippewa Falls.

While attending the Neenah-Menasha Junior Chamber of Commerce celebration of Independence Day, Wisconsin's senior Senator said: "Wisconsin's great paper industry and other industrial leaders have made wonderful progress in meeting the pollution problem. But we all recognize that the fullest additional Federal cooperation is urgently essential if we are to achieve further success."

Referring to the need for enlargement and improvement of the Neenah-Menasha sewage-disposal plant, Senator WILEY continued: "The sewage problem in this community is duplicated in many other Wisconsin cities who have been in touch with me on their participation in the provisions of the new antipollution law.

"The law has passed. But we must cross another hurdle before municipalities can start construction work on their projects—a separate appropriation measure to finance the program. I am, therefore, urging both House and Senate Appropriation Committees to get on the ball to see that the whole legislation is not grounded for lack of funds."

Looking further into our local pollution problems, the Senator commented: "Stream pollution in Wisconsin has entailed tremendous costs in time, money, and effort. It has reached the point where our cities alone cannot bear the terrific expenses of effective disposal plants and other antipollution projects. Municipal help is a necessity where the health and economic welfare of Wisconsin citizens are at stake."

The Senator stated: "The Pollution Control Act would pay one-third the costs of the Twin Cities' disposal plant, up to a maximum of $250,000 for your proposed $900,000 tripurpose project. This would mean a $125,000 saving for each town. Other general provisions of this bill also include: (1) A 5-year-grant program to States for pollution control planning and research; (2) enforcement measures against pollution of interstate waters; and (3) creation of a special Water Pollution Control Advisory Board."

Wisconsin Is Honored

EXTENSION OF REMARKS

OF

HON. MELVIN R. LAIRD

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 10, 1956

Mr. LAIRD. Mr. Speaker, last month in Miami at the Lions International Convention, Mr. Clarence L. Sturm of Manawa, Wis., was elected third vice president. The election of Mr. Sturm to this office assures his election as president of Lions International in 1959. We in Wisconsin are indeed proud of Clarence Sturm. He has a splendid record of public service as a citizen of Wisconsin as well as through Lions International. I would like to call to the attention of the Members of the House an editorial which appeared in the Marshfield News-Herald, Marshfield, Wis., under date of July 2, 1956. The editorial follows:

WISCONSIN IS HONORED

Wisconsin's 10,000 Lions Club members are elated this week by the fact that one of their number, Clarence L. Sturm, of Manawa, has been elevated to the third vice presidency of their international organization. Election to this office virtually assures accession to the presidency in 3 years, an honor which has not come to a Wisconsin man in nearly 2 decades.

Sturm, who was chosen by representatives of the 543,000 members of the world's 12,334 Lions Clubs at Miami Saturday, is eminently qualified to assume the duties and responsibilities that go with an honor of this kind, and his Wisconsin supporters know he will do them credit.

The service club, a peculiarly American phenomenon which has been introduced to virtually the entire world by its eager Yankee disciples, has grown to be a tremendous global force, and any man selected to head one of these associations—especially one of the "Big Three," Lions, Rotary, or Kiwanis—faces up to an enormous task.

In the case of Lions, 3 years of preparation through the vice presidential offices is climaxed by a presidential year in which the organization executive must devote virtually every minute of his time to personal visitations throughout the United States and in many of the other 74 countries in which there are Lions Club. In this capacity his opportunities for the improvement of interstate and international relationships are almost limitless.

In addition, he heads up an organization of local groups which, in the United States alone, engage in thousands upon thousands of humanitarian projects costing uncounted millions of dollars and incalculable manhours of work. A single example of such activity is the recent decision of the Wisconsin Lions Clubs to purchase an $18,000 tract of land in Portage County and equip it as a summer camp for blind children.

There has been much sophisicated and supercilious criticism of American service clubs, but they have done and are continuing to do a wonderful work, and the entire State of Wisconsin can take pride in the selection of one of its finest citizens to assume a major role in carrying on part of that work.

Senator Flanders' Proposal

EXTENSION OF REMARKS

OF

HON. RALPH E. FLANDERS

OF VERMONT

IN THE SENATE OF THE UNITED STATES

Wednesday, July 11, 1956

Mr. FLANDERS. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Senator FLANDERS' Proposal," published in the Pittsfield Berkshire Eagle, Pittsfield, Mass., on June 25, 1956.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

SENATOR FLANDERS' PROPOSAL

Walter Lippmann has been attacking the administration policy on Germany, and particularly the recent endorsement of Chancellor Adenauer's position by Secretary Dulles as completely futile and unrealistic. He has declared that instead of looking for common ground on which the allies can work together, Mr. Dulles has let Dr. Adenauer commit him to terms which are so extreme that they prohibit in advance any serious negotiations on the matter.

The Adenauer terms, writes Mr. Lippmann, provide that none of the allies is to come to agreement with the Soviet Union until Moscow has abandoned East Germany and agreed to a united Germany rearmed within the NATO alliance. Such terms are not only certain to be rejected by the Soviet Union; they will not be supported by our allies or even very long by the Germans themselves. Dr. Adenauer is no longer able to count on effective support in West Germany; he is faced with a united opposition and widespread dissatisfaction within his own party. Is it wise for the United States Government to be more inflexible and more extreme than the Germans themselves?

It is against the background of the Dulles position that the speech Tuesday in the Senate by Senator RALPH FLANDERS, Republican, of Vermont, must be read. Conceding that his suggestions were drastic and at direct variance with administration policies, Senator FLANDERS proposed that West Germany open direct negotiations with Moscow for German reunification. He suggested that Chancellor Adenauer be encouraged to ask Russia to release puppet East Germany in exchange for "a united Germany which agrees to be unarmed and neutral, but otherwise free." Admitting that the proposal might seem strange so close on the heels of the Adenauer-Dulles agreement, he offered it as a more practical plan than that supported by Mr. Dulles.

The Senate has been criticized in the past for trying to steer foreign policy in a different direction from that advocated by the State Department. Yet when the State Department's policy is obviously questionable, if not downright unrealistic, it is certainly the duty of dissident Senators to express their opinions. After all, foreign treaties are required to be concluded with the "advice and consent of the Senate" and the Senate is asked to appropriate the funds needed to finance our foreign policy. It is to be hoped that Senator FLANDERS receives support from others of his colleagues. Certainly the Dulles policy needs a thorough scrutiny.

The School-Aid Failure

EXTENSION OF REMARKS
OF
HON. ADAM C. POWELL, JR.
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 11, 1956

Mr. POWELL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the New York Times of July 6, 1956:

THE SCHOOL-AID FAILURE—AN ANALYSIS OF THE FACTORS THAT LED TO DEFEAT OF ADMINISTRATION IN HOUSE

(By James Reston)

WASHINGTON, July 5.—The long struggle over Federal aid for public school construction ended tonight in bitterness and confusion.

The House of Representatives was so entangled in its own parliamentary maneuvers most of the day that few Members professed to know where things stood until the final vote killing the bill.

Even Roswell B. Perkins, the able young lawyer who is assistant to the Secretary of Health, Education, and Welfare, was wandering around the fringes of the House lobbies this afternoon wondering how the administration's plans and hopes had gone awry.

Southern Members were bitter about what they regarded as efforts to coerce them through the school construction bill to carry into effect the Supreme Court decision outlawing racial segregation in the public schools.

Many northern Democrats saw in the tactics of the Republican leadership more evidence that the Republican Party had started on a major campaign to bring the northern Negro vote back into the GOP column.

For example, there were 148 Republicans for and 46 against the Powell amendment, which President Eisenhower specifically opposed; whereas there were only 75 Republicans for passage of the bill and 119 against. It is true that the bill as finally presented was not precisely the same as the bill the White House wanted. The Democrats felt it was significant, however, that more GOP Members went down the line for the Powell amendment, which is popular with Negroes in the powerful northern cities, than did for passage of the bill itself.

A FEELING OF FRUSTRATION

Some members were resentful that the Federal Government proposed to give aid to the public schools but not to the parochial schools. And the inter-play of these racial, political, and religious considerations all contributed to the final result.

It is something rare in the history of the House when the chairman of a committee—in this case Representative Graham A. Barden, Democrat, of North Carolina and chairman of the House Education and Labor Committee—gives up the leadership of a bill in the middle of the debate. Yet that is what happened this morning and it was typical of the strong feeling of frustration that pervaded the whole procedure.

It also is relevant to the question of presidential and administration leadership that 119 Republicans voted against and only 75 for the bill that the President had been preparing for more than 3 years.

No doubt the racial issue, which produced the adamant opposition of the Southern Democrats was decisive. They were against the bill from the beginning. If it passed, even without the Powell amendment denying Federal funds to States that refused to carry out the Supreme Court integration decision, they felt that the sense of this amendment could easily be written into an appropriation bill for the Department of Health, Education, and Welfare next year.

Once the bill was on the books, many southern legislators felt, a brief amendment to the appropriation bill next year would have made a filibuster in the Senate against it extremely difficult. For to kill such an amendment on an appropriation bill, they would have had to try to block all appropriations for the entire Department of Health, Education, and Welfare, and that would have been awkward if not impossible.

LACK OF ENGINEERS CITED

So the first major effort at Federal aid to the public schools of this century has lost, and everybody was talking in the House tonight about how the racial question had killed it.

Yet this is probably a very narrow construction of what actually happened. The racial issue dominated and inflamed the debate, but it was perfectly obvious to anyone talking all day to the legislators, that the whole principal of Federal aid to the public schools still troubles many Members who are not emotionally involved in the racial question.

The administration, though it tried, has clearly not persuaded a majority of the House that the development and even the security of the Nation in the coming era require a fundamental readjustment of Federal, State, and local responsibilities in the field of public education.

Congress has been providing Federal funds for generations to train an adequate corps of officers for the armed services of the country. The administration is convinced that in the developing "cold war" in the world the security of the Republic is now just as much involved in the adequate training of engineers, scientists, and other public servants as it was in the training of officers in the 19th century.

Though the Nation needs between 45,000 and 50,000 new trained engineers every year, it is now getting only about half that number. A large proportion of the brightest high-school students are still not going on to college, and many of those who do are so badly trained in mathematics, chemistry and physics that they are not equipped to do college work in these fields even if they have the necessary brains.

This was what was worrying top officials of the administration tonight in the light of the House vote. The first big test of the principle of Federal aid to education was defeated, but the problem of training the youth of the Nation to meet the Nation's expanding responsibilities remains.

Local and regional feelings, fears of political and social coercion, racial and religious emotions—all these have proved stronger than the argument that the country has an overwhelming need to adjust old habits to new responsibilities.

It will be difficult for historians to sort out all the factors that moved the legislators in this untidy and badly organized debate, but there is no doubt that the administration failed to make the crisis in the Nation's schools prevail over the habits of mind and political reactions of the past.

What Is Our Policy?

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 10, 1956

Mr. MULTER. Mr. Speaker, the following editorial from the New York World-Telegram and Sun of July 10, 1956, speaks volumes:

WHAT IS OUR POLICY?

A month ago, before his operation, President Eisenhower said:

"If we are waging peace, you can't be too particular sometimes about the special attitudes that different countries take. * * * Today there are certain nations that say they are neutral. This doesn't necessarily mean neutral as between right and wrong, or decency and indecency."

The President recalled that the United States was stanchly neutral for 150 years and urged that the word "neutral" not be translated as a choice between right and wrong.

Three days later, however, Secretary of State Dulles defined neutrality as "an obsolete conception and, except under very exceptional circumstances, an immoral and shortsighted conception."

And this was the opposite of what Mr. Dulles said in March when he told the Indonesians that neutralism was an understand-

able concept which would not interfere with either American friendship or aid.

Now Mr. NIXON is touring the nonneutralist area of Asia, giving yet another variant on this subject—coming close to Mr. Dulles' rejections of neutralism as immoral.

Which of these statements really represents American policy? No one knows. Worse still, we have managed, as so often, to confuse and offend while trying to play both sides of the street. The nonneutrals were upset by President Eisenhower's remarks on neutralism; the neutrals are agitated about those of Messrs. Dulles and NIXON.

This is similar to the American dilemma over colonialism. Our equivocation—even hypocrisy—on these issues, plus confusion caused by the babel of official voices, leaves us with the short end of the stick on both sides. If the American people don't know what our policy is on neutralism, how can our friends and enemies abroad know?

Relationship of Education and Psychology

EXTENSION OF REMARKS
OF
HON. GEORGE H. CHRISTOPHER
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 11, 1956

Mr. CHRISTOPHER. Mr. Speaker, believing that the following article by Dr. George S. Reuter, Jr., Holden, Mo., is well worthy of extension in the RECORD, and feeling sure that it may be read and studied by Members of this House on both sides of the aisle with profit, I am glad to insert this article:

RELATIONSHIP OF EDUCATION AND PSYCHOLOGY

(By Dr. George S. Reuter, Jr.)

Many institutions of higher education in the United States combine education and psychology, but little study has been made as to the reason. Dr. Carl Newton Rexroad of Stephens College, Columbia, Mo., during his visit to the campus of Arkansas A. and M. College, from June 24 through June 26, 1953, as a consultant, made the administration and faculty keenly aware of this issue.

Dr. Rexroad explained the program that he directs where psychology is a part of the science department. This appears to be a good organizational pattern, because education is not a science, never was intended to be, and will never be. Psychology, on the only hand, was conceived to be a science from the beginning. The discipline behind psychology indicates that it is a science, while the opposite is true of education.

A few leaders in education have attempted to combine psychology with education, so as to end with a larger program with more students and more classes. Educators have been guilty of invading psychology and creating educational psychology. It is somewhat debatable, however, if psychology discouraged this invasion.

Psychology was weak and some thought combination provided strength. There are examples of a divided point-of-view among psychologists. One section insisted on pure psychology completely divorced from education and very closely related to the sciences, while the other group desired education as a part of their overall program.

As big business is constantly growing bigger through mergers, many fine educators feel is the only avenue for professional education. They omit the important fact that they will be building an institution without a soul. Why grow large simply for the exercise and without a sound philosophy?

Education has a vital role to play by staying in the areas of educational administration, secondary education, elementary education, curriculum, supervision, and industrial education. The way a part of graduate elementary education is taught, the public could assume that it is advanced psychology. This appears to be the only weak point in the armor of professional education, as listed above.

The reading clinic is extremely valuable to any institution if it is organized properly. It should not be a part of the education department or the English department. It should be a part of the psychology department. The reading clinic fails in the English department in that it does only about one-half of its true task. If it is used in the education department, then education will be married to science, and that marriage was never intended.

Guidance is not education either. It is a part of psychology. Some call it education, but it still remains psychological by nature.

This could also be said about music education, science education, art education, agriculture education, etc. They do not belong to education. They belong to the various departments of music, science, art, agriculture. Many will admit that this is the case, but they contend that revisions are needed in the curricula of these departments and that change is impossible, hence they must be divorced from an impossible condition, but they fail to realize that they are just creating another impossible state of affairs.

Let's maintain a pure education where great service can be rendered and stand by and let the other departments do likewise. We should not desire to conquer the world—only to render real service in an area that is fitted for us. The sooner we divorce education from psychology, the faster our professional growth will be.

Lexington Rancher Wins Grassman of Year Honor

EXTENSION OF REMARKS
OF
HON. RICHARD L. NEUBERGER
OF OREGON
IN THE SENATE OF THE UNITED STATES

Wednesday, July 11, 1956

Mr. NEUBERGER. Mr. President, in a recent news story I have found a description of a successful ranch operation which emphasizes the benefits of good soil-conservation techniques. Mr. Alvin Wagenblast, of Lexington, Oreg., has just been recognized as Morrow County's "Grassman of the Year." I am sorry, Mr. President, that in the CONGRESSIONAL RECORD the picture which accompanied the story showing Alvin Wagenblast and his two sons, John and Steve, displaying sturdy stocks of pasture grass grown on their 560-acre ranch, cannot be reproduced. What an inspiration are these young Americans, learning about stewardship of the soil and sharing with their father the interest and care which have brought this enviable and deserved recognition. Mr. President, I ask unanimous consent to have the news item from the Pendleton East-Oregonian of June 28, 1956, printed in the Appendix of the RECORD.

There being no objection, the news item was ordered to be printed in the RECORD, as follows:

LEXINGTON RANCHER WINS GRASSMAN OF YEAR HONOR

HEPPNER.—Transforming a depleted, overgrazed ranch into fields of high-producing pastures and irrigated hayland has won for Alvin Wagenblast, Lexington, the "grassman of the year" title for Morrow county, it was announced Tuesday night at a meeting of the county farm bureau.

Taking over a 560-acre ranch just north of Lexington in 1949, Wagenblast has increased the livestock carrying capacity of his pasture and rangeland from 12 cows and calves to 150 head without injury to the soil or vegetative cover over the 7-year period of his ownership.

SEEDED SEVERAL ACRES

During the past 5 years Wagenblast has seeded 45 acres of permanent irrigated pastures, 75 acres of dryland grass, has 18 acres of irrigated bottom land prepared for seeding and an additional 75 acres of hill land in summer fallow for seeding next year.

Eventually he plans to seed 195 acres of wheatland to grass and continue seeding on his dryland hillsides wherever practical.

Grasses used in separate fields of vernal, talent, and ladak alfalfas are alta fescue, intermediate wheatgrass and akaroa orchard grass for his irrigated pastures. On dryland seedings nomad alfalfa, crested wheat and bulbous bluegrass is seeded.

WILL HAVE HAY SURPLUS

For the first time this year Wagenblast figures he will have a surplus of hay for marketing from his pastures that produced 8 tons per acre last year and show signs of a higher yield this season.

A regular system of weeding, clipping, fertilizing, irrigating by sprinkler and ditch and rotation grazing is followed by Wagenblast in his pasture management.

By deferring dryland grazing 6 months out of the year, grasses are gradually coming back to economic production. The entire property is cross fenced for rotational grazing.

BEEF HERD INCREASED

Beginning his beef herd by trading labor for livestock, Wagenblast by 1953 was able to purchase 10 head of purebred Herefords.

At present he has 113 cows, yearlings and calves and this fall by selling the last of the culls expects to have a completely purebred herd.

His livestock program includes vaccinating, spraying and culling. Machinery, added gradually, is kept in top condition for all farmwork.

Wagenblast, who came here from The Dalles, is married and has 2 sons, John, 9, and Steve, 7, whom he gives credit for real assistance on the ranch, eliminating the need for hired help during haying and harvest.

MASTER OF TWO GRANGES

This year he is master of both the county Pomona grange and the Lexington grange. He is a member of the Morrow County Livestock association and the Oregon Wheat Growers league.

A cooperator with the Heppner Soil Conservation District since 1950, Wagenblast stated he valued technical assistance from Tom Wilson of the soil conservation service and N. C. Anderson, county extension agent, for technical advice and assistance. He will compete with other county winners for State grass title in the "Grass is Gold" contest sponsored by the Portland chamber of commerce and locally by the Farm Bureau.

Why Foreign Aid Is in Trouble

EXTENSION OF REMARKS
OF
HON. STEWART L. UDALL
OF ARIZONA
IN THE HOUSE OF REPRESENTATIVES
Monday, June 25, 1956

Mr. UDALL. Mr. Speaker, those of us who believe the rough weather encountered by the mutual-security bill this year is attributable to President Eisenhower's failure to develop a coherent, long-range foreign economic policy are supported by the editorial reprinted below which appeared recently in the pro-Eisenhower Life magazine:

WHY FOREIGN AID IS IN TROUBLE

President Eisenhower tends to be lucky, but his luck is not always the Nation's. His middle of the road is a safe and sane position, but when his administration just wobbles there—or stalls—it can block progress.

These sour reflections are prompted by a series of minor events which illuminate a major—probably the major—shortcoming of this administration. This is its failure (now 3 years old) to develop a coherent, long-term foreign economic policy which will command general assent at home and understanding abroad.

The furious kicking around which Congress has been giving the foreign-aid bill is the chief current symptom of this failure. There are others. Joseph M. Dodge, the President's personal coordinator of foreign economic policy and planning, has just resigned after more than a year's work which failed to make any nationally visible imprint on the situation. His successor is slated to be Clarence Randall, an able fighter who may succeed in this assignment. But recalling the administration's first stab at a new foreign economic policy, the feeble Randall report of 1954, one may be pardoned the feeling that this is where we came in.

FOR LACK OF A PROGRAM

Congressman RICHARDS, of South Carolina, chairman of the Foreign Affairs Committee, put responsible congressional sentiment in a nutshell when he declared mildly that "we should not continue to spend our money in the same old way or in the same old places."

As for irresponsible congressional sentiment, it has seldom had so vulnerable a target. "I come from a town," cried TUMULTY, of Jersey City, denouncing aid to Tito, "where when we buy votes we expect them to stay bought."

The unpopularity of foreign aid extends to other parts of the administration's program. The customs simplification bill, which passed the House long ago, has only now reached the stage of Senate committee hearings. The Organization for Trade Cooperation, which the United States helped design and has every reason to join, is apparently in too much danger of defeat to be risked on the floor of Congress. These piecemeal offerings have not carried the conviction they would if the administration had presented them as related parts of a grand world policy.

WAY BEHIND THE PEOPLE

This administration failure has had one further effect. It has encouraged, like gas rushing into a vacuum, the greatest irruption of half-baked proposals for saving the world since the early rhetoric of Truman's point 4.

Starting from a sound premise—that the President's foreign-air program was not imaginative enough——they reach some startling conclusions. AFL–CIO's Jim Carey, for example, wants us to set aside 2 percent of our gross national product each year for the next 25 years—i. e., some $200 billion—for foreign economic development. Businessmen talk about "reviving the spirit of the Marshall plan" or a "dynamic, multiphase, century-long campaign" for winning the world from communism.

All these spokesmen can legitimately claim to represent some degree of grassroots sentiment; on this subject Congress, as they accurately put it, is "way behind the people." This is indeed a gap between our national will to do something and Congress' unwillingness to vote money for it. But that does not mean there is a contradiction. The gap waits to be filled by an administration program.

Nehru, had he come to visit the President this month, would by his very presence—let alone his private questions—have forced a decision on this issue. His second 5-year plan requires some $1.6 billion of foreign capital; can he look to the United States Government for it, and, if so, on what terms? What can we ask him to do in turn to encourage that use of private capital, Indian and foreign, which we know will improve his plan?

SEPARATING MILITARY AID

Only a Presidential command decision will unify the policy of all United States Government departments, including George Humphrey's Department, toward the greatest political force in free Asia—and by that we do not mean Nehru; we mean the insistence of all free Asians on a rapid rate of economic growth.

The President's illness, by postponing Nehru's visit, has also postponed the command decision. If that is lucky for his (and his subordinates') peace of mind the luck extends no further.

Americans will certainly wish to participate in the coming economic development of Asia, Latin America, Africa, and all such areas. Not only does our growing stake in foreign trade advise it, but also, as President Black of the World Bank has said, "The underdeveloped areas present a challenge to this century just as the open prairie and the empty lands presented a challenge to the last."

We would want to participate whether the Soviets were offering their own version of foreign aid or not. And we need a policy of participation that will not veer as Soviet rivalry veers, but will be steadfast on its real target, which is the real improvement of living standards throughout the free world.

AN END TO HANDOUTS

Without here trying to spell out what such a policy should be, we may note three facts that bear on it. First, this is not a military policy, and should therefore be kept quite distinct from military aid. Most of the $4.9 billion in the present administration bill is military aid. If this were put into our regular defense budget, where it belongs, the remnant of strictly economic aid would look a lot less generous (and a lot less foolish) than it looks in its present company.

Second, the United States economy, the source of our capital, is still mainly a free and private one. Our Government needs and should have considerable sums to lend or even give to underdeveloped countries. But a long-term policy for a free economy must envision an end to handouts, and point to and beyond the day when every nation will pay its own bills.

Finally, capital is not the only key to growth. A comprehensive United States policy will include lending, but much else besides, notably trade and payments; and it will place them in their proper perspective from the standpoint of their purpose.

That purpose is not to buy votes, or cement alliances, or even (directly) to compete with communism. That purpose is to improve world living standards, including our own, by doing more and more business with all free nations.

More About Our Security and Loyalty Program

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 10, 1956

Mr. MULTER. Mr. Speaker, I commend to the attention of our colleagues the following editorial which appeared in the New York Herald Tribune of July 10, 1956:

REPORT ON SECURITY

The report of the special committee of the Association of the Bar of the City of New York on the Federal loyalty-security program is the work of a responsible, unofficial group. It recognizes the Communist danger and the need for a security program within the Government to meet it. In discussing civilian personnel security, its principal subject, the committee makes few recommendations for fundamental changes in the present system, with the exception of its proposal that security procedures, as such, be confined to sensitive positions—and here the Supreme Court has already ruled to the same general effect. The importance of the report on this aspect of the question, therefore, lies chiefly in presenting a reasoned practical argument in favor of the main lines of the Court's opinion, and in providing a structure which might serve in readjusting the security program as a whole to what the committee rightly calls "a long continuing danger."

Part of such revision might well be the centralization of responsibility for the security program, as the report proposes, in a Director of Personnel and Information Security, to avoid some of the conflicts in interpretation of the regulations which have been caused by decentralization among the various agencies. Such an arrangement, with a central screening board within the Civil Service Commission, should make it easier to apply the rule of common sense which the committee suggests in appraising charges against Government personnel, as well as in such discretionary matters as the confrontation of the charged employee by accusers and witnesses when such procedure is not "detrimental to the interests of national security."

As to the scope of the security program, the Supreme Court, in ruling that the power of summary dismissal does not extend to non-sensitive positions, has stated the same principle adopted by the committee. But it is obvious that this principle requires administrative, if not legislative, clarification. The Attorney General, Mr. Brownell, as well as Mr. Philip Young, Chairman of the Civil Service Commission, have indorsed stopgap legislation, such as that proposed by Representative WALTER, to permit the President to extend the right of summary dismissal to all Federal posts until the Commission of Government Security, headed by Mr. Lloyd Wright, reports next year.

The bar association committee would have the sensitiveness of a job determined "by position and not by agency"; it would apply to those who had either "authorized access" to secret and top-secret material "or opportunity for unauthorized access," as well as to policymakers. "So the position of a secretary or a janitor," it correctly points out, "who had opportunity for access to the files of the Joint Chiefs of Staff would we classified as sensitive."

The committee goes on to say that adoption of its recommendations "would entail the abolition of * * * the Port Security Program" (now applying to longshoremen and seamen). The committee's argument in this

case—that sabotage on land could be more dangerous than sabotage at sea and that the provisions of the program might thus be extended almost universally—does not seem very striking. This newspaper believes there is a "special justification" for security measures on ships and in ports, because these provide a means of communication with foreign countries through which danger could come as well as good, and which are vital to national security in peace as well as in war.

With this qualification, the report has served a useful purpose in providing a temperate, judicious and well balanced survey of a critical subject. It has made a substantial contribution toward the great goal: "Both liberty and security must be maintained for the triumph of our cause in the world."

An Official's Creed

EXTENSION OF REMARKS
OF
HON. JOHN J. RHODES
OF ARIZONA
IN THE HOUSE OF REPRESENTATIVES
Friday, June 29, 1956

Mr. RHODES of Arizona. Mr. Speaker, under leave previously granted I would like to include in the RECORD An Official's Creed which appeared in the Mesa Tribune Friday, July 6, 1956. It is a very appropriate time for this article to appear and I thought it should be brought to the attention of the Congress:

AN OFFICIAL'S CREED

With the September primary only a couple of months away, political announcements of intentions to seek public office are dominating news stories these days.

Some years ago a Texas political candidate suggested a public official's creed for all those persons seeking and winning public office. Here is what he suggested:

A conscientious public official serves the people as guardian of their welfare, defender of their institutions, servant of their will, and champion of their cause, by dedicating himself—

To put God and county above party, persons, and private interests;

To strive to promote a religious state, but to avoid a state religion;

To safeguard the people's right to free, unfettered elections, the secret ballot, and the honest count;

To encourage decentralized government as a safeguard to the liberties of the people, and to keep government their servant and not their master;

To uphold the law and expose corruption wherever it may be, and to oppose those who break the law in spirit as well as those who violate it in letter;

To strive to make his office an example of efficiency, economy, and integrity;

To give a day's work for a day's pay, and to require the same of his employees;

To make no private promises, grant no special favors, and receive no personal gifts which would compromise his official integrity;

To use no official power or information for personal gain to himself or to others;

To protect the institution of private property by discouraging the excessive acquisition of land and other goods on the part of the Government;

To defend the institution of private enterprise by keeping government out of business and out of competition with private capital;

To keep the public informed of his office's activities, to respect the right and function of the press as the people's informant, and to invite public scrutiny and constructive criticism;

To assist the public school in the civic education of children;

To be attentive to the activities and needs of other offices and branches of the Government;

To strive to make his personal conduct exemplary of morality and good citizenship, and to fulfill the duties of a private citizen as well as a public servant.

Why I Am a Republican—California Young Republican's Prize Winning Essay

EXTENSION OF REMARKS
OF
HON. PATRICK J. HILLINGS
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, June 25, 1956

Mr. HILLINGS. Mr. Speaker, it was announced in Los Angeles by John Rousselot, president of the California Young Republicans, and Tom Smith, publicity chairman, that Mrs. Adele Anderson has won the California entry in the National Young Republican Federation Essay Contest. Mrs. Anderson is the former Adele Bowman of Santa Barbara and is now residing with her husband in Germany where he is serving in the United States Army.

Mrs. Anderson's essay, entitled "Why I Am a Republican," was chosen by a judging committee comprised of Dr. Robert Haugh, Pasadena City College; Dr. Carl Christol, University of Southern California; and Mr. Robert H. Finch, of Republican Associates, and former first place winner in the Hearst Intercollegiate Oratorical contest.

Mrs. Anderson attended Pomona College, where she graduated in June—magna cum laude and was a member of Phi Beta Kappa.

Adele has taken an active interest in Government and politics since high school, being a member of the Junior Statesmen of California and serving as State secretary of that organization for 1 year. The faculty at Pomona College selected her as 1 of the 2 students to enroll for the first semester of her junior year to study government in the American University in Washington, D. C.

Her winning essay will now enter the national contest which is being held in Washington, D. C. The first place prize in the contest will be a round trip to the Republican Convention in San Francisco.

The essay follows:

WHY I AM A REPUBLICAN

(By Mrs. Adele Anderson)

No party has a corner on the civic virtues of loyalty, patriotism, or honor. There is perhaps no major national policy that has not at some time during our history been held by both major parties. Parties differ most in the emphasis they place and the means they employ.

I am a Republican because this party more than any other party encourages and protects private enterprise, which is the very basis of our prosperous economic system. Private enterprise is the economic expression of individual freedom.

The Republican Party more than any other party respects private property, which encourages the pride of ownership, offers the highest incentive for improvement, and provides a means of deep satisfaction. The Republican Party recognizes that Federal governmental responsibilities can be met without domination.

The Republican Party more than any other is pledged to preserve the Federal structure of our system. Under their leadership the States retain the largest share of power and responsibility that they can effectively use and fulfill. The advantages of a Federal system are fully utilized while its disadvantages are minimized.

The Republican Party more than any other can adhere to principle rather than expediency, because it depends less upon the shifting interests of particular groups and more upon the support of individuals as American citizens. This party is least inclined to appeal for allegiance on the basis of minority group interests such as immigrants, racial groups, or labor. Its appeal concerns American citizenship rather than group membership. Precisely because of this appeal the Republican Party acts as a unifying factor in American life.

I am a Republican because the party is progressive but not radical. It preserves that which is valuable from tradition while keeping very much abreast of the times.

Dulles Is Taking on Role of Propaganda Dispenser

EXTENSION OF REMARKS
OF
HON. JOHN D. DINGELL
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 11, 1956

Mr. DINGELL. Mr. Speaker, because of the importance of the matter discussed, I insert in the CONGRESSIONAL RECORD an article by Walter Lippmann appearing in the Detroit Free Press of July 5:

DULLES IS TAKING ON ROLE OF PROPAGANDA DISPENSER

(By Walter Lippmann)

For some time past before the President went to the hospital, there was talk in Washington of a rivalry between the State Department and some members of the White House staff who deal with foreign affairs.

The President, it was said, was not listening exclusively to Secretary Dulles, and this was why there was occasionally, as for example in regard to the neutrals, such a big difference between Mr. Eisenhower and Dulles.

Some observers even went as far as to say that there had begun to exist—as in Woodrow Wilson's day with Colonel House and Franklin D. Roosevelt with Harry Hopkins—a second Foreign Office in the White House itself. Things have never gone nearly so far as that.

For one thing, the President has too deeply ingrained a respect for official channels and regular procedure.

For another, what happened under Wilson and Roosevelt is possible only when the President seems to be his own Foreign Minister.

But it was true that in what might be called the higher strategy of the cold war, President Eisenhower has asserted his independent authority and has deviated from the State Department official line.

Since the President's illness, there have, of course, been no more of these deviations.

But what is more, Dulles has enlarged his own personal operations to take in propaganda and psychological warfare.

Since the publication of the Krushchev speech, denouncing Stalinism, the Secretary of State has made himself the chief propagandist, and has, with the fanfare of big publicity, used the Department of State as an engine of psychological warfare.

Hitherto, the psychological warriors, like the cloak-and-dagger men of the intelligence service, have been kept separate from the Foreign Service, whose business it is to conduct the acknowledged foreign relations of the United States.

Even though the administrative control of the progaganda has been in the Department of State, it has been assumed that the Secretary of State was not himself an active propagandist.

To be that is a new role; and it is, I believe, bad for our diplomacy and for our propaganda as well.

Mr. Eisenhower was following a sound rule, attested by experience at home and abroad, when in the person of C. D. Jackson and then of Nelson Rockefeller, he placed the chief of propaganda in the White House, away from the State Department, and under his own personal supervision.

This separation preserves the desirable distinction between foreign policy and propaganda. For the Secretary of State cannot afford to be regarded as a propagandist.

A Secretary of State who himself assumes the role of chief propagandist can succeed only in undermining his own credit as a diplomat. Like a doctor who sells patent medicine, he sacrifices his professional standing.

As a result of the campaign launched by Khrushchev against Stalin, the international Communist movement and the whole Communist orbit are passing through an agonizing reappraisal which may well have epochal significance.

What should be the American stand in the face of these developments? Should we, as eager beavers, call attention to ourselves, making ourselves out either prime movers in the upheaval?

Or shall we avoid giving the impression that we are somehow engineering the upheaval, that what is going on is not so much an upheaval from within the Communist world as it is a disturbance due to our intervention?

By taking the center of the stage and putting this Government in the spotlight, Dulles has provided the most obvious pretext, for the repression of the upheaval—that is the work of an anti-Communist underground backed up the United States Government.

This is the time when a shrewd American psychological warrior would be making himself invisible. And a wise Secretary of State would be holding himself aloof, not meddling with events which he cannot control.

Stalled At Dead Center

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 11, 1956

Mr. MULTER. Mr. Speaker, the following column by the Alsop brothers, from the New York Herald Tribune of July 11, 1956, points up our lack of leadership in the executive departments of our Government.

MATTER OF FACT
STALLED AT DEAD CENTER
(By Joseph and Stewart Alsop)

WASHINGTON.—The American Government these days is a bit like a messy kitchen, with the unwashed dishes piled high in the kitchen sink, waiting for the cook to return. The cook, of course, is Dwight D. Eisenhower. And the dishes are a whole series of basic national policy decisions which are waiting to be made.

To be sure, the Government doesn't look like a messy kitchen. During the President's current illness, as after his heart attack, all seems to be going rather smoothly. Yet this appearance is deceptive. In the American system, only the President can make the really tough decisions. If the President is ill, or operating on a part-time basis, the really tough decisions simply do not get made.

Moreover, the President's two serious illnesses have coincided with basic changes in the world situation. There have been, for example, the upheaval within the Soviet-Communist empire, coupled with the rapid development of the new, adventurous, dangerously flexible Soviet policy. These changes are both an opportunity and a challenge, but, partly because of the President's illness and partly because this is an election year, the American Government has not really responded to them. It has gone on acting as though everything is as it was before.

Below the deceptively quiet surface of the Government, to be sure, there has been a great deal of painful, fogbound groping for new policies to fit the new situation. But nothing much has come of all this groping.

For example, one group in the Government, which includes men like Presidential advisers Harold Stassen and William Jackson and chief State Department policy planner Robert Bowie, has generally held that the changes in the Soviet regime are real and meaningful; and that every opportunity of testing Soviet intentions ought to be taken.

A contrary view is held by men like Under Secretary of State Herbert Hoover, Jr., and Secretary of Commerce Sinclair Weeks. The first group has maintained that this country should take the initiative in breaking down the Iron Curtain, that the more contacts with the Soviets the better, and that the gains involved in such contact far overbalance the risks. The second group has wished to maintain an impregnable Iron Curtain of American manufacture.

Largely thanks to William Jackson, the first group scored a partial victory when the President approved a modest "exchange of persons" program. But even this small policy decision took weeks of negotiation and feather-smoothing. And the basic issue—just how far to go to test Soviet intentions—remains undecided.

Again some of the younger policymakers have favored an aggressive policy for exploiting the new strains and stresses in the Soviet camp, resulting from the de-Stalinization policy. For example, after the Poznan riots, a serious proposal was made for a sort of Monroe Doctrine for the satellites, in effect warning the Kremlin against using the Red army to maintain its satellite empire. But this was rejected as too risky, and the policy now is to let the dust settle as far as the satellites are concerned.

Again, take the foreign economic and military aid program which is a chief buttress of American foreign policy. The revolt in Congress has alerted the administration to the fact that it is not good enough just to go on offering the same old program year after year. But even before the congressional revolt, there was much worried talking in the administration about the need for a "bold new approach" to meet the new Soviet challenge in the foreign aid field.

A speech for delivery by the President, modeled on former Secretary of State George Marshall's famous Harvard speech which initiated the Marshall plan, was drafted by a group headed by a former Presidential aid, C. D. Jackson, and submitted to the White House. But partly because no one had decided just what the bold new approach was to be, and partly because of the President's illness, the whole idea came to nothing.

Add the bitter, still unsettled defense debate, the drift in Asia, the policy vacuum in the Middle East, the failure to breathe life back into NATO. You then get an impression of the American Government stalled at dead center, displaying a somnambulistic tendency simply to go on doing what has been done before. There is only one man who can get the Government off dead center, which is another reason for hoping that the news from Gettysburg continues cheering.

Democracy

EXTENSION OF REMARKS
OF
HON. RICHARD L. NEUBERGER
OF OREGON
IN THE SENATE OF THE UNITED STATES
Wednesday, July 11, 1956

Mr. NEUBERGER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a most moving and eloquent poem entitled "Democracy," by Kathryn Fraser. Kathryn is a college student who has just moved to Oregon with her father and mother, Rev. and Mrs. Neil Fraser. Kathryn is to enroll in the University of Oregon.

Her poem symbolizes the equality of all peoples, all nations, and all religions which is inherent and implicit, not only in our own Constitution and Declaration of Independence, but also in the Bible.

There being no objection, the poem was ordered to be printed in the RECORD, as follows:

DEMOCRACY
(By Miss Kathryn Fraser)

We are junior statesmen.
The politicians, Congressmen,
Teachers, lawyers, doctors,
Ministers, writers and scientists
Of tomorrow.

We are English, German,
Irish, French, Russian,
Spanish, Dutch, Chinese,
Scotch and Filipino.

We are Jews, Catholics,
Baptists, Presbyterians,
Lutherans, Quakers,
And Christian Scientists.

We are Republicans and Democrats.
We are Americans.
We are junior statesmen
Trying to make democracy work.

To us, democracy is freedom:
The liberty to act, think, and speak freely
Without hindrances
Other than the precepts of common decency
and morality.
To us, democracy is not
An indefinable term
Which we bandy about loosely
Without a clear idea of either its literal
Or practical meaning.

We know our responsibility to democracy.
And our duty to the "other fellow."
We have seen how it is much more than a form of government
Or a dream, or an ideal.
But we realize that it is a way of life.
It is the privilege of standing straight in church
And singing, "Praise God from Whom all blessings flow."

In quite another sense,
It is being able to cheer for our favorite team
At a football game.
It is the devotion with which we behold
Our Constitution and Declaration of Independence.
Closing and locking our doors at night
Is democracy,
For no one may enter unbidden.

Much shopping exhausts both us and our pocketbooks.
But this, too, is democracy.
The very act of mailing a letter
With the confidence that it will go
Unopened to its destination
Is democracy.

What is democracy to us
Who have barely begun to live?

It is the evolution
Of a deeper, freer faith in mankind;
A government which progresses,
Yet does not break with the honorable past,
And in everything fulfills the people's desires—
Be they good or bad.
For it is only through failure
And repeated beginnings
That a nation becomes great.

And for us,
Democracy is a fuller
More trusting belief
In the eternal goodness
And omnipotence
Of God.

Junior statesmen—
We are tomorrow's leaders.
On us the future rests.
Today we are the world's hope—
But soon we must become its security,
A supreme privilege.

We cry—
"Our torch shall not fail.
Nor shall it be dropped.
Closer and closer
To our goal shall we press.
Yet even as we attain it
We shall glimpse it far ahead,
Ever leading,
Ever inspiring,
Ever pressing onward,
Leaving behind milestones
Telling of our accomplishments
Which were once so impossible.

We shall not fail—
Even though we die
We shall have sacrificed ultimately
In giving our lives.
Our influence
Shall still be felt
Like a living presence.
We shall not fail!
We cannot fail!
A just cause never dies!

Danny Kaye: Diplomat

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 11, 1956

Mr. MULTER. Mr. Speaker, Brooklyn is proud to call attention to the following column by Martin Agronsky which appeared in the Washington Post of July 11, 1956:

DANNY KAYE: CLOWN AND DIPLOMAT

(By Martin Agronsky)

A clown has been here in our town for the past fortnight. He is Danny Kaye. Like the good clown he is, Mr. Kaye has been making people laugh. This is his trade.

An interesting testimonial as to how well he plies it was provided the other night by one of the most distinguished of our Supreme Court Justices—Felix Frankfurter. Mr. Kaye employs what is known in show business vernacular as a gimmick. It consists of repeatedly asking his audience near the end of his performance if they've had enough and are ready to go home. The idea is for the customers to yell "No." Mr. Justice Frankfurter led the nay shouters with unjudicial abandon. And he is not a man to suffer even mediocrities gladly—let alone, fools.

The audience as usual in this Capital City was polyglot. There were some from the diplomatic corps whose English would certainly not have been equal to the occasion were the comedian's appeal pinned entirely on how he used English words. But Mr. Kaye speaks the international language everyone knows—the language of laughter. The conjugations and declensions—the grammar of his esperanto—are a sense of humor.

An international clown like Kaye has a unique ability. It's to communicate person to person on a level that leaps with a laugh the usual geographical and ideological differences that confront the diplomats and statesmen. It offers a tempting question to those who feel the problem of communication is one of the most difficult barriers across the road to peace. Could the statesmen usefully swap their striped pants for a clown suit?

The trouble is there's a defect in such rosy imagining. The clown's talent is not the only one that everyone understands. Toscanini is a citizen of the world. The Russian ballet would be a hit in New York. Shakespeare is appreciated in any language. And so are Tolstoi and Whitman. Mathematics has only one language, no matter where it is studied. The same is true of the scientists' symbols. So humor is not the only universal language nor the only vehicle for the kind of people-to-people communication of which President Eisenhower has spoken. The arts and the sciences have long provided the potential means for international understanding. And like that which humor offers, none has yet succeeded where diplomacy has failed.

Mr. Kaye is a jester, but not a fool. The experiences he has had in the past 4 years—particularly in trying to make unfortunate children laugh in many lands as a voluntary envoy of UNICEF—the United Nations International Children's Emergency Fund—have not made him feel the time has come when the diplomats can be laughed out of business. Yet one encounter he told me about does seem to justify wondering if it might not be wise for all nations to require of their diplomats that they be able to demonstrate not only a sense of protocol, but also a sense of humor.

In Austria recently, the comedian was honored with an invitation to meet with President Theodor Koerner. As Kaye told of the encounter, the Austrian chief of state came alive—an old man, 82, slight, with close-cropped head of white hair, a wispy white goatee, a gentle quizzical smile, a feeling of strength beneath outward frailty.

The comedian had been ushered through one immense chamber after another—all souvenirs of the lost grandeur of imperial Austria—to await the President finally in a vast, high-ceilinged reception room. At the far end a door opened. The Austrian President, walking with a stiff-legged limp, came slowly across a great expanse of gleaming floor. Formally the comedian and the statesman met in the middle of the overwhelming room. The comedian, oppressed by the atmosphere, made uncomfortable by the feeling he was taxing an old man's strength, discarded protocol to ask: "Why don't we sit down?" To this the President replied quietly, "But I was supposed to ask you that," and led the way to his office.

In his more informal atmosphere, Kaye reminisced, the dialog began like this:

President: "I know why you wanted to meet me, Mr. Kaye, you wanted to see an old man."

Comedian: "No, Mr. President; I wanted to see a great man."

President: "Well, Mr. Kaye, now I must offer you some of our fine Viennese coffee."

Comedian: "Thank you, Mr. President, and would you tell me something? Would you have offered me coffee if I hadn't said you were a great man?"

President: "I think so. And now, Mr. Kaye, what would you like to talk about?"

Welcome to Unico

EXTENSION OF REMARKS
OF
HON. GORDON CANFIELD
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 11, 1956

Mr. CANFIELD. Mr. Speaker, under leave to extend my remarks, I desire to include an editorial from the Paterson (N. J.) Evening News, issue of Friday, July 6, regarding Paterson's newest service club and its high principles.

The president of Paterson Unico is Salvatore Viviano; its secretary is Fred Ardis; and its treasurer is Anthony Ragucci.

The editorial follows:

WELCOME TO UNICO

Unico, Paterson's newest service club, is a welcome addition to a select group of organizations which have done much for the city. Each club—Kiwanis, Rotary, Veritans and their kindred groups, have contributed not alone manpower, but spirit, enthusiasm, and tangibles to Paterson's progress.

And so with Unico, comprising leading young men of Italian ancestry. The fact of its nationality association in no way detracts from its thorough Americanism. It is only that Unico provides an opportunity for men of deep pride in the homeland of their forebears to gather together in a spirit of camaraderie and of useful citizenship.

The name Unico is significant in itself—U for unity of man; N for neighborliness; I for integrity of character; C for charity; and O for opportunity in all-around citizenry. Compositely, the man who embodies these virtues epitomizes the American ideal at its finest, and so an organization dedicated to such principles cannot help but be of benefit to any community fortunate to have it in its midst.

Unico, based upon the principles of service above self, has expanded remarkably in the past few years and it was inevitable that this city, with so many capable men of Italian extraction in its midst, should join the national procession.

Dotted across the land are so many magnificent causes which Unico has served. Scholarships for needy students by the hundreds; camp life for youngsters who would otherwise never enjoy the life; guidance for youngsters who might have gone astray; aid for the physically handicapped—these are but a few of the causes to which Unico around the country has been dedicated.

Unico is new in Paterson but the fierce and passionate ardor of the Italian people, spurred on by unquestioned Americanism, will soon reflect itself in a vigorous program by the new Paterson unit.

We wish Unico well. It has charted a constructive course to which we will be pleased to give our support in the days ahead.

Separation of Federal Home Loan Bank Board and Federal Savings and Loan Insurance Corporation

EXTENSION OF REMARKS
OF
HON. RICHARD L. NEUBERGER
OF OREGON
IN THE SENATE OF THE UNITED STATES
Wednesday, July 11, 1956

Mr. NEUBERGER. Mr. President, on July 16, Reorganization Plan No. 2 will become law, authorizing at that time the separation of the Federal Home Loan Bank Board and the Federal Savings and Loan Insurance Corporation into two separate agencies. This will happen unless recent resolutions reported to the House and the Senate are approved. I ask unanimous consent, Mr. President, to have printed in the Appendix of the RECORD three letters which I believe explain the position taken by many notable Federal savings and loan companies relative to this proposal.

There being no objection, the letters were ordered to be printed in the RECORD, as follows:

PORTLAND FEDERAL SAVINGS,
Portland, Oreg., June 22, 1956.

The Honorable RICHARD L. NEUBERGER,
Senate Office Building,
Washington, D. C.

DEAR DICK: I enjoyed very much being with you and Maurine in Washington, D. C. It was a pleasure to have you both present at our dinner party.

I am writing at this time in regard to Reorganization Plan No. 2, which was recently submitted to the Congress as a Presidential proposal.

Our savings and loan industry has made a thorough study of Reorganization Plan No. 2, and it is our feeling that the Presidential staff did not give proper consideration to the far reaching effects of the plan. No one consulted with our industry before the plan was presented, and we, therefore, do not know how much study was given to it.

The present single agency for handling savings and loan affairs has been developed over the last 25 years, resulting in a strong and progressive nationwide system of savings and loan associations, which now finance over 37 percent of all home loans. The approval of Reorganization Plan No. 2 would create another separate agency. This would not result in a reduction of agencies or expense, but would increase the agencies and the cost of the Home Loan Bank Board and the Insurance Corporation. The existence of two boards with overlapping responsibilities for savings and loan operation would result in conflicts of policy and great confusion in our business as well as in Congress.

Our association and the entire savings and loan industry is interested in constructive improvements and supervision of the savings and loan business. We are interested in simplification and strengthening of the Insurance Corporation. The United States Savings & Loan League is currently studying the Federal Home Loan Bank system and is planning to make recommendations for improvements as soon as the study is completed.

We hope that, in the meantime, this Reorganization Plan No. 2 can be defeated and, at a later date, improvements in the Home Loan Bank system approved by Congress.

Many thanks for past favors, and, if you have any questions on this, do not hesitate to write me. Please give my regards to Maurine.

Sincerely yours,

GUY E. JAQUES,
President.

FIRST FEDERAL SAVINGS & LOAN
ASSOCIATION OF THE DALLES, OREG.,
June 18, 1956.

Hon. RICHARD L. NEUBERGER,
United States Senate,
Washington, D. C.

DEAR SENATOR NEUBERGER: As you are well aware, the President of the United States on May 17 presented to Congress Reorganization Plan No. 2 which has to do with the separation of the governing bodies of the Federal Home Loan Bank and the Federal Savings and Loan Insurance Corporation. As a director and managing officer of a Federal savings and loan association, an executive committeeman of the Oregon Savings and Loan League, and as the Oregon Director of the United States Savings and Loan League I wish to solicit your opposition to the plan on the basis that it has been obviously hastily drawn and that any plan affecting a major segment of the thrift and home financing field should be thoroughly studied by the appropriate committees established by Congress and representatives of the industry before drastic action is taken.

It is difficult for me to understand why it has been found necessary to submit this plan without first consulting the congressional committees normally concerned with the savings and loan industry, the Federal Savings and Loan Advisory Council as established by Congress, and the Federal Home Loan Bank Board. I know of no recent trend of events that has suddenly indicated that an emergency exists because savings and loan associations are or tend to operate in a manner detrimental to our savings members whose savings funds are also the concern of the Federal Savings and Loan Insurance Corporation.

I believe that I am correct when I state that the goal of the Hoover Commission is the attainment of efficiency and economy in government. It must be evident to any student of this plan and the savings and loan business that efficiency and economy are not the goal of Reorganization Plan No. 2. The message transmitting this plan to Congress, paragraph 11, indicates that economies to the Government may be effected by preventing unsound operation on the part of savings and loan associations rather than from the operation of governmental agencies. The fact that the major portion of the operational costs of the Federal Home Loan Bank System and the Federal Savings and Loan Insurance Corporation are born by the savings and loan industry is ample proof that there will be no savings to Government from an operational standpoint, in fact the establishment of an additional Federal agency is bound to increase the cost of the Government. It is also evident that the establishment of an additional agency could substantially increase the costs now being born by the savings and loan business which would be reflected either in the earnings to the public on savings or in the rate of interest on home loans. The cost must be raised from some source.

Haste in drafting Reorganization Plan No. 2 is evident by the departures from normal procedures when establishing governmental agencies. There is no provision that assures that the governing body of this agency will be bi-partisan as is provided for the Federal Home Loan Bank System and the Federal Deposit Insurance Corporation. Also, it would seem advisable to limit these appointees to a definite term of office rather than to provide for an indefinite tenure.

The letter of transmittal with Reorganization Plan No. 2 indicates that this step is in accordance with the recommendations of the Hoover Commission when as a matter of fact the task force studying the Federal Home Loan Bank Board observed "Also, it supervises the Federal Savings and Loan Insurance Corporation. This appears to be a natural grouping of functions which requires no change." Recommendation No. 4 of the Hoover Commission Report stated "That no person be permitted to serve as a member of the Home Loan Bank Board and the Federal Savings and Loan Insurance Corporation at the same time." Also, the representative of the Housing and Home Finance Agency in 1955 voiced opposition to the separation of these two functions when appearing at the hearings on lending agencies before the House Committee on Government Operations. Reviewing the foregoing it is difficult to find any similarity between the findings of responsible congressional organizations and the Hoover Commission and the objectives of Reorganization Plan No. 2.

As a managing officer who has to contend with governmental rules and regulations, I wish to make it plain that I will welcome and support any congressional action that will increase the security of the savings and borrowing members of this association. I believe that the record of my colleagues, both past and present, will indicate a similar attitude. However, I am opposed to any action affecting any business that has not been conceived by the best brains in the country and then only after they have given the action their serious and detailed consideration.

I feel that "act in haste and repent at leasure" is a poor philosophy to aply to an industry that has as prominent a position in the Nation's economy as that enjoyed by the savings and loan associations.

I am forwarding a copy of this letter to your colleague Senator WAYNE MORSE.

Sincerely,

B. M. KEITH.

PIONEER FEDERAL SAVINGS
& LOAN ASSOCIATION,
Baker, Oreg., June 21, 1956.

Hon. Senator RICHARD NEUBERGER,
Washington, D. C.

DEAR SENATOR: I am writing you regarding the President's proposed Reorganization Plan No. 2, which, as you know, is a proposal to separate the Federal Home Loan Bank Board and the Federal Savings and Loan Insurance Corporation into two separate agencies. As you also probably know, this Reorganization Plan was submitted to Congress without consultation with the leaders of the savings and loan business and, I believe, without sufficient study. It would seem that this separation of operations would result in considerable increase in cost of operation, as well as an overlapping of responsibilities for the operation of savings and loan associations.

At the present time there is a committee of the United States Savings and Loan League in the process of making a very thorough study of the Home Loan Bank System with the idea in mind to propose support of any constructive improvement in the supervision of the Savings and Loan business. It is my thought that this committee, when their study is completed, could make some very valuable suggestions which would make any reorganization plan more effective and on a sounder basis.

As you know, Reorganization Plan No. 2 will become law on July 16 unless you and your colleagues take action to prevent it. I urge you to give this your careful study and hope you will be inclined to reject it in its present form.

Yours very truly,

CARL DAVIS, *Manager.*

Statement of Hon. Arthur G. Klein, Democrat, New York, July 11, 1956, Upon the Introduction of a Bill To Amend Section 401 (e) of the Civil Aeronautics Act of 1938

EXTENSION OF REMARKS

OF

HON. ARTHUR G. KLEIN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 26, 1956

Mr. KLEIN. Mr. Speaker, I have today introduced legislation providing for permanent certification of the airlines temporarily authorized by the Civil Aeronautics Board to conduct helicopter service in the Chicago, Los Angeles, and New York metropolitan areas.

The metropolitan helicopter services have proved themselves an essential part of the air transportation system of the United States. Their successful development is required in the interest not only of civil air transportation, but of the postal service and the national defense. In the event of an attack upon the United States, the availability of the helicopter organizations to carry out military and civil defense missions would be vitally important.

Commencing only 9 years ago with service confined to mail carriage, the helicopter airlines are now providing lift not only for mail, but for passengers, express and freight as well. The helicopters now available for civil use have limited capacity. However, by 1960 multiple-turbine helicopters capable of carrying 25 passengers will be available for civil use.

Within the next 5 years, the 3 present helicopter airlines alone will require some $25 million of financing to keep pace with the swift developments in this field—representing a 7-fold increase in capitalization. It appears that the market for civil helicopters of United States manufacture might approximate $200 million during this same period. New money in these amounts is not likely to be forthcoming unless helicopter transportation is placed on the same basis of financial and operating stability as that enjoyed by the other forms of air transportation.

Temporary certification by the Civil Aeronautics Board is not sufficient for this purpose. The problems of achieving expansion of this magnitude should not be multiplied by the handicap of temporary authorizations in which neither the public, the investors, nor the helicopter manufacturers can have any firm confidence. According the helicopter carriers permanent status will provide much needed assistance in the development of this important new form of air transportation.

Ineptness and Ineffectiveness

EXTENSION OF REMARKS

OF

HON. ABRAHAM J. MULTER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 10, 1956

Mr. MULTER. Mr. Speaker, the following article by Walter Lippmann, which appeared in his syndicated column in papers throughout the country on July 10, 1956, demonstrates a maximum of ineptness and ineffectiveness. The readers can conclude for themselves which or both of these adjectives apply to either or both the Republican Party and its leader, President Eisenhower. Whether we agree or disagree with all that Mr. Lippmann says, we must conclude that the Republican Party follows its leader with lip service in order to get itself elected, while its leader, the President, talks big but accomplishes little.

The item follows:

TODAY AND TOMORROW

(By Walter Lippmann)

CANDIDATE AND LEADER

To judge by what is happening in Congress to the President's legislative program, he is the unanimous candidate of a party that will not follow him as a leader. A heavy majority of the Republicans, acting contrary to the President's advice, have just voted for the Powell amendment which made it impossible to pass the bill to give Federal aid to the public schools. But for the Republican defectors, the Democrats could not have gotten Congress to overrule the administration on the size of the military appropriation, and in effect to pass a vote of no confidence in the President's military judgment. The President's very modest proposals to liberalize international trade are stalled because of Republican opposition. The foreign aid bill, the keystone of administration foreign policy, is being given what Life magazine describes as "a furious kicking around." None of this could have happened if the President had a reasonably united support from his own party.

Yet he has such overwhelming support for his running again that he will probably be renominated by acclamation. The same Republicans who oppose his policies and his measures are a chorus crying out that the future of this country, the future of the world, depend upon his being a candidate. What are we to make of this contrast between his candidacy and his leadership? The obvious explanation is the cynical one, that the dissenting Republicans do not believe in Eisenhower's policies but that they need him to win the election for them.

The relations between the President and his party in Congress are remarkable. His enormous popularity and prestige have made him, as he was far from being in 1952, the undisputed choice of the party for President. Yet he is as little able today as he was when he took office to unite and lead his party in support of his policies. The issues on which the party will not unite behind him are not small issues. They are the crucial and major issues of foreign policy, defense, education. What takes some explaining is how, though he and they are divided in Congress, they can be united for the presidential election.

This is possible because in General Eisenhower's conception of the American Government the President is not the leader of the system who makes it work but the officer who presides over the executive branch. He exhorts; he preaches; he proposes measures, he pleads for them. But he does not lead the Congress. In his book there are no rewards for men, like Senator WILEY, who take risks in order to follow him; there are no penalties for those who, like Senator KNOWLAND, so often oppose him. Yet in order to lead a party it is necessary not only to talk but also to use a discipline of rewards and penalties.

It is General Eisenhower's unwillingness to insist upon party discipline, his virtual neutrality between those who oppose him and those who support him, that account for his inability to lead Congress. His personal popularity, which is his party's prime asset, is freely available to all Republicans without any reciprocal obligation on their part. So the Republicans opposed to Eisenhower want him for President, being under no obligation to follow him.

The American political system has never worked well when the President is passive and unable to give a strong lead to Congress. For the American Congress is like other legislative bodies, as, for example, the French National Assembly. It is almost incapable of dealing successfully with big questions except under the leadership, which includes the discipline, of the Executive. On measures where the national interest is more than the net sum of opposing local interests, the Executive, that is the President, must be the active political force.

He cannot drop the big measures into the legislative assembly, making an occasional public comment and doing some private lobbying, but on the whole standing aside in an attitude of respectful neutrality. For the big measures are almost certain to be ground to bits by Congressmen responding to local pressures from their constituents. These measures can be saved and carried through the Legislature only if the Representatives can feel behind them, and can point to, a national pressure which is stronger than the local pressures. Except when there is an upheaval of popular sentiment, only the President can generate the national pressure.

The Kelley bill to give Federal aid to the public schools is a case in point. The national interest, as the President rightly saw it, called for the passage of this bill. It was known to all that there was no chance of passing it through the Senate as against a Southern filibuster, if the bill contained the Powell amendment denying Federal funds to States resisting integration. But a heavy majority of the Republicans in the House, joined by a third of the Democrats from the North, nevertheless voted to insert the Powell amendment.

Thus Federal aid to education was sacrificed by some 148 Republicans and some 77 Democrats who believed they were appealing to the Negro voters in their local constituencies. The President alone could have forced Congress to face the grave national need in this crisis of the American public-school system. With the President absent, or passive and silent, the national interest could not prevail.

The Administration's Unrealistic Policy in the Middle East

EXTENSION OF REMARKS

OF

HON. VICTOR L. ANFUSO

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 11, 1956

Mr. ANFUSO. Mr. Speaker, during the discussion on the foreign aid bill last month I urged our Government, as I did on several other occasions in the past year, to adopt a firmer policy in the Middle East and to end its policy of appeasement of the Arabs. I advocated that we should not appropriate any funds for

the Arab states because "they have betrayed the cause of the free world by their actions in making possible Russia's intrusion into the Middle East." At the same time, I suggested that we provide the necessary military aid to Israel for self-defense against her aggressive neighbors who are threatening her existence.

About a month has passed by since that discussion, but events of the past few weeks only confirm the view that the situation in that area has deteriorated to a considerable extent. On the one hand, the deterioration is due to Communist intrigue with the Arab rulers; on the other hand, it is due to failure on the part of the United States to pursue a firm policy and to act decisively.

During these past weeks we have witnessed the triumphant tour of Russian Foreign Minister Shepilov in the Arab countries. We have witnessed the parade of Communist military equipment through the streets of Cairo in connection with the "liberation of the Suez Canal area." There have been new threats against Israel by Col. Nasser, of Egypt and the Premier of Jordan.

In the meantime, the French Foreign Minister M. Christian Pineau was in Washington recently to consult with Secretary of State Dulles and among other things sought to convince our Government of the need to make arms available to Israel in order to maintain a semblance of military equilibrium in the area. Secretary Dulles, however, would not listen to the advice of the French Foreign Minister.

The result is that Israel is still unable to purchase arms in this country which she needs for defense purposes. Other countries now take the view that providing arms to Israel is a responsibility which should be shared also by the United States, but since the United States refuses to do so other Western countries likewise are holding back. This is a vicious circle which is not only hurting Israel, our stanchest alley in the Near East, but it is also hurting our own prestige and our position of moral leadership among the free nations.

The policy pursued by the present administration is a policy of hostility toward Israel. It may doom Israel's existence as a free and independent state. It may lead to a war in the Middle East, and possibly to a new world war. It is a most unrealistic and erroneous policy. There is a crying need for a change in this policy, and the sooner the better. Next week or next month may be too late.

Mr. Speaker, in connection with the situation in the Middle East, I wish to insert into the RECORD an article on the subject by Murray Frank, entitled "Dulles Piles Up Perilous Blunders," which was published in the June issue of the American Zionist, the official monthly publication of the Zionist Organization of America. The article is as follows:

DULLES PILES UP PERILOUS BLUNDERS

(By Murray Frank)

WASHINGTON, D. C.—The following two news items datelined Washington appeared in the press 48 hours apart:

May 17: "The Defense Department confirmed it is sending Saudi Arabia another shipment of military goods. Pentagon officials said they included shells for the 76-millimeter guns of the M-41 tanks."

May 19: "State Department Press Officer Lincoln White disclosed that 21 surplus Army half-tracks destined for Israel were taken off a freighter in New York harbor. The ship sailed without the military vehicles."

The above two items illustrate most vividly the operations of Secretary of State Dulles' policy of impartiality as between the Arab States and Israel. That policy was reiterated only the week before by Mr. Dulles in an address before the B'nai B'rith convention in Washington when he said: "We want friendly political, cultural, and economic relations with all of the nations of the area (i. e., Middle East) on a basis of impartiality."

Evidently, impartiality in Mr. Dulles' dictionary means denying arms to Israel for fear it would result in an arms race in the Middle East, while at the same time sending (one is tempted to say secretly smuggling through an obscure port in North Carolina) weapons to Saudi Arabia. What kind of logic is this from a nation which claims to be the moral leader of the free world? Do principles no longer hold any meaning for us? No wonder the Washington Post observed editorially:

"The sudden disclosure of the shipment (i. e., to Saudi Arabia) tends to make a mockery of the pious admonitions not to whet Arab-Israeli tension and of the refusal to sell defensive arms to Israel. To say the least, it makes the American moral position one of dubious flexibility."

As if this is not enough, it is learned here that the United States is planning to send a group of 95 military experts to Saudi Arabia to train its troops, and that offers had been made to send similar experts to train troops in Syria, Lebanon, and other Arab countries. This was learned recently when Pentagon representatives testified before a congressional Committee on Military Appropriations for the coming fiscal year.

TREADING DANGEROUS LINE

The question arises: Train Arab troops against whom? Against the Soviet hordes? What nonsense. Is it to maintain internal order in these countries? Then why so much arms and of modern design? That leaves only one other alternative: Preparation for a military attack on Israel. If so, why should the United States be a part to such schemes? Secretary Dulles is treading not only a thin line, but also a very dangerous line in the Middle East.

When disclosure of the shipment of arms to Saudi Arabia and the denial of arms for Israel was made, those who immediately raised their voices in protest were Senators HERBERT H. LEHMAN, New York, ESTES KEFAUVER, Tennessee, PAUL DOUGLAS, Illinois, HUBERT H. HUMPHREY, Minnesota, and Congressman EMANUEL CELLER, New York—all Democrats.

The Democrats lashed out bitterly against the Government's action in permitting arms to flow freely to Saudi Arabia, while blocking surplus Army vehicles for Israel. Some called it favoritism toward the Arabs at Israel's expense, others said it was inept and unrealistic, still others called it unabashed appeasement of the Arabs and deplored the fact that the administraiton clings to a bankrupt foreign policy.

How did the State Department explain it? Mr. Lincoln White, the Department's press officer and spokesman, said that the weapons for Saudi Arabia had been approved last August at the time a shipment of 18 tanks for Saudi Arabia was approved. One is tempted to ask: How many more arms consignments have been promised to Saudi Arabia or other Arab countries of which the American public does not know and may not learn until they are discovered by sheer chance accident? As for the half-tracks for Israel which were removed from the freighter, Mr. White explained that the license called for spare parts, but not for assembled vehicles. In Israel's instance, United States authorities suddenly become highly technical and insist on abiding by each letter of the law.

Meanwhile, official Washington was reported to be shocked and dismayed over Egypt's recognition of Communist China. Fear is expressed here that other Arab League members may follow Egypt's action, and our diplomats are bringing all sorts of diplomatic pressure to prevent such steps on their part. Presumably, new efforts at appeasement are in the making. The United States is truly falling hook, line, and sinker for Arab blackmail tactics, of which the recognition of China is another example.

Already there are rumors here that Egypt is on the verge of making a deal with Red China to obtain a new supply of arms, so that when the present deal with Czechoslovakia expires on July 1, the flow of Communist arms to Egypt will continue. The State Department is reportedly investigating these rumors and lending credence to them as a buildup for further concessions to the Egyptian dictator, Colonel Nasser.

At last reports, United States relations with Egypt are under consideration or reappraisal by the National Security Council, the top policymaking body in the country, and some optimists are predicting that the United States-Egyptian relations may worsen. Others even predict that Henry Byroade, United States Ambassador to Cairo, will be recalled because of his failure to keep Washington informed in advance of Egypt's recognition of China.

We do not share this feeling, because it would be the natural reaction and the logical position for the United States to take. From past experience, however, it is safer to predict that the State Department will embark on a new series of appeasements and of playing right into the hands of the Arab blackmailers. It is not that our officials are so naive. They are cynical, hardboiled, blinded by expediency, their minds are shut, their ideas are fixed.

Commenting on Egypt's recognition of China, the Washington Post stated as follows:

"Recognition of Red China by Egypt must be put down as part of the payoff in connection with the Communist arms deal last fall. It is important for what it signifies. Colonel Nasser has not moved into the Communist camp, but is acting as a Soviet stalking-horse against the West in the Middle East and in Africa. The Cairo move comes as a blow to the school of thought in Washington which still clung to the view that the United States had a residual influence with the Egyptian dictator."

EGYPT AND RED CHINA

More recently, Secretary Dulles stated that Egypt's recognition of Red China is an action we regret, thus indicating for the first time that official Washington is perhaps beginning to cool off somewhat on its earlier appraisal of Nasser. One must not be overoptimistic regarding such developments, because when he was asked whether the United States had become disillusioned with Nasser, Mr. Dulles replied:

"To the extent that he (Nasser) is a spokesman for Egyptian independence, we have sympathy with his point of view; but to the extent that he takes action which seems to promote the interests of the Soviet Union and Communist China, we do not look with favor upon such action."

A day later, President Eisenhower expressed a similar view. He called Egypt's action in recognizing China "mistaken," but added quickly that a single act on the part of a nation does not destroy friendship or stop the efforts to work with it. He sought to minimize the difficulties in current United

States-Egyptian relations by referring to it as a family spat. Similarly, the President also sought to minimize difficulties over Saudi Arabia by saying the United States is only sending a moderate amount of arms which are to be used for internal security; besides, he stressed, Saudi Arabia has no common border with Israel. At this point he again observed that the United States is trying to prevent an arms race in the Middle East.

Unfortunately, our top officials in the administration still prefer to believe that they can influence the Egyptian dictator and the other Arab leaders to proceed along the path of peace and righteousness. Hence the conviction in Washington that the way to achieve this objective is to refuse to take sides, namely, to continue the policy of impartiality between the Arab States and Israel. One need only compare the Arab position today with what it was 3 years ago, when Mr. Dulles first enunciated his policy, to see how far they have gone in rearming, in aggressive intent against Israel, in opposing the interests of the United States and the free world, and in bringing the whole Middle East to the brink of war.

Tribute to Rt. Rev. Msgr. Stephen J. Krasula

EXTENSION OF REMARKS
OF
HON. IRVING M. IVES
OF NEW YORK

IN THE SENATE OF THE UNITED STATES

Wednesday, July 11, 1956

Mr. IVES. Mr. President, Method M. Balco, who is secretary-treasurer of the eastern district, Slovak Catholic Federation of America, has called to my attention the fact that the Right Reverend Monsignor Stephen J. Krasula recently completed his 40th year as pastor of St. John Nepomucene Parish in New York City. This is a remarkable record in pastoral service.

Mr. Balco has written a tribute to Monsignor Krasula, and I have been requested to place that tribute in the CONGRESSIONAL RECORD. Accordingly, Mr. President, I ask unanimous consent to have this tribute printed in the Appendix of the RECORD.

There being no objection, the tribute was ordered to be printed in the RECORD, as follows:

A TRIBUTE TO THE RIGHT REVEREND MONSIGNOR STEPHEN J. KRASULA—TO HIS 40 YEARS OF LEADERSHIP IN NEW YORK CITY

(By Method M. Balco, secretary-treasurer of the eastern district, Slovak Catholic Federation of America)

On March 12, 1956, 40 years of pastoral zeal, efforts, and sacrifices of true leadership were achieved in the city of New York by the Right Reverend Monsignor Stephen J. Krasula, pastor of St. John Nepomucene Parish, 66th Street and First Avenue in Manhattan. The 40th anniversary was observed quietly, with the jubilarian celebrating Holy Mass of Thanksgiving and preaching to his beloved parishioners.

However, although the anniversary was observed quietly at the request of the jubilarian, the Right Reverend Monsignor Krasula nonetheless received many tributes paid to him by the leading Americans, and especially Americans of Slovakian origin and descent, among whom he is a national figure, admired and respected as such. Thousands of Slovakian exiles remembered the good monsignor in various countries also. The proverbial saying, "Life begins at 40" was often repeated.

The Catholic News, official organ of the New York archdiocese, paid tribute to the jubilarian in its current issue by publishing his picture and listing his spiritual achievements as a pastor of one of the largest Catholic Slovak parishes in America, founded and established by the Americans of Slovakian origin. The parish was founded on September 8, 1895 by the members of the St. Matthew's Society, branch 45 of the First Catholic Slovak Union of the United States of America, and Canada. The late Martin Challan, well-known manufacturer, was its first president, was the principal organizer aided by many others. Challan's son, John P., was later deputy police inspector in New York City. Former Mayor Vincent Impellitteri paid tribute to Martin Challan on his 100th birthday anniversary, officially proclaiming "Martin Challan Slovak Day" on November 12, 1953.

The parish had its first church at 289 East Fourth Street in the borough of Manhattan. The late Most Reverend M. Corrigan, archbishop of New York archdiocese was the first to aid the Catholic Slovaks of the newly organized parish, which was incorporated on June 10, 1899. In 1911 a new church was established at 314 East 57th Street and the Fourth Street church building was sold.

During the period of 21 years the parish had 23 priests administering to the scattered parishioners in all the 5 boroughs. Forty years ago, on March 12, 1916, Rt. Rev. Msgr. Krasula was installed as its rector by the late Most Reverend John Dunn, later auxiliary bishop of the New York archdiocese.

Before describing the progress of the parish under the leadership of Monsignor Krasula, let us briefly review his life history.

Msgr. Stephen J. Krasula was born on May 22, 1887, as the son of John and Helen Krasula in the city of Namestovo, county of Orava, Slovakia, then the province of Austro-Hungary. The parents were blessed with six children, namely Florian, John, Simon, Stephen, and Joseph; also one daughter, Agnes. The family had a drygoods store, which was later managed by the eldest son, Florian. John became a teacher, but died a year after receiving his diploma. Joseph remained in his hometown and experienced horrors of two world wars. Simon came to America, lived in Chicago where he died.

The father of the family died when Monsignor Krasula was 12 years young. The mother died in 1933 at the age of 81. The monsignor visited her in 1925, when he also made a pilgrimage to Rome during the Holy Year.

Monsignor Krasula in his youth had the privilege of knowing the leading Slovakian leaders and patriots. In his home town, Namestovo, lived the greatest Slovakian poet, Hviezdoslav, an attorney by profession. During his studies in the city of Ruzomberok, he was inspired by the leadership of Msgr. Andrej Hlinka, champion of Slovak rights for freedom. The Slovaks did not fare well during the youthful years of Monsignor Krasula, so in October 1907 he came to America to finish his studies for priesthood. The late Rev. Joseph Martincek, then pastor of St. John Nepomucene Parish, took him to the Rt. Rev. Msgr. Mooney, then vicar general of New York archdiocese who accepted the 20-year-old student as a seminarian. In 1908 he began his studies at the St. Joseph's Seminary, Dunnwoodie, N. Y. There he met another Slovak seminarian, Rev. John Kubasek, later pastor of Holy Trinity Parish in Yonkers, N. Y. They became close friends until Father Kubasek's death in 1950.

Seven years after his arrival to this country, Monsignor Krasula was ordained to priesthood on June 5, 1914, at St. Patrick's Cathedral, New York City, by the Most Rev. Bishop Cussack. He celebrated his first solemn mass in Yonkers, N. Y., where he became assistant pastor of the Holy Trinity Parish. He also administered to the needs of Catholic Slovaks of North Tarrytown, N. Y., who organized the Parish of Holy Cross.

A year after his ordination, he was sent as assistant to the ailing Father John Kropac, then pastor of St. John Nepomucene Parish on East 57th Street in New York City. When Father Kropac died suddenly on February 14, 1916, the young assistant Father Krasula was appointed and installed as pastor on March 12, 1916.

Forty years have passed since the young pastor assumed his arduous duties. Immediately after installation he showed his remarkable organizing abilities and proved his powerful qualities as a leader. From a small parish, with scattered parishioners in all the five boroughs, he organized and built one of the largest and most up-to-date parishes.

After many sacrifices, in 1925 he built a new church on the corner of 66th Street and 1st Avenue, which was dedicated by His Eminence Patrick Cardinal Hayes on May 30, 1925. In the rear of this edifice stands a modern rectory and a parochial school with a large auditorium. Later he built a convent on East 66th Street. The buildings with all modern improvements were constructed and equipped with necessary furnishings, and recently renovated with new marble altar and new organ. All this at a cost of over $1½ million. In spite of depression and World War II, all debts are all paid.

Monsignor Krasula founded and reorganized the existing societies, visited all his parishioners at least once a year and in 1926 initiated a regular daily parochial school with the teaching staff of Sisters of Saints Cyril and Methodius, from the Motherhouse in Danville, Pa.

Although the large and growing parish required all his attention, Monsignor Krasula never failed to assist and lead his Slovakian compatriots in all their endeavors for God and Nation.

He is associated with these national organizations: The First Catholic Slovak Union of United States of America and Canada; has a New York district named in his honor; the First Catholic Slovak Ladies Union; the Slovak Catholic Sokol, of which he is protector; the Pennsylvania Slovak Catholic Union elected him as honorary spiritual director; the Ladies Pennsylvania Slovak Catholic Union, also the National Slovak Society honored him on numerous occasions. The Slovak Catholic Federation of America, an affiliate of NCWC, in recognition of his great work elected him honorary supreme president for life. He is also active in the Knights of Columbus. He is known as the first president of the first assembly of the Slovak League of America, which organization was founded on May 26, 1907. The league elected him national vice president. He served with great distinction during World War I, being also member of the Czecho-Slovak National Council, which worked for the establishment of the first Czechoslovak Republic. The Republic was proclaimed on October 28, 1918. In this capacity he worked closely with Dr. Thomas G. Masaryk and his son, Jan, as well as other distinguished Americans. During the historical meeting of the Catholic priests with Gen. Milan R. Stefanik, held at Hotel Plaza in New York City, he acted as secretary. General Stefanik was a famous astronomer, aviator, and cofounder of the Czechoslovak Republic who served on the allied military staff of Gen. John Pershing during World War I.

Monsignor Krasula aided the Reverend Joseph Murgas, well-known scientist, who was chairman of the million-dollar drive for the establishment of Czechoslovakia.

On February 22, 1911, a Slovak Catholic Federation of America, an affiliate of NCWC, was organized for the purpose of aiding the Catholic Slovaks in their religious and cultural needs and aspirations. Monsignor Krasula worked for this noble organization since its inception. He was its national secretary as well as editor of official organ Dobry Pastier (Good Shepherd) during and after World War I. During World War II, he head as national chairman the Slovak Catholic Religious Relief Association, affiliated with the NCWC war-relief services. The association aided the hierarchy, clergy, and people in the war-torn Slovakia and the displaced persons. Under Monsignor Krasula's leadership over a half-million dollars was raised by direct contributions and tons of clothing and food was sent abroad. The displaced persons were given all the necessary aid and assistance with the cooperation and supervision of the NCWC war-relief services and its subsequent agencies, in which the good monsignor still assists in any capacity assigned to.

In 1926 he was host to the four bishops of Slovakia, who visited the United States; also to Msgr. Andrej Hlinka, Senator Dr. Joseph Buday, later to Dr. Milan Hodza, Premier of Czechoslovakia, as well as Jan Masaryk, then exile from his native country; he also welcomed the delegation of St. Vojtech Society, largest Slovak cultural institute in the world, whose five member delegation, including Msgr. Joseph Tiso, later martyred President of Slovakia, visited this country in 1937; also the Slovenska Matica (Slovak Academy of Arts and Sciences), for which he acted as treasurer.

During the official reception by the late Mayor LaGuardia, of New York City, in honor of Dr. Edward Benes, then President of the Czechoslovakian government-in-exile; also the official reception in honor of exiled King Peter, of Yugoslavia, Monsignor Krasula was official representative of His Eminence Francis J. Cardinal Spellman. Monsignor Krasula likewise was a host to Karol Sidor, former Minister to Vatican from Slovak Republic.

Holy Father Pope Pius XI, at the recommendation of His Eminence Patrick Cardinal Hayes, elevated him in 1930 to the honor of papal chamberlain with the title of very reverend monsignor and in 1937 to the rank of domestic prelate with the title of right reverend monsignor.

During World War II he published monthly the St. John's Messenger, which he sent to over 750 parish boys in service. Nineteen of them paid the supreme sacrifice. He also consoled the boys from his parish during the Korean conflict.

Monsignor Krasula is the best-known American of Slovak origin. In all parts of the globe where you find Slovaks, they can tell you that they at least heard his name and also have known his interest in the welfare of the homeless and those who need a helping hand.

On the 40th anniversary of Monsignor Krasula's most successful pastorate in New York City, many prayers were raised to heaven for his health and blessings. We add our humble felicitations and prayers with a sincere ad multos annos.

Primer for Americans

EXTENSION OF REMARKS
OF
HON. HOMER E. CAPEHART
OF INDIANA
IN THE SENATE OF THE UNITED STATES
Wednesday, July 11, 1956

Mr. CAPEHART. Mr. President, on Wednesday, July 4, there appeared in the Columbus, Ohio, Dispatch, one of the finest articles I ever have read, entitled "Primer for Americans."

This article was forwarded to me and I assume that it appeared in other newspapers throughout the country since it bears the copyright of Sigurd S. Larmon.

Mr. President, I shall shortly ask unanimous consent to place this article in the RECORD because I have been so tremendously impressed with it that I believe every Member of the Congress and all other Americans will agree that it should be required reading.

This is such a clear, concise, and forceful expression of the foundation of the America we love that I should like to see it placed in the hands of every schoolchild, given a prominent position in every public library, posted in public buildings and given the widest possible circulation in print.

Sigurd Larmon, after recounting brilliantly the principles of America, proceeds at the end of his dissertation to pose the fundamental question—the acid test—to those who seek to impose some special brand of tyranny upon America. His question is: "Is it with or against the principles of America?"

Mr. President, I now ask unanimous consent to have printed in the Appendix of the RECORD, the article entitled "Primer for Americans."

There being no objection, the article was ordered to be printed in the RECORD, as follows:

PRIMER FOR AMERICANS

You live in the United States of America. You are an American.

Real Americans like their country. They are proud of it. They think it is a good place to live. And they want to keep it good—to keep it getting better all the time.

Why is America the way it is? What makes it a good place to live? The answer is simply this:

Throughout our history most Americans have believed that every person has certain rights and duties and responsibilities.

Americans have believed that there are certain things people should do, and things they should not do.

They have also believed in certain things that people are, and are not.

The principles of America are these:

1. Each person is of importance and value as an individual.

2. We believe that all men should enjoy personal freedom.

3. We believe that all men are created equal.

In our Constitution, and in other laws of our land, there are set down principles to protect the rights and freedoms and equality of individuals.

4. The right to freedom of speech.

This includes freedom of the press, of radio, of motion pictures, of every means by which man may express his thoughts.

5. The right to freedom of assembly.

6. The right to freedom of worship.

7. The right to security of person and property.

8. The right to equal protection before the law.

9. The right to freedom from slavery.

10. The right to petition the Government.

11. The right to vote for people of your choice.

Other principles hold that every man has—

12. The right to a good education.

13. The right to live where he pleases.

14. The right to work where he wants to.

15. The right to belong to an organization.

16. The right to own property.

17. The right to start his own business.

18. The right to manage his own affairs.

19. The right to make a profit or to fail, depending on his own ability.

20. Every man is entitled to freedom and equality of opportunity.

21. Every man may earn his living when, where, and how he wants to.

There are also limiting principles.

Principles of individual freedom sometimes clash with those of individual equality. Therefore our rights as individuals must be limited, and those limitations are themselves principles.

22. The rights of an individual shall not interfere with those of other individuals.

Your right to swing your arms stops where the other fellow's nose starts.

23. The rights of any individual shall not interfere with the welfare of the people.

Freedom of speech does not give the individual the right to shout "fire" in a crowded theater.

24. Every individual owes obedience to the laws under which he lives.

The individual has the right to talk against a law, to work and vote to change that law, but not to disobey that law.

Principles that are patterns of behavior.

Many of our principles of individual freedom and equality are guaranteed to us by law. But we have other beliefs, other general rules of action and conduct that have grown to the status of principles. And these, too, are foundations of Americanism.

25. A man shall be judged by his own record.

A man's family background, his race or his religion, is not as important as what that man himself can do, for Americans believe a man must stand on his own feet.

26. A man is free to achieve as much as he can.

We believe that where any boy may become President, where any man may achieve greatness, there is the greatest incentive for every man to do his best.

27. To achieve anything, a man should be willing to work.

Americans have always known that "you don't get something for nothing," that to get anything takes a willingness to work.

28. Achievement also depends upon the ability to do a good job.

Add to "willingness to work" the ability to produce results and the combination is the basis for most individual achievement in our country.

29. Every man has the right to a fair share of the results of his work and his ability.

Because of this belief, America has not only produced more goods, but they have been more fairly and more widely shared by more people than in any other country.

30. Security is the ability of a man to provide for himself.

The only true security for any individual is the opportunity, the ability, and the determination to work and plan and save for his own present and future. Self-reliance is vital to individual independence and personal freedom. No man can be proud and free who depends on others for his security.

31. When an individual cannot provide his own security, the responsibility should be assumed by others.

We believe that no one should starve, or be without adequate clothing and shelter; so those who have more than their basic needs share the responsibility of providing the essentials of security for those who need help.

32. Each individual must deal fairly with others.

Honesty, fairness, and personal integrity are virtues that help free and independent individuals get along with each other without losing their independence.

33. Fair and free competition is a good thing.

34. Americans have always believed that competition among individuals or groups encourages greater effort, which in turn brings greater benefits to all.

Principles of individual responsibility:

Freedom for individuals carries with it an equal responsibility to use that freedom wisely. If we wish to remain free, we must faithfully fulfill this responsibility.

35. The individual is responsible for himself and his family.

He must protect them and provide for their present and future well-being.

36. The individual has responsibilities to the groups of which he is a part.

He must give of his best to his community, his church, his employer, his union, and to every group in which individuals cooperate for their mutual benefit.

37. The individual has responsibilities to his country.

He must be an active citizen, interesting himself in local, State, and National Government, voting wisely, thinking and speaking and acting to preserve and strengthen freedom, equality, and opportunity for every individual.

For America's future:

Most of us have faith in our country's ability to move forward, to improve, to grow, to provide more and more individuals with more and more of everything they want and need in life.

38. If we, the people of the United States, want to have more material benefits, we must believe in and follow these two principles:

39. The only way we can have more is to produce more; and

40. As we produce more, we must make it possible for more and more people to enjoy that which we produce.

If we, the people of the United States, want to have a better life, spiritually as well as materially:

41. We must stand firmly for our beliefs, our rights, our principles.

There are those who would chip away our confidence so that their special brand of tyranny might creep into America. They must not succeed. So, let us ask of every plan, or act, or idea:

Is it with or against the principles of America?

Support Census Bureau

EXTENSION OF REMARKS
OF
HON. PHILIP J. PHILBIN
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 11, 1956

Mr. PHILBIN. Mr. Speaker, in the past, it has been the policy of this Government, through its Bureau of the Census, to publish a Census of Business and a Census of Manufactures data for urban centers, that is, for thickly populated areas meeting certain qualifications.

I have recently learned that this policy was not followed completely in the 1954 censuses and that, because of changed procedures designed to effect economies, the usual thorough reports were not completed. For this reason, the Bureau of the Census, apparently because of limited funds, is not now able to provide data for a considerable number of urban centers.

I am informed that despite these difficulties the Bureau expects to tabulate data for the larger towns and other urban centers, which will be issued as special census reports. To say the least, I was surprised to learn that this vital census work, upon which many people and many industries depend, was necessarily abridged and substantially crippled as to the last business and manufactures censuses.

So far as I know, it certainly was never the intent of the Congress to curtail these reports and services so vital to large segments of our business economy. To my mind, this curtailment is to be greatly deplored. Moreover, I hope and urge that it may be speedily remedied and that the Bureau of the Census may be able to resume its former practice in accordance with established policy.

If additional appropriations by Congress are necessary to accomplish this end, I want to make it perfectly clear that I am prepared to advocate and support them, because it is most essential that business, the great American press and other media engaged in disseminating news and information to the public should have available, as in the past, full reports concerning business and manufacturing throughout the Nation.

Development of Market for Oregon Wheat in Japan

EXTENSION OF REMARKS
OF
HON. RICHARD L. NEUBERGER
OF OREGON
IN THE SENATE OF THE UNITED STATES
Wednesday, July 11, 1956

Mr NEUBERGER. Mr. President, I have just received a copy of the June issue of the Portland (Oreg.) Harbor News, which is issued by the Portland Commission of Public Docks, of which Thomas P. Guerin is the general manager. This issue is devoted to an exposition of the extensive and notable efforts of the Oregon Wheat League toward development of the market for Oregon wheat in Japan. Mr. President, I ask unanimous consent to have this most significant article entitled "Oregon Wheat Growers Score in Export Push," printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

OREGON WHEATGROWERS SCORE IN EXPORT PUSH

A shining example of what can be accomplished by planned, intelligent export promotion of basic American products may be seen in the long-range program of Oregon wheatgrowers. Wheat is Oregon's largest farm crop—a soft, white wheat ideal for milling into cake, pastry, and biscuit flours, and for blending with high protein hard wheats for bread flours. Yet only about 25 percent of Oregon's wheat crop is used in the State for food, feed, and seed, which means that 75 percent of it must be marketed elsewhere. The picture is the same for Washington and northern Idaho, which with Oregon make up the Pacific Northwest wheat-growing region.

As long ago as 1926, Oregon wheatgrowers felt the need for a united approach to their problems. They organized the Oregon Wheat Growers League. Then, in 1946, growers decided that when postwar world demand for wheat declined, surpluses and acreage controls would be inevitable. A better approach, they decided, would be to put experts on the job full time finding new markets and expanding existing markets for wheat. The league's executive secretary, R. K. Baum, has been active in direction and participation in the program both in the United States and abroad.

At one time the Pacific Northwest region had a profitable market for its cake flour and soft wheat in Eastern and Southeastern States, but this market has been lost because of high freight rates. This leaves overseas markets as the main outlet. During the early postwar years, Government aid and foreign relief programs helped boost export movement to a volume that cleaned up the crop annually, and the emphasis was on greater production. Pacific Northwest wheat moved to all parts of the globe. This export movement has tapered off, taking less than half the crop in the past two seasons. This is of concern to Portland, too, for the commission of public docks maintains huge grain storage and export handling facilities.

At the request of growers, the Oregon State Legislature in 1947 enacted the Oregon Wheat Commission law which created a commission of five grower members, representing the main producing areas, and authorized a tax of one-half cent a bushel on all wheat sold commercially. Working closely with growers and checking its projects with the Oregon Wheat League, the commission has been spending an average of around $100,000 a year on a manifold approach to the surplus problem.

The United States sent a grain mission to Asia in 1949 to study markets there and early in 1954 the Department of Agriculture sent out trade missions at a time when surplus agricultural legislation was being considered by Congress. Many Asiatic countries expressed great interest. When Congress passed Public Law 480, providing for sale of surplus agricultural commodities with payment in local currencies, much of which would be respent by the United States in the purchasing country, new avenues were opened for reaching these markets. The big obstacle of dollar shortage had largely been overcome.

It was decided that a representative each from the Oregon Wheat League (Mr. Baum), from the Foreign Agriculture Service, and from the Millers National Federation form a team to visit Asia immediately to determine specific projects for each country to aid in expanding markets for United States grain products. The previous missions had found a significant increase in consumption of wheat products in Asia since the war and indication that the increase would be retained, although fluctuating with rice production. Too, several governments were willing to encourage wheat foods because they are cheaper than rice and will also result in diet improvement. A third favorable factor is the tremendous increase in population—it is estimated that every 10 years there will be 180 million more mouths to feed in Asia and it appears doubtful that food production can be increased to meet these demands.

The team worked in Japan, Hong Kong, Philippines, Singapore, Indonesia, Ceylon, India, and Pakistan and found definite encouragement in several countries where wheat was being adapted to the food habits of people in rice-eating areas. In India a project started 5 years before by the Oregon Wheat Commission and the Millers National Federation to sponsor nutrition research and extension aimed at improving the diet of the south Indian people had made tremendous strides. A demonstration car furnished by the commission had proven indispensable in demonstrating the preparation of wheat dishes.

The Oregon wheat groups played an important role in the introduction last year of a new wheat food called bulgor wheat, a popular wheat dish in the Middle East for centuries. It is made by boiling, drying, and cracking the wheat, resulting in a product that is high in food value yet easy to pre-

pare into a tasty dish of high nutritional value—cooking time only 15 minutes. In preparation, it has many uses similar to rice. Fisher Flouring Mills was persuaded to make this processed wheat in a new plant and the Department of Agriculture furnished wheat for trying the produce in Far Eastern countries. A. C. Hutchison, a representative of Fishers, found ready acceptance of the product by the Japanese from the standpoint of cost and nutrition after only a few months.

The biggest program to increase consumption of wheat by Asiatic peoples is that now underway in Japan, already the Northwest's biggest foreign wheat customer, but which is also believed to have the greatest immediate development potential. Considerable funds became available in Japan under terms of Public Law 480 for the furtherance of sales of surplus agricultural commodities. The wheat team has been in Japan for months working out 11 promotional projects, contracts for 4 of which have just been signed.

Wheat promotion efforts of the Oregon Wheat Growers League at the 15-day International Trade Fair in Osaka, Japan, during April turned out to be almost too successful. The exhibit was literally mobbed by crowds of Japanese. On the final day, in fact, more than 100 police had to be called out to keep the thousands of people from completely overrunning the wheat exhibit. As part of the 5-unit exhibit, baking demonstrations of cake mixes made a big impression on the Japanese public, millers and bakers, as did the scones, sweet breads and other baked goods. A Japanese home economist and four assistants spent full time preparing and explaining dishes made from Ala, the new bulgor, wheat food. Some 100,000 sweet rolls, countless thousands of samples of Ala, and recipe folders printed in Japanese were distributed during the fair. Twice as many people visited the exhibit as had been expected.

As we said, the work of the Oregon wheat people, coupled with the efforts of Government agencies, is a bright example of what should and can be done in promotion of world trade. In addition to having unequalled general cargo facilities, Portland is the leading grain port on the Pacific coast and has the largest tidewater grain elevator in the West. With a constant program of port development, we are keeping pace here at Portland, Oreg.—the progressive port of the Pacific.

LAWS AND RULES FOR PUBLICATION OF THE CONGRESSIONAL RECORD

CODE OF LAWS OF THE UNITED STATES

TITLE 44, SECTION 181. CONGRESSIONAL RECORD; ARRANGEMENT, STYLE, CONTENTS, AND INDEXES.—The Joint Committee on Printing shall have control of the arrangement and style of the CONGRESSIONAL RECORD, and while providing that it shall be substantially a verbatim report of proceedings shall take all needed action for the reduction of unnecessary bulk, and shall provide for the publication of an index of the CONGRESSIONAL RECORD semimonthly during the sessions of Congress and at the close thereof. (Jan. 12, 1895, c. 23, § 13, 28 Stat. 603.)

TITLE 44, SECTION 182b. SAME; ILLUSTRATIONS, MAPS, DIAGRAMS.—No maps, diagrams, or illustrations may be inserted in the RECORD without the approval of the Joint Committee on Printing. (June 20, 1936, c. 630, § 2, 49 Stat. 1546.)

Pursuant to the foregoing statute and in order to provide for the prompt publication and delivery of the CONGRESSIONAL RECORD the Joint Committee on Printing has adopted the following rules, to which the attention of Senators, Representatives, and Delegates is respectfully invited:

1. *Arrangement of the daily Record.*—The Public Printer will arrange the contents of the daily RECORD as follows: First, the Senate proceedings; second, the House proceedings; third, the Appendix: *Provided*, That when the proceedings of the Senate are not received in time to follow this arrangement, the Public Printer may begin the RECORD with the House proceedings. The proceedings of each House and the Appendix shall each begin a new page, with appropriate headings centered thereon.

2. *Type and style.*—The Public Printer shall print the report of the proceedings and debates of the Senate and House of Representatives, as furnished by the Official Reporters of the CONGRESSIONAL RECORD, in 7½-point type; and all matter included in the remarks or speeches of Members of Congress, other than their own words, and all reports, documents, and other matter authorized to be inserted in the RECORD shall be printed in 6½-point type; and all rollcalls shall be printed in 6-point type. No italic or black type nor words in capitals or small capitals shall be used for emphasis or prominence; nor will unusual indentions be permitted. These restrictions do not apply to the printing of or quotations from historical, official, or legal documents or papers of which a literal reproduction is necessary.

3. *Return of manuscript.*—When manuscript is submitted to Members for revision it should be returned to the Government Printing Office not later than 9 o'clock p. m. in order to insure publication in the RECORD issued on the following morning; and if all of said manuscript is not furnished at the time specified, the Public Printer is authorized to withhold it from the RECORD for 1 day. In no case will a speech be printed in the RECORD of the day of its delivery if the manuscript is furnished later than 12 o'clock midnight.

4. *Tabular matter.*—The manuscript of speeches containing tabular statements to be published in the RECORD shall be in the hands of the Public Printer not later than 7 o'clock p. m., to insure publication the following morning.

5. *Proof furnished.*—Proofs of "leave to print" and advance speeches will not be furnished the day the manuscript is received but will be submitted the following day, whenever possible to do so without causing delay in the publication of the regular proceedings of Congress. Advance speeches shall be set in the RECORD style of type, and not more than six sets of proofs may be furnished to Members without charge.

6. *Notation of withheld remarks.*—If manuscript or proofs have not been returned in time for publication in the proceedings, the Public Printer will insert the words "Mr. ——— addressed the Senate (House or Committee). His remarks will appear hereafter in the Appendix," and proceed with the printing of the RECORD.

7. *Thirty-day limit.*—The Public Printer shall not publish in the CONGRESSIONAL RECORD any speech or extension of remarks which has been withheld for a period exceeding 30 calendar days from the date when its printing was authorized: *Provided*, That at the expiration of each session of Congress the time limit herein fixed shall be 10 days, unless otherwise ordered by the committee.

8. *Corrections.*—The permanent RECORD is made up for printing and binding 30 days after each daily publication is issued; therefore all corrections must be sent to the Public Printer within that time: *Provided*, That upon the final adjournment of each session of Congress the time limit shall be 10 days, unless otherwise ordered by the committee: *Provided further*, That no Member of Congress shall be entitled to make more than one revision. Any revision shall consist only of corrections of the original copy and shall not include deletions of correct material, substitutions for correct material, or additions of new subject matter.

9. The Public Printer shall not publish in the CONGRESSIONAL RECORD the full report or print of any committee or subcommittee when said report or print has been previously printed. This rule shall not be construed to apply to conference reports.

10. *Appendix to daily Record.*—When either House has granted leave to print (1) a speech not delivered in either House, (2) a newspaper or magazine article, or (3) any other matter not germane to the proceedings, the same shall be published in the Appendix except in cases of duplication. In such cases only the first item received in the Government Printing Office will be printed. This rule shall not apply to quotations which form part of a speech of a Member, or to an authorized extension of his own remarks: *Provided*, That no address, speech, or article delivered or released subsequently to the final adjournment of a session of Congress may be printed in the CONGRESSIONAL RECORD.

11. *Estimate of cost.*—No extraneous matter in excess of two pages in any one instance may be printed in the CONGRESSIONAL RECORD by a Member under leave to print or to extend his remarks unless the manuscript is accompanied by an estimate in writing from the Public Printer of the probable cost of publishing the same, which estimate of cost must be announced by the Member when such leave is requested; but this rule shall not apply to excerpts from letters, telegrams, or articles presented in connection with a speech delivered in the course of debate or to communications from State legislatures, addresses or articles by the President and the members of his Cabinet, the Vice President, or a Member of Congress. For the purposes of this regulation, any one article printed in two or more parts, with or without individual headings, shall be considered as a single extension and the two-page rule shall apply. The Public Printer or the Official Reporters of the House or Senate shall return to the Member of the respective House any matter submitted for the CONGRESSIONAL RECORD which is in contravention of this paragraph.

12. *Official Reporters.*—The Official Reporters of each House shall indicate on the manuscript and prepare headings for all matter to be printed in the Appendix, and shall make suitable reference thereto at the proper place in the proceedings.

LAWS RELATIVE TO THE PRINTING OF DOCUMENTS

Either House may order the printing of a document not already provided for by law, but only when the same shall be accompanied by an estimate from the Public Printer as to the probable cost thereof. Any executive department, bureau, board, or independent office of the Government submitting reports or documents in response to inquiries from Congress shall submit therewith an estimate of the probable cost of printing the usual number. Nothing in this section relating to estimates shall apply to reports or documents not exceeding 50 pages (U. S. Code, title 44, sec. 140, p. 1938).

Resolutions for printing extra copies, when presented to either House, shall be referred immediately to the Committee on House Administration of the House of Representatives or the Committee on Rules and Administration of the Senate, who, in making their report, shall give the probable cost of the proposed printing upon the estimate of the Public Printer, and no extra copies shall be printed before such committee has reported (U. S. Code, title 44, sec. 133, p. 1937).

PRINTING OF CONGRESSIONAL RECORD EXTRACTS

It shall be lawful for the Public Printer to print and deliver upon the order of any Senator, Representative, or Delegate, extracts from the CONGRESSIONAL RECORD, the person ordering the same paying the cost thereof (U. S. Code, title 44, sec. 185, p. 1942).

OFFICERS OF THE SENATE

Secretary—Felton M. Johnston.
Chief Clerk—Emery L. Frazier.
Sergeant at Arms—Joseph C. Duke.
Secretary for the Majority—Robert G. Baker.
Secretary for the Minority—J. Mark Trice.
Chaplain—Rev. Frederick Brown Harris, D. D.

STANDING COMMITTEES OF THE SENATE

Committee on Agriculture and Forestry

Messrs. Ellender (chairman), Johnston of South Carolina, Holland, Eastland, Clements, Humphrey, Scott, Symington, Aiken, Young, Thye, Hickenlooper, Mundt, Williams, and Schoeppel.

Committee on Appropriations

Messrs. Hayden (chairman), Russell, Chavez, Ellender, Hill, McClellan, Robertson, Magnuson, Holland, Stennis, Clements, Johnson of Texas, Bridges, Saltonstall, Young, Knowland, Thye, McCarthy, Mundt, Mrs. Smith of Maine, Messrs. Dworshak, Dirksen, and Potter.

Committee on Armed Services

Messrs. Russell (chairman), Byrd, Johnson of Texas, Kefauver, Stennis, Symington, Jackson, Ervin, Saltonstall, Bridges, Flanders, Mrs. Smith of Maine, Messrs. Case of South Dakota, Duff, and Welker.

Committee on Banking and Currency

Messrs. Fulbright (chairman), Robertson, Sparkman, Frear, Douglas, Lehman, Monroney, Morse, Capehart, Bricker, Ives, Bennett, Bush, Beall, and Payne.

Committee on the District of Columbia

Messrs. Neely (chairman), Bible, McNamara, Morse, Frear, Beall, Hruska, Case of New Jersey, and Allott.

Committee on Finance

Messrs. Byrd (chairman), George, Kerr, Frear, Long, Smathers, Anderson, Douglas, Millikin, Martin of Pennsylvania, Williams, Flanders, Malone, Carlson, and Bennett.

Committee on Foreign Relations

Messrs. George (chairman), Green, Fulbright, Sparkman, Humphrey, Mansfield, Morse, Long, Wiley, Smith of New Jersey, Hickenlooper, Langer, Knowland, Aiken, and Capehart.

Committee on Government Operations

Messrs. McClellan (chairman), Jackson, Kennedy, Symington, Ervin, Humphrey, Wofford, McCarthy, Mundt, Mrs. Smith of Maine, Messrs. Cotton, Bender, and Martin of Iowa.

Committee on Interior and Insular Affairs

Messrs. Murray (chairman), Anderson, Jackson, O'Mahoney, Bible, Neuberger, Laird, Scott, Millikin, Malone, Watkins, Dworshak, Kuchel, Barrett, and Goldwater.

Committee on Interstate and Foreign Commerce

Messrs. Magnuson (chairman), Pastore, Monroney, Smathers, Daniel, Ervin, Bible, Wofford, Bricker, Schoeppel, Butler, Potter, Duff, Purtell, and Payne.

Committee on the Judiciary

Messrs. Eastland (chairman), Kefauver, Johnston of South Carolina, Hennings, McClellan, Daniel, O'Mahoney, Neely, Wiley, Langer, Jenner, Watkins, Dirksen, Welker, and Butler.

Committee on Labor and Public Welfare

Messrs. Hill (chairman), Murray, Neely, Lehman, Kennedy, McNamara, ———, Smith of New Jersey, Ives, Purtell, Goldwater, Bender, and Allott.

Committee on Post Office and Civil Service

Messrs. Johnston of South Carolina (chairman), Pastore, Monroney, Hennings, Scott, Neuberger, Laird, Carlson, Jenner, Langer, Curtis, Martin of Iowa, and Case of New Jersey.

Committee on Public Works

Messrs. Chavez (chairman), Kerr, Gore, McNamara, Neuberger, Wofford, ———, Martin of Pennsylvania, Case of South Dakota, Bush, Kuchel, Cotton, and Hruska.

Committee on Rules and Administration

Messrs. Green (chairman), Hayden, Hennings, Gore, Mansfield, Jenner, Barrett, McCarthy, and Curtis.

UNITED STATES SUPREME COURT

Mr. Chief Justice Warren, of California, Hotel Sheraton-Park, Washington, D. C.
Mr. Justice Black, of Alabama, 619 S. Lee St., Alexandria, Va.
Mr. Justice Reed, of Kentucky, the Mayflower.
Mr. Justice Frankfurter, of Massachusetts, 3018 Dumbarton Ave.
Mr. Justice Douglas, of Washington, 3701 Connecticut Ave.
Mr. Justice Burton, of Ohio, the Dodge.
Mr. Justice Clark, of Texas, 2101 Connecticut Ave.
Mr. Justice Minton, of Indiana, the Methodist Building.
Mr. Justice Harlan, of New York, 1677 31st St.

OFFICERS OF THE SUPREME COURT

Clerk—Harold B. Willey, 3214 N. Wakefield St., Arlington, Va.
Deputy Clerk—Reginald C. Dilli, 1329 Hemlock St.
Deputy Clerk—Hugh W. Barr, 4701 Connecticut Ave.
Marshal—T. Perry Lippitt, 6004 Corbin Road.

UNITED STATES JUDICIAL CIRCUITS

JUSTICES ASSIGNED
TERRITORY EMBRACED

District of Columbia: Mr. Chief Justice Warren. District of Columbia.

First judicial circuit: Mr. Justice Frankfurter. Maine, New Hampshire, Massachusetts, Rhode Island, Puerto Rico.

Second judicial circuit: Mr. Justice Harlan. Vermont, Connecticut, New York.

Third judicial circuit: Mr. Justice Burton, Pennsylvania, New Jersey, Delaware, Virgin Islands.

Fourth judicial circuit: Mr. Chief Justice Warren. Maryland, Virginia, West Virginia, North Carolina, South Carolina.

Fifth judicial circuit: Mr. Justice Black. Georgia, Florida, Alabama, Mississippi, Louisiana, Texas, Canal Zone.

Sixth judicial circuit: Mr. Justice Reed. Ohio, Michigan, Kentucky, Tennessee.

Seventh judicial circuit: Mr. Justice Minton. Indiana, Illinois, Wisconsin.

Eighth judicial circuit: Mr. Justice Clark. Minnesota, North Dakota, South Dakota, Iowa, Nebraska, Missouri, Arkansas.

Ninth judicial circuit: Mr. Justice Douglas. Washington, Oregon, Montana, Idaho, California, Nevada, Arizona, Alaska, Hawaii.

Tenth judicial circuit: Mr. Justice Clark. Colorado, Wyoming, Utah, Kansas, Oklahoma, New Mexico.

Appendix

A Way to Freedom From Oppressive Government

EXTENSION OF REMARKS
OF

HON. RALPH W. GWINN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 11, 1956

Mr. GWINN. Mr. Speaker, I desire to set forth in the RECORD some remarkable figures that show the way to freedom from oppressive government.

The following are excerpts from a speech by Willis E. Stone, author of the proposed 23d amendment to take government out of business. He is president of the American Progress Foundation, 6413 Franklin Avenue., Los Angeles, Calif. The speech was made before the Congress of Freedom at Dallas, Tex., April 7, 1956:

Mr. Chairman, delegates to the 1956 Congress of Freedom, friends, this is a discussion of the possibilities of repealing our individual income taxes by first reducing the costs of government sufficiently to make this possible. At the same time we would achieve a solvent government, free from the scourge of deficit spending and retire part of its debt.

Enormous as such an undertaking may seem at first glance, it can be done whenever we, the American people, decide to perform the basic function of citizenship—that of defining the terms of our freedom in our organic law.

Let's face it. We cannot correct the overwhelming tax burden from which we suffer until we first correct the cause of that burden. If we honestly wish to remove the tax burden, we must first discover how our tax dollars are used, determine whether or not such governmental activities are valid, the legal means by which they can be eliminated if they are not valid activities, and to what extent the removal of impractical functions can solve the tax problem.

First, we must recognize that this is our responsibility because the administrators of government have no intention of reducing their spending simply because we want lower taxes. They have proved this. Heavy as our taxes have been, our bureaucrats have constantly spent more than we provide—$240 billion more during these past 20 years. This means that our bureaucracy has spent an average of $12 billion more than we have paid in taxes every year for 20 years.

This should demonstrate that merely wanting lower taxes is an empty wish. It should prove that the only possible way to get lower taxes is for us to discover and apply the means for controlling bureaucracy and reducing its mad spending. The moment we look objectively at the activities of the Federal Government we begin to recognize the monstrous proportions of the bureaucratic empires which have mushroomed during recent years.

By tracing the method by which these bureaucratic empires were created and developed, and witnessing the increasing tempo of the process, we may be in better position to apply the necessary controls.

The 1956 session of Congress saw a set of contradictions all of them holding some individual merit, which demonstrates the process. It began with a great hue and cry about the evils of our abundance which propagandists call "surplus." To eliminate this, enormous pressures were brought upon Congress to appropriate a couple of billion tax dollars to a "soil bank" which would take land out of production, solving the surplus.

At the same time, and on another front, a different set of propagandists were at work getting appropriations from Congress to provide for the free distribution of fertilizer so farmers could get as much produce, if not more, from the acreage they would continue to farm.

This nullification of the soil bank idea was complicated by still another drive, by still another set of bureaucrats, demanding a few billions of tax dollars with which to build dams and irrigation systems so that vast new areas could be brought into production.

To further complicate the issue, more tax billions were demanded for loans to improve production on the farms, and for the Commodity Credit Corporation to take the production out of the market place, trucking in Government trucks to Government warehouses and granaries, to be managed, traded an sold by governmental agencies operated by bureaucrats determined to perpetuate themselves in control of the growing bureaucratic empires such contradictory legislation spawns.

By the device of politically manufactured emergencies, more than 700 Federal corporate activities have been created. They have rapidly expanded to fabulous proportions, consuming gigantic quantities of our tax dollars.

Under the label of "foreign aid" the American taxpayers, who have never known military defeat, have been compelled by their own Government to pay more treasure into the coffers of foreign powers than all the vanquished people of history have been required to pay to their conquerors.

The domestic problem is even worse. About 700 Federal corporate activities have been established without any pretense of constitutional authority. They absorb, directly and indirectly, about half of all Federal receipts to pay their losses and hidden costs. They have already, by one device or another, taken over 40 percent of the land area and 20 percent of the industrial capacity of the Nation, riding the backs of the American people as interest free, rent free, cost free, tax free competitors of our own citizens.

Amazing charges, certainly, but easily proved by the claims of the bureaucratic empires themselves.

The Interior Department brags of its enormous empire, asserting (p. 203, 1955–56 United States Government Organization Manual) that: "The jurisdiction of the Department extends over the continental United States, to the islands of the Caribbean and South Pacific, and to lands in the Arctic Circle. It includes custody of 750 million acres of land." This equals 32.3 percent of the total land and water area of the United States and all its territories and possessions.

The Forest Service declares (p. 238, 1955–56 Manual) that it holds lands "aggregating about 188 million acres," which equals 8.1 percent of the total land and water area of the United States and its territories and possessions.

The Soil Conservation Service (p. 241, 1953–54 Manual) claims to have acquired lands which "aggregate more than 11,297,000 acres," which is nearly a million and a half acreas greater in extent than the combined areas of 4 of our States—New Jersey, Connecticut, Delaware, and Rhode Island.

These three Federal agencies alone have taken from the American people an area greater than the combined area of England, Ireland, Scotland, Wales, Portugal, Spain, France, Belgium, Holland, Luxembourg, Switzerland, Germany, Iceland, Denmark, Poland, Austria, Czechoslovakia, Hungary, Italy, Monaco, Albania, Greece, Yugoslavia, Rumania, and Bulgaria.

We have believed that the function of Federal agencies was to protect us and our properties, yet these three bureaucratic empires have carried on a conquest greater than anything of modern times. With several hundred other bureaucratic empires also promoting their conquests, it is little wonder that our tax bill has become so agonizing.

We must reduce these bureaucratic empires to a dollars and cents evaluation to learn the exact extent to which the abolition of such practices can solve our tax burden. Once we know the dimensions of the evil we can recognize the all-important necessity of outlawing these practices.

The Federal corporate activities can be outlawed by an amendment to the Constitution, already introduced into Congress by Representative RALPH W. GWINN, Republican, of New York. It has been formally approved by the State of Illinois. More than 6,000 organizations have adopted resolutions of support for it. Known as the Gwinn amendment and also as the proposed 23d amendment, it is pending in Congress as House Joint Resolution 123. It provides that "the Government of the United States shall not engage in any business, professional, commercial, financial, or industrial enterprise except as specified in the Constitution."

This proposal in no way would alter the intent and purposes of the Constitution. It would only give the Constitution its proper force and effect. In doing this, it would stop the political gift of our tax dollars to foreign socialistic and communistic governments, leaving individuals to do this on a voluntary basis if they so desired. In 1954 the foreign grant and credits of your tax dollars amounted to $4,669,000.

This amendment would cause the Federal corporate activities to be sold back to the American people. It is estimated the land, buildings, and facilities, even under forced sale, would bring better than $50 billion, all of which would be applied to the national debt, particularly as series E and F bonds would probably be employed to buy those properties. Retiring $50 billion of the national debt in this way would reduce the taxes required to pay interest on it by $1,250,000,000 per year.

Also, the cost of amortizing that portion of the national debt would no longer exist and this would save the taxpayers $1,250,000,000 per year.

The average annual losses of the Federal corporate activities during recent years has exceeded $10 billion per year. The sale of the Federal corporations would eliminate these losses by eliminating their source, thus saving the taxpayers this amount of taxes every year.

Another important item is the fact that an estimated 1 million Federal employees apparently do nothing in their official life except provide services without cost to the Federal corporations. They are paid by the general fund, therefore their pay comes directly from taxes—your taxes. With the Federal corporate activities sold back to the American people, they will be more gainfully employed in private enterprise and 1 million pay envelopes, containing an average $4,000 per year will not require our tax dollar, saving the taxpayers $4 billion per year.

At least $3 worth of goods, services, and facilities are required to maintain every dollar of payroll, thus the saving of $4 billion in payroll means a related tax saving of $12 billion in goods, services, and facilities.

These five items of savings, possible by enacting the proposed 23d amendment, add up as follows:

The goods, services, and facilities that can be saved is	$12,000,000,000
The payroll that can be saved each year is about	4,000,000,000
The losses that will no longer require tax support are	10,000,000,000
The interest that will be saved will exceed	1,250,000,000
The amortization charge that will be saved exceeds	1,250,000,000
This adds up to a tremendous total of	28,500,000,000
Plus the savings resulting from putting foreign aid back into the hands of private citizens, on a voluntary basis	4,449,000,000
Means a total annual saving to taxpayers of	33,169,000,000
Compared with the total of individual income taxes collected	32,495,000,000
Indicates the Federal Government would have a surplus of	674,000,000

by repealing the individual income taxes (1954 level) at the same time the Federal corporate activities are sold back to the American people from whom they were taken.

So we can get the individual income tax off our neck on the very day we get the Federal bureaucrats out of competition with our business—and on that very day we will find that a veritable flood of new tax revenues will begin to flow into the Federal Treasury which will enable the Government to steadily retire the national debt and cut taxes in other areas.

This is the way it works. The very day we stop Federal income taxes, every person in the Nation will have an increase in net take-home pay exactly equal to the income taxes we now pay. This will not depend on any change in the rate of pay. It only depends on getting the Government back within constitutional limitations, getting bureaucrats out of competition with our private business, under the terms of House Joint Resolution 123.

This means that almost every one of us will have more than 15 percent more money to spend simply because we will have this amount of our earnings restored to us, in exactly the amount we reported on our tax Form 1040.

What would you do with your new income? Buy new drapes, or new furniture, or a new automobile, or even an airplane? Or perhaps invest in a business of your own, with new equipment. If you save your new income, putting it into the bank, it will be available for loans so others may expand their business or satisfy some important need.

However it is used, this better than 15 percent, new take-home pay will be spent for things, or services, or savings, increasing business volume tremendously. It is estimated the Federal Government will receive 15 percent more taxes from the increased volume done by the present business community, which would mean an increase of $3,231,900,000 in taxes each year from this source, based on 1954 standards.

Similarly, the sale of the Federal corporate activities would put about 20 percent more industrial and business capacity back on the tax rolls to share the burden, and this, at 1954 levels, would mean that this new source of revenue would yield to the Federal Treasury $4,309,200,000 per year.

The surplus in the foregoing computation	$674,000,000
The 15-percent increase from present business taxpayers will yield	3,231,900,000
The new tax payments—20-percent increase by new taxpayers	4,309,200,000
Based on the 1954 experience, the surplus and new tax sources can yield a total of	8,215,100,000
In 1954 the Federal Government operated at a deficit of	3,116,000,000
We can take care of that deficit and still leave the Government	5,098,487,000
This is enough to permit the abolition of gift and estate taxes	935,000,000
And still leave the Government, based on 1954 experience	4,163,487,000

That can be applied every year on the national debt, retiring it completely on this scale in much less than 50 years at the maximum.

This is a wonderful outlook, and it is all possible on the day we enact House Joint Resolution 123, now pending in the Congress. We can compel action on this by demanding that every Representative of ours, in Congress or in the State legislatures, get it enacted. We can demand that every candidate who seeks our vote declare his position on this question so we can know how to vote to serve our best interest as citizens and as Americans.

This is not the end of the equation. The cost of collecting individual income taxes amounts to about $200 million every year.

Then there is the item of printing the tax forms and all the auxiliary items that relate to collecting individual income taxes, which creates a deficit in the Government Printing Office of $100 million a year.

There is also the cost of postage, which amounts to an estimated $40 million per year just to handle the flood of parcels, booklets, and letters relating to collecting the individual income taxes. This appears as a deficit in the Postoffice Department and would no longer require deficiency appropriation of your tax dollars.

There is, in these three items, $340 million a year to help pay off the debt, stepping up the rate by which we can get back to solvency as a nation and cut other kinds of taxes. Every statistical fact proves that it can be done by the enactment of the Gwinn amendment, now pending in Congress as House Joint Resolution 123.

Instead of groaning under an inhuman load of individual income taxes, we could abolish and repeal the individual income tax laws.

Instead of operating the Federal Government at an annual average deficit of $12 billion a year, as we have been during the last 20 years, we can pay off the national debt at the rate of nearly $5 billion a year while operating on a balanced budget.

Instead of the violent conflict between Government and people regarding which shall own and operate the enterprises created by the people, we will have a Government devoted to protecting our lives and properties.

Instead of Government being the greatest pauper in history, it will be returned to a solvent position and will have the affection of the American people returned to it, and the affection of the citizens is the greatest asset any government can possibly possess.

All of this, just by enacting House Joint Resolution 123 as it is now pending in Congress.

But there is even more. Think of the time, the worry, and the money each one of us have been spending to conform to the tax requirements. All this would be saved. So would the time, money, and energy we spend in protective lobbying, special bookkeeping, reporting, accountants fees, and any number of other costly impositions which now involve us. Then there is the savings that will result because it will no longer be necessary to ferret out, prosecute, and incarcerate those who fail, for any reason, to conform to the more than 400,000 words now in the individual income tax laws.

Every person in the land can think of an infinite variety of other benefits that will come to every one of us on the day we take the Federal agencies out of competition with our individual business enterprise, thus stopping the waste of our tax dollars by the bureaucratic empire builders, and enabling us to use our own earnings in our own way and at our own pleasure by repealing the individual income tax.

The analysis presented here deals only with the dollars and cents elements of the Federal competition with private enterprise and the individual income tax laws. It does not take into consideration the advantages to every business when the threat of cost-free, rent-free, tax-free, cutthroat competition is removed.

Neither does it take into consideration the wide variety of benefits to come from a people whose genius is not restrained by political straitjackets of competition or the blight of impossible tax burdens.

This seems to add up to a wonderful vision of fabulous benefactions that stun the imagination, yet there is still one more highly important factor to be considered. When the Federal corporate activities are sold back to the American people, tremendous amounts of property will go back on the local, county, and State taxrolls. In some areas this will be an item of enormous importance.

In California, for example, the Federal bureaucracy owns 48 percent of the land area of the State. House Joint Resolution 123, which you recall provides that "the Government of the United States shall not engage in any business professional, commercial, financial, or industrial enterprise except as specified in the Constitution," will compel the Federal agencies to relinquish this vast empire, selling it back to the people. In this way about 40 percent more property will go on the local taxrolls to share the burden with the present taxpayers. This will reduce the amount of taxes to be paid by each taxpayer.

In Nevada, the difference will be even greater as the Federal corporations now own and operate 85 percent of that State. Returning these vast areas to the jurisdiction of the States in which they are naturally contained, means that the principle of States rights will be reestablished and the governor of such a State as Nevada, where he is currently governor of only 15 percent of a

State, will be governor of all the State, as was originally intended by the Constitution.

In each State and in each city and to each person the situation differs. But in every instance, without exception, the transfer of these vast bureaucratic empires back to the Ameriacn people means an infinite variety of benefactions beyond the power of human imagination—just as the Constitution itself held advantages for us far beyond the dream of even those who gave it life.

Well, there it is—a program of dollars and cents reality, built upon the hard facts of truth, supported with overwhelming quantities of irrefutable evidence. There can be no question of the tremendous financial advantage of restoring the American private enterprise system, giving the business of producing, distributing, and consuming the same constitutional protection we have always enjoyed in other fields. It all adds up to the simple equation that we can get the politicians out of our pockets the very day we get the bureaucratic empire builders out of our business. All that is needed is to fortify the terms already written into the Constitution, giving them reality and fact, by adding two more amendments.

First, House Joint Resolution 123, now pending in Congress, which provides that "the Government of the United States shall not engage in any business, professional, commercial, financial, or industrial enterprise except as specified in the Constitution."

Second, get action on a proposed constitutional amendment to provide that "Congress is prohibited from levying taxes on personal incomes, inheritances, or estates."

The day we really get together as a people, and labor jointly in the common cause as the Founding Fathers did, we can add these two amendments to the Constitution. Do you remember when Congress levied a tax of 10 percent on the purchase of 50 or more postcards? This 10-cent tax on a dollar's worth of postcards so enraged the American people that they went to work on their representatives in dead earnest. It was made perfectly clear to every person in office and every person who wanted to be in office that this tax had to be repealed instantly. Under this coordinated public pressure, the tax on postcards was repealed in a matter of days.

What about your personal income taxes? How much does it mean to you, personally, to get this one off your back? You know the answer as it applies to you, because it is the amount you reported on your income-tax form No. 1040. If you want that tax repealed—so you can keep that amount of your own earnings, then say so—and say it loud enough for your representatives to hear.

It's up to you to tell every Member of Congress and every Member of your State legislature exactly what you want—and what you are ready to do to get what you want. The day we do this with the same determination we displayed in the matter of the tax on postcards, the repeal of individual income taxes, and the enactment of House Joint Resolution 123 will be well on their way to accomplishment.

In this way the sovereignty of the States will be restored, just as the Constitution intended.

International justice, confidence, honor, and integrity will be restored.

The American theme of "equal justice under law" will be reestablished, with Government back at its rightful job of governing and regulating, protecting our lives and property.

This will constitute a great rebirth of liberty, making us free in fact, giving substance to our claim that ours is the land of the free and the home of the brave.

It will solve the most difficult of all our internal problems—the strife between management and labor—by restoring to labor the fruit of its toil, putting a greater net increase in the pay envelope of all Americans than any politician or labor leader ever dared suggest.

All this and much, much more is ours just as soon as we accept this challenge of Americanism, use our citizenship to define the terms of our freedom by adding these two amendments to the Constitution, and thus bring new vitality and greatness to our institutions of liberty—to the ideals of equal justice under law.

Federal Assistance to States for School Construction

EXTENSION OF REMARKS
OF
HON. HARLEY O. STAGGERS
OF WEST VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 5, 1956

The House in Committee of the Whole House on the State of the Union had under consideration the bill (H. R. 7535) to authorize Federal assistance to the States and local communities in financing an expanded program of school construction so as to eliminate the national shortage of classrooms.

Mr. STAGGERS. Mr. Chairman, I move to strike out the last word.

Mr. Chairman, we have been discussing the Federal aid to education bill, a subject that has been discussed for a long time. Men in this country, when public education first started, fought public schools. We did not have public schools throughout the United States until 1839 as a complete system of education.

The gentlemen who preceded me mentioned his State of Michigan and said that in 1874 the Supreme Court of Michigan held that local districts wishing to extend their schools beyond the elementary grades might do so. Today it is the custom throughout the United States that we provide public education through the high school days.

Five important words in the Declaration of Independence are, "all men are created equal." We lead peoples of the world to believe that every man in America and every woman has an equal opportunity, and that means in every field. Certainly this should be so in the basic field of education.

Recently a man in the city of Washington worth, I presume, at least $2 million, was discussing with me this fact of Federal aid to education, and I brought up the subject that in some of the States they just could not afford to give their children the kind of education they do in the richer States. He made the statement to me, "If those children can't get it, let them leave that State and go to some State where they can get it." I told him I thought that was the most absurd statement that a man I thought had good sense could make, because those children did not have the ability nor the opportunity to pick up and go to some other State to get their education. Perhaps their fathers and mothers should have, but why should we blame and penalize our children for the fact that they cannot get an education because of lack of teachers and facilities?

They say, "Where will the Federal Government come in?" As I understand the President's recommendation, and as I understood the gentleman from Indiana [Mr. HALLECK], they too, advocated that we equalize educational opportunities somewhat throughout the United States. I believe the Kelley bill does that. I hope that when we go back into the House the Gwinn amendment will be voted down, and that the Kelley bill will be voted up. We then will have made some start in this Federal aid to education which will equalize the opportunity of every man's child to get an education equal with yours and mine. I hope that my children will be educated in West Virginia. We feel that we have good schools. I want them to have a good education. But I would want the right for every other American child in this land, to have an equal opportunity for a good education. I believe every good citizen wants that, because the strength of America is in the whole and not in the part. There are a lot of men who would have their children go to a good school but would deny that right to some poorer child.

Polish Embassy Reception

EXTENSION OF REMARKS
OF
HON. THOMAS J. DODD
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 10, 1956

Mr. DODD. Mr. Speaker, in company with many of my colleagues, I received an invitation to a reception to be held at the Polish Embassy in Washington, D. C., on July 23 "in celebration of the national holiday of the Polish People's Republic."

I trust that no Member of Congress will attend this so-called celebration, for it would be shameful in my opinion if any Member of Congress, by so much as his presence, participated in a celebration marking the death of freedom and justice in Poland.

Mr. Speaker, I have written a letter to the Polish Ambassador refusing this invitation, and in my letter, I referred to the fact that 7 years ago I had refused an honor offered by this same Government.

I wish to make my own position a matter of record, and because I hope that my letter will be of interest to my colleagues, I include here a copy of it which reads as follows:

JULY 12, 1956.

Ambassador ROMUALD SPASOWSKI,
Embassy of the Polish People's Republic, Washington, D. C.

DEAR MR. AMBASSADOR: I have received your invitation to a reception "in celebration of the national holiday of the Polish People's Republic." In good conscience, I cannot and will not accept your invitation.

My reasons for so declining were made clear in a letter I sent to your predecessor, Ambassador Winiewica on April 23, 1949. In that letter I refused to accept the Officer's Cross of the Order of Polonia Restituta which was tendered to me in recognition of my efforts at the Nuremberg war crimes trial.

In the letter refusing the decoration, I stated, in part, as follows: "The record of your government in both domestic and foreign affairs is shockingly similar to the record of the Nazi tyrants as established in Nuremberg. Now the people of Poland are under the heel of a new tyranny which, like its evil predecessor, oppresses religious groups, terrorizes political opponents, and makes a mockery of the freedoms for which so many brave men and women gave their lives."

Now, more than 7 years later, I am even more firmly convinced that I was right in my expressions about your government.

Further in the letter I stated, "My great respect and admiration for the Polish people is undiminished by the misconduct of its present government." The anti-Communist uprising in Poznan less than 2 weeks ago by the citizens of that historic city who were willing to fight tanks with their bare hands for bread and freedom, has increased the already great respect and admiration that I have always felt toward the people of Poland.

It is my considered opinion, Mr. Ambassador, that the courage and love of freedom of the Polish people will once again see Poland a free nation. When that day arrives, and Poland has a legitimate and just and truly representative government, I will deem it a great honor to be invited to its Embassy.

Yours truly,

THOMAS J. DODD,
Member of Congress.

Stan, the American Man

EXTENSION OF REMARKS
OF
HON. JOHN P. SAYLOR
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 11, 1956

Mr. SAYLOR. Mr. Speaker, behind each player who participated in the all-star game is a success story that can serve to inspire the youth of our country. The road to big-league baseball is open to every boy, but it becomes so steep as it branches out into those 16 exclusive dugouts that only youngsters possessed of outstanding ability are able to go all the way.

On Monday, Stan Musial was presented with an award emblematic of his being named player of the decade. Yesterday, his brilliant performance at bat and in the field served to accentuate the judgment of those responsible for the selection. A word of tribute to Stan "the Man" belongs in the CONGRESSIONAL RECORD—not alone because he is one of the greatest baseball players of all time; rather because while achieving sports immortality he has remained the quiet, modest, humble, dignified, religious, refined, and sympathetic person that he was in the days of his boyhood in a small town of western Pennsylvania.

Stan Musial typifies the kind of fellow any father would want his son to be. This offspring of a steel worker was not tapped on the shoulder by fortune and invited into the Hall of Fame. When, after his career has come to an end and he becomes eligible to enter that edifice, his reward will have been made possible because of hard work, diligence, sobriety, and determination. Baseball has been a serious profession with Stan Musial. In it, he has invested study, training, and expert conditioning. From it has come commensurate financial compensation in testimony of the returns that are possible in a competitive system.

Despite the high salary which he came to command, Stan Musial shunned the profligate way of life that can be so inviting to celebrities in the sports and entertainment fields. He invested in private enterprise and is now a respected and successful businessman in St. Louis. He is a devoted husband and father, a veteran of our Armed Forces, and just about everything else that goes to make up the outstanding American.

America can use more men and boys of Stan Musial's caliber, whether or not they can swing a bat or play first base and the outfield. And if the rest of the world were so fortunate as to have a predominance of this type of character, the only defense programs required would be those planned by opposing managers to stop Stan Musial.

Drinking Is the Cure

EXTENSION OF REMARKS
OF
HON. W. STERLING COLE
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 12, 1956

Mr. COLE. Mr. Speaker, the surplus of dairy products has been a source of serious concern to our farmers, our Government, and our taxpayers for many years. A decline in dairy farm income significantly affects every segment of our economy for, when the dairyman is hurt and as his purchasing power drops, many lines of business and trade feel the impact.

As a Representative from America's second largest dairy State, I have been very much concerned about what we can do to bring about a supply-demand balance in fluid milk, and how we can make certain that consumption of milk continues to rise in 1956 as it did last year when the consumption increased by 3.3 billion pounds over the consumption of 115 billion pounds in 1954.

Many people seem to think of the surplus problem in terms of overproduction, but my own view is that it stems basically from underconsumption. Agricultural experts have pointed out that if every man, woman, and child in the United States would increase his milk consumption by a swallow a day we would use our total annual output of milk.

This means we could reduce the volume of fluid milk that goes into butter, cheese, and dry milk—products which the Government has purchased in large quantities to support dairy prices. I am informed by the Department of Agriculture that the cost to the Government in dairy support operations from July 1952 to March 1956, has been around $800 million.

I am glad to say that we have made some progress in reducing the surplus. But we still have a job ahead. The goal of balanced supply and demand in milk is within reach—if we can get more Americans to drink more milk.

More Americans will continue to drink more milk as long as the dairy industry continues to exercise its imagination and employs new merchandising ideas.

The industry already has taken long strides to improve the merchandising techniques of milk. For example, in recent years milk-vending machines have been providing milk in schools, railroad stations, public buildings, and factories. These machines are a response to an American public that likes and wants milk, but many times found that milk was not available where other beverages were being sold.

This year—on May 9—Senator WILEY, of Wisconsin, and I gave a milkshake-mix party in the main Senate dining room for 30 youngsters. These youngsters drank 60 pints of milk in 20 minutes.

It is interesting to me that Mrs. Lawrence Henderson, of Alexandria, Va., mother of two of the children who attended the party, reported this week that she has doubled the family's milk consumption and ended the problem of getting the children to drink milk since she was introduced to the mix.

I said on the floor of the House the day before the party:

Senator ALEXANDER WILEY, of Wisconsin, and I are giving a milkshake-mix party in the Capitol for a group of Washington children. It is my hope that this party will dramatize the need for increasing milk consumption and the effect which new products such as milkshake mix can have on that consumption.

I feel sure the dairy industry will continue to work hand in hand with manufacturers of all new products and techniques which will help sell more milk—just as the industry has done with vending machines and simple milk flavorings in the past.

The manufacturer of the milkshake mix served at the party said that from a projection of sales figures it can be estimated that the mix will sell hundreds of millions of extra quarts of milk this year. This is just one manufacturer. Other companies make milkshake mix, too; and their combined sales potential could represent a substantial contribution toward bringing milk consumption more in balance with milk production.

Just how much of a contribution these products make, however, depends to a large extent on the dairy industry. I am sure that those of us in the United States Congress are sincerely interested in increasing milk consumption and hope that the dairy industry and these manufacturers will seek to coordinate their advertising, public relations, merchandising, and other sales efforts.

The administration is doing its part to help the dairy industry. The Federal school-milk program is moving ahead. President Eisenhower signed a bill this year providing $25 million annually for school-milk distribution and extending the program until mid-1958.

The Department of Agriculture is also making a large contribution and I am interested in some remarks made by Secretary Benson in a June Dairy Month speech at Beaver Dam, Wis., this year.

The Secretary explained the results of research on milk consumption in 3 cities—1 in the South, 1 in the Midwest, 1 in the Northwest. In the southern city, during the week the survey was conducted, one-fourth of the children between 1 and 12 years old drank no fresh fluid milk at all. Among adolescents and adults the proportions drinking no milk were ever bigger. In the other two cities, the Secretary continued, "milk consumption was larger but still well below the good nutritional level."

There is a great incongruity in the above situation. Milk and other dairy products provide three-fourths of the calcium in our food supply. Childhood and adolescence are the times of greatest need for health-building calcium. Our youngsters must have the nutrients they can get from milk—as well as other essential nutrients—if we are to avoid a repetition of the appalling rejection rate of our young men by the armed services because of physical defects, many originating in malnutrition.

The Secretary said he believed that milk consumption can be increased. "But it cannot be done without keen imagination and new merchandising ideas." Then, just as Senator Wiley and I tried to do with our party, he called the attention of the dairy industry to new products which would help sell more milk.

Secretary Benson said:

"Industry has recently brought out a milkshake mix in three flavors—chocolate, vanilla, and strawberry. If this goes over, one can visualize the youngsters of the Nation setting up kitchen soda fountains by the millions—with benefit to themselves and the entire dairy industry."

I agree with Secretary Benson. Milk consumption can be increased and if it is increased it will be a benefit to the dairy farmer, to the Government, to the taxpayer, and to the youngsters of the Nation as well. I saw a perfect example of how children take to drinking milk when they find drinking milk is fun. Let us hope the dairy industry keeps its keen imagination busy and develops new ideas on how best to merchandise and sell milk.

A Third Term for Eisenhower?

EXTENSION OF REMARKS

OF

HON. LEON H. GAVIN

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 11, 1956

Mr. GAVIN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the Washington Evening Star of July 10, 1956:

A THIRD TERM FOR EISENHOWER? — OPINION HEARD THAT GOP SHOULD HAVE ONE ELIGIBLE TO BALANCE TRUMAN STATUS

(By David Lawrence)

Because there is such a widespread assumption, even among Democrats, that President Eisenhower will be elected for a second term, there has begun lately some discussion as to whether or not the Constitution should be amended to permit him to run for a third term.

This is not as far away as it might seem. The present trend of discussion on Capitol Hill points to some kind of world crisis for 1960. Presumably by then the Soviet Government will have caught up with America in airpower and in nuclear weapons, and it could conceivably happen that there would be a demand from the American people that Ike should continue on in the White House.

The 22d amendment, which was declared effective on February 26, 1951, prevents Eisenhower from becoming a candidate for a third term, but it does not disqualify Harry S. Truman, because the language specifically exempted the incumbent President.

As long as Truman is eligible, there are those who feel that Eisenhower should also be. The concession to exempt Truman was made largely to win Democratic support in Congress, inasmuch as a two-thirds vote of both Houses of Congress was required. But such a personal exception violates the principle of the anti-third-term amendment itself, and the only way to equalize this is to permit 1 Republican as well as 1 Democrat to be eligible for a third term. For at the time the amendment was submitted the Republican Party was out of power.

If the Constitution were to be amended, moreover, the process would have to start in 1957. It took from March 1947 to February 1951 to get the 22d amendment ratified by three-fourths of the States. If an amendment were proposed in the 1957 session of Congress, it probably would be 1959 before final action would be taken by the States.

Naturally there would be opposition from some Democrats who fear Ike's vote-getting powers, but it would hardly be justified because the purpose of the amendment would merely be to equalize an unequal situation between the major parties. Truman, himself, probably would be the first to endorse the idea for, it will be recalled, it was General Eisenhower's magnanimity and friendliness to the then President which caused him to refrain from running against Truman in the 1948 contest. He might have won. The story is told that Truman at Potsdam in 1945 told the victorious American commander in chief of Allied forces in Europe that there was no honor which he would not help the general to attain. It was then that Ike expressed his unwillingness to run for the Presidency in 1948.

At the time of the nominating conventions in 1960, Ike would be only 69 and, if elected, he would be 70 at his third inauguration.

But Truman today is 71 and is eligible. Chancellor Adenauer is 80 and going strong. Winston Churchill was 79 when he withdrew from the Prime Minister's portfolio. In this era of vitamins and advances in medical care, 70 is not considered a mark of ineligibility for active service in many lines of business. Each case is individual. The prognosis of Ike's doctors is that, with the excellent care given him in the White House, he may live on considerably beyond his second term.

The American people are never much concerned about the age of their Presidents—nor have they in the past been impressed with the argument that a Chief Executive has to have the physique or the health of an athlete or that he has to spend every minute of his waking hours on the job. There have been some full time Presidents—and Harry Truman was one of them—who didn't require more than a few minutes in which to make some of the gravest errors that have been committed in the Presidency. The true story of the influence of the Truman staff on the then President has never been told. It isn't the time that a President takes to study a situation or to decide on it which counts but the amount of acumen and judgment he brings to the job in the first place.

If Ike in his second term keeps the Nation at peace and is able to maintain a deterrent force sufficiently large to prevent any other nation from starting a war, the chances are that in 1960 there will be a considerable demand to have him continue in office. It may be, therefore, that the Nation's principal concern in another year or so will be whether Ike will be eligible to run for a third term. Because of his devotion to public service, it can be assumed that he himself will not initiate retirement as long as he feels able to serve the American people.

Why Try To Bluff Our Way to Peace

EXTENSION OF REMARKS

OF

HON. WILLIAM H. NATCHER

OF KENTUCKY

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 12, 1956

Mr. NATCHER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include herewith an editorial entitled "Why Try To Bluff Our Way to Peace," which appeared in the July 5, 1956, issue of the Hancock Clarion, of Hawesville, Ky.

It has been my observation that in a great many instances our aggressive weekly newspapers play an important part in molding public opinion at the grassroots, and they exercise great influence in the operation of our Government. Certainly such newspapers have been the training ground for some of our outstanding journalists. The Hancock Clarion, under the able editorship of Mr. Roscoe I. Downs, clearly exemplifies the type of newspaper to which I refer.

The editorial is as follows:

WHY TRY TO BLUFF OUR WAY TO PEACE

Sometimes one wonders at the attitude of our military men, and our statesmen as well, when they go all out in expressing opinions that carry weight with the people who have placed their confidence in such leaders. What we have in mind in thus expressing our thoughts about our statesmen and military leaders, is what such leaders of the world, and not excepting our own leaders, have to say from time to time about conditions in the world that seem to us to be much like shadow boxing: Erecting a straw man and then knocking such dummy down to prove their might and power.

In our world today that is seeking to find the ways of peace, it would seem to us that many of our leaders fail to grasp the real significance of what peace is and how to go about in the effort to achieve it. It would seem that the only method they can devise is to try to throw a scare into the supposed enemy and in that manner, by fear bring about the desired result. In all the history of the world it has never been shown that fears has caused any major country to tamely submit to aggression. There is an element in human nature that calls for a psychological reaction to fear when the desire for freedom is at stake and love of country and patriotic zeal reacts in the human soul to fight, even if the odds are overwhelming.

In a recent article it is stated that a high United States Army general testified before a congressional committee investigating our air power, about what would be the result if our country got into a nuclear war. We quote a part of the general's testimony, and

the question asked by the committee chairman.

"If we got into a nuclear war and our Strategic Air Force made an assault in force against Russia with nuclear weapons so that the weapons exploded in a way where the prevailing winds would carry the southeast over Russia, what would be the effect in way of death?" The chairman asked; and the general replied:

"Current planning estimates run on the order of several hundred million deaths; that would be either way, depending on which way the wind blew.

"If the wind blew to the southeast, they would be mostly in the U. S. S. R., although they would extend into the Japanese, and perhaps, down into the Philippine area.

"If the wind blew the other way, they would extend well back into Western Europe."

While the members of the committee were shocked at the statement of the general as to the large number of deaths from such an all-out nuclear attack, little was said about what the result would be if Russia should release such an attack on the United States.

All of this it would seem to us is being made public for the purpose of scaring the world, and especially Russia, into a submission of peace, rather than by persuasion and neighborly greetings of friendship. It would seem to us that the greatest "weapon" for peace is not some great destructive power that kills millions of human beings, most of them innocent victims of such an attack, but a real effort to gain the friendship of our supposed enemies. We surely cannot hope to bring about a lasting peace on the earth by the "rattling of swords," which in these advanced days means the menace of atomic weapons.

With every advance in destructive weapons, greater and more destructive warfare has been engendered. Two of the greatest wars in history have been fought with the ever-increasing production of highly destructive weapons, and such weapons have not deterred the advent of war but have stimulated wars. Why do we think that by giving out such terrible descriptions of future wars we can hope to prevent war? Such claims in the past have never deterred a nation bent on war to refrain from going to war.

The only purpose we can see in giving publicity to such claims of destruction by nuclear warfare is that we can attempt to bluff Russia into a peaceful attitude, and that is hardly conceivable. We are sure that Russia will reply by giving all the gruesome details of what terrible destruction their own nuclear warfare would carry to our country and the "hundreds of millions" of our own people who would be killed. And it does seem that the distinguished authority who testified as to the "hundreds of millions" of lives that would be taken if our full-scale nuclear warfare should be launched against Russia, has been very loose with his numbers, for the entire population of both European and Asiatic Russia is only about 193 million, and even if such a warfare with divergent winds such figures would include most all of Europe as well as Russia. Of course, the "authority" hardly states the exact number in hundreds of millions, and that is left to speculation. In fact all of the entire estimate is but speculation aimed, it would seem, to frighten a supposed enemy.

In our own speculation in this matter of the great number of lives taken in case of such nuclear warfare, we are not attempting to minimize the danger of war and of the possibility of such an attack on our own country. But it is inconceivable that the United States would launch such an all-out aggressive attack on Russia or any other country unless attacked ourselves. We do not believe the American people would allow this country to engage in an aggressive war, in spite of what our military and political leaders might say. We have never been the aggressors in war and we feel sure that our country would not wage an aggressive war on Russia or any other country. We would defend ourselves, of course, and to the utmost of our ability in spite of the danger that might befall us by such destruction as could be hurled upon us.

This sparring between Russia and our own country would appear very much like two small boys trying to bluff each other and saying: "My Dad can lick your Dad." Such claims by small boys usually do bring the dads into the argument and a real fight is the result with all the hatreds and animosity that such a conflict brings.

While we are in complete accord with our efforts to build an adequate military defense that would become aggressive if attacked by any other country, we do not believe our cause for peace is being stimulated by such bizarre statements as to the "hundreds of millions" who would be destroyed by our forces in aggressive attack. We do not think that such statements can or would bluff Russia into a peaceful attitude, so why give such wide publicity to such statements that can only stir up still further the warlike attitude that prevails in Russia and among some of our own high-ranking military men and statesmen.

Our Constant Challenge

EXTENSION OF REMARKS
OF

HON. WILLIAM H. AVERY

OF KANSAS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 11, 1956

Mr. AVERY. Mr. Speaker, Independence Day we reserve for reflecting upon our birth as a Nation and enjoy the day in celebration. On July 5 we dismiss from our minds yesterday's reflections on the responsibilities of our heritage. Just as we reserve Sunday as the Sabbath, and then on Monday we sometimes fail to heed our religious instruction given us on Sunday.

The Topeka Daily Capital graphically presented in two editorials the price and effort exerted for independence and the cost to maintain this hard-won freedom. "We Hold These Truths" appeared on July 4. "Eternal Vigilance" appeared on July 5.

This outstanding newspaper, founded and for a long time published by the late Senator Arthur Capper, has made an excellent presentation of the challenge that preserving our Republic is a daily task that must be met with vigilance and zeal.

The editorials follow:

[From the Topeka Daily Capital of July 4, 1956]

WE HOLD THESE TRUTHS

The American colonists had tried every means at their command to have the English King right the grievous wrongs that deprived them of liberty, and even of life. But the King ignored the rights which British subjects insisted belonged to them.

At first there was no thought of separation. Indeed, almost 3 months after the Battle of Lexington the Second Continental Congress was disavowing any ambitious designs of separating and establishing independent States. Even by July 1776 many Americans still had to be won over to separation from the mother country.

However, many patriotic colonists had become convinced that they could never enjoy justice and liberty without complete severance of the ties that had enabled the Crown and Parliament to impose exorbitant taxes and to fasten the yoke of oppression upon "these United Colonies (that) are, and of right ought to be, free and independent States."

The final draft, as written by Thomas Jefferson with the advice and counsel of Benjamin Franklin and John Adams, was formally adopted by the Continental Congress on July 4, 1776. But it was not read in public until 3 or 4 days later.

We suggest that all Americans ought to read the Declaration of Independence at least on the Fourth of July every year. It is too long for this space, but a part of the preamble of the historic (and most sacred) American document follows:

"We hold these truths to be self-evident: That all men are created equal; that they are endowed by their Creator with certain inalienable rights; that among these are life, liberty, and the pursuit of happiness.

"That, to secure these rights, governments are instituted among men, deriving their just powers from the consent of the governed; that, whenever any form of government becomes destructive of these ends, it is the right of the people to alter or to abolish it, and to institute a new government, laying its foundation on such principles, and organizing its powers in such form, as to them shall seem most likely to effect their safety and happiness.

"Prudence, indeed, will dictate that governments long established should not be changed for light and transient causes; and accordingly all experience has shown that mankind are more disposed to suffer, while evils are sufferable, than to right themselves by abolishing the forms to which they are accustomed.

"But when a long train of abuses and usurpations, pursuing invariably the same object, evinces a design to reduce them under absolute despotism, it is their right, it is their duty, to throw off such government and to provide new guards for their future security."

Adoption of the Declaration launched this Government upon its course. Although a long and bloody Revolutionary War ensued, the framers of the Declaration, and eventually the Constitution, never deviated from their determination to be free to "enjoy life, liberty, and pursuit of happiness."

Once the Revolutionary Army, under the valiant leadership of George Washington, had vanquished the British Crown's soldiers and the mercenaries hired to put down the rebellion, the American people began building their Government. During the long years there have been differences of opinion on methods and procedures, but rarely has any person dared to attempt betrayal of the country. And these abortive efforts were put down with a determination that discouraged others who would destroy the Republic.

Only in recent years have a relatively few misguided Americans espoused a foreign and wholly traitorous ideology, which, if allowed to get out of hand, would destroy our Government. The American people might well become aroused at the efforts to undermine the foundations upon which this Nation was built, and fight subversion and anti-American movements with the same zeal that the forefathers did in wresting freedom from a dictatorial king.

[From the Topeka Daily Capital of July 5, 1956]

ETERNAL VIGILANCE

Practically every able-bodied American yesterday enjoyed the fruits of the struggles of their forefathers to guarantee life, liberty, and pursuit of happiness.

They took long journeys on excellent roads to favorite recreation places, or perhaps visited relatives miles and miles away. They went golfing, fishing, picnicking, or merely lolled in the shade at home. Every individual was free to follow his own bent, without interference so long as his conduct did not encroach upon the liberty and happiness of his fellow-Americans. Or the safety of others on the highways and in other public places.

At no city egress or entrance was any person required to present visas, police permits or to seek official sanction for travel. There were no barriers at State lines with uniformed police demanding reasons for crossing. At service stations the attendants courteously supplied the fuel and oil, cleaned the windshield, collected the charges, and graciously waved a parting "come again."

All America was joyful, enjoying to the fullest measure the blessings inherited from their forefathers. It was Independence Day which is a sacred tradition handed down by the American heritage.

While 167 million Americans were celebrating their national birthday, half the human beings on this earth languished in slavery. Here and there the gleam of hope inspired by the natural desire for freedom caused defiance of tyrannical oppression.

In freedom-loving Poland desperate patriots defied their Communist overlords. Many died or were wounded in the uprising against intolerable slavery. East Germany seethed with unrest as the Red hierarchy tightened the yoke that holds millions in abject serfdom. Throughout Russia the population looked for a savior to lead them in victorious revolt against tyranny.

Every satellite nation was the scene of resentment at the heavily-armed guards protecting Communist officials from the wrath of outraged peoples. In the Middle East, Red-inspired warfare made life, liberty, and pursuit of happiness hazardous, if not impossible.

In far-off China nearly half a billion enslaved people went about their tasks, with rifles and bayonets at their backs. Brutal force kept them from the throats of their murderous rulers. Rifles cracked in Indochina, where a new freedom-seeking underground is sniping at the Red liberators who hold the land in despotic tyranny, and keep the people in subjection only because the cruel slave drivers have arms and munitions to enforce their ungodly authority.

There is no freedom, no independence of action, no pursuit of happiness behind the Iron and Bamboo Curtains. Human rights have been subjected to the whims of a relatively few merciless autocrats.

The American people today enjoy the greatest measure of liberty extant in the world. They are the inheritors of a way of life won by the blood of their ancestors. From every nation came fugitives from injustice and tyranny, to join the great melting pot that is the United States of America in this mid-20th century.

Every person who thinks must feel sorry for the millions of people held in durance vile by dictators who rule by brute force. The frequent uprisings indicate that the tyrants are living on borrowed time. Each incident, such as Poznan, is evidence of the flames being fanned by the desire for freedom.

The Red satellites are held by slender threads which threaten to break and precipitate revolution any day. And every American should fervently hope that the revolt against Communist masters will be well organized and effective. For the peace of the world, and perhaps the lives of millions of American boys depend upon breaking the stranglehold the Red demons have upon the throats of 500 million subjects.

Meanwhile, it behooves all of us to watch the ramparts of our own freedom. Evil influences are encroaching upon the liberties our forefathers bequeathed to all Americans. Little by little the Central Government, spurred by socialistic-minded demagogs, is tightening its controls over the lives of our people.

Every time we allow bureaucratic fuzzy-wuzzies to whittle away our traditional freedom of action, in return for a mess of pottage, we are pushed nearer the plight of the millions behind the despotic curtains.

We are being edged closer to the abyss whenever a Government agent—whether tax collector, price fixer, acreage arbiter, or controller of business and labor—moves into our lives to deprive us of life, liberty, and pursuit of happiness.

Eternal vigilance is the price of liberty.

Increasing Rates of Compensation for Service-Connected Disabilities

SPEECH
OF
HON. CHARLES A. WOLVERTON
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 12, 1956

Mr. WOLVERTON. Mr. Speaker, the bill now under consideration (H. R. 12038) provides increases in service-connected disability compensation and to increase dependency allowances.

The bill relates entirely to service-connected compensation and additional allowances for dependents of veterans suffering from disabilities incurred in or aggravated by service in one of the branches of the Armed Forces. It applies to all wars and peacetime.

The need for the increases that this bill provides for is abundantly clear—in fact it is my opinion the increases could have been much larger and still be justified. The increases for all basic rates of compensation for disabilities rated less than total and the additional allowances for dependents amount to 10 percent. The rate for total disability, however, is increased from $181 to $225 monthly, or approximately 24 percent. The increases in statutory awards for certain World War I veterans, under the World War Veterans' Act of 1924, amount to more than 30 percent.

The necessity for the introduction of this bill as a separate bill to apply to service-connected disabilities alone, arises from the fact that another bill reported to the House, and passed by the House, applied only to non-service-connected disabilities. This situation arose because a parliamentary objection was made to the inclusion of provisions in that bill which would have given the increases as provided for in this bill for service-connected disabilities. The Chair sustained the objection which thereupon received from that bill the provisions now contained in the present bill. The objection made and sustained was only technical and was not decided by the Chair with any thought of opposition to the provisions, that applied to service-connected disabilities from the standpoint of their merit. However, as a result of such parliamentary action and decision it became necessary to introduce a new bill to provide the increases desired for service-connected disabilities and certain dependents. The bill now before us is that new bill.

The bill is meritorious and should have the full support of this House. It is a pleasure to give my support to this bill and I do so with the hope that it will become law at this session of Congress.

Translating Democratic Ideals Into Asian Realities

EXTENSION OF REMARKS
OF
HON. HAROLD C. OSTERTAG
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 12, 1956

Mr. OSTERTAG. Mr. Speaker, while the echoes of the foreign-aid debate are still jangling in our ears, I include in the RECORD an article from last night's Evening Star, which illustrates the one kind of foreign aid which will always be welcome, effective, and mutually satisfying:

SERVICE SCENE—CALLING DR. DOOLEY IS OPERATION LAOS

(By Ruth Dean)

"The woods are lovely, dark, and deep,
But I have promises to keep,
And miles to go before I sleep."

With these lines from Robert Frost, Dr. Thomas A. Dooley closed his book, Deliver Us From Evil, his best seller about his experiences in alleviating the misery among Vietnam refugees following the fall of Dien Bien Phu.

But the lines were prophetic because this former Navy doctor does have promises to keep and miles to go on another mission to the Far East.

The 29-year-old doctor, who is a combination of meteoric energy and fearless self-confidence, leaves Washington on Friday to conduct his own medical mission to Laos.

In his book (which Adm. Arleigh Burke has called a story of which the U. S. Navy is proud), Dr. Dooley said he wanted to make the Navy his career.

MEMORIES

But his memories brought back vivid scenes of how American medical aid and the big heartedness of American sailors had turned fear and suspicion into hope and confidence for 600,000 Vietnam refugees. These were the refugees he processed through a primitive Haiphong medical camp for United States Navy transport to southern Vietnam.

And Dr. Dooley knew he must go back—to do the same thing for another people caught in the tug of war between free ideals and international communism.

Since Dr. Dooley could not go to Laos as an American naval officer, he resigned from the Navy 2 months ago—much to their regret—and set about getting his Operation Laos under way. .

With proceeds from his book he is financing the operation in cooperation with the Research Corporation of New York.

He will be working under auspices of the International Rescue Committee, a private organization. The mission also has the approval of the State Department, the International Cooperation Administration, and the Laos Government.

It will be a pilot project. He is taking with him a small mobile unit composed of former Navy corpsmen who worked closely and devotedly with him in Vietnam.

It is a nasty, dirty job these corpsmen will face.

They remember the thousands of refugees who struggled into Haiphong with the open

running sores of yaws, the hideous deformities of elephantiasis, infants pathetically ill with cholera, malnutrition, and dysentery, not to mention the maimed bodies that bore witness to their keeping faith in the face of Communist persecution.

But as one corpsman put it to Dr. Dooley: "I don't know why you want to go back to that place, but if you think it's important, Doctor, and you want me to come along, I volunteer."

Two of the former corpsmen are leaving behind them recent brides who gave their reluctant consent to the 8-month project. The third member of the team is leaving college to join them.

With the same persuasiveness he used to get his medical team together, Dr. Dooley walked unabashed into the offices of one of the country's leading airlines—to be pledged free passage; a leading motor car corporation—and came away with a specially constructed jeep as a gift, and donations of almost $100,000 worth of medicines from one pharmaceutical firm, plus thousands of bottles of vitamins and protein extract from another.

CARE has already sent a midwife kit with enough equipment to deliver 250 babies.

He's not afraid to beg for humanity.

In addition, the United States Navy has donated a 6-month supply of field rations, which the unit will supplement with native food. Also at the request of Gen. J. W. O'Daniel, president of the American Friends for Vietnam, the Navy is also transporting all their equipment to Indochina.

Their base of operations will be Vientiane, the capital, from which they will fan out in 1- to 2-week operations with the various tribes in the mountain villages.

"Operation Laos" has a twofold purpose. Not only is there a crying need for medical attention—only one qualified physician for more than 2 million people—but Dr. Dooley thinks the project will represent a tremendous weapon of foreign policy."

PLATITUDES

"If America as a nation ignores the Asian physical needs while we hand him pious platitudes, we justify the Communists' characterization of our religion as an opiate of the peoples," he declared.

"We want to be on the offensive for America, not just denying what the Communists say about us, but getting there and doing something about it. We shall try to translate the democratic ideals we do possess into Asian realities that they can possess."

One of the strong points of the project, Dr. Dooley thinks, will be the medical unit's channeling of its activities through the Laos Ministry of Health, with its already established village dispensaries.

Dr. Dooley knows he'll be facing months of hard work in the midst of the worst diseases known to man but yesterday you couldn't have found a happier man in Washington.

He thinks he knows why. One of the world's renowned medical missionaries, Dr. Albert Schweitzer, put it in one sentence in a letter which Dr. Dooley treasures.

"Dear Dr. Dooley," he wrote. "I don't know what your destiny will be but I know that you will always have happiness because you have sought and found: how to serve."

Rule or Ruin

EXTENSION OF REMARKS

OF

HON. WILLIAM B. WIDNALL

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 12, 1956

Mr. WIDNALL. Mr. Speaker, the responsibility for the failure of this Congress to pass a housing bill will not rest on the Republican Members of Congress or the administration. The blame will be entirely upon those who insist on tying radical and controversial measures to sound and desirable legislation about which there is no argument.

During the latter part of June, the Committee on Rules voted 6 to 4 to table H. R. 11742, a bill reported by the Committee on Banking and Currency, and referred to as the Housing Act of 1956.

Why did the Committee on Rules table this bill? The reason is clear. It was because it contained a number of provisions which are highly controversial. They are opposed, I believe, by most Members of Congress. They are contrary to the principles embodied in the President's recommendations on housing and are calculated to defeat them. For example, rather than helping to make mortgage funds more widely available through private channels, the bill actually would stifle the flow of private funds by Government competition through direct Government lending and forced purchase of mortgages at more than their market value. Furthermore, the public housing authorization exceeds what can be soundly planned or programed, or what communities are prepared to absorb. Public housing is divorced from the other parts of our housing effort designed to clear slums and blight, and renew and redevelop our communities. The bill refuses to acknowledge the need for an overall approach to the slum problem. It does not provide any incentive to the communities to do more than build more public housing. Public housing is presented as an end in itself.

For the sake of the welfare of our country and in order to maintain a high rate of housing construction to fulfill the needs of all American families, I trust that this Congress will reject all such extreme and unsound proposals, and pass a bill which confines itself to the desirable provisions which have been proposed—provisions which, generally, are noncontroversial and are supported by President Eisenhower, by the Administrator of the Housing and Home Finance Agency, Albert M. Cole, by Members of Congress, and by the public. These provisions, among other things, would:

First. Extend the home-loan-improve-program with increases in the maximum loan amounts and maximum term of loans.

Second. Liberalize the terms for FHA sales and rental housing mortgages.

Third. Give special aid to elderly persons in meeting their housing needs.

Fourth. Make mortgage funds more widely available through broadening the operations of the Federal National Mortgage Association in the secondary mortgage market.

Fifth. Continued and increased aid to colleges for dormitories and other facilities.

Sixth. Assist urban renewal through the liberalization of FHA's insurance terms for the repair and rehabilitation of housing and the provision of low-cost housing for families displaced by urban renewal.

Seventh. Provide better housing for families of men serving in our Armed Forces.

Eighth. Authorize an additional 70,000 units of low-rent public housing to be constructed over a 2-year period by communities which are participating in an integrated attack on slums and blight.

The bill which I introduced which had the approval of the administration embodied these features and could well be used, if there is any real desire to break the present impasse and pass a sound housing program.

I call upon those who favor extreme and controversial proposals not to make their adoption the price to be paid for support of these desirable provisions. Let them bring these proposals up separately for consideration on their own merits. If they refuse this, then the failure of the Congress to pass a housing bill must rest squarely upon their shoulders. Theirs will be a course of rule or ruin.

Uprising in Poland

EXTENSION OF REMARKS

OF

HON. ROBERT J. CORBETT

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 12, 1956

Mr. CORBETT. Mr. Speaker, I am very pleased to associate myself with the thoughts expressed in the following letter treating with the recent outbreaks in Poland. The Polish people have in the past made great contributions to our civilization and would do so again if they were free and independent as they by right ought to be. We hope their ordeal will not long continue.

The letter follows:

POLISH AMERICAN CONGRESS, INC.,
WESTERN PENNSYLVANIA STATE DIVISION,
Monessen, Pa., July 9, 1956.

Hon. ROBERT J. CORBETT,
Member of Congress,
Washington, D. C.

DEAR CONGRESSMAN CORBETT: The Western Pennsylvania Division of the Polish American Congress, representing Americans of Polish background in western Pennsylvania, voted at its meeting of July 1, 1956, to forward to our Representatives in Congress the following memorial statement and resolution concerning the recent outbreaks of workers in Poznan and other cities of Poland.

1. The Western Pennsylvania Division pays homage to the heroes of the uprisings in Poland. It realizes that the demonstrations were initiated by the desire for more bread and better working conditions, but had developed spontaneously into a more fundamental demonstration against injustice and oppression by the Soviet-dominated administration in that country. However untimely these demonstrations, they were inspired by the love of liberty and justice which is the heritage of Poles, Americans, and all freedom-loving peoples.

2. It is strongly urged that the liberation of such nations as Poland be included in the policies of our Government, and that appropriate steps be taken, by strong protests to the oppressor governments and by introduction before the United Nations for action, for the cause of the Polish people. Such steps would, in some measure, tend to compensate for the errors in the Yalta agreement.

3. Strong appeals ought to be forwarded to the present administration in Poland that

the trials in connection with the recent demonstrations of the workers be conducted in a just and humane manner, and not in the spirit of oppression and vengeance.

4. It is recommended that steps be taken to alleviate the hunger and distress of the subjugated peoples of Poland, but with the assurance that such aid will reach those really in need.

It is respectfully requested that you use your position and influence in Congress to further the above proposals, and that you give your support to such resolutions and legislation, in support of the same principles, which may be introduced in Congress.

Sincerely,

POLISH AMERICAN CONGRESS,
WESTERN PENNSYLVANIA DIVISION,
H. J. ZYGMUNT, *President*.
J. F. WATTRAS, *Secretary*.

Address by Attorney Joseph G. Tomascik, of Wilkes-Barre, at 25th Anniversary Banquet Honoring Rev. Father Michael J. Frohman

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES

Thursday, July 12, 1956

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address of Attorney Joseph G. Tomascik at the 25th ordination anniversary banquet of Rev. Father Michael J. Frohman, pastor of St. Anthony's Church, Larksville, Pa., on June 24, 1956:

EXCERPTS FROM AN ADDRESS DELIVERD BY ATTORNEY JOSEPH G. TOMASCIK, PRINCIPAL SPEAKER AT THE 25TH ORDINATION ANNIVERSARY BANQUET OF REV. MICHAEL J. FROHMAN, PASTOR OF ST. ANTHONY'S CHURCH, LARKSVILLE, PA., JUNE 24, 1956

Reverend chairman, very reverend and reverend clergy, reverend jubilarian, ladies and gentlemen, and friends, there are several aspects connected with my visit here this evening that afford me a great deal of pleasure. Seeing President Benaglia and Professors Dupuis and Haladay sitting here at the festive board, serves to recall my more than 5 years of happy and fruitful service as a member of the professional staff of that fine educational institution we know as King's College. I'm pleased, too, to see my former student, Rev. Stephen Medwick, who was ordained to the sacred priesthood a few weeks ago, and who is one of the early graduates of King's to become a clergyman.

And then it's always a happy event for me to come to Larksville to see old friends and renew old acquaintance. I was just telling Mrs. Kielty, my dinner partner, that I know most of the people on Howard and Wilson Streets, who invariably came to the old political rallies I used to address in the Lark Theater back in the depression years.

But most of all, I'm pleased to be in Larksville tonight to serve as a kind of keynoter in deserved tribute to a good friend, an estimable gentleman, a superb administrator, and above all, a devoted priest of God, Father Frohman.

The priesthood is a noble calling—probably the noblest known to man. The priest is a trained, accredited, consecrated, and trusted friend at large, maintained by the church in his community to preach the word of God, to administer the sacraments, to solemnize marriages, to assist in giving Christian burial, and to exemplify, insofar as one man may, the good life, and to make known to the men, women, and children of his parish, by word and deed, the purpose and love of God revealed in Jesus Christ.

Our friend, Father Frohman, has notably lived up to this large responsibility during these past 25 years. I am sure he is looking back today at the events of his fruitful ministry, and I am equally sure he is looking ahead to years of expanding service.

However zealous a man is, and however brilliant and studious, he is nevertheless not the product solely of his own efforts. And driving over to Larksville this evening, I couldn't help thinking how Father Frohman, like most successful men, are the products of a magnificent heritage. One American philosopher has said that the education of a gentleman begins 100 years before his birth, "for the intangible something that distinguishes the tactful, courteous gentleman, whatever be his station, is not to be acquired, but must come with breeding and blood of generations. So the education of a priest must be founded in self-sacrifice, practiced piety, and heroism of long-gone forebears."

And Father Frohman was blessed with a splendid ancestry—parents who were among the pioneer Slovak settlers in Larksville, who gave unstintingly of themselves in order to bring a fruition a long-cherished dream to educate their children. Like Poland, Ireland, Croatia, and France, among others, Slovakia has long been the model of religious nations. From the loins of that hallowed land of the Tatras has sprung a race of priests in God's church that has traveled all over the world to make His name known and loved by all nations. And Father Frohman, though of a younger generation and a native American, belongs in this group. He has made certain, by his magnificent record of service, that Larksville and Wyoming Valley have not lacked this Slovak leaven. I know of no priest who has sown among his people the seed of God's word more prodigally, husbanded it more solicitously, and brought forth fruit more abundantly, than this fine clergyman we honor this evening. The magnificent physical assets of his parish, the love and affection of his parishioners, and above all, their spiritual zeal, are all monuments to Father Frohman's tireless, patient, and effective labors in the vineyard of Christ.

Much has happened in the 25 years since our jubilarian was ordained back in 1931. The intervening years have witnessed great change and upheaval. The tempo of the world has quickened. Customs, methods, governments, laws, traditions, beliefs—all are changing. Around the world the things that have been are on trial for their lives before the bar of the things that are.

During the last quarter of a century, man has gone far in building the world he lives in. He has gone far also in tearing it down. He is racing with himself in construction and destruction. For in spite of all our material achievements, we find ourselves facing the same old problems in human relations. We have invented machines which have brought us closer toegther, but we have not yet learned how to live together. We know more about killing, than we know about living. We have achieved brilliance without wisdom and power without conscience.

This is a situation which presents a clear challenge to all Catholics and particularly to those who wear the vestments of the church. For years the church has fought the growing materialism of this age. For centuries the Catholic Church has realized that in the training of a man there must be spiritual as well as material values, and that the spiritual values must take precedence over the material. Our Catholic schools and colleges are an attempt to meet the materialism of today and to instill in the young people who attend them the principles which will enable them to be useful members of society and not merely fatuous ornaments.

We need strong Catholic leaders in this country. We need them for our own people, and we need them to work with those who are not of our faith in common endeavor for the elevation of the moral tone in our American society. And above all, we need devoted men of God in the community, men like Father Frohman, to instruct us and to exemplify the highest ideals of our faith.

So long as Father Frohman remains in our midst (and we trust that it will be for the entire span of his ministry) our community's spiritual welfare will be well attended to. We honor ourselves today in honoring one who has ever been an honor to the Church. We congratulate him upon the success he has attained, and the love and affection in which he is held by his associates. Words are inadequate in the light of the resounding testimony of the many years he has spent in the service of the Master.

It has been said that when God made man He didn't arrange any of the joints of his bones so he could pat himself on the back. Father Frohman has never been known to pat himself on the back—although he has often been justified in doing so—but those of us who have observed his loyal, efficient, and tireless work realize that it is about time that we recognized the splendid service which he has given during the last 25 years.

It is good for us that we contemplate his character and the sincerity of his service. It seems, to me, as I think of it, to resemble a little the epistle to the Romans. First we have a broad, substantial groundwork of doctrine; then we have a beautiful symmetrical superstructure of evangelical practice; and then we have a most graceful consummation of courtesy and kindliness. Our guest is a plant of God's own right-hand planting—the texture of it is substantial, the form of it fair, the flower of it beautiful, and the product of it prolific. Here is fruit unto holiness. He adorns the doctrine as he abides by it. The Church of an earlier era glorified God in Paul. The church of the present era glorifies God in men like Father Frohman. His teachings will be remembered until the generation has expired; in many a family and at many a hearth in St. Anthony's parish, his visits in their religious aspects will be cherished in memory; and in many a heart his name lives in the finest and fondest associations.

I am confident that our friend has won and will continue to win the approbation of the Master, "Well done thou good and faithful servant." We honor him, and I know I bespeak the sentiments of all of us when I express the hope that he will continue to convey the good news of the Gospel, and hasten the day when "at the name of Jesus every knee shall bow, of things in Heaven, and things in earth, and things under the earth, and every tongue confess that Jesus Christ is Lord, to the glory of God the Father."

Sixteenth Annual Model Congress

EXTENSION OF REMARKS
OF
HON. JAMES B. UTT
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES

Thursday, July 12, 1956

Mr. UTT. Mr. Speaker, under leave to extend my remarks I wish to include the following letter which appeared in

the July 1956 issue of the American Legion magazine:

SIR: On April 21, the 16th annual Model Congress was held on the campus of Brooklyn College and attending were 100-odd people from schools from throughout the New York area. What occurred there is something every American has a right to know. A number of bills were presented on the floor for consideration. One of the first asked for American recognition, diplomatic and cultural, of the Communist People's Republic of China. Almost every delegate spoke in favor of this motion. Only we, the undersigned, and very few others stood up and spoke against communism. The members of the Congress and a goodly portion of the leaders virtually laughed our motions and ideas off the floor. We said that we should stand up for the ideals we hold dear. We stated, let's try patriotism. We got shouts of "Fascist!" "Nazi!" "McCARTHY!" and so on. We spoke for American principles and one delegate called the Stars and Stripes a "rag." General MacArthur was called a traitor to his country and one of the officials said, "I hate MacArthur." The New York World-Telegram and Sun was called "a capitalist rag," and the American Legion and its national commander were called reactionary and Fascist. We firmly believe that every taxpayer has the right to know the extent of Communist infiltration of our public schools because many of the delegates in advancing their bills stated: "As my teacher has often said."

BROOKLYN, N. Y.

Some Reasons Why Baptists Do Not Accept Federal Tax Money Under the Hill-Burton Act for the Building of Hospitals

---

EXTENSION OF REMARKS
OF

HON. GEORGE M. GRANT

OF ALABAMA

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 12, 1956

Mr. GRANT. Mr. Speaker, I have been requested by the president of the Alabama Baptist State Convention and the superintendent of missions of the Montgomery Baptist Association to have inserted in the RECORD an article by Dr. A. Hamilton Reid, executive secretary, Alabama Baptist State Executive Board, which was published in the Montgomery Baptist Informant, and editor's note concerning the action taken by the executive committee of the Southern Baptist Convention.

SOME REASONS WHY BAPTISTS DO NOT ACCEPT FEDERAL TAX MONEY UNDER THE HILL-BURTON ACT FOR THE BUILDING OF HOSPITALS

(By Dr. A. Hamilton Reid)

I do not find where Southern Baptists as a denomination have ever definitely expressed their approval of the use of Federal tax funds as made available by the Hill-Burton Act of 1946 for the building of church owned and controlled hospitals. In this article I do not propose to speak for Southern Baptists or Alabama Baptists, but with a feeling that many Baptists and others are confused as to the Baptist position on this issue, I am writing in an effort to clarify the Baptist position.

The 79th Congress, on August 13, 1946, passed the Hospital Survey and Construction Act, commonly known as the Hill-Burton Act, appropriating $75 million annually for 5 years to assist the several States in the building of public and other nonprofit hospitals throughout the Nation. The 81st Congress amended the act extending its duration, increasing the annual appropriation to $150 million, and setting up more liberal terms for grants. The original act provided $1 in Federal funds for every $2 provided locally. The amended act provides a maximum of $2 in Federal funds for every $1 provided locally. The 83d Congress further amended the act extending the expiration date to June 30, 1957. The 83d Congress also passed the Medical Facilities Survey and Construction Act of 1954, providing a somewhat similar program of assistance for the construction of diagnostic or treatment centers, hospitals for the chronically ill and impaired, rehabilitation facilities, and nursing homes.

The purpose of the Hill-Burton Act as set forth in section 601 of the act is: "To assist the several States (a) to inventory their existing hospitals, to survey the need for construction of hospitals, and to develop programs of construction of such public and other nonprofit hospitals as will, in conjunction with existing facilities, afford the necessary physical facilities for furnishing adequate hospital, clinic, and similar services to all their people; and (b) to construct public and other nonprofit hospitals in accordance with such programs."

FEDERAL TAX MONEY EXPENDED UNDER THE ACT

As of April 30, 1956, the Federal Government had made grants to the various States totaling $752,847,000 under the Hill-Burton Act for the building of hospitals and other related medical facilities. Of this amount $140,180,000 went for the building of nonpublic and church owned hospitals. Of the $140,180,000 granted to such nongovernment organizations, $112,591,000 or 80 percent of the total went to one church denomination for the building of hospitals owned and controlled by that denomination. Of the total amount expended by the Government under this act throughout the Nation, 14.9 percent went for the building of hospitals owned and controlled by this one denomination.

As of July 30, 1955, the Federal Government had granted to Alabama under the Hill-Burton Act a total of $22,390,204.82 for the building of hospitals and other medical facilities. Of the amount granted to Alabama by the Federal Government for construction of hospitals, one church group, which is a minority group in the State, received $4,915,000 or 22.9 percent of the total including all grants made to city, county, and State hospitals and medical facilities.

RELIGIOUS FREEDOM AND THE FIRST AMENDMENT TO THE CONSTITUTION

Baptists and others came to this country in the early colonial days fleeing from religious persecution at the hands of state-favored and tax-supported churches. They did not immediately find religious freedom. They found it after much struggle and suffering. As a result of their valiant struggle and persistent efforts, the first amendment was written into the Constitution of our Government. This amendment reads:

"Congress shall make no law respecting an establishment of religion, or prohibiting the free exercise thereof; or abridging freedom of speech or of the press; or the right of the people peacefully to assemble, and to petition the Government for a redress of grievances."

Our Government from the time the first amendment was enacted has interpreted its Constitution as granting freedom of religion to all of its citizens without special favor or restraint, and has not extended tax support to any church or to all churches. Each religious group has been left free to practice and propagate religion in its own way without special favor or hindrance from the Government. The Government has not recognized any state church, or the dominance of any church over the state. Religious freedom and separation of church and state is one of the fundamental principles that has made for the greatness of our American democracy.

The Supreme Court of the United States has consistently interpreted the first amendment as granting religious freedom to all citizens and special favors to no religious sect or group. As late as 1952 this Court rendered the following decision which came out of the McCullum and Zorach cases:

"Government may not finance religious groups nor undertake religious instruction, nor blend secular and sectarian education, nor use secular institutions to force one or some religion on any person. * * * Neither a State nor the Federal Government * * * can pass laws which aid one religion, aid all religions, or prefer one religion over another. No tax in any amount, large or small, can be levied to support any religious activities or institutions, whatever they may be called, or whatever form they may take to teach and practice religion."

BAPTISTS STAND ON THE CONSTITUTION

Southern Baptists own and operate many hospitals, schools, and other institutions. There are one or more Baptist hospitals in most of the large cities of the South, and in some of the smaller cities. Many new hospitals have been erected by Baptists in recent years, and others are in the process of being erected. There are 3 Baptist hospitals in Alabama—2 in Birmingham that are owned and operated by Birmingham Baptists, and 1 in Gadsden, owned and operated by the Baptists of Etowah County.

Baptists, as a denomination, have not accepted Federal tax money grants under the Hill-Burton Act, or tax money from any source for the building of their hospitals or any other institutions. It is the accepted position of Southern Baptists that it is a violation of the first amendment to the Constitution for the Federal Government to make tax money grants for the building of hospitals, or any other institutions, when such institutions are to be owned, controlled and operated by a church group. Southern Baptists also take the position that it is a violation of the Constitution of this great democracy that grants religious freedom to all of its citizens, for any church group whether it be Protestant, Catholic, or Jewish to expect special favors from the Government and accept tax money for any purpose. To grant tax money taken from the pockets of citizens of all religious faiths or no religious faith to any church group for any purpose is a violation of the great American principle of separation of church and State. In our democracy, men of all religious faiths and no religious faith constitute our governing bodies, and the Constitution demands of them that they recognize the freedom of all the people in matters of religion and make no laws favoring any religious group or groups, or restraining any religion.

CHURCH HOSPITALS ARE RELIGIOUS INSTITUTIONS

It is argued that hospitals are humanitarian service institutions. It is true that they are humanitarian service institutions, but it is also true that they are religious institutions when they are owned and operated by a church body. Denominational hospitals are built and maintained with a service motive, but like all other church institutions they are built and maintained for the development of the church's influence in society, and to propagate the teachings and practices of the religious group. It is true that all hospitals admit patients of any or all religious faiths, but it is also true that a certain amount of religious influence is found in every church hospital. Some

churches assert this denominational and religious influence more definitely than others. It is well known that the church group that has received more tax money for the building of hospitals than all other church groups combined has medical codes that are narrowly denominational and discriminatory. This denomination systematically promotes one sectarian faith through the environment and personnel of its hospitals. Furthermore, through its canon laws it denies certain freedoms to patients, doctors, and nurses which are commonly found in other hospitals. Any institution that places the canon law of the church above the laws of the State, is not a public institution, and should not be built by public tax money.

AMENDMENTS TO THE HILL-BURTON ACT

The Hill-Burton Act will expire on June 30, 1957. A bill to extend the act has been introduced in the Senate by Senator LISTER HILL, of Alabama, and in the House of Representatives by Representative PERCY PRIEST, of Tennessee.

Doubtless the majority of the American people would favor an extension of the act, but with amendments. The act, if extended, should first be amended and made to conform to the Constitution of our Government and the American principle of separation of church and state by discontinuing Federal Government grants to church bodies for the building of hospitals and other related facilities, when such institutions are to be owned and controlled by a church body.

At this time in our national economy when Federal security of loans is the prevailing principle and practice, the act might be further amended making it possible for church bodies and private groups to borrow money for the erection of hospitals on Federal approval of such loans. This would greatly help to meet the need for more hospital facilities in our country by making it easier for private and church owned hospitals to borrow money for the erection of buildings. This would not be a grant, but a loan to be paid with interest like other loans. Such loans with Government endorsement are now being made to colleges and universities throughout the country for the erection of income-producing buildings on college campuses.

A STEP TOWARD A WIDER BREAKDOWN OF THE CONSTITUTION

For the Federal Government to subsidize a church body by granting tax money to that body for the building of hospitals to be owned and controlled by that body, and for a church body to accept such a subsidy, is, in the opinion of Baptists and many other American citizens, an entering wedge for a further and larger breakdown of the Constitution of our Government, and the great principle of religious freedom.

A pressing issue before the Congress at this time is that of Federal aid to schools. One of the main issues that has prevented the passage of such legislation in the past has been the contention of some that such aid, if granted, should include nonpublic schools along with public schools. It is argued that a Federal school aid bill should be modeled after the Hill-Burton Act, and nonpublic schools included along with public schools. Should the Congress pass such a bill making public tax money available to church schools along with public schools, it would place both the Protestant denominations and the public schools in a very unfavorable position. It would give Government recognition and assistance to two school systems in this country—the public school system under the control of the State, and the parochial system under the control of the church.

The Protestant Church groups have encouraged and supported the public school system in this country from its beginning, and in the main retired from the field of elementary and secondary education in favor of the public school system. If the Federal Government should pass an aid to education bill making tax funds available for the building and support of church schools of any and all religious faiths, it would force the Protestant denominations in America to rething their educational program and reenter the field of elementary and secondary education as a necessary protection.

The Protestant churches throughout the Nation have erected educational buildings in connection with their churches which are now being used for Sunday School and other church purposes. Many Protestant churches would feel forced to convert these buildings into parochial schools and claim Federal funds for the support of their school programs. This would lead to the weakening or destruction of the public school system in America, as has happened in many other parts of the world. In turn this would lead to the failure of this great democracy.

Without a democratic education of all the youth in a common school system, it is doubtful if a democracy can maintain its unity and strength.

CHURCH PROPERTY AND TAXES

Baptists not only take the position that it is unconstitutional for churches and church-owned institutions to be subject to taxation when such institutions are used wholly for religious, educational, or benevolent services. The power to tax carries with it the power to control. If the Government has power to tax properties used wholly for religion, it has power to control religion.

In America there is freedom of religion and separation of church and state. There is no state supported and controlled church, and neither is there a church dominated state. An American citizen has freedom of soul and conscience in the matter of religion. At the same time, Baptists in general take the position that any and all properties owned by a church or a denominational group, and not used wholly for religious, educational, and/or benevolent purposes, but which are rented or used for a profit in any way should be taxed like all other personally owned properties even though the earnings from such properties may be used for religious purposes.

(EDITOR'S NOTE.—At the meeting of the executive committee of the Southern Baptist Convention in Kansas City on May 28, 1956, the public affairs committee of the convention was requested to make a thorough study of the so-called Hill-Burton Act and report its findings to the executive committee at its next meeting.

(Since the preparation of this paper the public affairs committee met in Nashville on June 19, 1956, and using this paper, which has been carefully and thoroughly documented, together with other material available, unanimously made the following recommendation to the executive committee at its meeting in Nashville on June 20, 1956:

("I. That the executive committee of the Southern Baptist Convention petition the Congress of the United States through the Labor and Public Welfare Committee of the United States Senate and its chairman, the Honorable LISTER HILL, of Alabama, and through the Interstate and Foreign Commerce Committee of the United States House of Representatives and its chairman, the Honorable PERCY PRIEST, of Tennessee, to take appropriate legislative action to amend the Hospital Survey and Construction Act, as amended, so as to discontinue and prohibit Federal Government grants for the construction of hospitals and other related medical facilities, when such institutions are to be owned, controlled, or operated by a religious body.

("II. That the executive committee of the Southern Baptist Convention petition the Congress of the United States through the Labor and Public Welfare Committee of the United States Senate and its chairman, the Honorable LISTER HILL, of Alabama, and through the Interstate and Foreign Commerce Committee of the United States House of Representatives and its chairman, the Honorable PERCY PRIEST, of Tennessee, that provision be made through appropriate legislative action, whereby long-term, Government-secured loans may be made for the construction of hospitals and other related medical facilities to be owned, operated, and controlled by a religious body or a public or private corporation."

(Following the presentation of the recommendation by Dr. Walter Pope Binns, president of William Jewell College, Liberty, Mo., the chairman of the public affairs committee, the executive committee of the Southern Baptist Convention unanimously adopted the recommendations.)

Don't Let Them Take It Away

EXTENSION OF REMARKS

OF

HON. JOHN J. WILLIAMS

OF DELAWARE

IN THE SENATE OF THE UNITED STATES

Thursday, July 12, 1956

Mr. WILLIAMS. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial commenting upon the New Deal 1952 Campaign Slogan, entitled "Don't Let Them Take It Away!" This editorial appeared in the Troy Daily News, Troy, Ohio, Saturday, July 7, 1956.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

"DON'T LET THEM TAKE IT AWAY"

John Roosevelt, son of the late president, and an ardent Ike supporter, recalled the Democrats' 1952 slogan, "Don't let them take it away," and observed in the National Capital, "The only thing that has been taken away is the mess we found here in January 1953."

Senator JOHN J. WILLIAMS, Republican, of Delaware, took the floor of the Senate the day that Matthew J. Connelly and Theron Lamar Caudle were convicted of conspiracy to defraud the Government in a tax case. He noted that the conviction of Truman's appointments, Secretary and Chief of the Justice Department's Tax Division under Truman, served "once again to remind the American people the extent to which corruption under the preceding administration had reached the top echelon in the Government." Then he disclosed these statistics:

As of November 20, 1954, for the period between 1950 and 1954, there had been 214 indictments and 101 convictions of corrupt officials in the Treasury Department under Truman.

There were 40 indictments for embezzlement of Government funds, 51 indictments of Treasury officials for failure to pay their own income taxes, and 50 indictments for falsification of Government records or reports.

"They were indicted for operating what, in effect, constituted a blackmail ring, in that they admitted their policy was to go to taxpayers, audit their accounts, and fake a large assessment, or threaten them with prison sentences on the basis that they could shake them down on the side to settle what, in effect, was a nonexistent tax case."

Two were indicted for operating a bookmaking establishment in the second largest tax office in the United States.

"There has also been convicted a former commissioner of Internal Revenue, Joseph

Nunan. The assistant commissioner, Daniel A. Bolich, was convicted. One alcohol tax commissioner was under indictment, and the trial was postponed because of his health.

"There are only 64 tax offices in the United States but 8 directors were indicted in Federal courts, and 5 ultimately were sent to the penitentiary. Eight out of 64, or 12½ percent of the top tax collectors in the United States, were indicted in the Federal courts for having accepted bribes or otherwise violated the law.

"Furthermore, the damaging indictment against the Truman administration is that these scandals had to be exposed over the opposition of the administration rather than through their cooperation. The fact that many high officials were involved explains this determined effort on the part of the preceding administration to cover up and protect these scoundrels."

Senator WILLIAMS knows whereof he speaks. He rocked the Nation time and again with his disclosures of corruption in Truman's Bureau of Internal Revenue. He can claim that he has never made an accusation of crime that has not been followed by an indictment.

A national news magazine said of him: "He is like a man who pulled a loose thread; he got interested, kept pulling until the whole covering that screened one of the worst United States scandals was uncovered."

Rochambeau Birthday Commemoration

EXTENSION OF REMARKS
OF
HON. HARRY FLOOD BYRD
OF VIRGINIA
IN THE SENATE OF THE UNITED STATES
Thursday, July 12, 1956

Mr. BYRD. Mr. President, because this may be of historical interest to many, I ask unanimous consent to have printed in the Appendix of the RECORD a copy of Miss Mayme C. Parker's report of the Rochambeau birthday commemoration held in Washington, Sunday, July 1, which was published in the Standard of Falls Church, Va., and other papers, on July 6.

There being no objection, the report was ordered to be printed in the RECORD, as follows:

ROCHAMBEAU CELEBRATION HAS MANY PARTICIPANTS

(By Mayme C. Parker)

The second annual commemorative ceremony of the Interstate Rochambeau Commission honoring the famous French Lt. Gen. Jean-Baptiste Donatien de Vimeur Count de Rochambeau on the general's 231st birthday on Sunday afternoon, was an occasion for remembering the aid of France in our cause of freedom in 1781, and a time of renewing our present international friendship. Many northern Virginia residents participated.

Mr. Charles Parmer, general chairman of the Commission opened the ceremonies by announcing: "When America was poor and friendless, fighting for liberty, and at the hour when General Washington wrote, 'We are at the end of our tether,' 'twas France who stepped to our side, our first friend in the cause of freedom."

The brilliant military performance of General Rochambeau serving with General Washington in the siege of Yorktown, in 1781, established the independence that all Americans cherish in our own national birthday celebration on July Fourth.

The commemorative service recognizing our French ally was held in Lafayette Square in Washington on Sunday where 54 years ago President Theodore Roosevelt accepted and dedicated the Rochambeau statue presented to this country by France.

The impressive program arranged by Mr. Parmer, was official in character with international overtone. Present were representatives of patriotic organizations, children's societies, business and church groups. The United States Marine Band was directed by Chief Warrant Officer Dale Harpham. The Rochambeau Fanfare, honoring the Marsal of France, was played for the first time under Mr. Harpham's direction.

Mrs. Woodrow Wilson, widow of the World War I President Wilson, guest of honor, placed the first wreath presented during the ceremony, flowers from the gardens of Mount Vernon, where no doubt General Washington and General Rochambeau walked together in September 1781. She was saluted by the five military services of the United States—the Army, Navy, Marine Corps, Coast Guard, and the Air Force, with their colors and the national colors. Mrs. Parmer escorted Mrs. Wilson with Capt. George B. Crist, USMC, as guard of honor.

A message from the White House was read with President Eisenhower's best wishes for the successful celebration honoring General Rochambeau who contributed so materially to the early history and strength of our country.

The Department of State honored the occasion of the 175th anniversary of Rochambeau's aid to Gen. George Washington by sending this message signed by the Secretory, Mr. John Foster Dulles:

"One hundred and seventy-five years ago Count Rochambeau came to the embattled Colonies in America and placed his sword at the disposal of George Washington, and in the service of freedom and independence. We are well aware of our debt to this illustrious French soldier-statesman, who not only helped free our country but who also helped lay the foundation for the strong traditional friendship between the French and American people.

"Today we are happy to renew our tribute to the honored memory of that noble son of France, whose passion for freedom was equaled only by his gallantry, loyalty, and devotion to the ideals that led this country to independence."

Washington's Yorktown victory orders, of October 20, 1781, were impressively read by Maj. Gen. Francis M. McAlister, United States Marine Corps. In these orders, General Washington highly commended General Rochambeau and his officers and men for their services.

Mr. Parmer then read an excerpt from Rochambeau's famed letter to the Continental Congress, asking to be considered "the first French soldier in the Army of General Washington."

The French Ambassador, Hon. Maurice Couve de Murville, presented the flowers of France in honor of his nation. He was accompanied by a full Embassy staff, including the Honorable Robert Valeur, first counselor, the Honorable Pierre Dupont, consul, and military and naval officers.

Nine-year-old Claudia Pineau presented flowers in honor of her grandfather, M. Christian Pineau, Foreign Minister of France. She was accompanied by Lt. Gen. Julian C. Smith, (USMC, retired), and her mother, Mrs. Frances Pineau, of Alexandria.

The Irish Ambassador, Hon. John Joseph Hearne, also placed flowers, as Mr. Parmer narrated that Irish troops served under Rochambeau during his campaign in America.

Members of the Mount Vernon Guard of the Mount Vernon neighborhood, who last year took part in the ceremony, have been made a permanent part of the observance, and they carried the colors of France and of the Irish Ambassador. The guards have been sponsored by the Francis Wallis chapter, Daughters of the American Revolution, among other organizations, and they appear at many patriotic occasions.

Mrs. William Grant, wife of Rear Admiral Granat, was present as chairman of the women's committee. Besides her American ancestry, she had five forebears serving with Rochambeau—one on his staff.

In addition to Maj Gen. Francis M. McAlister, personal representative of the United States Marine Corps Commandant, were the following: all, including General McAlister, laying flower of friendship on the Rochambeau statue, which had been given by Hunting Terrace—from its gardens by the ford where General Rochambeau crossed Hunting Creek, en route to Mount Vernon and Yorktown; Col. Henry Ahalt, United States Army; Capt. John H. Brandt, United States Navy; Capt. Allen Winbeck, United States Coast Guard; and Col. Robert E. White, United States Air Force.

The Reverend Dr. Frederick Brown Harris, Chaplain of the United States Senate, pronounced the invocation; and likewise the benediction in the absence of the Right Reverend Monsignor John K. Cartwright, of St. Matthew's Cathedral.

Mayor Leroy Bendheim presented a bouquet in the name of "Alexandria—through which Rochambeau passed twice."

Among the distinguished guests for the ceremony were Miss Ellen Coolidge Burke, 1200 Quincy Street, Alexandria, great great granddaughter of Thomas Jefferson; Dr. Henry Augustine Latane, 311 North Washington Street, collateral descendant of George Washington; and representatives of the States through which Rochambeau passed on his march from Rhode Island in the summer of 1781.

Guests by States included Mr. Claiborne Pell, State of Rhode Island and Providence Plantations; Mrs. Richard J. Reid, Jr., the State of Connecticut and the Daughters of the Cincinnati; Mrs. Logan Billingsley, the State of New York, her flowers from the gardens of Rochambeau's headquarters at Yorktown Heights.

Also, Mrs. Bessie E. Pryor, the State of New Jersey; Mr. A. Glenn Mower, Commonwealth of Pennsylvania (whose State already has placed the two markers along the Rochambeau route to Virginia); Miss Florence Harris, of Alexandria, who placed flowers for His Excellency, Gov. J. Caleb Boggs, Delaware; Miss Elizabeth Harris, Alexandria, who placed flowers for the Maryland freestate; and Miss Elizabeth Armistead Boothe, of Vicar Lane, Alexandria, who placed flowers for the Commonwealth of Virginia.

Miss Faustine Dennis, treasurer general, National Society Daughters of the American Revolution, and Mrs. James D. Skinner, of the District of Columbia Society, DAR, placed flowers for their organization. Mrs. J. Powell Wardlaw, regent, Commonwealth DAR chapter, Richmond, was also present.

Others were the Gold Star Mothers of Virginia, represented by Mrs. L. E. Tull; the Colonial Dames in Virginia, by Mrs. Joseph Crockett; the Society of the Cincinnati, by Mr. James O. Denby; the Sons of the American Revolution, Col. Robert P. Waters; Association for the Preservation of Virginia Antiquities, Washington branch, by Mrs. John Lee Coulter; the Children of the American Revolution, by Mrs. Charles Marbury Seaman, 1112 Duke Street, Alexandria; with Nancy Lee Barlow, of Arlington, as the Virginia Junior State Historian, CAR.

Others were Miss Annie Laurie Martin, Washington, Junior National Chaplain, Children of the American Revolution.

Representatives of the Alexandria CAR societies were from the Abingdon, the Dick Anderson, Washington-Lee, and others from Maryland, Virginia, and Washington societies.

Still others were Mrs. Charles C. Carlin, representing the Alexandria Gazette. Also Mr. Paul Eckman, chairman, Businessmen of Alexandria; Mr. Herbert Baker, Pohick Church, with greens from a tree planted in the churchyard by Mrs. Woodrow Wilson. Pohick Church was founded and attended by General Washington, and Rochambeau marched past the church on his way to Yorktown.

Mrs. C. M. Campbell, also of the CAR, was on the program, as was Miss Jean Forshee, 2404 Taylor Avenue, Alexandria, who in riding costume, represented Rochambeau, the horseman.

Mr. Patrick Hayes, of Alexandria, was chairman to greet distinguished guests for the Commission, and Mrs. Irene Bunting, 1212 Martha Custis Drive, was chairman of the children's committee.

The decorations committee was composed of Mr. Edward W. Alfriend IV, chairman, and Mr. John Hartman, Mr. Fred Kirschner, and Mr. Edward Worasila, all of Virginia. These supplied and arranged many of the floral wreaths, especially those from the gardens along the Rochambeau Route in Virginia.

Miss Esther Green, of Alexandria, was chairman of the Virginia Ladies Committee, assisted by Mrs. Charles Marbury Seaman, who also is leader of the local CAR.

Mr. David Bacon, Jr., served as aid to the chairman.

Virginia Commissioner Thomas J. Broyhill, of Arlington, served as first assistant to the chairman, Mr. Charles Parmer, aided by Mrs. Broyhill and their children.

Mutual Security Appropriation Bill for 1957

SPEECH
OF
HON. HAROLD D. DONOHUE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 11, 1956

The House in Committee of the Whole House on the State of the Union had under consideration the bill (H. R. 12130) making appropriations for mutual security for the fiscal year ending June 30, 1957, and for other purposes.

Mr. DONOHUE. Mr. Chairman, as I stated here a few weeks ago during the course of debate on the authorization bill for foreign aid, the fundamental purposes of this legislation were, and still are, Christian to our character and practical to our own self-interest. Few Members here have any great disagreement with the original basic objectives of this so-called mutual security program: To prevent Americans from again having to fight and die on foreign battlefields, to help rehabilitate friendly allies and undeveloped countries, and to promote the safety of ourselves and the free world against any Communist threat.

The only fundamental question presented to us in this appropriation bill is whether or not it provides sufficient money to keep the program in reasonable operation while a thorough resurvey of our whole foreign aid policy and financial commitments to support it is conducted.

The vital and urgent necessity of a complete resurvey of our whole foreign-aid program and policy is only too unhappily evident from the most disturbing reports arriving almost daily in revelation of unstable conditions existing practically all over the world. It is unfortunately very clear that our foreign policy has been disastrously deficient in failing to keep up with and make proper adjustment to the changing attitudes of both our antagonists and our allies. As most of us know, the Senate has already voted for an investigation of the foreign-aid program by its Foreign Relations Committee, and there is legislation pending here for the same purpose. Such an investigation by the Congress in cooperation with the administration is long overdue and it cannot be initiated too soon.

In considering our action on this appropriation bill, let us seriously realize that even at this moment there is enough money outstanding to carry on the objectives of our program for at least 2 years; that we have spent, on this program since 1940, about $100 billion of the people's money in principal and interest; and, finally, that there is some $600 million more contained in this present bill than in the appropriation of last year. No less an authority than the Comptroller of the United States himself testified before the committee that overoptimistic foreign-aid planning has resulted in the appropriation of more money than could be spent.

The reductions in this bill before us will in no way disrupt the continuation of a reasonable mutual-security program. The most desirable point 4 operation, allies who have demonstrated friendliness, and areas of strategic military importance to us are all adequately provided for.

While we then accept our obligation to provide for this security against communism for ourselves and the free world, let us also accept and concentrate upon our primary obligation to the American people, whom we represent, to take the greatest care of their money and exercise the highest vigilance over the manner in which it is spent. The resources of this great Nation are not limitless and the burdens now beng patriotically assumed by each American taxpayer are truly staggering. It will profit us little to extravagantly attempt to buy uncertain friendships if the exorbitant price is the deteriorating morale of the American people and the grave danger of our own economic instability. Let us beware of both of these catastrophes which are more threatening than may appear on the surface. The American taxpayer has put both his faith and his money into our legislative hands. In legislative conscience, let us neither betray the one, nor dissipate the other.

Let us, rather, wisely and patriotically accept the reasonable reductions, in this foreign aid appropriation bill, recommended by the committee and sensibly wait until the results of the restudy and reexamination of the whole subject are available for our continuing legislative consideration in the best interest of our American taxpayers.

The Stockpile Twist

EXTENSION OF REMARKS
OF
HON. JOHN J. WILLIAMS
OF DELAWARE
IN THE SENATE OF THE UNITED STATES
Thursday, July 12, 1956

Mr. WILLIAMS. Mr. President, in today's Wall Street Journal there appears an article entitled "The Stockpile Twist."

Our stockpiling program was originally intended to be used for the purpose of accumulating those strategic materials which would be essential to our national defense in the event of an emergency. However, on many of these items our national defense needs have been taken care of, but the mining industry keeps insisting that the Government continue its purchase program at exorbitantly high prices, thereby converting this national defense measure to a simple price-support program for the mining industry.

This represents nothing less than an inexcusable raid on the Federal Treasury by a special group under the guise of national defense, and it should be stopped.

I ask unanimous consent that the article appearing in today's Wall Street Journal commenting upon this question be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

STOCKPILE TWIST—CONGRESS AIMS TO PUSH MOBILIZERS DEEPER INTO PRICE PROP ACTIVITIES—DEFENSE HOARD RIVALS FARM SURPLUS IN COST—THREAT OF SPOILAGE INCREASES—A PAINFUL LOSS ON PALM OIL

(By Joseph L. S. Terrell)

WASHINGTON.—Congress is writing a new law that spotlights this little-known fact: The Government's stockpile of strategic goods has grown to rival, in terms of cost, the surplus farm hoard.

By latest accounting, taxpayers have tied up in the strategic cache a cold $7.5 billion. The hoard contains an assortment of some 70 war-essential items, mostly minerals and metals, including such items as aluminum, lead, natural rubber, hog bristles, and castor oil. This $7.5 billion inventory lags only slightly behind the $8.6 billion wrapped up in wheat, corn, cotton, and other products of the soil.

The stockpile program, though it bears a defense label, resembles Secretary of Agriculture Benson's farm program in still other respects. Both serve to bolster prices of goods the Government buys. And Defense Mobilizer Flemming, who manages the stockpile, sometimes has to sell at a loss stocks that are in danger of spoiling, just as Mr. Benson has to unload farm crops that threaten to grow stale.

TUNGSTEN, FLUORSPAR

The new law Congress is passing, with administration backing, would put Mr. Flemming in the out-and-out price-support business. The scheme calls for continued buying of tungsten, fluorspar, asbestos, and columbium-tantalum, although stockpile goals for these items have already been met. Lawmakers from producing States, labeling their bill a "stopgap" plan, felt the Government market could not be cut off at this time. Secretary of Interior Fred Seaton has

promised to hand Congress next year a long-range program for aiding the mining and minerals industries.

But to cushion producers for 2½ years against the hardship of losing their lucrative Government outlet, the lawmakers got behind the bill to keep Uncle Sam in the market. Officials agree that as other stockpile goals are met, new demands will arise in Congress for still more schemes to prop the mining and minerals industries.

Senator BENNETT, Republican, of Utah, sounded the keynote in a comment on the bill that's already nearing passage. Said he: "In many ways the problem of these minerals has many similarities with the farm problem, with the added complexity produced by the fact that our domestic surplus of production exists in the face of very large importations of metal and of our inability to get our cost down to the point where we can move into the world market as exporters."

The amount of each of the 70-odd stockpiled items bears a secret label. But to get an idea of the size of the mountainous hoard, suppose the full $7.5 billion were in aluminum. This would add up to a huge 14,478,000 tons, or roughly the equivalent of 9 years and 3 months' output based on 1955 rates.

SEVENTY YEARS' OUTPUT

If Mr. Flemming went shopping for $7.5 billion of lead, he could bring home the amount United States mines could produce in 70 years at last year's rate.

Or suppose Mr. Flemming spent the full $7.5 billion on natural rubber. This would add up to 11,160,000 tons, enough for 625 million truck and bus tires. At the current rate of consumption, that supply would last nearly 48 years.

For the fiscal year that ended last Saturday, the stockpile swelled by an estimated $712 million. According to budget estimates, Uncle Sam will shell out an additional $378 million in the new fiscal year, not counting any outlays stemming from the pending law. All told, the Government aims at a stockpile that will cost taxpayers $11.2 billion, again not counting any new laws.

The basic purpose of the stockpile is military, to assure the United States a sufficient domestic reserve of essential items in case of war. This purpose still exists, of course. But the program also has a distinctly domestic price support element, and will have even more when the pending bill becomes law.

Officials confess they have no way of knowing exactly how much it costs to store and guard the hoard. They do agree it's an expensive job. The materials now occupy space at 65 military depots, 16 Government warehouses, 107 commercial warehouses, 5 vaults, 7 Government sites for bulk ores, 15 commercial sites for ores, 10 commercial tanks for various oils, and 34 industrial plant locations. "We have an army of men to guard the stuff," reports one custodian.

SPOILAGE THREAT

As the stockpile grows, so does the threat of spoilage. To insure that their huge rubber heap won't go bad with age, the stockpilers now have to rotate some 7,500 tons a month, selling it to industry and buying back the same amount. "Eventually everything but the metals and minerals will be rotated," says one official.

And there's the increasingly tangled problem of disposing of materials that lose their "strategic" character as defense needs change or better materials are developed. Right now, for example, the Government is in the process of selling, among other things, some stocks of pyrethrum, a material used to make insecticides; 75,000 pounds will be up for sale in August, on top of 55,600 pounds already sold.

While officials cheerfully report selling the pyrethrum at $7 a pound, about what they paid for it, they tell of painful losses on another deal. The stockpilers recently decided they didn't need all the palm oil they had stashed away. They've found animal fats can also carry out palm oil's strategic duty of helping to finish the lead-and-tin-coated steel sheet known as terneplate. So they've sold some 48 million pounds of palm oil at a loss of some nine cents a pound, or about $4.3 million. That's about half the original price. And more palm oil remains to go on the block.

Perhaps within the next 2 weeks, the stockpilers will offer for sale thousands of pounds of hog bristles destined for paint brushes. Because nylon bristles have improved, the hog bristles have lost the strategic value they had when Red China quit selling them to the United States early in the Korean war.

RIDICULOUS BIDS

Other materials scheduled for sale, and awaiting only the end of a 6-month period to allow Congress' objections, include cordage fibers, quinine bark and emetine, a medicine base. On at least one of these, the profit-and-loss signs are ominous for the Federal salesmen. Bids recently received on quinine bark, reports one official, were so low as to be "ridiculous." "By the time the Government gets around to selling the stuff," he says, "nobody wants it."

Dr. Flemming doesn't admit of course that he's in the price support business. He argues instead that the stockpile program has a dual purpose: To store physically scarce materials that would be needed if the United States went to war again and to maintain what bureaucrats call a "broad mobilization base." Under this concept, the Government tries to maintain multiple sources of war-vital goods and, in the case of the stockpile, the Government applies this theory by furnishing markets.

The stockpile program started 10 years ago this year, shortly after World War II. Congress decided to store away minerals, metals and other items that would be needed if war broke out and might be in short supply. Even then, lawmakers from producing States looked on their handiwork at least partly as a price supporting operation. Goals were set for individual items to be hoarded away, and Uncle Sam went out to buy when and where he could, even in foreign markets.

In the spring of 1954, the stockpile program took on more of an appearance of a domestic subsidy. President Eisenhower ordered stepped-up purchases of about 40 metals and minerals on the recommendation of his Minerals Policy Committee, not as a defense measure but as a prop for United States producers.

REACTIVATING CAPACITY

In ordering the increased buying, Mr. Eisenhower said purchases would be made "ordinarily at such times as the Government decides that purchases will help reactivate productive capacity and in other ways to alleviate distressed conditions in connection with domestic mineral industries that are on an important element of the Nation's mobilization base." This Presidential directive came in March of 1954.

In June of that year, the Government started buying lead and zinc. Producers of these metals were in a bad way. Demand was down, prices low, and big inventories hung over the market. Lead and zinc producers were still unhappy, despite the Government buying, and were pushing for higher tariffs to protect them from imports. Mr. Eisenhower rejected the plea for higher tariffs and ordered still more buying of lead and zinc.

This part of the Government buying program is known as the "long-term stockpile."

Freedom and Authority

EXTENSION OF REMARKS
OF
HON. OLIN E. TEAGUE
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 12, 1956

Mr. TEAGUE of Texas. Mr. Speaker, under leave to extend my remarks in the RECORD, I should like to insert the commencement address given by the Honorable William E. Morgan, president of Colorado A. and M. College, upon the graduation of the senior class of 1956 of the Agricultural and Mechanical College of Texas.

President Morgan is an old friend of mine and is a former student of the Agricultural and Mechanical College of Texas.

The address follows:

The topic I should like to discuss has to do with freedom and authority. It's a big subject for a short speech.

When Adam walked alone through the Garden of Eden, he had freedom—complete and absolute freedom. He was the world's first, and its only successful, anarchist. He was the last anarchist the world could tolerate.

When Eve came along, the struggle between freedom and authority began; not because Eve was a woman—though that might be argued with more than indifferent success—but rather because Eve was another person, herself endowed with certain inalienable rights to freedom. But they were rights neither more than, nor less than, those held by Adam. They were equal to Adam's, though Adam's were less than he had before Eve came along. You might say that when Adam multiplied, his freedom was divided.

From the time of Adam, the history of the world has been a struggle over this arithmetic of rights to freedom and liberty. Simple arithmetic was sufficient until Adam and Eve had children, and their children's children had children, and so on. The problems thus created called for a higher order of mathematics in analyzing the struggle between freedom and authority.

This problem has received the attention of philosophers down through the ages. It is coming in for its share of attention today, and it promises to command even more attention as the human race continues to multiply.

You need only read your daily newspaper to know that these are confused times. In such circumstances, we may take comfort from the men and women who founded this Nation. They too lived in a time of stress and strain and of many voices. It was just as difficult for them as it is for us to see clearly the main goals toward which they struggled. As one of our eminent present-day thinkers, Dr. Paul S. Havens, puts it, "Our task now, like theirs, is to find the main idea and to hold it, to see through propaganda, to get to the center of a problem without being ambushed on the periphery."

And, speaking of those early subjects of George III—those ragged revolutionaries who in 1776 impudently called themselves Americans—we should remember that their times, like stormy ocean waters seen at a great distance, appear to us quieter and calmer than they really were.

The issues confronting those rebellious colonists, and those confronting us, are as old as Plato. Plato did not have daily newspapers to read, nor did he have TV newscasters to report the news as it developed,

or radio gossips to speculate on the news before it even happened. But Plato knew what was going on in his world of city states, and he thought through this problem of the struggle between freedom and authority. He came up with an answer in terms of the state; through the state, and through social controls exercised by the state, would justice and equality be achieved. His answer was the state supreme, with the individual subordinated to the state.

Since Plato's time the glorifiers of authority have never ceased to advocate the firm control of men's lives by the state. Sharing this one doctrine, they have sought justification for it in appeal to the most diverse types of philosophy and social organization. Sometimes as theory, sometimes also as practice, it emerged—

1. In the medieval town economy, with control through merchant and craft guilds;

2. In mercantilism, with control through the state; and

3. In various forms of state socialism, with control residing in a party elite, presumably the modern counterpart of Plato's guardians.

And so it confronts us today, perhaps a more formidable challenge than it has been for well-night two centuries. Embalmed in the teachings of Marx and the Communist Party, it is now bolstered by a pseudoscience: the materialistic interpretation of history, the doctrine of the class struggle, prediction of the inevitable collapse of capitalism and rule of the proletariat. And, finally, it proclaims itself the only genuine democracy, as its advocates prattle of a classless society, free of inequalities and exploitation, which will know only peace and where, at last, authority allegedly will no longer be necessary.

It was just over a century ago that Marx and Engles issued their Communist Manifesto, urging the workers of the world to unite, and assuring them they had nothing to lose but their chains. It was an unabashed appeal to force and violence, utilizing, ironically, a completely authoritarian discipline to reach the goal, supposedly, of freedom. Frankly materialistic, it denies that man is of the Spirit. Having made man cheap, it is not strange that the protagonists of this doctrine have treated man cheaply, that firing squads and slave labor camps are part of their standard equipment. Yet this movement is international in mission, and almost universal in its appeal. It refuses to be confined.

Whether men or states, those who invoke uncurbed authority without regard to moral ends, are dealing in fundamental error. And the disastrous element in the materialistic view of man is that it removes the grounds for moral life. The struggle for power, ruthless and bloody, characterizing the political life of peoples committed to a materialistic view of man is no accident.

The only alternative is a respect for morality on the part of the individual, for in the long run the state reflects the morality of its citizens. Unless you, as individuals, develop moral and spiritual restraints, unless you subject your desires to an intelligent editing that results in moral ends, unless you make materialistic considerations always a secondary thing in whatever you do—your life on this planet must be written off as a moral failure. Indeed, if man fails to develop such moral and spiritual control over that complex instrumentality known as the state, man himself may very possibly be written off in the atomic fires he has kindled.

Fortunately, in the history of Western culture, there have been adequate answers to Plato and to subsequent glorifiers of authority. Interestingly enough, it was one of Plato's pupils, and the greatest mind of antiquity, who next made a major statement on the problem of freedom and authority.

As a fine example of just how perverse a student can be, Aristotle came up with a doctrine diametrically opposed to that of his teacher. He advocated a far greater measure of freedom and initiative on the part of the individual. It was he who insisted that the collective political wisdom of the many is likely to surpass that of their rulers, however good. Since his time, the movement of political thought through history might be likened to that of a pendulum, oscillating between the extremes of freedom and control.

Aristotle's doctrine ultimately found expression in the development of societies where the emphasis was placed on personal freedom, individual initiative, and private property as the bases for incentive to effort and achievement. As a doctrine of political economy, its advocates included the Physiocrats with their natural law, Adam Smith, Malthus, and John Stuart Mill. To them, liberty, equality, and fraternity started from the fundamental idea of personal freedom and extended to the areas of freedom to contract, freedom of competition, private property and profit, and free trade.

Thus, over a long period, the pendulum of history moved away from the extreme of an all-encompassing authority, and greater freedom emerged. This movement received enormous impetus from developments in religion. "Democracy," wrote Thomas Mann, "is the political name for ideals which Christianity brought into the world as religion." Christianity may not be unique in this respect, but its followers predominate in the Western World, and it suffices to illustrate my point.

Jesus stressed the intrinsic value of the human personality for its own sake. The doctrine of unalienable rights was thus a political corollary to fundamental religious teachings. A basic feature of both democracy and Christianity is the recognition of the individual as a free agent—a moral agent, of intrinsic worth in the universe, distinguished by a capacity for love of his fellow men. Small wonder, then, that the advocates of authoritarianism in its most virulent form today, are also advocates of the godless state.

In the strife and confusion of colonial Americe 180 years ago, when Washington, Jefferson, Franklin, and their colleagues turned to the task of formulating the main ideas—political, religious, and economic—upon which a new nation was to be founded, they turned not to Plato, but to the tradition of Aristotle. Number 10 of the Federalist Papers echoes, from across the centuries, much that can be found in Aristotle. The author was James Madison.

The framers of our Constitution were not blinded, however, by the authority of classical antiquity. And while they paid their respects to the Aristotelian tradition, they recognized it to be a tradition now supplemented and enriched by the Christian doctrine of love and brotherhood. They went on to embody the political counterpart of this Christian doctrine first in the Declaration of Independence, and then in the Constitution.

Moreover, they spilled their blood for the privilege of living under this doctrine of liberty and self-government. In a very real sense, they bought their freedom. But they did not buy it for you—they only made a downpayment on it as far as you are concerned. That much, at least, they pass on to you as a heritage. If you would preserve it, you need to remember Daniel Webster's words of caution, that "God grants liberty only to those who love it, and are always willing to guard and defend it."

It should now be evident why freedom has flourished best where Christian faith is strong. This Christian philosophy says in simple terms that you may not trample on the other fellow, or vice versa. It is a doctrine of love. All round us are those, who, with the characteristic abrasiveness of the realistic fellow, challenge the usefulness of so soft and pliable a doctrine in a world so harsh and brittle. By way of defending the abuse of authority in trampling on another's freedom, how many times have you heard the expression, "After all, we must be realistic about this?" I submit that it would be a truly realistic exercise for each of us to test his conception of freedom on Christian doctrine.

This leads me to conclude that you have a special task ahead of you. To recall the depression view of a college diploma as a search warrant for a job, this job I am talking about is already here, and it has a search warrant out for every college graduate in the land.

I take it that you subscribe to the fundamental precepts of Aristotle and of Christianity—precepts that are incorporated in the basic instruments of our American society. Your task, then, is to understand these fundamentals, to guide your action by them, to reject the tempting proposals that do not conform to these precepts.

If you do your task well, you will not fall for the snare and delusion of voting yourself a harvest that you do not sow.

If you do your task well, you will believe, as Woodrow Wilson believed, that liberty has never come from the government—the history of liberty is the history of the limitations of governmental power, not the increase of it.

If you do your task well, you will understand that you may preserve your liberty only by extending it to those who do not have it.

And, finally, if you do your task well, you will arm yourself as the weapon that your Nation's mortal enemy can never have—it is the least secret of all weapons—the weapon of the free citizen.

Tendency Toward Complacency

EXTENSION OF REMARKS
OF
HON. JOHN J. SPARKMAN
OF ALABAMA
IN THE SENATE OF THE UNITED STATES
Thursday, July 12, 1956

Mr. SPARKMAN. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Have We, Indeed?" published in the Birmingham Post-Herald, a Scripps-Howard newspaper, of Saturday, June 2, 1956. The editorial relates to the complacency which has been engendered throughout this country by some of the statements which have been made, even by President Eisenhower himself, with reference to the present Soviet attitude in world affairs.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

HAVE WE, INDEED?

Congressman as well as many ordinary citizens are disturbed by the tendency in this country and among our allies to relax and bask in the smiles of the new men in the Kremlin. This trend is virulent in military matters. Too many want cutbacks.

This kind of complacency is only encouraged by such statements as this by President Eisenhower before the National Citizens for Eisenhower Campaign Committee.

"We know we have largely nullified its (Soviet) reliance on force and the threat of force."

Poetry: School of the Pacific Northwest

EXTENSION OF REMARKS
OF
HON. RICHARD L. NEUBERGER
OF OREGON
IN THE SENATE OF THE UNITED STATES
Thursday, July 12, 1956

Mr. NEUBERGER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a most informative and thorough article about poetry in the Pacific Northwest by Carolyn Kizer, in the New Republic of July 16, 1956. The title of the article is "Poetry: School of the Pacific Northwest."

Miss Kizer is a talented and gifted poet herself, a native daughter of the Pacific Northwest. Her parents are Ben and the late Mabel Kizer. Mr. Kizer is well known throughout the Nation as a distinguished lawyer, as a leader of regional planning projects both in the Pacific Northwest and Canada, and as director of our UNRRA operations in China during and after World War II.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

POETRY: SCHOOL OF THE PACIFIC NORTHWEST
(By Carolyn Kizer)

In the coastal strip of the United States stretching from the border of British Columbia to the southernmost reaches of the Los Angeles city limits there is a distinct culture area: That corner of the coast containing Seattle. Its current artistically creative mood has been energized largely by one man, the artist Mark Tobey, regarded by many as America's most distinguished elder painter. Junior to Tobey, and deeply influenced by him and by an interest in the Orient, which has profoundly affected both painters, is Morris Graves, whose European reputation is somewhat less, and whose domestic recognition is more advanced than that of Tobey. The oriental influence seen in their work is also increasingly reflected in the architecture, interior decoration, and taste of the Seattle area, generally.

In this same rainy, misty area, on which the sun never (or almost never) rises, with a climate tempered by the Japanese current and protecting mountains, with living traces of pioneer and Indian days, with a State university whose recent fame rests on its denial of a platform to J. Robert Oppenheimer and its football scandals, where anything resembling night-club or cafe life is almost unknown, a new Pacific school of poets has been emerging.

Its existence is quite apparent in recent issues of literary periodicals. For example, every issue of Poetry magazine for the first 6 months of this year (with the exception of one Japan issue) contains poems and reviews by Seattle poets. The current issue of Botteghe Oscure (No. XVII) has poems by six Seattle writers. In the forthcoming volume of New World Writing, in a section devoted to the best student poetry being produced at American colleges and universities, 4 of the 20 poets represented are students at the University of Washington.

This poetic activity is closely connected with the presence there for some years, of Theodore Roethke, the Pulitzer Prize-winning poet of 2 years ago who conducts the Poetry Workshop. During the year just past, Roethke has been a Fulbright professor in Italy, and his work has been carried on by Stanley Kunitz. Undergraduates, graduate students, instructors, professors, and neighboring poets share and criticize each other's work in an atmosphere amazingly free of the back-biting, in-fighting, jealousy, and the concomitant secrecy about one's own work usually found when two or more writers gather together. Nor has this busy atmosphere produced a lot of little pasteup Roethkes toddling along in the wake of the master. Except for the occasional outcropping of a strongly stressed trimeter line, heavily end-stopped, which Roethke adapted from Yeats and made his own, these poets are all highly individual in approach and technique. This is all the more remarkable seeing that this is a group which bears down heavily on critical analysis of its own work. In these poems one finds originality of imagery, few hammock-sag lines, and a readily audible, although natural, beat. As Roethke says, with considerable emphasis, "I teach a beat." And the level of aural sensibility is high.

As to program, these poets are united only in what might be called "the feeling area" of their work. This is the age of the fear of feeling, and for some time, while the more prominent younger poets in America have shown a technical proficiency which puts their English counterparts to shame, there has been a great deal of what Roethke calls "cosy" writing: the fear of the display of emotion, the fear of self-exposure, the desire to be emotionally sophisticated even at the cost of a lie. For a number of years, poets like Roethke and Kunitz had to buck the tendency of editors to encourage, and publish, this kind of writing, a tendency which is still the stock-in-trade of the New Yorker and some of the quarterlies. Thanks to the increasing acceptance of Roethke as a truly expressive force in American poetry, resistance seems to be wavering.

Two of the most interesting poets in this group are Carol Hall and David Wagoner. Mrs. Hall is the wife of a university professor, James Hall, who is a skillful poet himself. Mr. Wagoner has lived in Seattle only 2 years, was a former student of Roethke's at Pennsylvania State. He has published two novels, and a volume of poetry, Dry Sun, Dry Wind, and is an assistant professor in the English department. Somewhat younger, amazingly prolific, and the recent winner in the Yale Series of Younger Poets competition, is James Wright. Wright has almost completed his Ph. D. at the university, was previously a student with John Crowe Ransom at Kenyon College.

There are poets like Richard Hugo, who works for the Boeing Aircraft Co., and myself, who have no official connection with the University at present, but whose social and literary activities center around this group. There are younger workshop students of promise. Carol Christopher Drake, a young poet majoring in Greek, who has not yet graduated, but has already been published in Botteghe Oscure is an easterner. Jean Clower, a graduate student from Texas, is here because the last poet-in-residence with whom she studied told her that Roethke could help her with "that crazy stuff," her highly original poetry. Robert Krieger is a teaching fellow from Portland, Oreg., whose work has appeared in Poetry and the New Yorker. A gifted young Canadian, Errol Prichard, only 18 years old, is studying Chinese at the instance of Stanley Kunitz, and is experimenting with translations from the French and the Chinese.

I believe that Robert Graves once said that the amount of available talent does not vary from generation to generation, that what matters is whether this body of talent is stimulated to produce. Talent is in Seattle largely because Roethke is here; and he and the Workshop are here partly because of the wise, genial and sympathetic administration of Robert J. Heilman, Chairman of the Department of English. The surrounding social environment, with its American emphasis on home entertaining rather than cafe life, offers as a bistro only such places as the Blue Moon Tavern, a grubby oasis just outside the University's 1-mile-limit Sahara. Here the jukebox roars, Audrey the waitress slaps down schooners of beer, and poets, pedants, painters and other assorted wild-life make overtures to each other. They tell me the men's room walls bear quotations from Dante, in Italian, and a graffetto to the effect that "There is no God but Milton, and Arnold is his prophet." "Arnold" is Arnold Stein, the Milton scholar, who also published poetry, and is one of the critics to whom Roethke listens with especial care.

Roethke, when he is at home, occupies the magnificent house in the woods north of Seattle which Morris Graves built for himself, while Graves continues to paint in Ireland. The latest form of amusement hereabouts has been the writing of Japanese link poems, in concert, and lonely grapplings with the Haiku and Tanka forms. Someone just wrote a series of Tanka-type verses which describe Roethke's pastoral life at the home of Graves; the Japanese wall paintings, the geese on the great green lawn, and the poet muttering to himself in the courtyard as he works.

More Giveaways

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 12, 1956

Mr. MULTER. Mr. Speaker, in the closing days of every session of Congress efforts are made to push through bills that cannot stand the light of day and could not survive exhaustive hearings and debate. One such bill is the attempt again being made to give away enemy alien property seized during World War II, the title to which long since has vested in the United States Government by its action and which action has long since been ratified and confirmed by each of the enemy countries involved.

All of the agreements and conventions entered into with Germany after World War II specifically vest title in the United States Government to property which was located here and which belonged to German enemy aliens. Not only was title vested in our Government, but these agreements and conventions contain express waivers on the part of Germany or all of its citizens to make claim to, for, or against the assets of this property or the proceeds thereof.

To permit claims to be made against these assets or the proceeds thereof by enemy aliens, or to allow them any funds from the United States Treasury on account of such claims, runs counter to international law as well as American law, and does violence to ethics and morality.

I trust that most of the Members will join in opposing any attempt to enact legislation to give away any American moneys for such purpose.

In this connection, I am pleased to call attention to the following excerpt entitled "Alien Giveaway Is Maneuvered"

as it appeared in Drew Pearson's column of July 12, 1956.

ALIEN GIVEAWAY IS MANEUVERED

(By Drew Pearson)

Some of the cleverest backstage lobbying in this session of Congress has maneuvered a bill for the return of German property out of the Senate Judiciary Committee onto the Senate Consent Calendar where it may sneak by the entire Senate.

It means a giveaway of half a billion dollars, with the big German cartels who manufactured arms for Hitler, being the chief beneficiaries. United States taxpayers will have to make up the half billion.

In order to camouflage the German giveaway, the bill is dressed up in some high-flown language about compensating nationals of the United States who have war-damage claims. And while former POW's do get some benefit, the chief benefit goes to I. G. Farben, the giant Nazi cartel, and the former owners of American Bosch, Schering, North American Rayon, and so forth.

The Helicopter Heroes

EXTENSION OF REMARKS

OF

HON. RICHARD L. NEUBERGER

OF OREGON

IN THE SENATE OF THE UNITED STATES

Thursday, July 12, 1956

Mr. NEUBERGER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD, a splendid editorial from the New York Times of July 11, 1956, about the heroism of the Army helicopter crews who recovered the bodies after the tragic Grand Canyon air disaster. I also ask that there be included in the Appendix of the RECORD a letter which I have written to Secretary of the Army Brucker, suggesting that suitable awards and recognition be made available to these men because of their valor and heroism on peacetime duty.

There being no objection, the editorial and letter were ordered to be printed in the RECORD, as follows:

THE HELICOPTER HEROES

Uncertainties still surround the airliner collision 12 days ago that claimed 128 lives in the Grand Canyon of Arizona, but one unassailable certainty stands out—the superb courage of the Army helicopter crews who made possible the recovery of the bodies from this horrible disaster. From the first day, when these crews fought turbulent air to reconnoiter and land, to the mass funeral services at Flagstaff at which five members that had risked death daily stood as part of the honor guard, these men distinguished themselves by selfless devotion beyond the ordinary call of duty.

They braved 40-mile-an-hour updrafts in the canyon. A pilot said his craft once shot upward like an elevator. Another made a landing on a spot no larger than the helicopter itself. "If you misjudged the distance by 10 or 15 feet you would drop maybe 1,000 feet into the canyon."

Besides taking out bodies themselves, the helicopters landed mountaineers preparing the way for other climbers. The whole job was a triumph of man over hazardous inaccessibility, in the worst commercial air disaster and the worst possible spot to reach. There were no lives left for these helicopter men to save, but they did their tedious, dangerous job with a heroism that commands the admiration of the Nation.

UNITED STATES SENATE,
COMMITTEE ON
INTERIOR AND INSULAR AFFAIRS,
July 12, 1956.

Hon. WILBER E. BRUCKER,
Secretary of the Army,
Washington, D. C.

DEAR MR. SECRETARY: I have been favorably impressed by the heroism of the Army helicopter crews who have braved turbulent air and dangerous terrain to bring out the bodies of the victims of the recent air disaster and tragedy at the Grand Canyon of the Colorado.

It is my fervent hope that the Department of Defense is studying the possibility of rewarding this valiant group of men with some siutable recognition or medal, which is consistent with an outstanding feat of bravery not associated with action against the enemy.

I am sending copies of this letter to the two distinguished Senators from Arizona, where the tragedy occurred, in the thought that they may want to reinforce my suggestion.

Thank you very much.

Respectfully,

RICHARD L. NEUBERGER,
United States Senator.

India's Friendship Imperiled by Nixon

EXTENSION OF REMARKS

OF

HON. EMANUEL CELLER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 26, 1956

Mr. CELLER. Mr. Speaker, the President must make clear to the world that the recent statements by Mr. NIXON on the subject of neutrality do not reflect the official views of the United States. The harsh inflexibility of Mr. NIXON's views do not correspond with the President's own views on neutrality. It is in particularly bad taste and bad diplomatic relationship that Mr. NIXON should, on two occasions, have gone out of his way to give needless offense to the Government of India. The bad taste is compounded by the issuance of one of his statements from Pakistan.

All of Asia watches the experimental democracy of India with one eye, with the other eye on Communist China. The proving ground of democracy in Asia lies in the success of India's experiment, as against the tyranny of communism. India needs every encouragement to proceed in the ways of democracy. We must carry with us a measure of understanding of the staggering problems of India, which in the early years of its freedom, beset with every social and economic problem, nonetheless has chosen the path of freedom and has resisted the inroads of Communist ideology.

We have offered our aid in the spirit of free people helping free people to help themselves. Public lecturing to other governments avails us nothing.

These are the times that call for the utmost dignity on the part of spokesmen who presume to speak from high office and these are the times that call for the calm presentation of indisputable facts rather than indulgence and slogans. The stern shaking of the finger of admonition indulged in by Mr. NIXON is no happy prelude to friendship with India. America's leadership in the free world receives no support from such outpourings as Mr. NIXON's.

A 1916 Manifesto

EXTENSION OF REMARKS

OF

HON. WATKINS M. ABBITT

OF VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 12, 1956

Mr. ABBITT. Mr. Speaker, there appeared in the Lynchburg News a very forceful and impressive editorial on Tuesday, July 3, 1956.

Under leave to extend my remarks, I desire to include the editorial herewith:

A 1916 MANIFESTO

Among the most immoderate supporters of the Supreme Court's decree abolishing segregation in the public schools on social grounds has been and is the New York Times. In its diatribes, no less, it has expressed indignation at criticisms of the Court's decision violating precedent and reached without consideration of the Constitution and statutes made in conformity to it. It has made itself the defender of the sociological and ideological approach to questions of constitutionality. The cause is good, it seems to say, so the Court was right in making it law by use of usurped authority.

It is interesting therefore to note the quotation by W. D. Workman, Jr., in the Roanoke Times of the outraged comments made by the New York Times when President Wilson named Louis D. Brandeis to the Supreme Court. Brandeis, it contended, was concerned with sociology more than with law. It denounced the judicial appointment of an exponent of "theories of social justice" likely to be more occupied "with questions of a purley political nature concerning social welfare and social justice" than with the constitutional powers of the Government. There is no place on the Supreme Court, it declared, for an advocate of any cause and the Court can never put itself in the position of "pleading for any cause." Changes and reforms under our system of government, it said, "can be properly achieved only through legislation and not through judgment of the courts." That reads like the southern manifesto of which the Times has been so violently critical.

And, in light of what has followed, the Supreme Court's decision the Times now so stanchly supports sound prophetic;

"It (legislation by judicial decision) would introduce endless confusion where order has reigned, it would tend to give force and effect to any whim or passion of the hour, to crown with success any transitory agitation engaged in by a part of the people overriding the matured judgment of all the people as expressed in their fundamental low."

What the Times said of Brandeis could be said of Chief Justice Earl Warren except that part acknowledging the former's legal ability. The confusion the Times predicted would follow legislation by Court decree is

here. Force and effect is given by other decisions of the Supreme Court to "the passion of the hour." What the Times said in 1916 is as true now as it was then.

This editorial written 40 years ago when the Times was at the height of its influence ought to be required reading for the editors of the Times today.

Address by Charles H. Silver, President of the New York City Board of Education

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 26, 1956

Mr. MULTER. Mr. Speaker, I am pleased to make a part of our RECORD the following address by the very distinguished president of the New York City Board of Education, the Honorable Charles H. Silver, which was delivered at the commencement exercises of the Erasmus Hall High School on June 26, 1956. Erasmus Hall High School is one of Brooklyn's oldest and best institutions of learning. Its principal, Dr. John McNeill, is one of our finest educators, and Mr. Silver is one of the best presidents our board of education has had.

The address follows:

ADDRESS BY CHARLES H. SILVER, PRESIDENT, BOARD OF EDUCATION, AT COMMENCEMENT EXERCISES OF ERASMUS HALL HIGH SCHOOL, JUNE 26, 1956

There is a certain program that some of you may have seen on television. It starts by showing a news commentator seated at a desk and turning a calendar back to a celebrated date in history. Then he says: "What kind of a day was it? It was a day like any other day. And you are there!" The scene changes and the past unfolds, reliving a great moment in history. There is a great deal to be learned from the past.

But this is the present. This is June 26, 1956. What kind of a day is it? It is a day unlike any other day in the last 4 years you have spent at Erasmus Hall—and you are here—about to graduate. Now, your scene will soon change as your future unfolds.

Many who are called to speak on occasions like this will counsel you to face the future. They will urge you to face the future fearlessly and with a smile—and that is probably very fine advice. Yet, in a deeper sense, you cannot really face the future at all, because very few of us can possibly know anything about it. That is why I feel particularly fortunate and privileged that you have honored me with your invitation to be a part of your commencement exercises. Standing where I am, I need only turn to face you, the members of the graduating class, and I and all who are in this vast audience can look upon the future—for you are the future.

This is a strange and wonderful turning point in your lives. You are shutting a door forever on a great adventure which you have shared with 5,000 other students in one of the largest and most respected high schools in the world. More than that, you are opening another door upon an even greater adventure in which will come opportunities for further study, for starting upon a useful career and for coming to grips with the trials of everyday living.

You could not be better equipped for the tasks ahead. An Erasmus Hall diploma is a precious symbol of preparation for life. When you take it in your hand, hold it as a torch to light your way ahead. Hold it with pride as a mark of achievement, on this memorable day when you carry forth into the world all that you have gained from the great tradition of Erasmus Hall.

It is a tradition that was born almost two centuries ago when such men as John Jay and Alexander Hamilton gathered together their distinguished friends to give the people of Flatbush a place where their children could be taught. They named it after an immortal scholar and it became the first school of secondary rank to win the distinction of a charter from the Regents.

Even in the short while I have been among you, I have already felt a stirring awareness of the special atmosphere of this very special school. You could not have enjoyed a 4-year tenancy at Erasmus Hall without absorbing something of its greatness. This school has a soul—and it will always be part of your own souls wherever the patterns of your destiny make take you.

When I say that your school has a soul, I do not mean just the heritage of its glorious history. Erasmus Hall is more than history, more than stone and steel. Most of all, it is the people who work within its walls. They give it life and meaning—the teachers and the students. And just as Erasmus Hall will always be a part of you, you will always be a part of Erasmus Hall.

The spendid record of this graduating class will be woven into the golden tapestry of Erasmian achievement. I know how many of you have made outstanding progress in your studies. I know your fine records in winning merit scholarships, in the Westinghouse science talent search, in the State, Cornell and nursing scholarships and in qualifying as future scientists of America.

Your justly proud faculty has carefully informed me of the many awards your school newspaper and magazine have won in the Columbia scholastic press competition. I even know how well your basketball team acquitted itself in the city championships and the top standing of your tennis team. I only wish I could have been there to see some of the matches. But, in my job, what school would I cheer for?

Well, today, I'm cheering for your school and I'm cheering for you graduates, because you are about to play in the greatest game of all. I know that you will carry into the contest we call "life" those vital rules of the game that you have learned at Erasmus Hall, and that you will play it fairly and to win.

As president of the board of education, I see almost a million young men and women preparing for their tomorrow in our public schools today. I speak for the board as well as for myself when I say that these youngsters are on the way to fine useful manhood and womanhood.

Ever decade seems to come up with its own so-called youth problem. When I was eligible to be part of that problem they had not yet coined the impressive phrase, "juvenile delinquent." As I recall, the nice name they picked for us was "the lost generation." Then, a little later, when I had matured enough to be concerned about children of my own, we shook our heads sadly and made worried noises about what we chose to call "flaming youth."

Yet, somehow, my lost generation found itself and managed things fairly well and so did the generations that came after. And I'm not too troubled about you.

When I praise the youth of America, I express my faith in the future of America. I am not blind to the black marks some few have made in confusing liberty with license. But for every young person who transgresses the law and earns a lurid headline in the papers, I can show you hundreds, yes thousands, who are well on the way to respected places in society and to positions of security and leadership. The picture is bright and healthy, and so are our young people.

You are growing up in an era when great forces for good and for evil are striving for the welfare of the destruction of mankind. Lipservice is not enough; discussion is not enough. You are growing up in an hour of great decision and we want you to decide to do something. Think, speak, study, then act. If there are abuses, strive to erase them. If there are wrongs, work to right them.

You young people represent a multitude of graduates in every part of our vast Nation. You were never more needed than now. You will bear the brunt of the coming struggle between the free world and the slave world in which nothing will count more than education and the ability to defend democracy throughout the earth.

The stakes are high; for, if we fail, we lose our freedom. The outcome is in your hands, tomorrow is in your hands.

Face it without fear. The laurels you have won today are proof of your ability to protect the rights of mankind and to assure the survival of this God-loved land of ours against any enemies present or to come. If tomorrow's conflicts can be won, as I believe they can, in the classrooms of today, the victory is yours.

In our time, when we are so desperately in need of great minds and hearts, teachers, scientists, engineers, workers, planners, and healers. I cannot just say to you young people, "Do not let us down." The world you inherit may be faltering in many ways; it may, indeed, be falling into a void of confusion and despair. That is the challenge I ask you to face. It is not enough to say, Do not let us down; lift us up.

It is sometimes your lot to meet a person whose excellence of character and abundance of ability are such that, even at a brief meeting, his fine qualities are shown. Such a person, in my opinion, is John McNeill. Each occasion on which I have met him has cinfirmed and strengthened this opinion.

Dr. McNeill is with us tonight, I am glad to say. He is fighting his way back to good health with the same determined spirit with which he fought for his country and fights in behalf of the young people in his charge. He can well be proud of his notable career and we can be proud and are proud of John McNeill.

I remember the story he told me of the first day of his return to this school after his latest service in the Armed Forces. He explained his deep feeling as he approached the building. I thought to myself, as I listened, here is a true educator, worthy in every sense of the word to take his place in the line of great people who have headed this fine school. We all hope that, with God's help, he will soon be fully recovered and return to his post. While on the subject of the head of the school, may I commend Miss Corey for the competent manner in which she has filled this position during the absence of Mr. McNeill.

On behalf of the board of education, I congratulate the graduating class of 1956 of Erasmus Hall High School. I think it is quite proper that I congratulate your parents and your teachers, too, your principal and acting principal. They all have reason to share the pride we feel in the work you have done to reach this hour of reward.

And I would like to look ahead to another hour, to a far-off day when some all-seeing commentator may say: "It is June 26, 1976. What kind of a day is it? It is a

day better than other days. It is a richer, brighter, greater tomorrow. It is a better world, because you are there."

Young men and women of the graduating class, go forth with our blessing. We give you to tomorrow. We give tomorrow to you.

The Gift Horse's Mouth: Federal Aid to Education

EXTENSION OF REMARKS
OF
HON. RALPH W. GWINN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 11, 1956

Mr. GWINN. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include an editorial from the Daily Oklahoman published in Oklahoma City on June 29, 1956, entitled "The Gift Horse's Mouth," which shows how Federal aid to education, as proposed in the Kelley bill, works out. Even though Oklahoma would get more from the Federal Government under the Kelley bill than it paid out in taxes, Oklahoma, as reported by the Daily Oklahoman, does not want it.

The editorial follows:

THE GIFT HORSE'S MOUTH

Veterans who oppose the proposed amendment for a new and wholly unnecessary State veterans' loan bureau have put out some literature showing the veteran looking the gift horse in the mouth, and finding that the gift is a complete phony.

The same thing can well be said of H. R. 7535, called the Kelley bill, which proposes a huge Federal-aid appropriation for public schools.

The main talking point of educators who promote this bill is that it would equalize educational opportunities.

It does nothing of the kind. Under its provisions Oklahoma would get $24 million, of which Oklahoma would have to pay back $18 million in additional taxes, and, by the time the bureaucratic brokerage was deducted, the remainder would be virtually nothing. It costs a lot of money to collect taxes in Oklahoma, and have collections supervised by Washington bureaucrats and piped back to this State.

New York State would get $177 million under the terms of the bill. Yet we are blandly told that this Federal-aid money would go to backward States that can't raise enough money to pay their way educationally.

And what will the States get in return for the money they pay in taxation, getting back a part of it through misnamed Federal aid?

They will get Federal control, despite a few feeble efforts to deny this.

William E. Carr, executive secretary of the National Education Association, told his organization in a speech that what he calls planned education is a necessary prerequisite to world government. He says it is the duty of educators to teach world citizenship in the public schools and thereby strengthen the United Nations to a point where it can be made into a world government.

Steve Stahl, executive vice president of the Oklahoma Public Expenditures Council, publicly challenged this statement, and his challenge appeared in the CONGRESSIONAL RECORD. He asked Mr. Carr, in substance, this question: "How can you get planned education without having controlled education?" Mr. Carr shunned this question like smallpox. He did not dare to answer it. Up to the present day he has not answered it.

Mr. Stahl, in an address to the Oklahoma City Rotary Club, convincingly pointed out that Government, whether Federal, State, or local, must control that which it subsidizes. To have it otherwise would lead to total irresponsibility and chaos. The Supreme Court has already supported that formula. No one can seriously dispute it. If we get Federal aid for public schools, it is inevitable that we shall have an army of parasitical Federal bureaucrats telling us what we can or can't do in our public schools, as to curriculum, instruction, and administration.

The Kelley bill is up for final action. If you don't want Federal control through Federal aid, now is the time to make your wishes known.

Northwest's Fight for Certification

EXTENSION OF REMARKS
OF
HON. THOR C. TOLLEFSON
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES
Saturday, July 7, 1956

Mr. TOLLEFSON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include a timely editorial appearing in my hometown newspaper, the Tacoma News Tribune:

NORTHWEST'S FIGHT FOR CERTIFICATION

Northwest Orient Airlines, in continuing its efforts to obtain a permanent certificate for its operations on the great-circle route across the North Pacific to the Orient, has asked the Civil Aeronautics Board in Washington, D. C., to correct the record as far as the White House is concerned regarding its subsidy-free international operations.

This is a matter vitally important both to the airline and to Puget Sound business interests cognizant of what such permanent certification means in the fight that is being made to put the Seattle-Tacoma International Airport on a parity with Los Angeles and San Francisco airports in the long-range struggle for trans-Pacific air traffic.

As matters now stand, Northwest is maintaining its six passenger flights weekly oriental service on a 7-year temporary certificate ordered granted to it on February 1, 1955, by President Eisenhower. In directing the CAB to grant the temporary certificate, President Eisenhower said: "I believe that permanent certification of Northwest Airlines is premature as long as subsidy payments are necessary for its operations. A temporary certificate will provide the carrier with the opportunity to demonstrate its ability to operate without subsidies within a reasonable period of time."

Actually, Northwest spokesmen point out, they were operating without subsidy when the Presidential directive was issued, but apparently the White House was not so informed. This is the error that the airlines wish to have corrected.

Northwest's plea for permanent certification has found active support in briefs filed by the Tacoma and Seattle Chambers of Commerce, the Seattle Traffic Association, and the Washington Public Service Commission. Northwest asks permanent certification so that it will have the same status as competitive airlines. It has been providing such service since 1947 under temporary orders. This would seem to indicate considerably more than a passing interest in the matter. The company's argument that a permanent certificate is essential for such important factors as construction of facilities, personnel security and other long-range planning problems assuredly seems to be logical.

The entire issue will be scanned in a full-scale CAB hearing to be held in the near future, although a definite date has not as yet been set.

Talking Through His Hat

EXTENSION OF REMARKS
OF
HON. ALBERT H. BOSCH
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 11, 1956

Mr. BOSCH. Mr. Speaker, to understand that the Soviet Government has no conception of our freedom, we need only note the remarks of its leaders from day to day. Dmitri T. Shepilov has just recently given us another example of this complete lack of understanding.

Under leave to extend my remarks, I include an editorial, Talking Through His Hat, from the Daily Mirror of July 9, 1956:

TALKING THROUGH HIS HAT

What Dmitri T. Shepilov, the new Soviet Minister of Foreign Affairs, does not seem to understand is that the United States is a free country and is governed by a written and sacred Constitution and that among the articles in that Constitution is one that reads:

"Congress shall make no law respecting an establishment of religion or prohibiting the free exercise thereof; or abridging the freedom of speech, or of the press; or the right of the people peaceably to assemble, and petition the Government for a redress of grievances."

Therefore when this minion of Khrushchev makes normal relations with the United States conditional on the "toning down of press and radio," using such a word as muzzling, he is talking through his hat. Who is to do this toning down? Is it to be our Government? Is it to be done by our officials?

Shepilov should have been briefed by Molotov and Gromyko and Malik and the other Russian diplomatists who have been to this country and by the numerous spies that they let loose upon us, that no newspaper in the United States is owned by the Government and that no decent one is controlled by the Government and that the only ones who are too strongly influenced by those in power are owned by weak men who like to be invited to Washington dinner parties.

Shepilov used to be the editor of Pravda, which is the official organ of the Communist Party of Soviet Russia. When Stalin was alive, Pravda only published what Stalin permitted it to publish. It extolled Stalin as the greatest genius of all time, the smartest man that ever lived, the winner of wars, the most glorious of architects, the noblest of philosophers, etc., etc., ad nauseam. After Stalin died or was killed or went mad or whatever happened to him, Pravda came under the control of Khrushchev and it followed closely the Khrushchev line of downgrading Stalin.

We can have no particular objection to Pravda's methods, for after all it is a party organ. The point must be made that Shepilov has had no experience with a free press; he himself has been the editor of a party organ, a kept, offical newspaper. Therefore

he is incapable of understanding the American way of doing things and there is no reason why we should change our way to please him.

Incidentally, Shepilov is coming to this country in November to attend the meeting of the United Nations which was postponed to be held after the American presidential election. It is expected that at this meeting a very powerful attempt will be made to admit Red China into the United Nations.

Shepilov made the point in his press interview that the United Nations cannot count on real respect as long as Red China is not a member. Then the answer must be that the United Nations will have to get along without real respect, so far as the American people are concerned.

It is more than likely that if Red China is admitted, the Congress of the United States will withdraw this country from the United Nations as it has indicated it will do by resolution. The process is simple: Cut off appropriations for our delegation to the United Nations and refuse to confirm the American Ambassador thereto. The power to determine such matters constitutionally rests with Congress.

So Comrade Shepilov is wrong on two counts: (1) There is nobody who can instruct the American press what is to be its policy; (2) if Red China is permitted to shoot its way into the United Nations, Americans ought to get out of the place.

Democratizing American Capitalism

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 12, 1956

Mr. MULTER. Mr. Speaker, if the American capitalistic system of free enterprise is to survive, it is essential that the rights of the public, and particularly that part of it which holds stock in the big corporations, insurance companies and banks, be protected.

The testimony before congressional committees for years has demonstrated that these stockholders need more protection, not less, and that the big corporations and banks need more regulation and supervision rather than less. While this Congress has been striving to give the public more protection, the pressures of big business have been growing stronger and stronger, not only to thwart that worthy purpose but to remove more and more of the provisions of existing law which were enacted for the sole purpose of protecting the general public.

For years, cumultative voting of shares of stock has been required in all national banks. The tendency is more and more to require such cumulative voting as to all publicly owned corporations. Every year sees more States enacting such legislation covering its corporations and banks.

In the last days of this session there is going to be a concerted drive to push through a repealer of the cumulative voting requirement as it applies to national banks. I trust that every Member who feels as I do about this matter will exert all of his influence to prevent that happening. In that connection, I direct our colleagues' attention to the following column which appeared in the Washington Post of July 12, 1956, written by Malvina Lindsay:

MORE VOICE SOUGHT FOR NEW CAPITALIST

(By Malvina Lindsay)

It's tough luck for Communist propagandists to find that the fat man in a plug hat with a dollar sign on his stomach, who has so long been the stereotype of the American capitalist, is changing into a 48-year-old housewife of a family whose income is around $6,000.

The typical owner of American industry seems headed that way, a recent study of stock ownership by the New York Stock Exchange indicates. Women constitute 52 percent of this country's 8 million stockholders—who have increased about 1,500,000 since a similar study was made in 1954. (This does not include the millions who indirectly own stock through insurance companies, union pension funds and other institutions.)

But even more departure from the capitalist stereotype is under way. Another Stock Exchange study shows that people under 40 and residents of smaller towns and cities are doing an ever larger share of exchange business.

Direct management of industry is necessarily restricted to a small group. Yet the spread of its ownership among the people of this country is significant—and it is also discomfiting to those whose ideas of American capitalism are of the 1900 vintage.

Probably that is why Soviet leaders have been attacking the American concept of "people's capitalism," and why Dmitry Shepilov, Soviet Foreign Minister, has called it "as absurd an idea as fried ice." (Hasn't he ever heard of baked Alaska?)

What should be even more discomfiting to Communists and to all others who cling to the cartoon idea of the American capitalist are the movements afoot to give the people who own industry more voice in its affairs, to provide them better protection of their rights, and to awaken them to their corporate responsibilities. For such developments promise to give American capitalism more grassroots vitality.

As yet, however, Americans cannot be complacent about their roles as small capitalists. Corporate democracy still is far behind political democracy, as witnesses have been telling a Senate Subcommittee on Banking and Currency, which is considering bills to improve proxy voting regulations.

There has been criticism at the hearings of "feudalistic" relations between management and stockholders, and especially of the machinery for handling proxies (the forms on which stockholders give authorization for their votes). A plea for the secret ballot in corporate voting was made by Mrs. Wilma Soss, president of the Federation of Women Shareholders in American Business, Inc. She asked that funds be provided the Securities and Exchange Commission to make a study of practical ways and means of bringing this about.

Mrs. Soss, who has been campaigning for the secret corporate ballot as zealously as the early suffragists campaigned for the political ballot, declared that industry needed a modern proxy mechanism in preparation for the great expansion in stockholders that was expected. She predicted that, barring a war or major depression, there would be 20 million stockholders within a decade as a result of inflation, stock splits, population growth, expansion programs of industry, and birth of the atomic age.

Many of these new stockholders, she pointed out, would be employees of corporations—as a result of the spread of profit sharing—and therefore in special need of a secret ballot.

Other proposals to the subcommittee have included: mandatory cumulative voting to afford minority representation on boards of directors, aboltion of the stagger system of electing directors, and the provision of better facilities for dissenting shareowners to submit their proposals and arguments.

It is not only in this country that grassroots capitalism seems on the march. Some British companies are now providing train rides and free lunches for stockholders who attend annual meetings. A large chemical company is advertising that 85 percent of its stockholders hold on the average shares valued at less than 400 pounds and that 80,000 of its employees are owners under a profit-sharing plan. And Lady Norah Decker, British socialite, is sending autographed copies of her photograph to stockholders of the Birmingham Small Arms Co. asking for their votes to have her industrialist husband restored to the board.

Hells Canyon

EXTENSION OF REMARKS
OF
HON. HAMER H. BUDGE
OF IDAHO
IN THE HOUSE OF REPRESENTATIVES
Monday, July 2, 1956

Mr. BUDGE. Mr. Speaker, under leave to extend my remarks, there follows a copy of a communication addressed to me under date of July 9, 1956, by Mr. William E. Welsh, secretary-manager of the National Reclamation Association:

NATIONAL RECLAMATION ASSOCIATION,
Washington, D. C., July 9, 1956.

Hon. HOMER H. BUDGE,
House of Representatives,
Washington, D. C.

DEAR MR. BUDGE: I have been requested to send to you a copy of the telegram as shown below, pertaining to Hells Canyon.

Sincerely,

WILLIAM E. WELSH,
Secretary-Manager.

The following telegram was sent by Guy C. Jackson, Jr., president, National Reclamation Association, to Hon. JAMES E. MURRAY and Hon. CLAIR ENGLE, chairman, respectively, of the Senate and House Interior and Insular Affairs committees:

"Last year Mr. C. Petrus Peterson, of Lincoln, Nebr., then president of the National Reclamation Association, appeared before the Subcommittee on Irrigation and Reclamation of the Senate Committee on Interior and Insular Affairs and made a statement in opposition to the Hells Canyon authorization bill, S. 1333, on behalf of the directors of the National Reclamation Association of 8 Western States, including all 5 States in the Columbia Basin.

"These eight States were Washington, Oregon, Idaho, Montana, Wyoming, Utah, South Dakota, and California.

"Mr. Peterson's statement said in part, 'We urge that the Federal Power Commission report be announced and that their findings and recommendations be accepted.' These same directors of eight reclamation States have now requested me to reiterate on their behalf, their continued opposition to S. 1333. The Federal power company's three-dam proposal is the best comprehensive plan and

the license makes full provision for complete protection of irrigation water rights; both present and future Congress should abide by that decision."

GUY C. JACKSON, Jr.,
President, NRA.

Finn Ronne To Command United States Base in Antarctic

EXTENSION OF REMARKS
OF
HON. THOR C. TOLLEFSON
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES
Saturday, July 7, 1956

Mr. TOLLEFSON. Mr. Speaker, I was delighted to learn through the attached news account appearing in the New York Times on July 7, that Capt. Finn Ronne had been named to command the Antarctic outpost which the United States hopes to place this year in the Weddell Sea area. I know of no man better qualified to assume this command. Captain Ronne has contributed greatly to the United States exploratory work done in Antarctica and has never been given the recognition to which he has been entitled for his contributions. We can be sure that the basis for future United States claims to Antarctic territory has been strengthened by his past efforts, and will further be enhanced by his activities in connection with his new assignment.

The news article follows:

FINN RONNE TO COMMAND A UNITED STATES BASE IN ANTARCTIC—NAVY EXPLORER IS NAMED TO FIND SITE AND SET UP A WEDDELL SEA POST

(By Walter Sullivan)

WASHINGTON, July 6.—Capt. Finn Ronne was named today to command the Antarctic outpost the United States hopes to place late this year in the southwest corner of the Weddell Sea.

It will be Captain Ronne's first visit to Antarctica since he led a 1947–48 expedition to the sector of Palmer Peninsula, below South America and on the west side of Weddell Sea. The expedition discovered and named Edith Ronne Land south of Weddell Sea.

Captain Ronne hopes that his base can be placed on Bowman Peninsula or Gardner Inlet; but no ship has been able to go within several hundred miles of this area. The 1947–48 Ronne explorations were made by air.

An alternative and more accessible location for the base would be at Gould Bay, discovered by Captain Ronne 380 miles to the southeast at about longitude 44 degrees W., latitude 78 degrees S.

The Weddell Sea station is one of six Antarctic outposts planned by the United States for the International Geophysical Year 1957–58, the coordinated worldwide scientific observations to begin next July. Rear Admiral Richard E. Byrd is officer in charge of the United States program with Rear Admiral George J. Dufek commanding the naval support forces.

Captain Ronne was frequently associated with Admiral Byrd's Antarctic ventures. Finn Ronne's father, Martin, served both with Capt. Roald Amundsen and Admiral Byrd, and Finn first went to Little America with Admiral Byrd in 1933.

In 1940–41 Finn Ronne made a 1,200-mile sledging trip that proved the insularity of Alexander Island. This was of special importance since the Soviet claim to a share in the Antarctic pie is largely based on Russian observations that erroneously made the area a "land." Finn Ronne showed that what the Russians had discovered was not part of the mainland.

The naval unit that will carry the 41 members of Captain Ronne's party into the Weddell Sea is to consist of the attack cargo ship *Wyandot* and an icebreaker—either the *Atka* or the *Staten Island*.

The *Atka* made a shallow penetration of the Weddell Sea in 1955. The Navy unit will be headed by Comdr. Edward A. McDonald, who was skipper of the icebreaker *Burton Island* on the 1948 Navy expedition to Antarctica.

Two long triangular tractor journeys are planned from the Weddell Sea base. The region south of this sea is unexplored although it has been seen in a few places from the air. It is hoped that one of the tractor parties will meet a similar group operating from Byrd Station at longitude 120° west, latitude 80° south.

Seismic soundings of the Antarctic ice cap to be made by these groups should provide a profile of the continental rocks underneath. As in oil prospecting, these soundings will be made by recording the echoes from a series of explosions.

Finn Ronne returned to active duty today as a captain in the United States Naval Reserve. He is also to head the 10 scientists at the Weddell Sea station.

On his flights in December 1947 the then Commander Ronne observed open water along the southern coast of the Weddell Sea. He hopes now that, if he can get in there early enough in the coming Antarctic summer, he may be able to follow the traditional route down the east coast of the sea and then along the southern coast to Gardner Inlet.

This inlet, covered with shelf ice, is reported by Captain Ronne to be an excellent airfield site. It lies 450 miles northwest of the projected site of an Argentine station on the Filchner Shelf ice and 540 miles south of Stonington Island, off the west coast of Palmer Peninsula, the nearest station in the other direction.

In Good Hands

EXTENSION OF REMARKS
OF
HON. HUGH SCOTT
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 11, 1956

Mr. SCOTT. Mr. Speaker, under leave to extend my remarks, I am enclosing an editorial which appeared in the Honolulu Advertiser, Friday, June 29, 1956. This editorial is indicative of the high esteem in which Adm. Felix B. Stump is help by all who have come in contact with him. It is most heartening to know that we have such a man as Admiral Stump looking out for our interests in this crucial area of the world.

The editorial follows:

IN GOOD HANDS

The announcement that retirement of Admr. Felix B. Stump has been postponed for some 2 years will be received with general satisfaction. President Eisenhower has done well to retain our best qualified senior officer to guide our Armed Forces in the Pacific.

Admiral Stump came to this theater 3 years ago with a heroic war record and 2 Navy crosses. From his headquarters at Pearl Harbor he runs the largest and certainly the most important military command in the world. The United States Pacific Command stretches from the West coast of North and South America almost to Africa, and from the South Pole to Alaska. It borders many of the nations of Asia, vital areas in this age of unreason. This great and complex area may hold the key to future peace and security of the United States and of the world.

Admiral Stump as commander in chief, Pacific, has the responsibility of coordinating the efforts of all the Army, Navy, and Air Force elements in this hemispheric command. He has the further responsibility of building a common military-political alliance against aggression; he is military adviser to the Southeast Asia Treaty Organization. He is an ambassador in uniform whose attainments as a sailor-diplomat have been recognized internationally.

In his capacity as military statesman he has made dozens of trips to Asia. His face is a familiar one on Laos, Cambodia, Taiwan, Vietnam, the Philippines, Pakistan, and other faraway places where the United States is trying to preserve freedom and human dignity.

Hawaii's officials and citiznes also have developed a great respect and affection for this tall and stern but very human figure who has been moving about our community for the last 3 years. The admiral's brand of leadership is rare; and we are happy that President Eisenhower has recognized this and seen fit to continue Felix Stump in his present position as leader of the world's largest military command. It is reassuring. Also, we like having him and Mrs. Stump as neighbors.

A Worthy Project

EXTENSION OF REMARKS
OF
HON. THOR C. TOLLEFSON
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES
Saturday, July 7, 1956

Mr. TOLLEFSON. Mr. Speaker, my home city's newspaper, the Tacoma News Tribune, has commented editorially upon companion measures introduced by my distinguished colleague, Hon. WALT HORAN and myself, authorizing the Government to purchase paintings of Chief Joseph and other Nez Perce Indians, for installation at the administration building at Chief Joseph Dam in the State of Washington.

The comments follow:

A WORTHY PROJECT

If bills introduced by Representatives TOLLEFSON and HORAN are acted on favorably by Congress, a Tacoman's paintings of Chief Joseph and 21 other Nez Perce warriors and chieftains will become Government property and hang for all time in the administration building the Chief Joseph Dam.

The fate of the measures in an election year is problematical, but the idea is a worthy one and all Tacomans who know the history of the great Northwest will hope for its adoption. The pictures were painted by Mrs. Rowena L. Alcorn. Artistically and technically they are of the highest quality, and they represent years of work, travel, and

expense. The have been on display at the State Capitol and in museums, and have been widely acclaimed. Regardless of action on the pending bills, the paintings will be on display at the dedication ceremonies for the dam Tuesday, the Army already having arranged to have them transported there on a loan basis.

Acquisition of these paintings by the Government would be a signal and deserved honor for the Nez Perce Indians. That tribe has a proud record of early-day service to the white explorers and settlers. The tribe early embraced Christianity and in many ways helped lay the foundation of the white man's Northwest empire of today. Should the Government buy these paintings, it will be getting a bargain, both in art and Nez Perce gratitude.

Safeguarding Klamath Indian Assets

EXTENSION OF REMARKS
OF

HON. EDITH GREEN

OF OREGON

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 11, 1956

Mrs. GREEN of Oregon. Mr. Speaker, H. R. 11660 is a bill to amend the Klamath Indian Termination Act. It vitally concerns the welfare of the 2,100 members of the Klamath Tribe and the Klamath Reservation in my State of Oregon. This bill is badly needed to forestall a threat of forced liquidation of the tribal assets, estimated at close to $100 million, and to save from destruction the 800,000 acres of the Klamath Forest, one of the finest timber stands in the United States.

Because the stakes are so great and the need for this legislation so clear, support for H. R. 11660 has been overwhelming. Under unanimous consent, I include in the RECORD, at this point, some of the statements I have received in support of this bill:

JULY 2, 1956.

Both Mr. E. G. Favell and I are strongly in favor of both bills, particularly H. R. 11660. This latter bill will insure sufficient time for Congress to consider further amendments to the law which may appear advisable after the appraisal of the property has been completed during the early part of 1957.

It has been the opinion of the Department of the Interior that there will be ample time to submit such a stopgap amendment, if it is needed, after the new Congress has convened in January of 1957. Since we are not too familiar with the amount of time required for Congress to take action on such matters, we have depended on the opinion of the Department. However, now that the bills have been introduced we hope that the Department will give both of them favorable consideration.

We thank you for your interest in this mutual problem.

T. B. WATTERS,
Chairman, Management Specialists Committee Appointed by the Secretary of the Interior To Plan Termination for the Tribe.
KLAMATH FALLS, OREG.

JUNE 19, 1956.

Klamath Indian Tribal Committee officially on record favoring amendments to Public Law 587 embodied in the H. R. 11659 and H. R. 11660. Request and urge you to take every possible action expedite passage of these bills during current session of Congress with particular emphasis on H. R. 11660 at this time.

DELFORD LANG,
Chairman, Klamath Indian Tribal Executive Committee.

JUNE 21, 1956.

Thank you very much for your interest in this freedom move which is loaded with problems. As a matter of the Oregon Council of Churches Committee on Indian Affairs, I have become acquainted with the Klamath Indian problem. I assume that Dr. Talney has informed you of our proposed conference on Klamath Indian problems for September 27, 1956.

I could hope that the House Interior Committee will avail itself of the Stanford Institute of Research Report on the Klamath Indian situation. I have had the opportunity to read and study the report and it seems to me that Public Law 587 needs some revision.

Dr. JOHN C. NEVIN,
Minister, the Multnomah United Presbyterian Church.

JUNE 23, 1956.

Chairman HALEY,
Indian Affairs Committee.

I trust that your committee will look favorably upon Mrs. GREEN's bill to postpone action on the disposal of the Klamath Indian lands for a period.

The present most unfortunate legislation would result in a great disservice to the Indians and create a calamity—after a boom—in the community. The proposed bill will allow more time for study and reflection upon the best means for handling these lands for the permanent welfare of all concerned.

Piecemeal sale to the highest bidder of the forest and marsh lands would surely result in land mining. It would be a repetition of the same old story that has happened over and over by the cut-out-and-get-out loggers and by those who have overgrazed submarginal land to get a quick profit at the expense of the land's permanent highest use.

The tribal forest lands ought to be managed as a unit on a sustained-yield basis as they have so well been for the last 40 years. Diverse small owners could not and would not practice sustained yield. Inevitably, if the reservation were sold to the highest bidder in small lots, it would be gutted in a few years, after which there would be a period of land unproductivity and starvation for the industries of the community.

As for the Klamath marshlands they could go with the timberlands, but might more properly be acquired by the Fish and Wildlife Service to be administered as a bird and game refuge and for stock pasturage as at present. If they go piecemeal to the highest bidder the sources of the Williamson River will be dried up, much of what is now subirrigated meadow will become a dust bed and the rest will afford but mediocre pasturage (the soil is pumice and the elevation 4,700 feet), and the greatest nesting area of Canada geese and other waterfowl will be gone.

I might add that I have lived in Oregon 46 years, am personally familiar with the area, and have no ax to grind.

THORNTON T. MUNGER,
PORTLAND, OREG.

JUNE 14, 1956.

I want to commend you so highly for the two amendments, which I think are exceedingly helpful and will do much to alleviate some harmful aspects of the present law.

There is a large body of opinion among informed people that the law as now written is ill-conceived and was hastily passed without careful analysis. It will not only cause harm to the Indian people, but will create a serious economic and social dislocation for the Klamath people. The difficulty in fulfilling the purpose of the law becomes more and more apparent. Even the management specialists have protested vigorously the implications of the law and have pointed out that it is impossible to fulfill its requirements with fairness to the Indian people, and with any measure of economic security for the Klamath area.

Everything indicates that the whole law needs careful review, and whatever you and others who are deeply conocerned can do, I know will be most helpful for the general welfare of the Klamath Tribe and the whole Klamath area.

Dr. MARK A. TALNEY,
Executive Director, Oregon Counsel of Churches.

JUNE 21, 1956.

Chairman HALEY,
Indian Affairs Committee:

I have for many years been somewhat familiar with the Klamath Indian situation. Like a good many others we are concerned for the welfare of the Indians and, if it seems best to terminate Federal supervision, that this be done in a sufficiently deliberate and orderly fashion to assure that the assets will be handled to the long-term advantage of the Indians, and of the community and the people as a whole. A quick liquidation of the timber could be disastrous both financially to the Indians and to the economy of the area.

There is also the question of the adequate protection of the marshes within the reservation which are highly important to wildlife, particularly migrant birds including, of course, ducks and geese, a problem which I have the impression has scarcely been considered at all as yet.

I have not, as yet, been authorized to speak for the Federation of Western Outdoor Clubs, but I am sure the organization as a whole, and its member clubs, would strongly recommend that action be taken only after much more adequate study than has yet been made and full consideration of all the factors concerned. A postponement for 9 months is not a bit too long and the provision for expert study is certainly essential.

I might add, in case you should not happen to be informed, that the Federation of Western Outdoor Clubs is an organization of most of the outdoor and conservation groups west of the Rocky Mountains. It has some thirty-odd member clubs, including the great Sierra Club of California, and has some 25,000 members.

KARL W. ONTHANK,
President, Federation of Western Outdoor Clubs.

JUNE 19, 1956.

Chairman HALEY,
Indian Affairs Committee:

I have been on the Klamath Indian Reservation many times during the past 20 years. I have studied the plans for sustained yield management of the commercial timberlands on that reservation.

I am deeply concerned for the future handling of the timberlands on the Klamath Reservation under the procedures provided in Public Law 587. No provision was made for the continued management of the timber on a sustained yield basis. Oregan forest laws do not require sustained yield management of forest lands. In addition some 30,000 acres of the reservation is swamplands essential to the maintenance of the Pacific flyway of migratory waterfowl. There is about 600,000 acres of tribal owned commercial forest land on the reservation. About two-thirds of the commercial timberland has been logged over once under careful selective cutting. A fine stand of thrifty trees remain on the cutover part. About one-third of the timberlands is still virgin uncut timber. Under sustained yield, selective cutting, the property would produce each year forever

more than 60 million board feet of timber. Such stability is of real concern to Klamath County. It is my belief that disposal of these lands under the present law will result in relogging for a quick profit of most of the lands already selectively cut, and the clear cutting of the part now in virgin timber. This would be tragic for Klamath County. H. R. 11660 simply provides that as soon as the appraisal of the timber is completed, one copy of the report will be furnished to your committee and that Congress would then have 9 months to consider the need for plans for disposal of the property.

This is a logical approach to the problem. It is believed that during the 9 months some way can be found to retain the swamplands as part of the Pacific flyway for waterfowl and to make sure that the timberlands will continue to be managed on a sustained yield basis.

I earnestly recommend that H. R. 11659 and H. R. 11660 be favorably considered by your committee.

LYLE F. WATTS,
Retired Chief of the Forest Service. (from 1943 to 1952).

JUNE 26, 1956.

This in our opinion is a good bill and should be passed. If that great area of 1 million acres in Klamath County were to pass from public ownership, it would be a calamity not only to conservation in all of its aspects but to the economic well-being of much of the area of Klamath County. You may rest assured that if our aid is needed in promoting this legislation you can rely on our help.

ROLLIN E. BOWLES,
President, Oregon Division, Izaak Walton League of America, Inc.

JUNE 29, 1956.

I am disturbed somewhat at the attitude which the Department takes to your bills and cannot be as complacent as the Department has been all along in regard to the Klamath Tribe and termination.

Most certainly the language of the present law is so defective that no one seems to be in agreement as to what the law does say. I have had various opinions from different lawyers and they would agree with Tom Watters and the other management specialists that if at one time anyone knew just what the law does clearly say, that person no longer exists and certainly would not be found in the Department of the Interior. There will not be sufficient time for amendment in the next session.

I do not know whether you received a copy of the Stanford Research Institute report in regard to the date of termination and the consequences of termination, but this group of objective research people indicates that immediately upon termination the Indians can and will, to a large degree, demand immediate sale of their timber holdings in order to receive their cash returns.

Your suggested delay in action would help considerably and permit some organization, such as the Stanford Research Institute suggests.

DR. MARK A. TALNEY,
Executive Director, Oregon Council of Churches.

JUNE 26, 1956.

It is the Indian affairs that concern me and have since the first public announcement of the termination legislation for the Klamath Indians.

First of all the Federal hearing to determine readiness of those on the reservation and off for that matter, was inadequate and presented a picture of greater readiness in competing for jobs, etc., than really existed. The Stanford research survey proves that these people aren't ready. The survey should have preceded the legislation, obviously.

Secondly, your proposals for amendments to the present law 587 are absolutely necessary if the work of the management specialists is to be of value and the Indians' interests as well as the taxpayers are to be considered adequately.

The additional time for Congress to review and for the Secretary of the Interior to consider the appraisal facts is necessary, surely.

This last week I rode through the Indian lands with a forester of 30 years United States service all over the country and Puerto Rico. He thinks it undoubtedly the finest stand of Ponderosa he has ever seen and that cutting shows trees almost mature and those ready to harvest at intervals according to the best standards of sustained yield. If this land should pass into Oregon State Forest category, the 50 years of maintenance would be lost as a "yardstick" or demonstration. State laws require the very minimum toward "sustained yield." I agree with those that think the Federal Government should purchase and hold it intact but that can come after any hasty acts of Congress have been prevented by your legislation.

MRS. HARLAN P. BOSWORTH, Jr.
MEDFORD, OREG.

JUNE 21, 1956.

I have received your most interesting and encouraging letter and description of your bills to amend Public Law 587 (H. R. 11659) and H. R. 11660) and because our committee has been looking forward with considerable concern for some sign of that type of legislation, we sent out slightly less than 550 notices asking our members and friends to support these two bills.

MRS. PAUL C. SCHWANTES,
Secretary, Committee on Indian Affairs of the New York Yearly Meetings of the Society of Friends.

JUNE 19, 1956.

Although I am no longer the executive secretary of the Portland office of the American Friends Service Committee, I have kept in touch with developments on the Klamath reservation. I am extremely concerned with the present trend, and therefore believe your two proposals to be steps in the right direction.

I approve heartily of the two amendments (H. R. 11659 and 11660) which you propose to Public Law 587.

G. BARNHARD FEDDE,
Attorney.

PORTLAND, OREG.

JUNE 14, 1956.

Chairman HALEY,
Indian Affairs Subcommittee:

We would be pleased if your subcommittee is able to take up before the end of this session and to report favorably on the bills introduced by Congresswoman EDITH GREEN to amend the Klamath Indian Termination Act, namely, H. R. 11659 and H. R. 11660.

These bills seem to be very desirable corrections of the Termination Act, the need of which was probably not foreseen when the Congress enacted this legislation.

Rev. J. B. TENNELLY,
Director, Bureau of Catholic Indian Missions.
WASHINGTON, D. C.

JUNE 19, 1956.

Thank you so much for writing to me concerning the bills on the welfare of the Indians on the Klamath Reservation in Oregon. We have been watching these bills for a long time, particularly the first termination bills.

Church Women are most interested in fair legislation which will not put too great a burden on the Indian, and I am sure that these two bills which you have introduced are of great importance.

ESTHER C. STAMATS,
Director, Christian Social Relations, General Department of United Church Women, National Council of the Churches of Christ in the United States of America.
NEW YORK, N. Y.

JUNE 18, 1956.

Since concern for Indian Americans is one of the special interests of my committee, your letter to Mrs. MacLeod was given to me for reply.

I am impressed by the need for your bills and congratulate you on them. In a mailing to State chairmen and committee members next week I will mention the importance of writing their Representatives to support your bills.

MRS. JAMES M. EVANS,
Director, Christian World Missions, General Department of United Church Women, National Council of the Churches of Christ in the United States of America, New York, N. Y.

JUNE 18, 1956.

I have discussed your letter and the proposed amendments with some of my associates in the bank, and all of us feel that they are not only for the best interests of the Klamath Indians, but are entirely fair for everyone concerned with this vital legislation. If the Federal Government wishes to relieve itself of its responsibilities with respect to the Klamath Indians, and if it is to have the dominant voice in determining the program that is to be followed to effectuate this desire, then it would seem only fair that the Federal Government take care of all expenses in the carrying out of that program. As to the 9-month waiting period after the liquidation plan has been submitted to the Secretary of Interior, we do not believe that anyone could seriously question the wisdom of this amendment. Experience to date certainly indicates that the Klamath Indians have been somewhat confused by the liquidation program, and are not acting in unanimity, so it would seem to be prudent to forestall any impulsive action on the part of any of the tribal members.

JOHN N. ADAMS,
Vice President and Trust Officer, the First National Bank of Portland (Oregon).

Need For Speedy Revision of Immigration Laws

EXTENSION OF REMARKS
OF
HON. HERBERT H. LEHMAN
OF NEW YORK
IN THE SENATE OF THE UNITED STATES
Thursday, July 12, 1956

Mr. LEHMAN. Mr. President, Brig. Gen. David Sarnoff, chairman of the board of the Radio Corporation of America and honorary chairman of the greater New York drive for the American Museum of Immigration, recently delivered an eloquent speech recalling to all of us the importance of seeing that America returns to its traditions of being the haven of the oppressed and the homeless. This must be done by obtain-

ing speedy revisions of our existing immigration laws.

I commend General Sarnoff's speech to all my colleagues in the Senate.

I ask unanimous consent that General Sarnoff's speech be printed in the Appendix of the RECORD.

There being no objection, the speech was ordered to be printed in the RECORD, as follows:

TEXT OF ADDRESS BY BRIG. GEN. DAVID SARNOFF, CHAIRMAN OF THE BOARD, RADIO CORPORATION OF AMERICA, AND HONORARY CHAIRMAN, GREATER NEW YORK DRIVE, AMERICAN MUSEUM OF IMMIGRATION

No American can stand here at the feet of the Goddess of Liberty without feeling a surge of patriotic emotion. The Beautiful Lady, as she has often been called, sums up so much of our Nation's history and destiny.

More than any other physical object on earth, this statue has become for all mankind a symbol of freedom and promise, justice and compassion. These are the American ideals. And today, when a fateful contest is under way between liberty and slavery, they are more important and more binding than ever before.

The statue's "lamp beside the golden door" makes bright the land we love and the values we cherish. But its rays are not for us alone. They reach into remote places the world over, to help disperse the darkness of despotism.

Her voice speaks to the "huddled masses yearning to be free"—to "the homeless, the tempest-tossed"—as eloquently as on the day those deathless words were first inscribed by Emma Lazarus.

Whether his ancestors came to these shores on the Mayflower or on a squalid steerage boat, an American cannot be immune to an upwelling of pride and gratitude as he looks upon the Statue of Liberty. Quite naturally these sentiments are more poignant for those who, like myself, are themselves immigrants or the first offspring of immigrants.

I was 9 years old when my parents had the good sense to bring me to the United States. This meant that I was young enough to absorb America and to be absorbed by it. At the same time, I was old enough to retain memories of the primitive world from which I had come. I was old enough, also, to know the difficulties of the newcomer's adjustment to a completely new way of life and thought.

Let me say a few words about that adjustment, which millions of new Americans—your forebears—have had to make. It is a bewildering experience to be transported, by a mere ocean journey, from the Middle Ages to the 20th century; from a fixed and frozen background to this infinitely dynamic America; from the past, one might say, straight into the future.

The great change, however much desired, is beset by problems and tensions and heartbreaks which few who have not been through it can feel. It is a remarkable fact, however, and one that redounds to the credit of our America, that this major adjustment, in time, creates in the overwhelming majority of immigrants and their offspring not only contentment but a deep love for the adopted land.

It is also a significant fact that in the measure that immigrants—and especially their sons and daughters—achieve a sense of "belonging" in America, they develop a sentimental interest in the regions from which their families migrated. They rediscover elements of beauty and strength in the cultures of their foreign ancestors.

Most important, they realize at last that their immigrant forebears not only took something from America, but gave something to America. They recognize the truth that the newcomers made a unique contribution to American civilization precisely because of their particular origins.

Though they arrived here penniless, the generations of immigrants did not come emptyhanded. They brought with them great gifts—the brain and the brawn that are cemented into America's highways and railways, skyscrapers and farmhouses, mines and factories, from shore to shore. They brought with them the hungers for human freedom, individual dignity, and self-improvement that are at the heart of the American dream.

When Israel Zangwill coined the phrase "the melting pot," it was quickly accepted as the image of American humanity. But it is not an altogether accurate, or indeed, desirable image.

"Melting pot" implies that the human ingredients are pressure cooked into a single and uniform compound, in which all trace of the original components is lost. Yet we know, as a matter of common experience, that this is not the case. And we know, too, that regard for the land and race from which an American has sprung, is not incompatible with complete love of and devotion to America.

It is not inconsistent that good Americans like the du Ponts still have a soft spot for things French, or that good Americans like the Skouras brothers have a special concern for helping the people of Greece, or that a good American and great restaurateur in San Francisco named George Mardikian, helped to find homes for thousands of displaced Armenians after the last war.

Americans of Irish descent could throw their hearts into the cause of Irish freedom yet remain good Americans. Today, Americans of Polish extraction do not impair their Americanism when they seek the liberation of Poland from the Communist yoke. American Jews are no less American because they work for the survival of the new state of Israel.

For it is the unique glory of our country that it neither demands nor imposes an artificial uniformity. Our strength lies in unity, which is a quite different concept. On the whole we not only tolerate but take pride in differences. America is less an amalgam than an integrated mosaic. Yet again and again, in time of danger or crisis, we have demonstrated a unity that has amazed the world. Enemies who counted on divisive influences because of our history of mass immigration have always been disappointed.

The temptation in proving that the immigrant has served America well is to cite celebrated names and spectacular careers. But I prefer to cite humble names by the millions.

Recently I paused before a war memorial in a small town in Westchester County. I glanced down the list of its sons who died in two world wars. The names in the roster were Anglo-Saxon and Latin, Slavic and Jewish, Scandinavian and Oriental. Yet all were true Americans. The same amazing unity and allegiance are revealed on the rolls of honor in every city, town, and hamlet of our beloved America. Each of these memorials is a portrait in miniature of this nation of immigrants, welded by common loyalty to high ideals to make and preserve a mighty country.

The American Museum of Immigration, under whose auspices we are gathered here this morning, is dedicated to keeping alive the consciousness of this towering fact. Its location, within the orbit of light shed by the torch of the beautiful lady, implies a further dedication—to defend and keep undefiled the free institutions which drew those immigrants to America. It is an enterprise in patriotism which merits the cooperation of all Americans.

Schedule of Courthouse Visits

EXTENSION OF REMARKS
OF
HON. JOHN E. HENDERSON
OF OHIO
IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 13, 1956

Mr. HENDERSON. Mr. Speaker, it is my practice to afford the residents of the 15th District of Ohio, whom I have the honor to represent, an opportunity to confer and talk with their Representative in Congress as often as possible.

In the past, I have established a schedule of courthouse visits and have announced that schedule as far in advance as possible. In so doing, residents of the district will know well in advance when they will have opportunities for such conferences.

Members of Congress reecive many letters from constituents, and a great amount of assistance can be rendered through the use of correspondence, but there are some problems and some difficulties that cannot be adequately taken care of through the mails. I have found that these courthouse conferences not only permit constituents to bring their problems to their Congressman, but also the conference provides the Congressman with an opportunity to find out the needs and reactions of the people whom he represents.

After Congress adjourns I will be at the courthouse of each of the seven counties of the 15th District from 9 a. m. to 4 p. m., in accordance with the following schedule:

Perry County, August 6.
Muskingum County, August 7.
Monroe County, August 8.
Noble County, August 13.
Washington County, August 14.
Morgan County, August 20.
Guernsey County, August 21.

No appointment is needed, and I urge any individual or group to meet with me on the date most convenient. Of course, I shall be glad to meet with residents of the 15th District in my office in Cambridge at any time that Congress is not in session.

For those who are unable to attend the courthouse conferences, I should like to announce at this time that I will be present at each of the county fairs where those who wish to meet informally with me may do so. I shall be present at the fairs on the following dates:

Muskingum County Fair, August 16.
Noble County Fair, August 30.
Washington County Fair, September 3.
Morgan County Fair, September 6.
Guernsey County Fair, September 27.
Barlow Fair, September 29.

If Congress has adjourned by the dates of the Monroe and Perry County Fairs, I shall attend those fairs also, on the following dates:

Monroe County Fair, July 26.
Perry County Fair, August 2.

Hot School Lunch

EXTENSION OF REMARKS
OF

HON. CLARENCE CANNON

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 12, 1956

Mr. CANNON. Mr. Speaker, no expenditure made through the Department of Agriculture has been more beneficial or more popular than the appropriation for the school-lunch program.

It has improved health and physique. A surprising number of pupils attend school without breakfast. Even those from the wealthier homes often refuse to eat an adequate breakfast and the hot lunch provided by the program has brought added health and weight to practically the entire student enrollment of the schools in which it is served.

Almost without exception the school-lunch program has resulted in improved scholarship. Improvement in grades and class standing are invariably incident to the adoption of the program in schools throughout the country.

And not the least important effect of the program in this day of increasing juvenile delinquency has been the immediate simplification of problems of school discipline.

The Missouri Farmers Association, through a statement by President Fred V. Heinkel, released in its weekly news letter of June 20, charged that the United States Department of Agriculture had misinformed the Congress on the national program:

COLUMBIA, MO.—"At the urging of United States Department of Agriculture Congress has recently passed a soil bank law to restrict the production of food and to remove agricultural surpluses; then the department turned around and said we do not need the money necessary to feed our school children," charges Fred V. Heinkel, president of the State's largest farm organization, the Missouri Farmers Association.

"We do not have a surplus of food as long as any of our people are not getting enough nourishing food to eat. We have the food and we should be interested in seeing that our school lunch program receives adequate funds to provide nourishing lunches to our children," Heinkel continued.

Funds for payment of school lunch claims in Missouri are exhausted. Only 7½ percent of the claims for March are to be paid. No funds are available for April, May, and June claims.

Under the lunch program, schools must agree to offer lunches to all children regardless of ability to pay. In return, schools are reimbursed with Federal funds to help out with the program. Children from families that can afford it pay for the lunch. In Missouri the reimbursement figure will be approximately 3.3 cents per lunch this year provided meal includes one-half pint of milk, 2 ounces of a protein item, three-quarters cup of vegetable or a combination of vegetable and fruit, 1 serving of bread and a 2 teaspoon serving of butter.

In a separate school milk program, schools are reimbursed 4 cents for each extra one-half pint of milk over and above that served with the lunch.

The United States Senate approved an amendment to the second supplemental appropriation bill to provide an additional $10 million for the 1956 school-lunch operations. The conferees agreed to eliminate the amendment from the final bill that was adopted because the Secretary of Agriculture stated that he did not think the States "could use the additional funds effectively."

"This is a glaring example of the lack of interest on the part of the United States Department of Agriculture toward the school-lunch program and shows how the Department has continually issued misinformation to the Congress of the United States," Heinkel charged.

"Secretary Benson has demonstrated during the past several years when, even in the face of increased enrollments and the tremendous expansion of the lunch program, he has requested substantial decreases in the national school lunch appropriation. The recommended reductions were restored only because the people of the country acquainted their Senators and Representatives with the facts which apparently could not be obtained from the Federal agency charged with the administration of the National School Lunch Act," Heinkel said.

"Unfortunately, due to the time limitations, the people 'back home' had no chance to refute or to correct the completely erroneous recent testimony of the Secretary," Heinkel said.

"Federal regulations permit reimbursement of 9 cents for lunches, but the average reimbursement for school lunches served in the continental United States during the 1954–55 school year amounted to only 4.4 cents and this figure, due to continued expansion of the program, will be much lower during this school year. In view of these facts, the Secretary told the conference committee that the $10 million additional appropriation could not be used effectively," Heinkel continued.

"Results of a survey made of the eating habits of 716 public school pupils in the fourth, fifth, and sixth grade between the period of December 1 and December 15 at Cape Girardeau serves as a dramatic answer as to whether the appropriation could not be used effectively," Heinkel said.

"Their findings were amazing. For instance, only 13 percent had an adequate breakfast the day they were tested. Some said they ate none at all. In many cases a candy bar bought at the neighborhood grocery while waiting for the school bus constituted the meal.

"At suppertime the food the children reported measured up to minimum standards only in 15 cases out of each 100.

"The bright spot in the survey came in the report of the noon meal, and this is due to that 45 percent of the children tested ate in a school cafeteria where balanced and nutritious meals are offered.

"Another bright spot was that 85 percent of the children drank milk. Some of this could be attributed to milk being sold in the schools and in the cafeteria," Heinkel said.

"Typical" is the way nutritionists describe the Cape Girardeau story. "While the Cape Girardeau parents and school authorities are alarmed and are attempting to correct this situation, most communities do not realize the inadequacy of the diet their children are receiving," Heinkel said.

"It does show, however, the tremendous need for an expanded school-lunch program," Heinkel concluded.

In response, the Department of Agriculture issued a release to the newspapers which printed it under date of June 28, as follows:

OFFICIAL "NO" TO MFA SCHOOL LUNCH CHARGES—PROGRAM CHIEF DENIES AGRICULTURE DEPARTMENT FOOLED CONGRESS

WASHINGTON.—Agriculture Department officials have denied charges by the Missouri Farmers Association that they have "continually issued misinformation" to Congress on the Nation's school lunch program.

Dennis Doyle, acting chief of the program, said in an interview that the Department has "neither withheld information or misinformed" House-Senate conferees. He asserted that the lawmakers have been "supplied with tables which showed the status of Federal funds for the school lunch program in all the States."

Doyle replied to charges hurled by Fred V. Heinkel, president of MFA, who declared in a statement that funds for payment of school lunch claims in his State are exhausted.

Heinkel said "Only 7½ percent of the claims for March are to be paid. No funds are available for April, May, and June claims."

Under the program, schools must agree to offer lunches to all children "regardless of ability to pay." In return, schools are reimbursed with Federal funds to help out with the program. Children from families that can afford it pay for the lunches.

DOYLE said: "We recommend that State agencies establish variable rates of reimbursement so as to favor the neediest schools and to spread available funds over the entire school year."

He said the schools know far in advance of the start of the school year the exact amount of funds to be made available to them.

Earlier this year, when it looked as though no funds were available in some States for payment of school lunch claims, the Senate approved an amendment to a second supplemental appropriation bill to provide an additional $10 million for 1956 school lunch operations.

DOYLE denied Heinkel's assertion that Agriculture Secretary Ezra Taft Benson had stated he did not think the States could use the additional funds effectively.

The Secretary pointed out, DOYLE emphasized, the disadvantages of receiving the money so late in the year. He said Benson took the position that it would be too late in the school year for the additional funds to do much good.

DOYLE stressed that had the additional $10 million been forthcoming, the amount could not have been put to use until near the close of the school year.

DOYLE also pointed out that the Department has made about $115 million worth of commodities available for us by schools during the 1955–56 school year.

I am this morning in receipt of a letter from Jack Hackethorn, editor of the Missouri Farmers Association's bulletin, the Farm News, in which he points out:

Despite Mr. Doyle's denial, I insist that the United States Department of Agriculture has continually issued misinformation to Congress on the Nation's school-lunch program. Members of Congress must share this opinion, else why would they find it necessary to increase the school-lunch appropriation each year over the Benson budget request. It is because Congress is aware of the increased enrollments and the tremendous expansion of the program, facts which the Secretary has been very reluctant to admit. Has he not each year until this, tried to cut school-lunch appropriations? This year he asked for last year's appropriation, and Congress found it necessary to increase his request.

Doyle said that the schools know far in advance the amount of funds to be made available to them. It must be pointed out, however, that the schools do not know far in advance the amount of participation in the program.

He suggested State agencies establish variable rates of reimbursement so as to favor the neediest schools. On the other hand the State agencies are hardly in a position to discriminate between schools as to need. The school-milk program, a program set up in its entirety by the Secretary and his Department, makes no attempt to

establish variable rates of reimbursement so as to favor the neediest schools.

Doyle denied Heinkel's assertion that Secretary Benson had stated he did not think the States could use the additional funds effectively, claiming that the Secretary merely pointed out the disadvantages of receiving the money so late in the school year. Certainly Mr. Doyle must have known that Missouri and numerous other States withheld action on processing March and April claims with the hope that the deficiency appropriation would be approved and that they would be in a position to at least continue the prevailing, greatly reduced reimbursement rates during the last 2 or 3 months of the school year. An additional $10 million appropriation was made available for the special milk program and this came rather late in the school year.

Naturally we are strongly in favor of the school-milk program. It must be pointed out, however, that these funds cannot be used for the school-lunch program. In fact, the school-milk program applies only to that milk consumed over and above that consumed by the lunch program. If any schools are forced to curtail their lunch program the milk program is endangered.

Mr. Doyle said that about $115 million worth of commodities were made available for use by schools during the 1955–56 school year. Many of these, like pork, were made available too late to be used effectively and far too long after the collapse of hog prices. It is my understanding that there was $400 million or more in section 32 funds; yet the Secretary saw fit to offer only about $115 million. Certainly farm prices were down.

While on the subject of commodities, each year when Congress is considering appropriations for the school lunch has not the Secretary promised from 30 to 50 percent more commodities than are ever actually made available? This might be another example of misinformation.

Conformity by Coercion?

EXTENSION OF REMARKS
OF
HON. LAWRENCE H. SMITH
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 12, 1956

Mr. SMITH of Wisconsin. Mr. Speaker, David Lawrence, publisher of U. S. News & World Report, has again presented a national issue which must be faced by the people of this country.

In U. S. News & World Report of July 6 in an article entitled "Conformity by Coercion?" he has analyzed a situation which troubles most of us. Under leave to extend my remarks I am including his article at this point:

CONFORMITY BY COERCION?

(By David Lawrence)

It is necessary to come to grips with the issue of enforced integration in the Nation's schools. It is a legal issue, a moral issue, a sociological issue, and a political issue.

Yet all these diverse approaches only accentuate the real question—conformity or nonconformity in organized society. It is an issue that for generations has confronted mankind.

The perennial conflict fundamentally is between theoretical equality and actual equality.

Government usually is concerned with theoretical equality. But too often, in the passion for uniformity, obstacles arise to the practical application of the law. Sooner or later revision is found necessary. An adjustment to realistic conditions becomes inevitable.

Obedience to law is a precept with which few will disagree, but disrespect for a law written by agents of the people in contradiction of the real will of the people leads to disobedience, disregard, or repeal.

Conformity itself is a dangerous dogma when dependent solely on coercion. It is a device by which freedom often has been destroyed and totalitarianism substituted. Conformity of thought imposed by law is the tool of despots.

Conformity means that everybody must think alike, act alike, and obey the edicts of a central authority.

Our Constitution was built upon the fundamental principle that government derives its just powers from "the consent of the governed."

Realizing that our Republic was founded by groups with conflicting interests, often widely separated by big distances, our forefathers conceived the idea of separate States. Each State was to be sovereign—endowed with the right to govern itself within its own area. Only in the case of infringement upon other States was the national authority to be invoked.

The Founding Fathers, to be sure, realized that they could not apply a rule of conformity over the people of a vast territory. So they delegated to the several States the right to deal with their own sociological problems. This is why education, for example, has always been a local problem. It is also one of the reasons why the maintenance of law and order has been primarily a State and city responsibility.

Conformity cannot be successfully compelled where the customs and morals of the people are in conflict with statutory law. It has often ben truly said that government cannot legislate morals.

Perhaps the best demonstration of this in recent years was the experience of the Nation with the 18th amendment. For decades there had been attempts to solve the prohibition problem. Many States had passed "dry" laws. Congress tried to regulate the liquor traffic across State lines. The Federal courts, while upholding the interstate aspects, were careful to refrain from imposing upon each individual State an obligation to conform to a moral code which specified that people must not drink intoxicating liquors.

When the 18th amendment, however, was ratified in 1920 as a part of the Constitution, the entire Nation was asked to conform to a formula which forbade the manufacture and sale of intoxicating beverages anywhere in the United States. This meant that the will of a State was superseded entirely by national law.

What was the result? The effort to produce conformity failed. This was because the evils which came in the wake of the 18th amendment proved to be far greater than the evils which the amendment sought to correct. Disobedience of law became widespread.

Bootlegging, which began to thrive immediately after the amendment was adopted, brought in its wake vice and crime and organized gangs. Some of these gangs which had their origin at that time have not been entirely eradicated from our communities to this day.

It will be recalled that, while the 18th amendment was a part of the Constitution for nearly 14 years, it took less than 10 months during the year 1933 to get it repealed by the States after Congress submitted it to them.

This did not happen because public thinking on the use of intoxicating beverages had actually undergone any substantial change. Many people continued to think that the sale of intoxicating beverages was harmful to the community and that the manufacture of such products should be prohibited. Several States still have prohibition laws, varying according to local conditions. But the Nation voted for repeal because of a general condition—the American people found that, despite vigorous efforts to enforce the law, the illicit manufacture and distribution of liquor had intensified.

Historical experience should have taught us that there is a distinct difference between the theory of equal rights and the conditions, sometimes provoked by the application of laws which go counter to public sentiment in a community.

But, while we profess to believe in the right of a community to govern itself, do we always apply the doctrine in practice? We have tried in America to give city and State communities the right to govern themselves. Yet we interprose a Federal authority sometimes and virtually disregard local self-government. Thus we impair a great principle—the right of self-government.

We have, for example, said, in effect, that, because the people in the northern, eastern and western parts of the United States constitute a numerical majority, their will must prevail over the people in southern communities.

What we are attempting to do today in America is to compel the minority in the South to conform to the supposed will of the majority in the North. Do we aim thereby to wipe out State autonomy altogether?

There are basic rules to which both minorities and majorities will give their support. Thus, individual rights of association—the practice of religion, the right to educate children in accordance with local custom or tradition, and the right of the minority, even though living in the same community with the majority, to pursue its own racial or religious customs—have all been recognized as just principles in organized society.

The theory of equal rights means that there can be no denial of any public rights to citizens. Thus, the right to vote is a public right. The right to hold office is a public right. The right to own property is a public right. The right to obtain an education in a city or county school is a public right.

There are, to be sure, certain public utilites, such as conveyances, and certain public facilities where rules of limitation should not be imposed by the majority which would put the minority at a physical disadvantage.

But this is a far cry from requiring that each community must compel conformity in the educational process.

If education were entirely an impersonal affair and there were no social life at all in the schools, we would be dealing with a different problem.

But majority as well as minority groups have an equal right to freedom of association or nonassociation. Voluntarism is the key.

If one individual, for example, does the same work as another, he is entitled to equal pay, irrespective of race or creed or color. In some occupations where majorities object to working alongside of minorities, a problem of adjustment presents itself which in many instances can be solved by patience and some physical rearrangement of locker rooms and personal facilities so as to remove barriers to employment.

But attempts to impose conformity by coercion, whether in the legal or economic or social sphere, usually produce conditions not unlike those which followed the attempt to enforce the 18th amendment.

We already hear zealous extremists advocating that troops be sent "to enforce the Constitution" and compel the South to integrate its public schools.

It is not a problem that will ever be settled by bayonets. Nor will it be settled by exhorting people to forget prejudices bred in them.

II. AN ERA OF FRICTION

We have recently seen evidences of anger and violence in the North and South. We have also witnessed the use of retaliatory measures in communities in the South where the most amicable relations previously had prevailed between the races in the South. Voluntarism had make progress. Talk of coercion now retards progress.

It is an illusion to suppose that, under the threat of "law enforcement," these difficulties are going to lessen with the passage of time. For social customs and social life do not function by any rule of conformity. They are bound to continue in the diversity that human nature has provided.

There will inevitably be passive resistance to laws of enforced integration. The public-school systems of the South may even disintegrate so that education in that region may lag behind the rest of the country. It would be a tragic price to pay. But men of determination have been known to pay almost any price for what they consider to be the preservation of their inalienable rights. Prejudice cannot be legislated out of existence by law.

A compromise formula — segregation through equal but separate facilities of education—was first sanctioned in a Northern State. It was upheld by the Supreme Court of the State of Massachusetts in 1849.

For 30 years after the War Between the States, the Supreme Court of the United States wrestled with legal issues growing out of racial conflict, and in 1896 ruled that systems of "equal facilities, even though separate" were constitutional. This permitted minorities to live alongside majorities in harmony.

Now, however, 60 years later, the Supreme Court of the United States, having reversed itself, is attempting to impose conformity. It should be noted that the Court, in its decision in 1954, did not say the separate educational facilities previously provided had been unequal—indeed, they have at times been even superior for the Negro. The Court took the position that, although the facilities were equal, they could not be permitted to be separate. Reliance was placed on sociological reasons—not legal precedents. The basic argument accepted was that a psychological impact of an adverse nature had occurred—that Negro children felt themselves inferior wherever segregation was legalized. It was the act of "discrimination" itself which the Court held to be illegal.

Now, as a consequence, however, a counter-conflict on the sociological front has arisen. White parents in the South are arguing that the impact of integration will prove harmful to their children. Will the Court now give equal weight to this plea, or tell the white parents to send their children to private schools, which so many citizens cannot afford?

III. SOCIAL RELATIONSHIPS

So we are back again in the realm of the sociological—how can we get majorities and minorities to live harmoniously in the same community?

But it will be asked whether the right to attend a public school does not include the right to attend any public school. The right of assignment of pupils is a local—not a national—function. Even today, the most ardent exponent of equal rights would not deny that it is within the power of the State to set up schools in which there is segregation by reason of sex—all girls in one school and all boys in another school, irrespective of color.

If, for sociological reasons, it is deemed desirable to separate the sexes in the schools, there would be no constitutional barrier against this even though one State chooses to adopt the plan and another State does not. For we usually recognize as absolute the right of each State community to regulate its social life, provided there is no denial to anyone of the right to public education itself. The States can, moreover, if they wish, subsidize private schools—provided they do not discriminate as between individuals in allocating funds.

The question before the country today is whether communities are free to adjust their school systems to meet their own local conditions and local sentiment. Those States which desire to integrate their schools ought to have the sovereign right to do so, and those which desire to operate mixed schools in some counties and separate their schools in other counties, either by color or by sex or by intelligence tests, should have the same sovereign right.

It is argued, on the other hand, that, since the public schools are tax-supported and because tax receipts come from all citizens, all public schools must be opened to all citizens. But the same point—equality of participation—could be made with respect to admission to church organizations, private clubs and private schools. They, too, are supported by all taxpayers because an exemption from State and Federal income taxes is given them as "non-profit-making" institutions.

Theoretically, wherever the Government confers its favors, there rests authority to regulate—to withdraw those favors unless the regulation which imposes conformity is accepted. Today the President's Commission on Interracial Discrimination has adopted this principle as the genesis of its power. The Executive order under which the Commission functions provides that whosoever benefits from any Government contract must conform to its requirements against discrimination in employment if based on "race, creed, color or national origin."

The central issue in the school question, however, is one of social relationships. Rooted in the minds of many people in the South is a fear that personal associations begun in the elementary schools will lead to a state of mind among youth that will bring more intermarriage of races.

If intermarriage became widespread, it seems certain that communities would insist upon some other way of preventing them—either by ostracism or by curtailing economic opportunities in the community to those who deviate from custom.

If there were only a few intermarriages in a given State, they probably would not attract much attention. But once they became numerous, the local communities would frown upon them. Public sentiment sometimes is stronger than law in bringing about a reform or change which the law itself could never impose.

What are the limits of conformity? Conformity in theory is justified, especially when the entire national interest is involved—in times of national peril. Thus, in theory, we are not supposed to recognize any distinctions when it comes to military service. But actually we do discriminate here, too. Even the conscientious objector is allowed to refrain from participation in active combat. Able-bodied women are not compelled to fight in the front lines though women have equal rights of citizenship. "Equality" has its exceptions.

At most it must be said that the problem is not going to be solved if there is a failure to analyze studiously the viewpoints of the opposing groups. It is a situation that ultimately will have to bow to the enlightened principle that majorities and minorities each have a right to regulate their own lives and their own customs.

Thus, treaties signed at the end of World War I established an obligation upon some of the new governments in Central Europe to allocate public funds for educational, religious, and charitable purposes to "racial, religious, or linguistic minorities" within their borders. The League of Nations was given the task of guaranteeing the observance of these minority rights.

The more we examine the formulas that have been developed throughout the world to permit minorities to get along with majorities, the more we will find that adjustments precisely of this nature have been conducive to conditions of harmonious living.

IV. IS THE 14TH AMENDMENT VALID?

We hear the argument, "But it's the law of the land." There is a grave question whether the 14th amendment, under which integration is ordered, was ever legally submitted to the States and legally ratified. The specific point has never been passed upon by the Supreme Court, though the public has taken it for granted for years that the 14th amendment is an integral part of the Constitution.

What are the facts? It is necessary as an initial step for any amendment to the Constitution to be passed by a two-thirds vote of both Houses of Congress. Yet, in June 1866, when the 14th amendment was voted upon in Congress, each House had excluded all persons appearing with credentials in the first instance as Senators or Representatives from the 10 Southern States of Virginia, North Carolina, South Carolina, Georgia Florida, Alabama, Mississippi, Louisiana, Arkansas, and Texas. If these Southern States had been permitted to vote in Congress, the amendment would not have passed.

Then, when the amendment was submitted to the legislatures of the several States, it needed to be ratified by 28 States, which was three-fourths of the 37 States then in the Union. Ten States, therefore, were able to block ratification.

But the 14th amendment was never ratified by California, and was rejected at the time by Kentucky, Delaware, and Maryland. It was rejected during the latter part of 1866 and the early part of 1867 also by the legislatures of the 10 Southern States. For the 14th amendment had in it many objectionable clauses. Apart from its provision requiring States to guarantee "equal protection of the laws," the amendment sought to punish former Confederate soldiers by forbidding them to hold office even in their own States unless Congress by a two-thirds vote removed the disability. It was argued, moreover, in those days that the State governments in the South were not legal governments but were merely "rebel States." Yet these States at the time had already received presidential recognition, and when the same southern legislatures in 1865 had ratified the 13th amendment, which abolished slavery, their action was accepted as legal by the Secretary of State. For the South had, by its vote, made possible the three-fourths vote of the States necessary for the adoption of the 13th amendment.

Furthermore, in the Reconstruction Act of 1867 Congress arrogantly proclaimed that self-rule would be restored to the States and they would be permitted representation in Congress once more only when they adopted the 14th amendment. It was so stipulated in the law which had been passed over the veto of President Andrew Johnson. He emphazed its injustices and unconstitutional aspects, and denounced it as "a bill of attainder against 9 million people."

Here is what Senator Doolittle, of Wisconsin, a conservative Republican of the North, said about the proposal on the floor of the Senate:

"My friend has said what has been said all around me, what is said every day: the people of the South have rejected the constitutional amendment, and therefore we will march upon them and force them to adopt it at the point of the bayonet, and establish

military power over them until they do adopt it."

This was a flagrant case of conformity by coercion. The act of Congress was a direct violation of the letter of the Constitution. For Congress has no power to coerce the States when they pass upon the question of whether or not they will ratify or reject proposed constitutional amendments.

"Puppet" governments established in the Southern States did finally ratify the 14th amendment in 1868 but only under duress—with registration of voters being supervised by military commanders from the North and with millions of white voters deliberately disenfranchised by the Reconstruction Act because they had fought in the war against the Union. Ohio and New Jersey attempted unsuccessfully that same year to withdraw their acts of ratification before the Secretary of State formally proclaimed the amendment as adopted. Doubt was expressed at the time by the President as to the validity of the alleged ratification.

Can it be said that all this action was in accord with the spirit of American fair play? Will this record stand up as constitutional—as the "consent of the governed"? Would we say today that the people in any place under military occupation are able freely to exercise their sovereign rights? The Reconstruction Act for many years deprived the Southern States of their powers of governmental autonomy. They recovered these powers only after a long and tragic era of military compulsion.

Should not the Supreme Court today reexamine the validity of the 14th amendment? If an important decision of 1896 can be reopened and reversed by the Supreme Court in 1954, is it not logical to resurvey the doubtful procedure whereby the 14th amendment itself was forced into the Constitution? The present Court has shown itself quite solicitous lately that persons in our midst charged with disloyalty be given the protection of "due process." Cases involving Communists have, on the slightest pretext of technicality, been ordered for retrial. Can't we give the same consideration to the States which have demonstrated their loyalty to the Union?

If it were presented anew today, there would not be a two-thirds vote of both Houses of Congress to approve the 14th amendment unless a specific reservation were made on the points now at issue.

The reason is clear. More than a third of the membership of both Houses at present feel that the 14th amendment was itself amended by the Supreme Court in 1954 and that, as long as this new legislative action by the Court stands as the official interpretation, it makes the original language of the 14th amendment inadequate.

V. THE PHILOSOPHICAL APPROACH

What do the philosophers of history say about conformity?

George Santayana in Dominations and Powers (1951)—a work sometimes referred to as comparable to Plato's Republic or to the Ethics of Aristotle—makes this pertinent comment:

"This ideal of a perfect ultimate democracy rests on two assumptions: that human nature in all men is essentially similar, and that consequently mankind could not fully develop its vital liberty without coming to a unanimous vision of the world and a cooperative exercise of the same virtues. I think this is a biological error, and that what is identical in all life is only its germ, from which all plants and animals have developed centrifugally, as circumstances have allowed them to develop * * *.

"The uniformity in American principles, as proclaimed publicly and as genuinely felt by most people, is no index to a natural unity in the vital forces at work among them. The proof appears if we consider a notorious fact: the Constitution of the United States, since the Civil War, establishes the equality of all citizens, irrespective 'of race, color, or previous condition of servitude.' And this is not merely a constitutional sham, like so many of the provisions in paper constitutions in other countries. It expresses an earnest conviction, dearly defended, by a great part of the people.

"Nevertheless whenever a difference of race, color, religion, or breeding is not so overcome in the rush of common work or duty as to pass unnoticed or even unknown, if an attempt is made to ignore it in comradeship, society, marriage, or place of residence, the real difference in the soul is instantly recognized, and an irresistible impulse causes the groups to segregate.

"This is set down by democratic doctrinaires to prejudice or snobbery. They do not perceive that contrast of character and taste can be ignored when people are engaged in some instrumental action, to which their moral diversity is irrelevant; but that as soon as the labor is over and the liberal life of play, art, affection, and worship begins, both sides equally require moral comprehension and are equally chilled, bored, and rendered sterile when comprehension is absent.

"That a white man ought to hobnob with a Negro because otherwise he would not be Christian or unselfish involves a flagrant assumption of superiority. The Negro, if he is not a fool, loves his own inspiration, and expands in the society of his own people. Vital liberty differentiates. Only vacant freedom leaves all in the same anonymous crowd."

G. K. Chesterton, in his famous work Orthodoxy, wrote in 1908:

"In modern ideal conceptions of society there are some desires that are possibly not attainable: but there are some desires that are not desirable. That all men should live in equally beautiful houses is a dream that may or may not be attained. But that all men should live in the same beautiful house is not a dream at all; it is a nightmare."

Alexis de Tocqueville, of France, a renowned philosopher who visited America in the 1830's and compared it with the systems of government in vogue from ancient days, expressed himself vehemently on the subject of tyrannical majorities—the effort by law to impose upon the minority certain customs and rules that did not have universal sanction.

Yet de Tocqueville was hopeful about America's future, little realizing the grave conflicts that were to come in later years because of the abuse of the very principles about which he wrote in 1835:

"But in the United States, the majority, which so frequently displays the tastes and the propensities of a despot, is still destitute of the most perfect instrument of tyranny.

"In the American Republics the Central Government has never as yet busied itself except with a small number of objects, sufficiently prominent to attract its attention. The secondary affairs of society have never been regulated by its authority; and nothing has hitherto betrayed its desire of even interfering in them.

"The majority has become more and more absolute, but has not increased the prerogatives of the Central Government; those great prerogatives have been confined to a certain sphere; and although the despotism of the majority may be galling upon one point, it cannot be said to extend to all. However the predominant party in the Nation may be carried away by its passions, however ardent it may be in the pursuit of its projects, it cannot oblige all the citizens to comply with its desires in the same manner and at the same time throughout the country.

"When the Central Government which represents that majority has issued a decree, it must entrust the execution of its will to agents over whom it frequently has no control and whom it cannot perpetually direct.

"If an oppressive law were passed, liberty would still be protected by the mode of executing that law; the majority cannot descend to the details and what may be called the puerilities of administrative tyranny. It does not even imagine that it can do so, for it has not a full consciousness of its authority."

Perhaps it is in recognition of these very difficulties that Robert Morrison MacIver, whose name means as much to modern sociology as does that of John Dewey to philosophy, gives some pointed advice in his book, The More Perfect Union, excerpts from which appear on pages 106–133 of this issue. He offers a program for the control of intergroup discrimination. It is definitely sympathetic to integration. Yet he gives this word of caution:

"Discrimination and its evils are likely to be exacerbated by any changes that increase tensions or promote crises in a society, no matter what their source, whether economic, political, ideological, or any other. On the other hand discrimination is likely to be diminished by any changes that make for the general well being of a society or that provide more constructive outlets for the aggressive tendencies of its groups."

VI. LINCOLN ON SOCIAL EQUALITY

It is sometimes asserted, though mistakenly, that, once the Supreme Court has ruled upon a subject, there is no appeal—not even to public opinion. Lincoln didn't think so. He denounced the Supreme Court for its decision in the Dred Scott case. He was outspoken against social equality.

When Lincoln argued against slavery he pointed to the impairment of personal freedom within the community—the individual had been deprived of his liberty—the right to make his own life. But Lincoln said this did not mean enforced association between the races. Debating in Illinois with Stephen Douglas, in September 1858, Lincoln said:

"I will say then that I am not nor ever have been in favor of bringing about in any way the social and political equality of the white and black races—that I am not, nor ever have been, in favor of making voters or jurors of Negroes, nor of qualifying them to hold office, nor to intermarry with white people; and I will say in addition to this that there is a physical difference between the white and black races which, I believe, will forever forbid the two races living together on terms of social and political equality. And inasmuch as they cannot so live, while they do remain together there must be the position of superior and inferior, and I as much as any other man am in favor of having the superior position assigned to the white race."

But it is insisted: "The Supreme Court has spoken." De Tocqueville's eloquent answer may be applied to the issue today. He wrote:

"When I refuse to obey an unjust law, I do not contest the right of the majority to command, but I simply appeal from the sovereignty of the people to the sovereignty of mankind. Some have not feared to assert that a people can never outstep the boundaries of justice and reason in those affairs which are peculiarly its own; and that consequently full power may be given to the majority by which it is represented. But this is the language of a slave.

"A majority taken colectively is only an individual, whose opinions, and frequently whose interests, are opposed to those of another individual, who is styled a minority. If it be admitted that a man possessing absolute power may misuse that power by wronging his adversaries, why should not a majority be liable to the same reproach?

Men do not change their characters by uniting with one another; nor does their patience in the presence of obstacles increase with their strength. * * *.

"When an individual or a party is wronged in the United States, to whom can he apply for redress? If to public opinion, public opinion constitutes the majority; if to the legislature, it represents the majority and implicitly obeys it; if to the executive power, it is appointed by the majority and serves as a passive tool in its hands. The public force consists of the majority under arms; the jury is the majority invested with the right of hearing judicial cases; and in certain States even the judges are elected by the majority. However iniquitous or absurd the measure of which you complain, you must submit to it as well as you can."

VII. JEFFERSON ON JUDICIAL TYRANNY

Thomas Jefferson warned against the tyranny of judges. He wrote in 1804:

"But the opinion which gives to the judges the right to decide what laws are constitutional, and what not, not only for themselves in their own sphere of action, but for the legislature and executive also, in their spheres, would make the judiciary a despotic branch."

Then, long after Jefferson left the Presidency, he wrote in 1820 and 1821:

"It is a misnomer to call a government republican, in which a branch of the supreme power is independent of the nation. * * *

"A judiciary independent of a king or executive alone, is a good thing; but independence of the will of the nation is a solecism, at least in a republican government. * * *

"To consider the judges as the ultimate arbiters of all constitutional questions (is) a very dangerous doctrine indeed, and one which would place us under the despotism of an oligarchy. * * * The Constitution has erected no such single tribunal.

"The great object of my fear is the Federal judiciary. That body, like gravity, ever acting, with noiseless foot, and unalarming advance * * * is engulfing insidiously the special governments into the jaws of that which feeds them."

How much this is like the doctrines of Thomas Hobbes. In his famous work Leviathan, he wrote in 1651:

"Princes succeed one another; and one judge passeth, another cometh; nay, heaven and earth shall pass; but not one tittle of the law of nature shall pass, for it is the eternal law of God. Therefore all the sentences of precedent judges that have ever been cannot altogether make a law contrary to natural equity."

A modern writer—Walter Lippmann—in his book, the Public Philosophy (1955), says:

"There is a hiatus between the highest wisdom and the actual perplexities with which men must deal. An encyclopedia of all that the prophets and the philosophers have taught will not tell a man clearly and definitely how to make laws, how to govern a state, how to educate his children—how, in fact, to decide the problems that the priest encounters in the confessional, the doctor with his patients, the lawyer with his clients, the judge with the litigants, the man of affairs in his business."

VIII. FACING THE REAL ISSUE

Many people today are urging caution with respect to the integration problem—an approach that has come to be known as gradualism. Its fallacy lies in the belief that what cannot be resolved now will be resolved by postponement. It assumes that equality is a natural right in the community and that all forms of discrimination can be abolished by the passage of time.

The fetish of conformity, however, has demoralized the life of many nations in the world through the centuries. Where minorities have been suppressed and the right to pursue their own lives and customs has been impaired, there has been discontent and, at times, eruptions of violence.

We see today in the island of Cyprus a bloody war because nobody has yet devised a plan whereby the Turkish minority can live alongside the Greek majority. We see the same tragedy in Algeria—as between the French minority and the native majority.

Self-determination does not mean the delegation of power to a tyrannical majority. It means adjustment of minorities alongside of majorities. In no other way can there be a maintenance of equity for all concerned.

Can we not in America find a way whereby majorities and minorities may get along with one another in peace? The Constitution of the United States provided for separate but not equal States. There was no provision that each State must be equal to the other in voting for President or in choosing Members of the House of Representatives. Equality of representation was provided only in the Senate.

Theoretically, all men are created equal. It is a doctrine that could mean that all wealth in the community must be divided equally between all citizens. The Communists believe in such a doctrine. There have been men in America who have argued for the redistribution of wealth. Do any of us honestly believe that harmonious society can ever be achieved by a law that requires all incomes to be equal, or that the possession of property should be equalized between all citizens?

Equality is a theoretical goal. Its application will depend always on the mores of the community. Even in our day some of the loudest voices declaiming against discrimination are men who in their business and social relationships are practicing discriminations of various kinds. It is common knowledge that membership in some of the principal clubs and organizations in many of our large cities and in the fraternities in almost all of our colleges is barred to persons of certain races or religions, as the case may be. It is common knowledge also that employers in the North, for the most part, give preference to applicants of certain ethnic origions or races as against others. There is, therefore, continuously applied a doctrine of discrimination which negates the theory of equality.

One need not agree at all with the reasons given for such discriminations—indeed, one may be offended by their practice. But if we are to rely on theory, there is as much right to discrimination as there is to noncrimination. It is really the misguided attempt to override these separate and distinct rights of the individual by public law that causes the conflict of today.

Conformity by coercion is not liberalism. The answer is to be found in voluntarism—freedom's greatest vehicle of progress. It offers us the only solution to the vexatious problems of sociology in our Republic.

Westchester County and the Westchester County Association

EXTENSION OF REMARKS

OF

HON. RALPH A. GAMBLE

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 27, 1956

Mr. GAMBLE. Mr. Speaker, under permission granted by the House, I present for insertion in the CONGRESSIONAL RECORD an address by my good and longtime friend, Mr. Hugh W. Robertson, vice president, Westchester County Publishers, Inc., on the occasion of the fifth anniversary dinner of the Westchester County Association. I am sure the readers of the CONGRESSIONAL RECORD will find this article concerning my home county informative and interesting.

The article follows:

WESTCHESTER COUNTY AND THE WESTCHESTER COUNTY ASSOCIATION

(By Hugh W. Robertson)

Thank you, Mr. Chairman, ladies, and gentlemen—and fellow members of the Westchester County Association, and I hope those terms are synonymous.

I think it is important before we weigh the value of the Westchester County Association during our 5-year life to look also at Westchester County, because occasionally it strikes me that being so close to the county, so many of us day after day don't see it in perspective that a newcomer does.

Now I'll let you in on a little secret. We had hoped to have the county executive, Jim Hopkins, here to make this speech tonight. But because of a commitment of long-term standing, he could not be here. I'm pinch-hitting for Jimmy and I hope to give you in substance what he would have said had he been here.

THE NEW LOOK IN WINCHESTER

I had the opportunity recently to see an advance showing of an administrative program which the New York Telephone Co. has put together consisting of about a hundred projection slides with an added comment by a representative of the telephone company. That is entitled the "New Look in Westchester" and for any of you who are looking for a showing for your luncheon clubs or dinners, I can recommend it highly. It gives you not only the historical background of Westchester, but an insight into the development of the last 5 or 10 years since World War II that I've seen nowhere else. I would make just one addition to that—instead of calling it the "New Look in Westchester" I'd like to borrow a title and call it the "New Forward Look in Westchester."

Now, to run over briefly the developments in Westchester County in the past 5 years, paralleling the growth of this association of ours: I may, at the risk of repetitions for some of you who have heard this before, give you just a few of what I consider interesting sidelights. Mr. Hopkins, our county executive, pointed out in discussing a budget the other day, that Westchester has a population which exceeds any 1 of 8 States. I made a little research myself beyond that. I got from Colby Kalloch the fact that we have 352,000 telephones in this county, which is more than those in Albania, Bulgaria, Greece, and Roumania combined. I checked on the auto registration. We had last year 269,998 cars, motor vehicles, registered in this county. That is, just to make it easy to remember, 2 short of 270,000 cars. That's more than any 1 of 6 States of the United States.

I checked our voting in 1952, the last presidential year. We voted 355,358. That's more than the total vote of any 1 of 15 States. And our assessed valuation as shown by the last figure in the new budget, is $2,098,000,000. And that's more than the assessed values of any 1 of 15 States. Not at all a small county that we are trying in this association to help.

NOT HOW BIG—BUT HOW GOOD

I want to hastily insert the idea that it isn't how big this county is that really counts, it's how good we are. And we are not going after sizes, after large figures, at the expense of quality. What we are trying to do is the best we can with what we have, and it's surprising what you can do with that.

For example: I read this interesting observation, and I think you'll find this in the little brochure that comes with your bill from the telephone company. You might not all know what is the third largest seaport of the northeastern section of the United States. It is Mount Vernon. You will be surprised, but when you check up your tonnage that's where Mount Vernon stands.

Now, Westchester itself is not so big geographically, only 450 square miles, yet we have the highest per capita income in the world in this county.

What we have been up against in this county and in this association, in this attempt to help the county, has been a guidance of growth which is certain. It's coming and if this association were to fold up tonight, this growth would continue. We do not claim credit for that, but what we are striving to do is to guide it, to help that growth, to keep it from harming those of us who are here and have our investments here. To cooperate, to get liaison.

CUTTING DOWN ON THE DEBT

How is the county doing? Well, the first place to look as a rule is to the financial statement. Let's start with the money. Back in 1936, this county owed an outstanding debt of $106 million. We have cut that down to $55 million, which is almost a 50-percent cut. Back in 1933, counting our bonds and the interest to which we were committed by those bonds, we owed $149 million. As of the first of next year, we've cut that to $48 million, which is about a two-thirds cut.

I don't know of any other government, county, State, municipal, and I know of very few of our families which can show such a good standing on the books. And yet we haven't done that by being over stingy or thrifty. For example: In the last 4 years we have spent, or committed, or made available $18 million for public improvements in this county.

Back there 25 years ago when I started attending the meetings of the county board of supervisors, out of every tax dollar that was collected, 55 cents went to pay off bonds or interest amortization. We've cut that down now to 13 cents out of every dollar and further than that, we are on the pay-as-you-go policy now, exclusive of sewers, which are district charges and on which we can expect the improvement will outlast by a good length of time the interest on the bonds themselves.

NOW IT'S PAY-AS-YOU-GO

It's not too well remembered that a number of years ago we didn't proceed on that theory. Someone has said we forged our grandchildren's names to promissory notes. Let's take the first large noteworthy improvement this county had up to World War I, the Bronx River Parkway, in which we shared the cost 25 percent and 75 percent with New York City.

But even at that we made those 50-year bonds and we didn't start paying off until 1938. By 1938 we had practically worn out one pavement. It's been repaved twice since then. We could say: "Here are the bonds, but where is the road?" That last bond on the Bronx River Parkway will not be paid off till 1988. We have altered that now—and I'm glad to see here tonight one name to whom I give a great deal of credit for that change in our fiscal policy, and that is former budget director, Bill Folger.

FROM A BUSINESS VIEWPOINT

Now how are we doing on industry? You may not know that we're second only to Erie County, outside of New York City, in the number of business firms. We have the fastest growing department store trade in the East. Our income payments in 1952, those which were paid to our residents, were $1,705,000,000. Now it's almost up to $2 billion. Is it any wonder that the department stores are moving to Westchester County?

How about buildings? Permits last year: We had 6,649 permits for one-family homes or apartment units at a total cost of $124 million. For 1953 it was 9,374 units at a $152 million cost. In industrial building in 1953, we had 383 units at $15 million. This year it is almost certain we'll break all records.

How about manufacturing? Last figures, 1953, we had 927 plants employing 50,300 people. What do we make? We don't consider Westchester usually as a manufacturing county because we have carefully guarded against every type of manufacturing which would depreciate adjoining property values, yet we have a tremendous range of it. Looking at some of the small things and the large things, a transistor hearing aid which is the size of—or only a little larger than this match cover—ranging from that up to some of the finest motorcars that have been assembled.

WIDE RANGE OF PRODUCTS

We have the world's best known nuts and bolts. We have candy mints that are known from Alaska to Africa. We have the magazine with the largest circulation in the world. We have the funniest animal cartoons that have ever been screened by Hollywood. We turn out greeting cards by the millions. We have foodstuffs made right here and bearing the trademark of Westchester which go all over the world, and we have the first atomic-powered production of electricity on the Atlantic seaboard now underway.

Some more of our outstanding products: We have the makers of scales here which will weigh one-hundredth of a milligram. We go from that to the largest elevators in the world. We have maps. We have the world's oldest candlemaker here. We have fabrics, wall coverings. We make powder puffs. We turn out those mints I mentioned * * * 10 billion Lifesavers. Enough if they were put side to side to circle the globe five times and still have enough left over for every kid in Westchester County.

We make cold-laid asphalt concrete, we have cameras for underwater use, we have closed TV circuit equipment which is just coming into use. We make pharmaceuticals including, right here in Westchester, the first chlorophyll that was ever turned out. One firm alone in Westchester makes one-third of a million dresses annually. We make X-ray machines. We turn out a million bottles daily of a certain soft drink. We started frozen bread here. We have an ice cream college, teaching people how to make the best usage of ice cream in soft drinks.

We even have a brewmaster where we teach people how to brew beer. Recently we made the world's largest diner here in Westchester and shipped in to Elkton, Md. We make wire and cables. We make a nuclear competometer. We have Columbia University's cyclotron. We have the biggest emery mine in the United States here. We have a timing device company which makes one so delicate, so fine, that it will measure one ten-millionth of a second. Now one ten-millionth of a second is exactly the time that elapses when the light turns green and the fellow behind blows his horn at you.

We have this new bridge coming across at Tarrytown which, as estimated by engineers, and rather conservatively, will be bringing by 1960—85,000 vehicles daily across and is to bring a hundred thousand population into Westchester markets. That's why I like to call ours the Empire County of the Empire State.

THE TASK FOR THE ASSOCIATION

Now that's Westchester. Let's look to the Westchester County Association. How have we helped?

I want to start off first by reminding you that this is a voluntary association made up completely of civilians. We have no authority whatsoever. No legal authority. Our only weapon is that of moral suasion or how we may be able to mold public opinion. And yet it seems to me that, through our committees, our directors, and most of all our members, we have formed a common pool into which have been poured ideas, plans, projects, to be tossed around and discussed and argued.

When a decision is reached we have in effect an impact that is greater than you can measure by any yardstick of an association because each of us in our individual business, in the circle of friends and business associates that we have, is empowered to advance that project and that idea.

It is impossible to measure the Westchester County Association and say it has been worth so much, so many dollars. All I know is that, if it hadn't been here, we would have had to invent it. Because this county needed it in the rapid expansion which has come as it did after the First World War, when more people came in and required better service utilities, transportation, hospitals, schools, highways, roads, which in turn attracted still more people. And the cycle continues.

THE TREND IN OUR DIRECTION

The principal feature of our association work in this 5-year period has been, I think, the cooperation which has brought recognition of Westchester County as the logical site for national regional headquarters. Especially those which feel they must be centralized. And I do not believe, as has been advanced in some quarters, that this decentralization is caused by orders from the Pentagon, or a feeling by the heads of these large corporations that they must get out of the large cities because of fears that bombs may be dropped.

Rather it is a recognition of a trend which is obvious to anyone who lives on the fringe, or in the suburbs of a large city. That is, those cities are gradually tending to strangle themselves with traffic, with rail transportation delays, with the rush and saturation, the noise, the tension, all of which have the effect upon the bodies and the human minds which are making us more and more a population requiring mental treatment. Follow the absorption of the clerical help in the cities, the sales taxes and most of all I think, unattractive working conditions.

This has been a trend in which the association has cooperated, and yet of the 60 major firms which have come to Westchester County in the last 3 years, not one of them has been solicited by this association. We have said that we are glad to show what we have, to lay it out on the counter: take a look at it, if you come, we'll be delighted to welcome you. But we have highpressured none of them.

The result of that is that in the 3 years mentioned we have a $354 million jump in our assessed valuation, and I think we're just in the edge of even greater prosperity. In that connection, the association last year had 580 inquiries from companies which wanted to move in or expand or establish branches.

Oddly enough, if I may interrupt or interpolate a thought here, one of the unfortunate aspects of this has been an almost hysterical countermovement in New York City in which some of the established realty interests have attempted to engage us in some sort of controversy as to the relative merits of New York City and Westchester County. I'm glad that our association has refused to be drawn into any such argument. It is our feeling that there's enough business to go around * * * that time will decide * * * we will welcome those who come, but we are not going to get into any name-calling or

mud slinging with any interests in New York City. We'll stand on our own merit.

OUR PROBLEMS—PAST AND PRESENT

I think in business we've done a good 5-year job. I think in public relations we haven't done so well. I think our publicity will stand a checking up. I think our membership should be better. We are 500 * * * we should have at least 5,000. I think that we've got to make more use of a greater number of our members who are not serving on committees, because that's where the real good work is done. The hard work, the surveys. Those people who come back with the correct answers, the facts, on which we can proceed. I think we can be judged also by the fact that we have not made mistakes which we might have made.

Let's consider the question of politics. We've been about 5 years living down the idea that this association was formed to produce the city of Westchester County, than which nothing could be further from the truth. We could have made mistakes in a partisan political sense, and yet I point to the fact that our former counsel is now the county executive of Westchester. I point to the fact that we have the minority leader of the board of supervisors as one of our directors and the leader of the minority party in the largest city as one of our directors.

We might have had trouble with our labor relations, yet two of our hardest working directors are the president and secretary of the Westchester Building Trades Council, the largest A. F. of L. union in the county.

THE BIG TASK OF TRAFFIC

Now I'm coming to the end, and this is looking ahead: Our problems. They are tremendous. We are going to see some of them when we get this bridge opened on the 15th of December across the Hudson. Without contact yet made to the Deegan Expressway I tremble to think of the traffic problems we're going to have on the west side of our county next spring. Particularly since that $750 million bond amendment was defeated are we up against it.

I think we've got to give a little thought to the question of whether or not we may have to raise our parkway tolls from 10 cents to 25 cents. We've seen Connecticut double them on the Merritt Parkway with hardly a ripple of public opposition. We're still paying 10-cent tolls on the Hendrick Hudson Bridge 10 years after that bridge has been paid for, but those tolls have very little public opposition.

That is something on which I think the association can be a great deal of help. I don't know what the end is going to be. I do know this: That we must consider seriously the effect, the cost that we're going to have to face in new roads or parkways. I suggest that we give serious thought to the question that we may in emergencies open our parkways to commercial traffic, insofar as the bridges will allow the trucks to pass underneath.

I think we've got to expand our airport—we've got to fight for a little better transportation facilities, and I'm delighted to read in tonight's paper that Mohawk is giving us back that flight to Utica and Syracuse and Rochester and Buffalo.

The association helped tremendously in better mail service, in intercounty delivery, and integration in the bus services, in our sewerage treatment, and in our community college in the establishment of scholarships by business firms.

WE CAN DO BETTER

I think we failed miserably on two cultural objectives. One was the establishment of a county library. I'm delighted that we are now going in on that cultural side of our program to help in the science fair for high-school students.

We've got to watch out particularly on the home proposition: That we do not allow vacant stores on Main Street to put an added tax burden on residences on the Soundview Avenue homes. We've got to be careful that we keep Westchester still open to the young married couples, to the G. I. boys. We must keep them with us and there is a job for the real-estate interests and the contractors.

On recreation we've done a pretty good job. We've got the new pool at Saxon Woods. We are going to have the new golf course at Dunwoodie. In all of this the association has been helpful, I believe, to the county and I think if County Executive Hopkins were here tonight he would be the first to admit it.

I'd say this in conclusion. We have not been hurried. We've done a good job. We could have done better, and we hope to do better. At least gives us an "A" for effort because we have tried. I think we have done what the philosopher urged when he said:

"Greatly begin—
Though thou hast time
But for a line
Make it sublime!
Not failure
But low aim is crime!"

LAWS RELATIVE TO THE PRINTING OF DOCUMENTS

Either House may order the printing of a document not already provided for by law, but only when the same shall be accompanied by an estimate from the Public Printer as to the probable cost thereof. Any executive department, bureau, board, or independent office of the Government submitting reports or documents in response to inquiries from Congress shall submit therewith an estimate of the probable cost of printing the usual number. Nothing in this section relating to estimates shall apply to reports or documents not exceeding 50 pages (U. S. Code, title 44, sec. 140, p. 1938).

Resolutions for printing extra copies, when presented to either House, shall be referred immediately to the Committee on House Administration of the House of Representatives or the Committee on Rules and Administration of the Senate, who, in making their report, shall give the probable cost of the proposed printing upon the estimate of the Public Printer, and no extra copies shall be printed before such committee has reported (U. S. Code, title 44, sec. 133, p. 1937).

GOVERNMENT PUBLICATIONS FOR SALE

Additional copies of Government publications are offered for sale to the public by the Superintendent of Documents, Government Printing Office, Washington 25, D. C., at cost thereof as determined by the Public Printer plus 50 percent: *Provided*, That a discount of not to exceed 25 percent may be allowed to authorized bookdealers and quantity purchasers, but such printing shall not interfere with the prompt execution of work for the Government. The Superintendent of Documents shall prescribe the terms and conditions under which he may authorize the resale of Government publications by bookdealers, and he may designate any Government officer his agent for the sale of Government publications under such regulations as shall be agreed upon by the Superintendent of Documents and the head of the respective department or establishment of the Government (U. S. Code, title 44, sec. 72a, Supp. 2).

CONGRESSIONAL DIRECTORY

The Public Printer, under the direction of the Joint Committee on Printing, may print for sale, at a price sufficient to reimburse the expenses of such printing, the current Congressional Directory. No sale shall be made on credit (U. S. Code, title 44, sec. 150, p. 1939).

PRICE OF THE CONGRESSIONAL RECORD

The Public Printer is authorized to furnish to subscribers the daily RECORD at $1.50 per month, payable in advance.

Remit by money order payable to Superintendent of Documents, Government Printing Office, Washington 25, D. C.

CHANGE OF RESIDENCE

Senators, Representatives, and Delegates who have changed their residences will please give information thereof to the Government Printing Office, that their addresses may be correctly given in the RECORD.

RECORD OFFICE AT THE CAPITOL

An office for the CONGRESSIONAL RECORD is located in Statuary Hall, House wing, where Mr. Frank Brodie is in attendance during the sessions of Congress to receive orders for subscriptions to the RECORD at $1.50 per month, and where single copies may also be purchased. Orders are also accepted for the printing of speeches in pamphlet form.

PRINTING OF CONGRESSIONAL RECORD EXTRACTS

It shall be lawful for the Public Printer to print and deliver upon the order of any Senator, Representative, or Delegate, extracts from the CONGRESSIONAL RECORD, the person ordering the same paying the cost thereof (U. S. Code, title 44, sec. 185, p. 1942).

Appendix

Resolutions Adopted by the National Rivers and Harbors Congress

EXTENSION OF REMARKS
OF
HON. PAUL G. ROGERS
OF FLORIDA
IN THE HOUSE OF REPRESENTATIVES
Friday, July 13, 1956

Mr. ROGERS of Florida. Mr. Speaker, under authority granted to extend my remarks in the RECORD, I wish to submit the report of the resolutions committee which was unanimously adopted by the 43d convention of the National Rivers and Harbors Congress held in Washington, D. C., recently.

The resolutions committee, of which I had the honor and pleasure of serving as chairman for the first time, consisted of one delegate from each State, Territory, island possession, and the District of Columbia. The members gave careful and painstaking consideration to the matters before them, suggested numerous changes in the draft of the resolutions presented to them, and reached agreement thereon. An amendment to the committee's report was offered from the convention floor and was adopted without objection.

The convention was attended by 358 registered delegates from 43 States, Hawaii, Puerto Rico, the District of Columbia, and Colombia, South America, in addition to several hundred who failed to register, guests, visitors, representatives of the press, and so forth. Louisiana sent the largest delegation, 41, being the home State of our president; North Carolina was next with 30; while Ohio and Texas were tied for third place with 22 each.

These delegates were from all sections of the country, representing both legislative and executive branches of the Federal Government; State, city, county, and other local governmental agencies and interested groups; commercial, waterway, flood control, and reclamation associations; agricultural, labor, industrial, and trade organizations, and transportation interests; with memberships totaling several million.

We believe this unanimous expression of representatives of such different interests and pursuits is strong evidence of the general sentiment of the people of the United States concerning the matters dealt with in these resolutions:

REPORT OF THE RESOLUTIONS COMMITTEE TO THE 43D NATIONAL CONVENTION OF THE NATIONAL RIVERS AND HARBORS CONGRESS, MAY 12, 1956

FOREWORD

Migrations of varying degrees have historically played a most important role in the settlement and development of our yet young country. Beginning on our eastern seaboard, people moved our frontiers northward, westward, and southward over the years and expanded our young Nation. Today migrations are still taking place through the movement of humans and industry to the water courses throughout the land. These movements have intensified the need for additional flood protection, navigation, and water resources development in general as a national problem. These newly developing frontiers and those already developed in our river valleys need the Nation's help to its utmost ability. Anything less may well endanger our economy and future security. The National Rivers and Harbors Congress can and will continue to devote its best efforts to methods of developing our Nation and benefiting all its people through an active program of resource development consistent with the changing times.

THE PRESIDENT'S MESSAGES

President Eisenhower on January 5 of this year reemphasized, in his state of the Union message, the critical importance of the wise use and conservation of our great natural resources and pointed out that their development cannot be accomplished overnight. His message acknowledged that the need is such that much faster progress must be made without delay. The President's 1957 budget message on January 16 reflects this view. He recommends that work be started on 36 authorized Corps of Engineers and Bureau of Reclamation projects; recommends the authorization and start of other improvements at Federal expense and participation in others. Other projects have since been recommended. Moreover, the President's Economic Report on January 24, 1956, pointed out that a great backlog of public works remain largely as a consequence of heavy expenditures for our national security during and since World War II and unexpected population gains. The message further states that outlays should be large enough to contribute decisively toward removing this backlog.

From these messages we have received encouragement, and we hope that these and similar future messages, and the actions by Congress on the recommendations and policies therein, will result in development of our resources in keeping with the needs of our people and the stature our Nation enjoys in the world.

APPROPRIATIONS

There is no denial in any quarter that a great backlog of resource projects exists. The President's Economic Report recognizes it; and statements appearing in the CONGRESSIONAL RECORD make reference to it. The President recommends that outlays be large enough to contribute decisively to its removal, and Members of Congress are alert to the desirability of its reduction. In considering the elements entering into an increase in appropriations to accelerate the resource program it is interesting to note that our country, as a generous gesture, has granted billions in specific aid to foreign nations and at the present time there remains of the appropriated funds for that purpose some $10 billion of unobligated funds. Ten billion dollars approximates, at the present rate, the total appropriations that will be made for natural-resource development in our own country in the next 10-year period.

Accordingly, we believe that a reconciliation of the two appropriations will provide adequately for our own welfare and permit our generosity throughout the world to remain substantial.

FLOOD AND DISASTER INSURANCE

The recent hurricanes and floods on the east coast and floods on the west coast have caused considerable thought to be given to insurance against such devastation. This Congress must insist that any method by which victims of these unfortunate events are made whole cannot become a replacement for a sound program of prevention. Whether the losses are paid out of private funds, a combination of private and Federal funds or solely from Federal funds the losses are not reduced and suffering is not compensated for. It is our hope that by the adoption of a disaster insurance program our leaders are not lulled into complacency respecting a sound program of prevention but rather that they realize such insurance to be a stop-gap measure pending the completion of protective projects or as a substitute for control measures where such measures are impracticable.

MAINTENANCE OF WATERWAYS AND PORTS

This Congress is sympathetic to the proposition that obsolete and little used waterways should not be a burden on the Federal Treasury by the expenditure of funds for their unjustified maintenance. By the same token waterways that have carried sufficient traffic to justify their maintenance but are not now carrying such traffic because of lack of maintenance should by all means be restored to usefulness. New waterways are justified on prospective traffic and there is no reason why lack of maintenance should operate to take a waterway out of existence. The actual and potential traffic for existing and proposed waterways is of sufficient proportion to warrant a concurrent program of adequate maintenance of the one and immediate construction of the other.

COMMISSIONS AND REPORTS

It is evident from published reports that considerable time and effort have been applied to the study of natural resource development, among other things, by the President's Advisory Committees on Water Resources Policy and on Transport Policy and Organization; the Second Commission on Organization of the Executive Branch of the Government headed by former President Hoover; and the Commission on Intergovernmental Relations headed by Mr. Meyer Kestnbaum from industry. These related studies of a common broad subject have resulted in some instances in similar recommendations. We concur in some of these recommendations. However, it may well be that, unless the proper combinations from the several reports are put into effect with proper timing, the overall program of resource development will suffer a setback. The echelons of review and coordination; the interagency studies, the State organizations; the partnership arrangements; all contemplated in one or more of the studies would be time-consuming in the beginning at least. These coupled with the checks and balances already required of the appropriate Federal agencies by law and regulation should not be permitted to delay the already lagging programs.

We urge the President and the Congress to afford those of us interested in an accelerated and orderly program of resource development the opportunity to be heard further when the several recommendations are considered for aodption.

WATER SUPPLY

Our insufficient supply of water for domestic, municipal, and industrial uses has been increasingly apparent to the National Rivers and Harbors Congress for several years. The current supply weighed against projections into the future with increased population, expanding industry, and the conversion to irrigation even in the humid areas indicates that the problem is compatible with that of controlling floods—it is also serious.

We urge the Congress of the United States to consider the need for conserving and increasing our water supply concurrent with their consideration of the flood problem and related resources problems, and legislate a Federal policy on water supply. Now is the appropriate time.

SHORE PROTECTION

The National Rivers and Harbors Congress hereby reaffirms its support of H. R. 4470, a bill to amend the act entitled "An act authorizing Federal participation in the cost of protecting the shores of publicly owned property," approved August 13, 1946. The need for shore protection with Federal participation on the water borders and lake areas of our Nation is parallel with the need for flood control in our river valleys.

MERCHANT MARINE

World tension today keeps us mindful of the frantic conditions under which ships were constructed for use in World War II. Many of the ships constructed under those conditions are now obsolete for even an appropriate contribution to our peacetime economy. Others in our active maritime fleet are approaching obsolescence. The deterioration of our merchant marine must not be allowed to come about. We reaffirm our support of a vigorous program by the Maritime Administration which will insure orderly replacement of those vessels which do not contribute to our peacetime economy and our national security.

We support also the efforts of the Maritime Administration in providing merchant-marine officers from the United States and State maritime academies as replacements and additions to the maritime service of our country.

WATERSHED PROTECTION AND BASIN PLANS

This Congress notes that a number of bills have been introduced to amend the Watershed Protection Act to include, under the Secretary of Agriculture, engineering structural programs for flood control, water supply, drainage, irrigation, and other phases of resource development. A lot has been said and is still being said about duplication and overlapping of functions in the Federal Government. These proposed amendments on the surface would appear to duplicate functions of the Departments of the Interior and the Army. Soil conservation, forestry, and other land-treatment measures are favored by this Congress, but we do advise caution to the extent that conflicting laws do not operate to the detriment of sound basin development by all agencies concerned through the imposition of conflicting policies as to partnerships, project economics, and related problems.

TOLLS ON WATERWAYS

This Congress believes that the imposition of tolls or user charges on our inland waterways is incompatible with the historic free use of these waterways for the flow of commerce by which an extensive economy on, along, and off them has been developed. Moreover, the complexities of any equitable imposition of such charges on waterways improved over a period of a century are aggravated by the varying amounts of local contributions heretofore made. Tolls or user charges in lieu of some form of non-Federal participation in projects will have an adverse effect on water transportation perhaps to the extent of eliminating a number of carriers; increasing rate structures for the remainder; and even the elimination of important links in this vast transportation network. The Nation cannot afford such deterioration of a valuable asset by experiment. We cannot remain idle and permit it to take place.

THE CABINET COMMITTEE BILLS

Where our national transportation policy of 1940 now recognizes and would preserve the inherent advantages of each means of transportation and foster sound economic conditions among the several carriers, the President's Cabinet Committee on Transport Policy has recommended a change which would encourage and promote full competition between modes of transportation subject only to certain vague provisions intended to prevent the charging of rates less than out-of-pocket cost.

Our present system of regulation of railroads was designed for the purpose of restraining their practices of selective rate-cutting which in the past have been so successful in stifling competition by water carriers. Inland water for-hire transportation owes its very existence and its encouraging current growth to the fact that this system of regulation has at last become partially effective. We recognize that it is in the public interest to protect small carriers who render efficient services from the destructive rate practices of large carriers who, by virtue of their size alone and regardless of efficiency, have historically been capable of putting their small competitors out of business unless a proper restraint is exerted by Government.

These transportation amendments, while purporting to reduce economic regulation of transportation, would do so only for the railroads and with respect to water transportation would actually increase the scope of regulation in such a way as to restrain competition. To place artificial restrictions upon water carriers while relaxing the restraints upon rail carriers will relegate inland water transportation to the field of private carriage where its benefits are limited only to those shippers large enough to afford their own fleets.

We are impressed with the prosperity of the railroads and wish them continued success. We recognize the need for maintaining an efficient and sound railroad system in the United States, but we are convinced that the proper method is to improve the outworn administrative and operating practices of the railroads and not to cripple their small competitors. Let Congress continue the policy of survival of the fittest in transportation and not be tempted to substitute survival of the biggest.

PROPOSED REPEAL OF THE DRY BULK EXEMPTION

Current efforts by special interests to induce Congress to impose Interstate Commerce Commission regulation upon the transportation of dry bulk materials on our waterways would have the effect of replacing free enterprise with a regulated cartel. On our waterways there are over 1,700 carriers, of whom roughly 1,000 are contract carriers engaged in vigorous competition among themselves in the transportation of bulk commodities basic to our national economy. This competition under our system of free enterprise has produced rapid technological progress and effective transportation to the benefit and satisfaction of shippers and carriers, as well as to the public who ultimately derive these benefits. Legislation which would impose the devitalizing influence of government regulation in this field, and virtually preclude the entry of new carriers into the business, and place small carriers at the mercy of large carriers would benefit no one other than a handful of prosperous major barge lines.

We urge Congress to reject such legislation and to remember that the benefits of our God-given rivers, improved by the Government for the benefit of the public, must not be delivered into the hands of a few for their own exploitation.

HURRICANES AND FRESH WATER DEVELOPMENT

The Federal Government should intensify its efforts in three important areas:

1. Observation and possible control of hurricanes. The Weather Bureau and the armed services are to be commended for recent improvements in reporting hurricanes and warning people in threatened areas.

2. Artificial rainmaking has shown enough promise to warrant the use of public funds for further experimentation. Thought should also be given to the control of and use of such artificially produced water, if the cloud-seeding technique is perfected in the future.

3. More Federal funds should be allocated for study of projects to convert saline water into fresh water. This has been proven feasible, but the cost is still too high for practical application to agricultural and industrial needs. As the water-table continues to drop and as municipalities, industry and agriculture increase their demands for more water, the sea becomes a promising source.

We commend Congress for recognizing this problem and recommend that the program be expedited.

COMMENDATIONS

The 43d National Convention of the National Rivers and Harbors Congress held in the Mayflower Hotel, Washington, D. C., May 10–12, 1956, was well attended by delegates from all parts of the United States. The press, TV, and radio very ably and correctly reported the proceedings of the convention. The arrangements and program committee made an outstanding effort for a successful convention. The Mayflower and other hotels in Washington made available their facilities and accommodations for the comfort and convenience of the delegates. Visitors and other persons interested in the welfare and development of our resources cooperated heartily.

The National Rivers and Harbors Congress and its members express their appreciation and gratitude to all those named above.

Another Democrat Looks at His Party

EXTENSION OF REMARKS

OF

HON. HARRY FLOOD BYRD

OF VIRGINIA

IN THE SENATE OF THE UNITED STATES

Friday, July 13, 1956

Mr. BYRD. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "In the Nation: Another Democrat Looks at His Party," by Arthur Krock, and published in today's New York Times.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

IN THE NATION: ANOTHER DEMOCRAT LOOKS AT HIS PARTY

(By Arthur Krock)

WASHINGTON, July 12.—"Moderation" is a word that Adlai E. Stevenson, its principal distributor in the political community, has never had an opportunity to demonstrate in practice by acts in national elective office. But LYNDON B. JOHNSON, the Senate majority leader, has had ample occasion to do that. And a memorandum on the subject which he drew up as a mental exercise not only states explicitly his principle of moderate party leadership, but suggests it may become a

point of basic conflict at the Democratic national convention.

Certainly it will if Gov. Averell Harriman makes a determined attempt to lead the majority of the convention over a trampled minority into the aggressive path he already is treading. And certainly the Johnson formula will come into basic conflict with former President Truman's if the record is a reliable guide. A Harriman challenge of the Johnson concept would seem the greater probability because Mr. Truman has told friends he is going to Chicago in August to "heal the party's wounds" and that on this errand he has "a complete understanding" with JOHNSON and Speaker RAYBURN. However, in view of the former President's intra-party fighting record, and the comment of JOHNSON and RAYBURN that they aren't sure what he means by "a complete understanding," a Truman challenge of the JOHNSON thesis also may appear.

"The function of leadership in an American political party is too often misunderstood," wrote JOHNSON to himself as he began his memorandum. "The general concept is that leadership is composed of fighting the opposition party and that therefore the best leader is a man with leather lungs, a choice store of epithets and an inexhaustible willingness to do anything and everything to join battle at any time."

The Texas Senator must have had some fellow Democrats in mind whose names will readily occur to many readers. But since he did not give them, they must remain his secret for the time being.

THE COUNTRY IS SO HUGE

"If all leaders were of this type," JOHNSON went on to confide to himself, "the American landscape would soon be littered with political parties—none with any real following and none able to command a majority. The country is so huge that there are bound to be regional differences which must be reconciled lest Government grind to a halt and the Nation be paralyzed."

The majority leader has followed this view with great success in legislation, and with constructive results so far as restoring long-absent Democratic unity in the Senate is concerned. The memorandum continues:

"With a few rare exceptions the great political leaders of our country have been men of reconciliation—men who could hold their parties together. Lincoln never permitted the radical Republicans to drive more moderate elements out of the party. Woodrow Wilson appealed to elements throughout the Nation and only went down to failure when he became too doctrinaire and too arbitrary. F. D. Roosevelt successfully maintained a coalition that ranged all the way from Jimmy Byrnes to Leon Henderson. Theodore Roosevelt was a great political figure up to the point that he split his own party."

The next passage fortifies the conclusion that other names were in the Senator's mind, though he mentioned but one. "About the only 'rock 'em, sock 'em, damn the opposition' leader who was continuously successful," he mused, "was Andrew Jackson, and this can be attributed to a special circumstance—the fact that he was representing a group of Americans who were in the actual majority but who had been disfranchised up to the point that he came along.

"A true leader," so ends the memorandum, "consists of a man who can get people to work together on the points on which they agree and who can persuade them that when they disagree there are peaceful methods of settling their differences. This is the kind of leadership that can build a party that will win the election this November or any other November. The kind of leadership that would split the party because of differences in doctrine is the kind that will guarantee defeat."

It is obvious that the Senator, when he wrote this aide memoire, was thinking of party leadership in the legislative arena, of the record therein made as the claim of the party for office from the people. But the formal political platform is the product of the national convention; the candidates for President, for Vice President and for other offices stand on this. Hence the Johnson formula necessarily extends to compromises on differences of doctrine at the convention as a required sequel to compromises on legislation if a party is to win this November or any other November.

The Senator will have a balance of power at Chicago considerably beyond that supplied by the Texas delegation. He will have more or less difficulty with his concept there, but it probably won't be with Stevenson.

The Fallacy of United States Foreign Aid Policy

EXTENSION OF REMARKS
OF
HON. WILLIAM LANGER
OF NORTH DAKOTA
IN THE SENATE OF THE UNITED STATES
Friday, July 13, 1956

Mr. LANGER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "The Fallacy of United States Foreign Aid Policy," written by Thurman Sensing, and published in the Lima (Ohio) News of July 8, 1956.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

THE FALLACY OF UNITED STATES FOREIGN AID POLICY

(By Thurman Sensing)

It would seem that bureaucracy of foreign aid has become well entrenched in our Nation's Capitol, and that a large percentage of the representatives of the American people in the Congress have been brainwashed on the subject.

How else can one explain the giving away of $55 billion of the American taxpayers' dollars since the end of the Second World War? How else can one explain that we shall give away $4.4 billion more during the next fiscal year? How else can one explain the request of the administration for an appropriation of $4.9 billion for the next fiscal year? How else can one explain that, after an attempt by the House to reduce this appropriation, it has now been voted by the Senate Foreign Relations Committee to restore the appropriation of $4.5 billion? How else can one explain the continuation of foreign aid at all?

All this in face of the fact that no one can prove that the world would not have been better off if we had never given away $1 of foreign aid.

The whole origin of the foreign-aid concept was that it would buy friends and stop communism. The blunt truth is that you cannot buy friends, and that you must stop communism with ideas and not with dollars.

There has been a very popular fallacy prevalent in the world and particularly right here in our own country since the end of the Second World War; namely, that hardship makes Communists.

Shortly after the end of World War II one of our distinguished public leaders came back from a trip to Europe and in one of his speeches made this statement: "An empty stomach is a Communist workshop."

That was a very catchy statement and it got a lot of attention. But it would be a much truer statement to say that, "An empty head is a Communist workshop."

If any people of any nation think communism—or socialism, which is only a half-way step to communism—will solve their problems, let them search history from beginning to end and see where it has ever helped any nation. It has been tried time and again, in one form or another, and has always failed.

The spirit of a limited government does not need material wealth to make it thrive. The Colonies were poor and struggling when America was founded as a nation. This free Nation of ours was founded on principles and ideals—not on dollars.

If hardship and empty stomachs made Communists, the people of the South would have quickly gone Communist after the end of the War Between the States, because after that war the South was left as poor and impoverished and destitute as any region anywhere after any war. The people of the South had to make their comeback the best way they could—by the hard work, the thrift, the energy, and the determination of the people. Yet the philosophy of the South has consistently adhered to those fundamental principles of democracy—individual freedom, and local self-government.

It is hard to understand the reasoning of those nations who say, "If you don't give us so many billions of your dollars we are going Communist." It is even harder to understand our reasoning in accepting such a statement and acting upon it.

We should very bluntly tell such nations, "If you think communism will solve your problems, go ahead and go Communist. As for us, we are going to stick with the ideals of freedom, with the system of private enterprise and individual initiative, the system that has brought the American people the highest standard of living the world has ever known, and has brought more benefits to more people than any other ever devised by man. We suggest you try the same system."

The plain fact of the matter is that the best way to destroy friends—and nations are no different in this respect than individuals—is to start supporting them with gifts. The more you give a man, the more he wants—and the effect of continued gifts is to completely destroy the independence and self-reliance and initiative and incentive that anyone must have if he is to succeed.

Yeoman Service by the Vice President

EXTENSION OF REMARKS
OF
HON. JOHN W. BRICKER
OF OHIO
IN THE SENATE OF THE UNITED STATES
Friday, July 13, 1956

Mr. BRICKER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entiled "Vice President's Yeoman Service," published in the Columbus Evening Dispatch of July 11, 1956.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

VICE PRESIDENT'S YEOMAN SERVICE

Will Vice President NIXON return from his tour of the Far East the hero he deserves to be?

Will the backbiters in the Eisenhower administration who have tried to discredit him accept his stimulating and inspiring per-

formances in Manila, Formosa, Bangkok, and Karachi for what they are and desist in their efforts to dump him from the Eisenhower ticket?

We shall see.

What Vice President NIXON has done on this tour, which he took at the request of the President, is to prove to the world—and especially to the so-called neutrals who have given Moscow so much support—that the Communists are bunglers.

Even as he was pointing out the certain risks that must be taken by the neutrals who play Moscow's game, accept Moscow's favors and make business deals with the Kremlin, the world was seeing what had happened to another once neutral nation when the Polish steel workers went on strike in Poznan to better their living conditions.

Marxism there turned out to be the cruel suppressor of human rights and labor prerogatives which it has always said the capitalists were. At the time the Reds were demonstrating how wrong Marx was, Mr. NIXON was telling the world how wrong he was.

As he was commending Thailand's faith in western ideas of freedom, Russia's new Foreign Minister Shepilov was saying that under communism there is no room for other political parties, and this, of course, the people of Poland, Czechoslovakia, Eastern Germany, and others had already learned when they tried to express economic and political sentiments opposed to communism.

Under communism there is only room for one party—and the guns necessary to maintain it in power.

As the Vice President was celebrating the 10th anniversary of independence in Manila, the captive satellites of Europe and Asia were learning anew—at gunpoint—that there is no hope of independence from communism.

Mr. NIXON told the peoples of Asia and through them the peoples of the world—the indifferent, the free, the neutral, the captives, and the undecided alike—the simple truths of freedom and the dangers of communism.

The truth, of course, shall prevail. What Mr. NIXON said was true yesterday. It is true today and it will remain true tomorrow. The Communists recognize no such continuity of truth. Only that is true for them which is expedient. What may have been true yesterday is not necessarily true today. Nor is it likely to be true tomorrow.

In time, the neutrals who have compromised truth or who have accepted the political or economic thinking of communism must learn the dramatic differences between slavery and freedom which the Vice President so ably presented for their consideration.

He has done a magnificent job for the United States and freedom in an area where it is most needed. And he has added great meaning to the foreign policies of the United States for all of the beleaguered people of the world.

Abandon Hope All Ye Who Enter Here

EXTENSION OF REMARKS

OF

HON. MIKE MANSFIELD

OF MONTANA

IN THE SENATE OF THE UNITED STATES

Friday, July 13, 1956

Mr. MANSFIELD. Mr. President, a very interesting editorial was published in the Washington Post of July 8 entitled "Art For No Sake."

I ask unanimous consent that the editorial be printed in the Appendix of the RECORD, under the heading "Abandon Hope All Ye Who Enter Here."

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

ART FOR NO SAKE

Three totally undressed, impressively muscular but, alas, sadly agonized young men have, it seems, been ignominously expelled from the Republican Party; but since all three are foreigners—presumably French—and therefore ineligible to vote next November, their expulsion should have no effect on the issue of the Presidential election.

By one of those embarrassing gaffes this sculptured trio by the late and eminent Auguste Rodin was to symbolize peace, progress, and prosperity on the cover of the official program of the Republican National Convention which is to meet next month at the San Francisco Cow Palace for the formality of renominating the Messrs. Eisenhower and NIXON. Leo Manheimer, the artist who designed the cover, said that he chose these figures strictly for art, which only seems to prove that his esthetic sensibilities are more highly developed than his political discretion. Anyway most of the Republican bigwigs promptly agreed with Mayor Christopher, of San Francisco, that, politically speaking, the cover design is "not a very healthful picture"; and accordingly the program, of which 13,000 copies had already been printed in 2 of the 4 specified colors, has been scrapped, a new program, containing a fully clothed portrait of President Eisenhower on the cover, will be substituted.

The objection to the Rodin figures, we gather, was not a matter of prudery. Nude though they undoubtedly are, there seems to have been a bit of confusion for a time about whether the figures are male or female. This interesting question was not definitely settled until somebody identified the group as having been entitled by the sculptor himself as Les Tres Hommes, which of course pretty well clinched the matter. What really distressed the Republican arrangements committee was the suggestion of utter despair in the attitudes of the marble trio; and the alarm proved to be well founded when it was learned that the sculpture—now apparently on loan exhibition at San Francisco—is part of a sequence illustrating the famous passage from Dante: Lasciati ogni speranza, voi ch-entrate (Abandon hope, O ye who enter here). This, as you can readily see for yourself, is hardly the sort of sentiment to inculcate among the delegates who are soon to assemble in the Cow Palace.

The moral, it seems to us, is that art and politics are rarely if ever compatible; and this doubtless explains why politically inspired statuary and painting are almost invariably mediocre, and why nearly all efforts to improve them have been disastrous. We recall, for example, how the late George B. McClellan, Jr., who was something of an amateur in these matters, undertook while mayor of New York to elevate the quality of public sculpture in that metropolis. Among other things he commissioned the late Frederick MacMonnies to design a fountain for the City Hall Park, giving the sculptor an entirely free hand (which is what these artists always prefer) in the choice and execution of the subject. Eventually MacMonnies produced a statue consisting of a muscular male figure—not unlike those in the Rodin group, only much bolder and more cheerful—designated Civic Virtue who had one of his massive feet planted firmly on the neck of a prostrate lady who was said to symbolize civic corruption. This outrageous inversion of the natural genders of vice and virtue occasioned a tremendous uproar and eventually the statue had to be relegated (like the Discobolos at Montreal) to the decent obscurity of the Borough of Queens, where—as we understand it—it was accepted by the populace after the false but ingenious rumor had been circulated among them that the trimphant male figure actually represented the beloved Dodgers and the prostrate female the sissified and detested Giants.

Then there was St. Gaudens' equestrian bronze of General Sherman near the lower Fifth Avenue entrance to Central Park, generally considered—after the Adams Memorial in Rock Creek Cemetery here—his finest work. In front of the general, as you may remember, is a Nike, or Winged Victory, leading his horse by the bridle, thus provoking the late Col. Henry Watterson to exclaim: "Well, if that isn't just like the old —— —— —— to make the lady walk!" The Sherman statue has been permitted to remain at its original site; but to this day no really chivalrous New Yorker passes it by without sheepishly averting his eyes in the manner of a seated male rider in a crowded subway car.

Brownell's Sell-Out

EXTENSION OF REMARKS

OF

HON. JAMES M. QUIGLEY

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Friday, July 6, 1956

Mr. QUIGLEY. Mr. Speaker, one of the more cogent commentaries on the huckstering technique of Attorney General Herbert Brownell, who withheld pertinent public information in order to promote the sales of a specific private business, has been voiced by the Carlisle (Pa.) Evening Sentinel in an editorial published on July 10.

The Sentinel's editorial writer points up the fact that Mr. Brownell has not conducted a news conference since last October with the comment, "Silence speaks for itself."

This same observation could be used to characterize the actions—or lack of them—of Mr. Brownell and the administration from the President on down in relation to civil rights and civil liberties. Mr. Eisenhower long ago promised the American people a civil-rights program. None was forthcoming until late this year, when, after months of silence, Mr. Brownell submitted a civil-rights program which was no more than a limited borrowing from programs which had long been made.

Mr. Brownell was also strangely and lengthily silent when a committee of the other body requested that he present his views relating to civil liberties. According to press reports, and published hearings, the Attorney General cavalierly ignored requests to testify on this important inquiry into possible abuses of our basic freedoms.

Silence, Mr. Speaker, speaks for itself. The editorial follows:

SELLING OUT NEWS

News ought to be made available when it becomes news, not withheld for a commercial TV program, as was done recently by the Department of Justice with the sanction of Attorney General Brownell.

Corn Products Refining Co. sponsors the TV show Press Conference. To appear on Press Conference, the person invited to be interviewed must have a news story to break—one which the producers consider worthwhile.

And, in that way on last Wednesday night the public learned that the Government had filed an antitrust suit against General Motors Corp.

The revelation of something new on TV may not in itself necessarily be of any consequence. But, when news which the public is entitled to when it happens is bottled up or saved by Federal or other officials to meet the condition of a TV sponsor—until the sponsor is ready to let it leak—that is another matter, a matter of concern to the public, the press, TV and radio. If continued, the integrity of the administration will be questioned even more by the public than it is today.

We doubt that Mr. Brownell intentionally aided the sponsor of a news leak. We would rather believe that, as in some of his other questionable actions, he failed to study the result of postponing a big story. But the Justice Department head and all others connected with the Government should stand forewarned that news must not only be made available when it becomes news, but it must be dispensed simultaneously to all reporters of all media.

The Attorney General, as the Washington Post said, in delaying the news of the action against GMC, "to present it under select conditions on a sponsored program," manipulated "public property to serve a private interest."

Mr. Brownell, by the way, has not held a press conference in Washington since last October. Silence speaks for itself.

Agriculture, Labor, and Business United for Private Power Development at Niagara

EXTENSION OF REMARKS
OF
HON. WILLIAM E. MILLER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Friday, July 13, 1956

Mr. MILLER of New York. Mr. Speaker, I ask unanimous consent to have printed in the appendix of the CONGRESSIONAL RECORD a copy of a letter forwarded to the Honorable DENNIS CHAVEZ, chairman of the Senate Committee on Public Works signed by Mr. H. M. Stanley of the New York State Grange, Mr. Harold C. Hanover of the New York State Federation of Labor, and Mr. William A. Mills of the Empire State Chamber of Commerce attesting to the fact that agriculture, labor and business organizations in the State of New York are united in their appeal for the further development of hydroelectric power from the Niagara Falls and river by private, regulated, tax-paying enterprise.

The letter follows:

INTER-ORGANIZATION CONFERENCE
ON POWER RESOURCES,
Albany, N. Y., January 9, 1956.

Hon. DENNIS CHAVEZ,
Chairman, Senate Committee
on Public Works,
Washington, D. C.

DEAR SENATOR CHAVEZ: One of the characteristics of what we call "the American Way" is the manner in which we organize for the purpose of acting collectively to solve mutual problems and attain desirable objectives. Much of our social and economic progress in New York has been achieved through the collective action of volunteer citizen groups.

One matter of mutual concern to a majority of these citizen groups is the development of the power resources at Niagara Falls. After careful consideration of all aspects of the problem and through the democratic process of group discussion and action, the members of an overwhelming majority of these organizations have declared it to be contrary to the public interest to construct and operate power-generating facilities under Government auspices. These are not isolated selfish groups which have reached this conclusion. They represent the very best of our citizens from every walk of life—agriculture, labor, business, as well as political, educational, professional, and civic groups.

At previous sessions of the Congress these individual groups have made known their views to the members of your committee. Because we believe this may be the year of decision, we are making this united appeal for favorable consideration of legislation which will authorize the development of the water resources at Niagara by public utility companies which are regulated by the State of New York, for the benefit of all of the people. The controversy already generated by the New York Power Authority in its development of power resources at the St. Lawrence has further convinced us that their management of economic resources is not in the public interest.

We ask you to favorably report legislation incorporated in S. 6 by Senator CAPEHART and H. R. 142 by Congressman MILLER.

Respectfully yours,

H. M. STANLEY,
New York State Grange.
HAROLD C. HANOVER,
New York State Federation of Labor.
WILLIAM A. MILLS,
Empire State Chamber of Commerce.

Coal Against Government Subsidy for Atomic Energy

EXTENSION OF REMARKS
OF
HON. EUGENE SILER
OF KENTUCKY
IN THE HOUSE OF REPRESENTATIVES

Friday, July 13, 1956

Mr. SILER. Mr. Speaker, there used to be a rhyme that went something like this:

Old King Cole was a merry old soul
And a merry old soul was he.
He called for his pipe and he
Called for his bowl and he
Called for his fiddlers three.

Now, we have had another king by the name of Old King Bituminous-Anthracite Coal that used to be quite merry and gay down in Kentucky, West Virginia, Pennsylvania, Ohio, Illinois, and other places. But in recent years his gaiety has changed to certain deadly seriousness for the mere survival of King Coal. This has been caused by an incursion of his domain by two powerful enemies, known as natural gas and fuel oil. These enemies have already robbed thousands of honest, hard-working, patriotic Americans out of their jobs in the once great coal industry. These enemies have put 1 day or 2 days of mining work on the company's weekly bulletin boards in many places where there might have been 4 days or 5 days had these un-American usurpers not intruded with their brazen robbery against the wives and children of some of our very best citizens. I refer to them as un-American because that is exactly what they are in large measure. They are considerably foreign born—coming in from Venezuela, Canada, and other places that pay no American taxes in time of peace and bear no American arms in time of war.

But just at present we are about to witness still another potential enemy of Old King Coal, namely, the proposed atomic-energy legislation that has already had complete success in the Senate, and will soon come up in the House, asking you for $400 million of tax money to have our Government do these diabolical things:

First. Help destroy a great taxpaying industry like the coal industry.

Second. Put on the idle shelf of unemployment hundreds of thousands of useful, self-sustaining, family-rearing coal miners.

Third. Push our country still further into chaotic socialism by doing things through Government that could better be done by private enterprise.

Atomic development is already going forward at a very rapid and satisfactory pace through the activities of some of our great industrial giants like General Electric Co. and Westinghouse Electric Corp. and at least a dozen others that have previously entered competitively into this great field of science and engineering.

Make no mistake about it, we Americans are going to destroy ourselves completely by further socialization if we persist in that direction in the future as we have in the past. This atomic-development scheme at a cost of $400 million from the taxpayers' purse is socialistic from stem to stern. It will destroy jobs and private industry and taxable property and will attempt to do something by Government that is already being satisfactorily accomplished by private business concerns.

The vote in the Senate was close. It carried by a margin of nine votes in that body. I hope it will fail by a margin of 99 votes in the House. It will if all of us will wake up, especially all the red-blooded Americans interested in Americanism.

Nixon Annoys Izvestia and Nehru

EXTENSION OF REMARKS
OF
HON. JOSEPH F. HOLT
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES

Thursday, June 28, 1956

Mr. HOLT. Mr. Speaker, I should like to call attention to the following editorial from the Los Angeles Times of Tuesday morning, July 10, 1956:

NIXON ANNOYS IZVESTIA AND NEHRU

Vice President NIXON, in his goodwill tour of Asia, has succeeded in annoying both

the Russian newspaper Izvestia and the Indian Prime Minister Nehru. Perhaps that is not enough in itself to mark the tour as a success, but it is a good start.

The Vice President has touched at the Philippines, Formosa, Thailand, Pakistan, and then Turkey, everywhere proclaiming American friendship for free peoples and criticizing those who seek to be neutral in the worldwide struggle between freedom and totalitarianism.

Prime Minister Nehru commented that Mr. NIXON'S views are not democratic. But Nehru's own government has many elements of totalitarianism and it may be questioned how much a Socialist knows about democracy.

Izvestia says the Vice President takes "outdated cold war positions" which might be a valid criticism if cold war positions are really outdated. The expression assumes the Russians are sincere in their new attitude, something they have yet to prove by "deeds, not words."

The Vice President himself intimated as much when he said Asian leaders are wise in waiting to see whether Khrushchev, Bulganin & Co. have "quit acting like Stalin." They have, he said, quit talking like Stalin, but that alone is not enough.

The omission of India from the Vice President's trip is regarded as an unnecessary affront by the admirers of Nehru. But in view of the numerous unnecessary affronts Nehru has given the American Government and people we can see no impropriety in it.

Truth Must Prevail

EXTENSION OF REMARKS
OF

HON. JAMES M. QUIGLEY

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Friday, July 6, 1956

Mr. QUIGLEY. Mr. Speaker, under leave to revise and extend my remarks, I include the text of an address delivered by the Honorable George M. Leader, Governor of Pennsylvania, at a regional convention of the Committee on Political Education of AFL–CIO in Pittsburgh on July 12.

I recommend it to all those who seek the truth:

ADDRESS OF HON. GEORGE M. LEADER, GOVERNOR OF PENNSYLVANIA AT THE CONVENTION OF THE COMMITTEE ON POLITICAL EDUCATION OF AFL–CIO, WILLIAM PENN HOTEL, PITTSBURGH, JULY 12, 1956

People are always telling newspapermen that their jobs must be fascinating because they get to meet such interesting people.

They're right—newspapermen do. But a Governor doesn't do so badly himself. Since I took office 18 months ago—as Pennsylvania's third Democratic Governor since the Civil War—I've met more important people than you can shake a stick at.

Being Governor must have something to do with it, because I'm doggoned if I met half as many important people when I was a chicken farmer.

For instance, I've met a good many labor leaders—some at the National, others at the State level.

So I have friends here today—friends who fought shoulder to shoulder with my administration in a common effort to bring back simple humanity to Pennsylvania government.

Now one of the privileges of being a governor is the opportunities you get of making speeches before friendly groups willing to put up with a little modest bragging: and I'm going to avail myself of that privilege right now.

We have a Democratic house and a Republican senate in this State, and, as you might expect, a situation like that doesn't usually lead to political harmony. As a result, we recently concluded the longest, bitterest legislative session on record.

We were trying to put across a humanitarian program; the Republican senate was trying to obstruct it. Getting humane legislation through that GOP senate was like tunneling through granite. We invariably had to blast.

Yet surprisingly enough this was the most successful session for people in Pennsylvania's history.

We passed FEPC. We liberalized unemployment compensation. We rammed through one of the best workmen's compensation laws in the Nation. We upgraded our occupational disease law.

Our plan to attract new industry and ease unemployment got through. We passed a wide-ranging mental health program; and another program to help the State's handicapped, crippled, and retarded children.

These are only a few of our accomplishments, but they'll give you some idea of how much long-overdue legislation was made law.

Let me make this clear, however; we could not have done the job without the responsible support of Pennsylvania labor. They fought not only for decent labor laws, but for every humanitarian measure we introduced.

They have earned the lasting gratitude of this administration and, more important, of their fellow Pennsylvanians.

Accordingly, I'd like to ask that you delegates from West Virginia, Maryland, Delaware, Ohio, and New Jersey join me in a standing tribute to Pennsylvania's men and women of labor.

And as long as I'm in a boasting mood, I might just as well tell you one more thing: Pennsylvania has not passed a right-to-work law, nor will Pennsylvania pass one as long as I am Governor.

The first day I took office I served notice on that. Don't bother to pass one, I advised the Republican leadership; because if you do, I'll veto it before the ink has dried.

However, I know you don't want to hear me talk Keystone politics all afternoon. The Pennsylvania delegates will hear more than enough on that subject between now and election, and I think the rest of you are more interested in the coming campaign as it will affect your own States and the Nation.

So let's talk about the national scene.

History tends to repeat itself, as does the Republican Party. So let's take a look at the 1952 election and see if it casts any light on the events of this November.

Now the Republican Party used its usual campaign techniques 4 years ago. All of them are designed to confuse the voter and obscure the issues. But they added one new and devastating element: Highly skilled propaganda.

For the first time, the GOP placed itself unreservedly in the hands of Madison Avenue. And Madison Avenue, plus Wall Street, is a frightening and unholy alliance.

Notice, first of all, the selection of the candidate. General Eisenhower was typical of the New Look in GOP candidates. He is cut from the same cloth as Tom Dewey and Wendell Willkie, seemingly a middle-of-the-roader with liberal tendencies.

Note, too, that the real Republicans—the conservatives like Taft, Knowland, and George Humphrey—couldn't have gotten the Presidential nomination if they tried. And the reason for that is simpe enough: They couldn't have won, and even their own party knew it.

This was how a citizen-for-Eisenhower leaflet stated the case just before the Republican convention:

"The Republican Party must not take a chance. With Eisenhower, the victory will be sweeping. Without Eisenhower, the outcome is doubtful. If you are seeking Republican office, would you rather add to your strength the surging wave of Ike Eisenhower, or have a doubtful candidate ride in on your coattails? The odds against a Republican victory are huge."

According to a Roper poll in March of 1952, General Eisenhower was the most-admired living American. A war hero, he needed no buildup and his personal popularity was immense.

The Republican Party could no more have resisted the impulse to capitalize on his popularity than alley cats could resist cream. At the convention, you'll remember that Ike won on the first ballot.

Senator Taft, who thought the New Deal and Fair Deal threatened the country with creeping socialism, never had a chance—even though he was Mr. Republican to his party and a frank and able spokesman for its true views.

And although Taft left the convention a bitter and disgruntled man, he and Eisenhower quickly made it up at Morningside Heights, where the general declared himself in agreement with the principles of the Taft-Hartley Act and a firm opponent of creeping socialism.

The breach in the GOP mended, the time had come to page the men in the gray-flannel suits—the boys from Madison Avenue. Pay them well enough and they can merchandise anything—soap, shoe polish, or supermen.

Chosen to head the Republican National Committee's Public Relations Division was Robert Humphreys, at a modest $2,044 a month. RICHARD NIXON brought along an expert named Murray Chotiner, whose name you may have read lately in the papers. Chotiner had not only handled NIXON'S campaign for Congress and the Senate, but had acted as campaign manager for Earl Warren and Senator KNOWLAND.

Also on the team was the former director of public relations at General Mills; the firm of Whitaker and Baxter, which had handled the campaign to kill the Democrats' national health insurance plan; the Kudner Agency; Ted Bates and Co.; and Batten, Barton, Durstine, and Osborne—better known along Madison Avenue as B. B. D. & O.

This is only a partial list; for there were many, many others.

All of them had one belief in common: You can merchandise a candidate just like you merchandise a tin of Spam. And they knew the techniques—all the techniques of press-agentry ever to spring from the larcenous mind of man.

Moving into the smoke-filled room, the boys from Madison Avenue took over—and relegated Wall Street's representatives to the secondary duty of digging up the cash.

Now 1952 was the first year that television had a large enough audience to make it important in a presidential campaign. So the Eisenhower tub-thumpers budgeted close to $2 million for radio and television and turned the admen loose.

B. B. D. & O.'s team bought their time on this basis; political telecasts, they reasoned, couldn't compete successfully for mass audiences if faced with competition like Arthur Godfrey. Many political shows would be tuned in by accident, said B. B. D. & O., and one of their spokesmen added "We knew that people were more interested in Godfrey than a political speech."

They solved this knotty problem by purchasing outright the time periods which already had the largest established audiences—thus keeping the entertainers off the airwaves and out of competition.

The other tub-thumpers were also busy. They were turning out cartoon film strips—

six of them—and invading the domain of Mickey Mouse. Listen to the titles:

"Korea—The Price of Appeasement;" "America's Creeping Socialism;" "Inflation, or Our 50 Cent Dollar;" "Taxes;" "Ticket to Freedom;" and, last but not least, "Scandals."

"None of us are critics of cartoons," remarked one huckster. "You make a cartoon of a Chinaman and a sword dripping blood and it hits you with your hardly knowing it. The same thing in a movie would be ridiculous."

Some three million people saw those cartoons. This is known as the idiot approach to issues, or, politics made simple.

That's only the beginning. The boy wizards were also producing speech kits; background material; political manuals for party workers; special appeals for farmers, Negroes, laborers, veterans, and housewives. They were turning out pamphlets, leaflets, posters, streamers, buttons, badges, gimmicks, and even comic books.

One comic book, called From Yalta to Korea, openly implied that Democratic officials had conspired against their own country. The main victim of this particular piece was Dean Acheson, who will go down in history as one of America's great Secretaries of State.

A large percentage of this campaign material was devoted to smear, sneer, and innuendo. Much of it stated openly that a vote for the Democrats was a vote for "corrupt government," "higher taxes," "more and wilder spending," or "more socialism-communism."

Nor is that all. Borrowing from the techniques of Hollywood and the circus, advance men went forth like a plague of locusts. NIXON'S advance agents, under the expert tutelage of Murray Chotiner, received instructions so detailed that they are hard to believe. Typical was the item in the advance man's manual instructing him always to get a Korean war veteran to lead the Pledge of Allegiance to the Flag of the United States.

The Eisenhower campaign opened formally in Philadelphia's Convention Hall. Thanks to an unrelenting telephone campaign, a hand-tailored rally of 18,000 people was turned out. The press agents' blueprint for that august occasion filled 39 pages. As the throng enters convention hall, the blueprint read, the following will be provided for them: 25,000 fresh-cut red roses; 3,000 noisemakers; 5,000 flags; 25,000 programs.

Candidate Eisenhower was even instructed to arrange himself with one hand on the Liberty Bell.

No, they didn't forget anything. Except, perhaps, the issues.

Adlai Stevenson, meanwhile, was telling the truth. He was telling the American Legion that he intended to resist any excessive demands from veterans' groups. He was telling a Virginia audience that he adhered wholeheartedly to the civil-rights plank of the Democratic Party. He was telling a Louisiana audience that he opposed giving the oil-rich tidelands to the individual States.

But General Eisenhower was coming out four-square for full parity to farmers, social security, balanced budgets, more and better housing, workmen's compensation, unemployment insurance, the liberation of "captive" nations, or anything else that seemed to promise a vote.

And the Madison Avenue experts were right at his elbow to tell him what the people wanted promised.

Mostly, though, Ike talked about the mess in Washington, and the "scandal-a-day administration," gradually moving in on the Communist issue, and the Democrats' responsibility for the war in Korea.

DICK NIXON got caught with his secret fund showing, and bought $75,000 worth of television time to explain it. As usual, Madison Avenue was represented in the affair. Edward A. Rogers, who produced "The Lone Ranger" and "Double or Nothing" was NIXON'S television adviser, and, presumably, we are indebted to him for the soapiest soap opera on record.

And where had NIXON'S $18,000 secret fund gone?

To "political expenses," he said, "of getting my message to the American people; and the speeches I made—the speeches I had printed, for the most part concerned this one message of exposing this administration, the communism in it, the corruption in it."

His wife, Pat, didn't even have a mink coat, he said, and had to make do with an ordinary cloth coat like everybody else. As for the charges made against him, they were simply an attempt to frighten him into silence on the issue of communism in American government. And that's when his anti-Communist dog—name of Checkers—was dragged in by the scruff of his neck.

Over 9 million sets were tuned in on that nauseating but expert performance. And after those 9 million sets had been turned off, NIXON was officially as clean as a hound's tooth in the dedicated eyes of the Republican Party.

He was clean enough at any rate to participate in the dirtiest assignment of a dirty campaign—the mudslinging.

That was the campaign in essence. The Republicans promised what needed promising; avoided issues where possible; double-talked when cornered; smeared on every possible occasion, and smothered the voters in sound and fury signifying nothing.

They spent $1,500,000 on radio spots the day before election in the greatest mass saturation effort in history. And this was the kind of responsible effort it was:

A voice would say: It was extra tough paying my income tax when I read about the internal revenue tax collectors being fired for dishonesty.

And Eisenhower would answer: Well—how many taxpayers were shaken down, I don't know. How many crooks escaped, I don't know. But I'll find out after next January.

The final stroke of huckstering genius was the famous Eisenhower speech of October 24, when he said: "I shall go to Korea. That is my pledge to the American people."

He never got around to explaining what he would do when he got there, but he seemed to fool a lot of people.

I wish I had time to talk more about that campaign—about the "Kids for Ike," and the organized cheering specially set up for Republican rallies.

But I think I've made my point, except for one last thing:

According to a Roper survey, Communists in government was a major issue by the time the campaign ended. A majority of Americans believed Communist infiltration in Government agencies to be one of the Nation's most serious problems; and they also believed, by a 4-to-1 count, that only the Republicans could successfully drive the Reds out of Washington.

The pitchmen of Madison Avenue have always believed that the claim is quicker than the eye and that truth is a professional handicap. Their attitude is hardly surprising, for the huckster's job is done once he gets sales acceptance for his product. And if the product does not live up to the claim he's made for it? That's somebody else's headache.

Ever since the Eisenhower administration took office, its one consistent policy has been hucksterism; has been government by handout; government by slogan; government by snow-job. The revolutionary new theory in Washington is to hide each of the Nation's problems under a ton of press releases.

So if a person wants to find out what's happening to the United States at home and abroad, his only hope is to duck the confetti, sidestep the slogans, ignore the pollsters and turn the harsh spotlight of truth on the issues themselves.

The State Department's fatuous utterances? There is no truth there. As the Christian Science Monitor remarked, a Dulles account of an international conference sounds like a Hollywood blurb for the latest Cecil B. DeMille supercolossal.

"Trade, not aid?" Then why put a high-tariff man on the Tariff Commission?

"Unleash Chiang?" You might just as well unleash NIXON'S dog, Checkers.

"More bang for a buck?" Ask Charley Wilson how he cut down the number of our Air Force wings, reduced atomic research, and still managed to improve American defense.

Is it any wonder the voters' heads are reeling?

Yes, Presidential Aid C. D. Jackson described the process perfectly when he said: "We are merchandising the living hell out of the Eisenhower program."

This is the type of campaign we face in the coming election. We in America are being bombarded with lies, ballyhoo, and slogans. Already confronted with a Juggernaut of propaganda, the voter will find this campaign far worse than the campaign of 1952.

Remember this: the Republican Party is as frightened of an informed electorate as the Devil is of holy water. The GOP doesn't want people to think—it wants them to react. It doesn't want them to understand, it wants them dizzied and confused.

It isn't that this is a new Republican attitude, because it isn't. The frightening thing about it, however, is the amount of confusion and muddle you can buy if you spend enough money and spend it cynically and expertly enough.

When I ran for Governor I ran on a positive program—just as Democrats usually do. I had a program for unemployment; mental health; handicapped children. But during that entire campaign no Republican opposed me on those constructive issues.

Instead, they took full page ads in the newspapers, questioning my patriotism and my loyalty to this country because I once voted against a loyalty oath bill.

So I speak from personal experience when I say that I know something of Republican campaign techniques. And I predict that 1956 will be twice as bad as 1952. The smear technique is already back.

Just last week the Senate Republican policy committee issued a memorandum proclaiming that the Communist Party wants "the Republicans defeated" and hopes for "a Democratic victory" this fall.

And not long ago DICK NIXON announced that the Supreme Court segregation ruling was made because Chief Justice Warren is a Republican.

Yet the campaign has hardly started.

Let us always remember that no matter how thing you slice it, the huckster technique is still baloney. Let's try to teach the American voter to recognize baloney when he sees it, too. That's your job in COPE. And that's my job as a party leader.

Our big guns in this campaign must be the heavy artillery of truth, fired in a tireless barrage.

I like Harry Truman's remark. "I never give 'em hell," he said. "I just tell 'em the truth and they think it's hell."

The Democratic Party does not want Democrats who are Democrats because of tradition. We want Democrats who are Democrats because of conviction.

We do not want men and women to stick to this party through sheer loyalty. We want them—always—to choose the Democratic Party on its merits.

That goes for labor.

It is too frequently said that labor must stick to the Democratic Party because it has no other place to go. I don't buy that theory. I think labor sticks with this party because it gets results.

Labor stayed with the Democratic Party because it got results under the leadership of Franklin Roosevelt and Harry Truman.

And labor will back the Democratic Party again, because it knows it will get results under Adlai Stevenson.

But the day our party fails to get results, fails to be responsive to the people's will, is the day when it no longer deserves the support of labor or any other group representing the people.

I, for one, want to see the party of Jefferson and Jackson continue to deserve your support. And we will continue to deserve your support so long as the Democratic Party believes in special privileges for all Americans.

The Bible quotes Jesus Christ as saying: "Know ye the truth and the truth shall make you free."

To you men and women of COPE I say only this final word:

Without truth democracy is lost. Without truth the democratic process is fettered and helpless. Without truth no man, no party, no nation can survive.

This is the task that awaits you, as indeed it always awaits you. But at this moment in our Nation's history the forces of truth are being menaced as never before.

I know what the letters COPE stand for. But let's make them also stand for the Committee on the People's Emancipation. And let that emancipation proceed, as it must, from our trust in the voters of America and their ability to tell the counterfeit from the real.

You who have done so much in six great industrial States to win economic freedom for millions of our people must face the equally important task that lies before you.

That task is to regain for those millions of men and women full political and social freedom, free access to the truth. For when the truth prevails, the truth will make them free, and keep them free.

In this you must not, you dare not, fail them.

The Housing Bill

EXTENSION OF REMARKS
OF
HON. WILLIAM A. BARRETT
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Friday, July 13, 1956

Mr. BARRETT. Mr. Speaker, "unrealistic, excessive and ill conceived" were the terms applied by the administration's housing spokesman to a housing bill reported out by the House Banking and Currency Committee. These were the uncomplimentary adjectives chosen by a man who once served in this House to characterize a measure that represented many months of honest toil and deliberation. This was how he chose to identify a bill that differed in some respects from an administration-sponsored measure. I do not contest his right to free speech, but I do object to the looseness of his language. Webster's International is full of words that he might have used.

Be that as it may, the Housing and Home Finance Administrator tars H. R. 11742 with a sweeping brush. He found nothing good in the bill, and the House Rules Committee echoed him with a resounding "Amen." I do not propose to discuss the obvious merits of the bill at this time. That will come when the Rules Committee reverses itself and grants a rule for the debate of the bill by this Chamber.

It seems strange that the Housing Administrator is willing to submit to us the question of appropriations with which to operate his Agency, yet balks at having us debate the housing bill of 1956.

Washington has a few treasured customs, among which are the Potomac Regatta, the Cherry Blossom Festival, and the Retreat Parade at Fort Myers. Are we to add to this catalog the annual contest over public housing? Maybe so, but it seems to me that the Rules Committee should give public housing a fair chance, and not bottle it up in star chamber proceedings. I believe, and many of you agree, that we have sufficient acumen to evaluate the merit of bills. We have been in the lawmaking business for a long time, and I do not believe we would permit something to become law that was not in the best interests of the country. At least we should be given the opportunity to demonstrate our lawmaking ability.

Time is running out. The Rules Committee must not disregard the fact that the housing bill of 1956 is vital to the homebuilding industry. The committee, with regard for the democratic process we all cherish, must give this body a chance to debate H. R. 11752. We assure the committee that we will act in the best interests of our constituents, and that our deliberations will not endanger the welfare of the Nation. All we want is the chance.

Community Cooperation at Griffiss Air Force Base

EXTENSION OF REMARKS
OF
HON. WILLIAM R. WILLIAMS
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Friday, July 13, 1956

Mr. WILLIAMS of New York. Mr. Speaker, under leave to extend my remarks, I wish to insert in the RECORD a copy of resolutions by the chamber of commerce and the Common Council of the City of Rome, N. Y., as well as a copy of an editorial which appeared in the Rome Daily Sentinel on July 9, 1956. To these inserts, I wish to add my personal appreciation for the service of Col. Benjamin H. Shiffrin who completes his tour of duty as commander of Griffiss Air Force Base this month. These statements are evidence of the fine relationships which have existed between this military base and the surrounding communities during the period of his command.

The resolutions and editorial follow:

RESOLUTION OF ROME CHAMBER OF COMMERCE, ROME, N. Y.

To Whom These Presents Shall Come Be It Known That:

Whereas Col. Benjamin H. Shiffrin has completed his tour of duty as commanding officer of Griffiss Air Force Base at Rome, N. Y., and is about to assume his new duties as chief of the Air Force Section of the Military Assistance Advisory Group in London, England; and

Whereas Colonel Shiffrin has made this tour of duty an occasion to contribute significantly to the progress of the community of Rome, and to building the fine relationships which exist between the community and the Military Establishment for which he has been responsible, through his honest, forthright recognition of the mutual problems inherent in such relationships; and

Whereas his dedication to improving the environment for both military and civilian is evidenced by the devotion of his energy and experience and resources to such essential and worthy projects as more adequate housing, extended community education, consistent and useful public information, cooperative support of the community social service, the common safety and his own personal service to civic betterment: Therefore be it

Resolved, That the Rome Chamber of Commerce serve upon Col. Benjamin H. Shiffrin this dictum of the esteem in which he is held as a military officer and as a citizen of our community; and of our regret that the community of Rome will no longer have his valued counsel and assistance; and be it further

Resolved, That this dictum be made a part of the records of the Rome Chamber of Commerce; that it be published for the attention of the community he has served; and that it be read into the CONGRESSIONAL RECORD by our appropriate representative to the Congress of the United States of America.

RESOLUTION EXPRESSING THE COUNCIL'S APPRECIATION TO COLONEL SHIFFRIN, COMMANDER GRIFFISS AIR FORCE BASE, BY COUNCILMAN HERBST

Whereas Col. Benjamin H. Shiffrin, commander of the Griffiss Air Force Base, has given unselfishly and unceasingly of his time and energy for the betterment of life in our community; and

Whereas the common council of the city of Rome, N. Y., would like to make known its respect and appreciation for Colonel Shiffrin's frank and fair representation of the position of the United States Air Force in his relations with the city of Rome, and for his truly democratic spirit and his unswerving devotion to his duty as former commander of the Griffiss Air Force Base: Now, therefore, be it

Resolved, That the common council of the city of Rome, N. Y., hereby conveys the community's gratefulness to Colonel Shiffrin for the meritorious civic service rendered by him during his stay in Rome and wishes him every success in his future endeavors; and be it further

Resolved, That the city clerk be requested to send an appropriate copy of this resolution to Colonel Shiffrin.

[From the Rome (N. Y.) Daily Sentinel of July 9, 1956]

COLONEL SHIFFRIN: GOOD CITIZEN OF ROME

We share with others in the community the wish that Ben Shiffrin was not going to leave us. He is a good citizen.

Colonel Shiffrin, who has been commander of Griffiss AFB since July 1954, is going to London to be chief of the Air Force section of the United States Military Assistance Advisory Group.

This is a combination military-diplomatic job. Ben Shiffrin is well qualified for it. He has shown himself to be an excellent officer and an expert diplomat in his responsibility of maintaining good relations between the community and Griffiss AFB in this important preexpansion period.

The Rome Common Council has officially commended him for his frank and fair representation of the position of the United States Air Force in his relations with the city of Rome, and for his truly democratic

spirit and his unswerving devotion to his duty as commander of Griffiss AFB. The Common Council formally expressed the community's gratefulness to him for the meritorious service rendered by him during his stay in Rome.

The Rome Chamber of Commerce will honor Colonel Shiffrin tonight at a dinner in appreciation of his community service. These two formal actions by our leading municipal and civic bodies speak for the high regard in which Colonel Shiffrin is held.

The Air Force would have to look far to find a man better suited to represent the service in community relations than Colonel Shiffrin. He has a deep sense of responsibility and an understanding of the civilian viewpoint in the community's relation with the military. His record in Rome in this respect reflects credit upon the Air Force.

We will miss Colonel Shiffrin and his gracious wife. We join with many others in wishing them happiness in their new assignment.

Mutual Assistance Program

EXTENSION OF REMARKS
OF
HON. T. MILLET HAND
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Friday, July 13, 1956

Mr. HAND. Mr. Speaker, on Wednesday in the course of my speech on the appropriations bill for Mutual Assistance, I referred to the present legal impossibility of setting up military forces in Japan. I then said that the results of the Japanese elections were not yet clear. It is now apparent that the Hatoyama government has not elected sufficient delegates to change that Constitution.

The Washington Star of Thursday, July 12, refers to this in an editorial called "Setback in Japan." The Star says that votes are needed "to speed up the country's rearmament." It is worse than that. They need it to rearm at all, at least legally and constitutionally.

I am appending the editorial referred to:

SETBACK IN JAPAN

The chief effect of Sunday's parliamentary elections in Japan is that Premier Hatoyama and his conservative Liberal-Democratic government have run into a serious new roadblock in their effort to push through the constitutional changes needed to speed up the country's rearmament. The setback is one that is especially welcome to the Moscow-Peiping axis.

Although it is true that the Liberal-Democratic Party still retains majority control of the Diet by a wide margin, it has fallen short of what it sought in Sunday's vote—namely, more than two-thirds of the seats in the House of Councillors, which corresponds roughly to our Senate. If that goal had been attained, then the Hatoyama government would today be in a position to bring about an early constitutional amendment to build up Japan's inadequate defenses to the degree obviously demanded by the times. But the antirearmament forces, predominantly the Socialists, have won a sufficient increase in their parliamentary strength to block any real progress toward that objective for months to come.

In fact, as a result of Sunday's vote, it is now felt in Japan that no substantial advances are likely to be made in this field until new Diet elections are held in 1959, at which time the returns conceivably may be no better than those just recorded. Interestingly enough, of course, the root of all this uncertainty can be found in the occupation policy enforced by our country after the Japanese surrender in 1945. For it was under that policy, as carried out by General MacArthur, without dissent, that Hirohito's shattered empire adopted a constitution in which the once-belligerent Land of the Rising Sun forever renounced the right to maintain an army, navy, or air force.

This unwise and unrealistic renunciation—the first of its kind in the history of nations—has been a constant obstacle to Japan's postwar rearmament. Presumably, one of these days, the people of the country will take the necessary constitutional action to rectify the situation, but apparently they prefer to procrastinate and let the matter drift at present. Meanwhile, still depending primarily on American power to keep them safe from aggression, they are gambling with their own national defense.

ASWAN DAM FOR EGYPT

I also referred in that statement to the continued likelihood of the United States throwing in a great many millions to help a very unfriendly Egypt with a billion-dollar dam construction. It now appears that Egypt has very kindly consented to deal with us on this proposal. According to the Washington Post of July 13, 1956:

High Egyptian sources said Nasser had personally given Hussein a clear-cut go-ahead to complete the Western package deal. It involves an immediate $70 million grant from the United States and Britain, followed by a $200 million World Bank loan.

Thus, Egypt is finally willing to consent to take $70 million dollars more of our money as a starter. Undoubtedly, we will be relieved that this gift has not been turned down as had been feared.

How Not To Improve Foreign Relations

EXTENSION OF REMARKS
OF
HON. MELVIN PRICE
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Friday, July 13, 1956

Mr. PRICE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include herewith an editorial which appeared in the July 11, 1956, issue of the East St. Louis (Ill.) Journal. The editorial, entitled "Relations Damaged," follows:

RELATIONS DAMAGED

Vice President NIXON seems determined to make himself as unpopular with India as he is with the Democratic Party.

The running argument which Mr. NIXON conducted with Prime Minister Nehru of India over the weekend can do nothing except damage still further American relations with India, the world's second most populous country and the key democratic nation in Asia.

The Nixon-Nehru disagreement began when the Vice President echoed in a Fourth of July speech at Manila a recent statement by Secretary of State Dulles equating neutralism with immorality.

Two days later, in London, where he was attending a meeting of the Prime Ministers of the British Commonwealth, Mr. Nehru said: "I submit for consideration that Mr. NIXON and Mr. Dulles are saying something that is opposed to the democratic way of life." The Indian Prime Minister said further that the very basis of democracy is tolerance for differing points of view.

Monday in Karachi, capital of Pakistan, India's rival for the control of the disputed Kashmir and a country of which India is as apprehensive as the United States is of the Soviet Union, Mr. NIXON, in the words of an Associated Press dispatch, "fired a return salvo at India and Prime Minister Nehru."

Not only did Mr. NIXON prolong an argument that Mr. Dulles should never have started, but he did so from the capital of Pakistan after flying over India without stopping there on his way to Karachi from Thailand.

The Eisenhower administration has had a fondness for injecting morals into public issues. But to say that India and Nehru are immoral because they wish to pursue a policy of what Nehru prefers to call noninvolvement rather than neutralism is an almost insulting way of referring to a man and a country of incalculable importance to Asia.

The Nixon-Nehru name-calling comes precisely when Mr. Nehru was scheduled, before President Eisenhower's latest illness, to be in the United States conferring with the President over the questions which divide India and the United States.

The events of the weekend make it all the more imperative that Mr. Eisenhower reschedule his President-to-Prime Minister talks with Mr. Nehru for as early a date as can be mutually agreed upon.

Uprising in Poland

EXTENSION OF REMARKS
OF
HON. SAMUEL N. FRIEDEL
OF MARYLAND
IN THE HOUSE OF REPRESENTATIVES
Friday, July 13, 1956

Mr. FRIEDEL. Mr. Speaker, a little over a week ago, the Polish workers of Poznan rose in mass protests against their country's Communist regime. They besieged the local secret police headquarters, burned its records and battled the troops sent to put down the revolt. Like their fellow workers in Berlin 3 years ago, they fought tanks and infantry until, by government admission, at least 38 lay dead and 270 injured.

These brave Polish people were driven to this desperate action because they have been ruled by the minions of a foreign power and the fruit of their factories and farms taken to strengthen that power. A revolt such as this in Poznan is a desperate way of calling the world's attention to the plight of those under Communist oppression.

The Poznan outbreak is the most spectacular of a thousand signs of crises in world communism. The rioters were clamoring for food in order to keep body and soul together and they expressed their hatred for their godless Communist overlords.

Mr. Speaker, all of us in America owe a great debt to a very great and revered patriot who fought and died in order to help and assist our own beloved country. I refer, of course, to none other than Casimir Pulaski, who was born in Podolia, Poland, in 1748. In 1777 he

came to America in order to give his all on behalf of our then new Republic. It was for his exemplary conduct at the Battle of Brandywine that he was given a brigade of cavalry which he commanded until March 1778. This great soldier entered Charleston during May 1779, and held it until that city was relieved. During the siege of Savannah he was wounded and died 2 days later. For what he did for us, we shall be eternally grateful. I am proud, indeed, that my State—the Free State of Maryland—has not forgotten this great hero's sacred memory, for a modern dual highway, a part of what is now designated as U. S. 40, leading from the great city of Baltimore to the northeast, has been named after this brilliant son of Poland.

All of us are fully appreciative of the brilliant and courageous record of the Polish people over the centuries. And all Americans are cognizant of the many contributions that people of Polish descent have made to America's wealth and culture.

Although we all are confident that the indomitable spirit of Poland and its brave people will ultimately triumph over the evil forces of darkness, I urge that the Government of the United States repay its debt to Poland by its immediate protest of such action in order to prevent the further slaughter of hungry and innocent people at the merciless hands of the Communist Polish puppet government of Soviet Russia.

Why Spend $34 Million When Friendship Airport Is Available?

EXTENSION OF REMARKS
OF
HON. RICHARD E. LANKFORD
OF MARYLAND
IN THE HOUSE OF REPRESENTATIVES
Friday, July 13, 1956

Mr. LANKFORD. Mr. Speaker, I ask unanimous consent to insert in the RECORD a timely editorial which appeared in the Evening Capital, Annapolis, Md., July 11, 1956.

Recently on the floor of the House we have heard of the need for relief of air traffic congestion at the Washington National Airport. I believe that every one of us here is cognizant of the fact that this relief is badly needed. I believe that each one of us is equally cognizant of the duty we owe the taxpayers of the Nation to spend our taxes wisely. It would seem to me that we would be derelict in our duty in spending added millions for the construction of a second airport at Burke, Va., which in my opinion, would not only not relieve the congestion at National Airport but would add to it. With this in mind, I have asked for permission to insert the following editorial:

WHY SPEND $34 MILLION WHEN FRIENDSHIP AIRPORT IS AVAILABLE?

Once gain the controversial problem of relieving congestion at the Washington National Airport, which involves a proposed new airport at Burke, Va., and the use of the Friendship International Airport in northern Anne Arundel County, is before Congress.

But this time there is a new twist. President Eisenhower has asked Congress for a $34,700,000 appropriation to start construction of the Burke Airport. Then, following his request, Sinclair Weeks, Secretary of Commerce, has asked the Civil Aeronautics Board to designate the Friendship Airport as an alternate field to the Washington Airport until the problem of the airport at Burke is solved.

It has been pointed out that even if the Congress would make the funds for the Burke Airport available now, the field there will not be ready for traffic until June, 1959.

So, apparently, during this 3-year period, the plan is to use the Friendship Airport to relieve the pressure on Washington. This plan brings up an obvious question—if the Friendship Airport is satisfactory to use for this purpose for a 3-year period, why not continue to use it? Why spend $34,700,000 and more with the Friendship field available and with its use being requested?

No wonder the Maryland Senators and Representatives in the Congress are opposing the Burke project. They should. In these days when it is essential that the Federal Government save every dollar of tax money it can, why spend money on construction of a new airport, when the existing Friendship Airport is planned to be used during the construction?

If the Congress appropriates the $34,700,000, which may not happen, it will not complete the Burke Airport. It will only be a start. The money requested does not include funds for construction of hangars, and it is estimated that an additional $10 million would be needed to complete the full development at Burke.

This controversy over the Burke Airport has been going on since 1949. Congress had already authorized construction of a supplemental airport there and appropriated $1 million which allowed the Civil Aeronautics Administration to acquire some 1,000 acres of the 5,540 acres needed at Burke.

But then citizen opposition that developed to the Burke site caused Congress to refuse further funds and the project lay dormant until revived last fall by the Senate Commerce Committee. Then the committee directed the Commerce Department to develop a plan to relieve congestion at the Washington Airport. This action was taken despite department indications that no more airports should be financed wholly with Federal funds.

Representative JOEL T. BROYHILL, Republican of Virginia, has stated he would oppose the request for the Burke funds because he does not want the Alexandria, Fairfax, Falls Church, and Arlington areas in Virginia in the crossfire of two major airports. He has contended that the airports now in the Washintgon area would be sufficient with proper rearrangement of traffic.

Senator J. GLENN BEALL, Republican of Maryland, has branded the Burke proposal as a complete waste of funds and unfair to the people of Virginia who have opposed the location. Senator JOHN MARSHALL BUTLER, Republican of Maryland, predicts that every Congressman from the Washington metropolitan area will fight the appropriation.

Frank McHugh, aviation director for the Baltimore Association of Commerce, has pointed out that second airport in the Washington metropolitan area, instead of using the available Friendship facilities, would be an inconvenience to 1,600,000 people in the Greater Baltimore area.

The plans of the Civil Aeronautics Administration based on the $34,700,000 request in Congress, for the Burke Airport, call for the acquisition of remaining land needed, construction of 2 north-south runways and 1 east-west runway, a large terminal building and an access highway to the airport.

Included in the request are $2,500,000 for land acquisition, $8 million for grading the site, $10,500,000 for paving, $4 million for the terminal building and $1,700,000 for the access road. The second stage of the proposed development, requiring an additional $10 million would be largely to extend the 2 north-south runways.

But one wonders why it is necessary to pour out all this money if the Secretary of Commerce feels that the Friendship International Airport is adequate to handle the excess traffic from Washington for a 3-year period, until the new site is built.

Idea for an Icebox Latch

EXTENSION OF REMARKS
OF
HON. KENNETH A. ROBERTS
OF ALABAMA
IN THE HOUSE OF REPRESENTATIVES
Friday, July 13, 1956

Mr. ROBERTS. Mr. Speaker, under leave to extend my remarks in the CONGRESSIONAL RECORD, I include the editorial Idea for an Icebox Latch which appeared in the Electric Appliance Service News. This editorial proposes a latch which in the future could help save the lives of innocent children who may become trapped in a refrigerator while playing and suffocate to death:

IDEA FOR AN ICEBOX LATCH

(EDITOR'S NOTE.—Electric Appliance Service News has been waging a prolonged campaign for voluntary action by the manufacturers or a Federal law that would provide for safety devices on refrigerator doors. During the past few years attempts by Congress to get refrigerator manufacturers to incorporate safety features on the doors of their products, have been futile, with many promises and little progress. Finally, in utter disgust, a congressional committee has seen fit to recommend passage of a bill which would make it national Federal law for refrigerator manufacturers to incorporate safety devices that would allow the doors of their products to be pushed open from the inside. See front page story this issue. We are therefore taking advantage of this timely opportunity to reprint herewith an editorial which was written by editor and publisher J. J. Charous in the August 1954 issue of EASN.)

There have been all kinds of ideas for making a lock on a refrigerator so that when it is discarded, a child cannot lock himself in, leading to tragedy.

In the news (this issue) is a story of an inventor who offered a magnetic means of holding a door shut on a refrigerator in such a manner that if the center shelf was removed, the door could not be held closed, thus removing the possibility of a child entering the box and being locked in. The idea was condemned by a popular manufacturer who stated that the magnetic lock was not strong enough to seal the door and that contamination of food could cause more deaths than that of suffocation.

We have an idea we believe can be worked out very practically and with little expense. Why not make a lock that has a magnetic trigger which would make a mechanical lock inoperative by means of a trip? As long as the refrigerator is plugged in, the magnet is energized and the mechanical lock holds the door shut in the conventional way * * * no contamination of food here. However, once the refrigerator is discarded and the current shut off, the mechanical lock be-

comes completely inoperative, and the door can be pushed open without any effort, since the catch will not hold.

The magnetic lock is not new. There are many locks of this kind on the market used on doors of cashiers' cages, etc. The idea is the same; all it needs is slight revision to apply to a refrigerator latch. It can be done, and we urge the manufacturers of refrigerators to give this idea some thought. Perhaps it won't be the immediate answer to those boxes now on the market, but the millions of potential deathtraps must be considered. There has to be a starting point to end—once and for all—any possibility of child deaths by suffocation in discraded refrigerators.

Tito and American Foreign Policy

EXTENSION OF REMARKS
OF
HON. LAWRENCE H. SMITH
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Saturday, July 7, 1956

Mr. SMITH of Wisconsin. Mr. Speaker, under leave to extend my remarks, I am including an address by Mr. George E. Stringfellow, senior vice president of the Thomas A. Edison Co., of West Orange, N. J., before the Kiwanis Club of Detroit, Mich., on Tuesday, July 10.

The address follows:

WHO MAKES AMERICA'S FOREIGN POLICY?

Mr. Chairman, fellow Kiwanians, distinguished guests, I feel highly honored to have been invited to take part in your program today.

Your club was the first Kiwanis Club to be established in the country. Chronologically, you are the No. 1 club. In the minds of many people, you are also the No. 1 club in influence and prestige as a result of your 41-year history of constructive accomplishment.

I accepted your invitation enthusiastically, for I remember most pleasantly my visit with you about 8 years ago, and I welcomed the opportunity to renew my acquaintance with those whom I met at that time and to meet the newer members of your fine club.

Eight years ago I spoke to you about Thomas Alva Edison—a symbol of free enterprise. Today I shall speak to you about an entirely different type of individual whose philosophy is inimical to our way of life. Let me tell you about Dictator Tito and our foreign policy.

Who is Dictator Tito? Here in part is his record for the last 37 years:

From 1919 to 1923 he was a Communist organizer in Russia.

From 1923 to 1935 he was an active underground Yugoslavian agitator.

From 1935 to 1939 he represented Dictator Stalin as a traveling member of the Communist Internationale.

From 1941 to 1945 he led the Communist guerrilla war against Germany.

From 1945 to 1948 he ran Yugoslavia as a Stalin satellite.

In 1948 he broke with Stalin.

In 1953, following Stalin's death, he proclaimed his neutrality.

In 1956 he was received in Moscow as a hero, and several days ago this Communist dictator was quoted in the press as having said, "Nothing of the kind [split between Moscow and Tito] will ever happen again. Our two countries will march along the path of Marx, Engels, and Lenin."

There you have a thumbnail sketch of Dictator Tito whom our Government has propped up for many years at great cost to the American taxpayers.

Let's see how he has shown his gratitude.

In 1946, an unarmed American transport plane, en route from Austria to Italy was forced off its regular course by bad weather and inadvertently flew over Yugoslavian territory. The plane was shot down without warning and 5 gallant American soldiers met their death.

A couple of days later another unarmed American transport plane was forced down and American soldiers were thrown into jail.

On October 19, 1946, our State Department charged that this Communist dictator had been holding 165 American citizens in one of his concentration camps and that because of mistreatment some of the citizens had died and others had been sent to the Soviet Union to serve as slave labor.

A storm of protest forced Dictator Tito to release the American soldiers whose unarmed plane had been forced down and the occupants thrown into jail, and to pay an indemnity for those who had been killed when their unarmed plane was shot down. No report, so far as I know, has been made by the State Department or the Pentagon on the whereabouts of the 165 American citizens whom Tito had thrown into his concentration camp and then hired out to private individuals or sent to Soviet Union slave-labor camps.

There has been much criticism in Congress and in the press of our subsidizing this Communist dictator, but that criticism hasn't deterred the pro-Communist and anti-Americans in the State Department and in the Pentagon.

Even after the Communist dictator shot down and forced down the unarmed American transport planes and threw 165 Americans in concentration camps and hired them out like animals, we have given him more than a billion dollars.

Our Federal Government has in the budget for the fiscal year ending June 30, 1957, more than $30 million for economic aid for this Communist dictator. The dollar value of the military aid we are told, is classified information and we Americans, who are putting up the money, cannot be trusted with that information. However, this is not classified information to the Communist dictator and his comrades in the Kremlin. Isn't it about time we told the administrators of our national affairs that we must know as much about our affairs as the Communist dictator or his comrades in the Kremlin?

We are told that Tito's army today has so much United States military equipment given it by our Government that it costs $50 million per year for parts and supplies to keep this dictator's army going, and we American taxpayers foot that bill, too.

This leads me to ask this penetrating question. It is a question which should be in the mind of every loyal American. The question is "Who makes America's foreign policy?"

Is it made by men who think first of America or is it made by men who would promote Communist rule in America?

Let me call as my only witness: Dr. WALTER H. JUDD, of Minneapolis, Minn., to answer that question. I qualify Dr. JUDD as an expert witness by giving you a brief excerpt of his biography.

Dr. JUDD enlisted in the United States Army in 1918. He received a fellowship in surgery from Mayo Clinic, Rochester, Minn. After firsthand observation of the Communist movement in China, beginning in 1927 until after the invasion of China by Japan in 1937, he returned from China in 1938 and spent the next 2 years speaking throughout the United States in an attempt to arouse Americans to the menace of Japan's military expansion and the threat of world peace by the Communist subversion in China. Dr. JUDD was elected to Congress in 1942 and has served continuously and well in that capacity for the last 14 years.

Appearing on May 31, 1956, before the Senate Subcommittee on Internal Security, Congressman JUDD was asked some penetrating questions by Senator JAMES O. EASTLAND, chairman of the committee. Here are a few of them:

Question: "Do you think there are still pro-Communists in the State Department and the Pentagon?"

Answer: "Why, yes. There are employees in both the State Department and the Pentagon who advocate policies that work out to the good of the Communist Party."

Question: "Do you think * * * that committees * * * should look into who has been writing * * * the directives that make policies?"

Answer: "I think that is where pay dirt will be found, sir."

Question: "Do you think today that * * * high officials in the State Department and Pentagon are subject to pro-Communist influence?"

Answer: "Yes; I do. I don't see how they could come to the conclusion they do if that weren't the case."

Question: "What is the trouble; can't they fire them?"

Answer: "Well, it seems to me that they could if there was the will to be really tough in policing an organization and tightening it up."

Question: "You say that the men at the top (in the State Department and Pentagon) are being influenced by pro-Communists in these departments?"

Answer: "Yes."

Congressman JUDD is one of the ablest, one of the most forthright, and one of the most loyal men in America and I think he knows what he is talking about. Appearing before the Foreign Relations Committee of the Senate on June 26, John Foster Dulles, Secretary of State, said he was vitally concerned that we do nothing that would drive Yugoslavia back into the Russian camp and that we should therefore continue to subsidize this Communist dictator.

What does the Secretary of State mean when he says, "If we do not continue to subsidize Communist Dictator Tito he will take Yugoslavia back into the Russian camp." Can't the Secretary read? If he reads, can't he understand. Didn't he see in the papers recently that Tito had in effect proclaimed to the world that he is back in the Russian camp?

While pledging his allegiance to Soviet Russia, Communist Dictator Tito stated: "Our (Yugoslavia) relationship with the United States will not suffer" as a result of lining up with his comrades in the Kremlin, and if we are to judge by what Mr. Dulles said, Tito is right—it won't. It seems we'll keep right on subsidizing this Communist dictator.

Again I ask the question that must be uppermost in your minds, as it is in mine: "Who Makes America's Foreign Policy?"

Resolution by Alabama Historical Society

EXTENSION OF REMARKS
OF
HON. KENNETH A. ROBERTS
OF ALABAMA
IN THE HOUSE OF REPRESENTATIVES
Friday, July 13, 1956

Mr. ROBERTS. Mr. Speaker, under leave to extend my remarks in the CON-

GRESSIONAL RECORD I include the text of a resolution adopted by the historical society devoted to the memory of Gen. John H. Forney, a great Civil War hero. The resolution was adopted by the society on June 15, 1956, at their annual meeting in Jacksonville, Ala.:

The society approved unanimously a resolution offered by T. Weller Smith, of Jacksonville, declaring:

"We reaffirm our allegiance to the constitution of the State of Alabama and the laws enacted thereunder for preserving the southern way of life. We believe that the system of government thus established was the work of statesmen who by actual experience understood and understand the peculiar needs of our people and what is best socially and morally for our total population and we deplore any effort, legal or otherwise, to destroy that heritage and that wisdom."

Excerpts From Address by Hon. Alexander Wiley, of Wisconsin, at Harris Memorial Foundation, University of Chicago

---

EXTENSION OF REMARKS

OF

HON. ALEXANDER WILEY

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Friday, July 13, 1956

Mr. WILEY. Mr. President, America and the rest of the free world were appalled at the bitter and completely unjustified attack made by Soviet Representative, Andrei Gromyko, at the United Nations Disarmament Commission against the suggestions, made in good faith, by our United States delegation.

Ambassador Henry Cabot Lodge, Jr., in replying to Mr. Gromyko, termed the Soviet delegate's unwarranted attack as "a scurrilous attack on my country in the worst traditions of Stalinism."

If the nations are to prove adequate to the challenge of the atomic bomb and the hydrogen bomb, then the world must expect something more from Soviet spokesmen than vitriol. The world has a right to expect that the Soviet Union will at least make an effort to respond to free world proposals in the spirit in which they are offered—a spirit of good faith and of genuine desire to find a common meeting ground.

We are now awaiting the new comments of the able leader who has been spearheading our disarmament efforts, the Honorable Harold Stassen.

I believe that Governor Stassen is to be commended for the great job he has been performing patiently, industriously, and with imagination and initiative.

On Saturday night, June 30, it was my own privilege to comment on the future of the United Nations, and to touch briefly upon the atomic problem. At that time, I delivered an address before the Norman Wait Harris Memorial Foundation, at the University of Chicago. I ask unanimous consent that excerpts from that address be printed in the Appendix of the RECORD.

There being no objection, the excerpts from the address were ordered to be printed in the RECORD, as follows:

SENATOR WILEY SAYS ATOMIC CLOUD OVER WORLD IMPELS FURTHER ALL-OUT EFFORT FOR U. N. EFFECTIVENESS—STATES U. N. CHARTER CONFERENCE CAN BE VALUABLE FORUM

I am delighted to be here with you this evening, to contribute, if only in a small way, to your most significant deliberations.

The foundation's annual symposiums in the field of international relations have been outstanding, and have proven, I am sure, invaluable in stimulating an increased public awareness of today's major world problems.

Nineteen hundred and fifty-six marks, as you so well know, the 11th anniversary of the founding of the United Nations. Thus, we are now into the second decade of its existence.

What more appropriate time to consider all aspects of the organization and some of the major issues it poses for American foreign policy?

Earlier this week you have, indeed, heard from an imposing array of experts in the overall field of United States foreign policy and international organization.

I feel particularly honored to participate in these lectures and to discuss with you one of my very special subjects—the Future of the United Nations and Charter Review.

MY WORK ON SENATE SUBCOMMITTEE

As a member of our Senate Subcommittee on Charter Review and its first chairman, I have closely studied charter problems, particularly during the past 3 years of our committee's operations.

And this spring, with the prospect of a review conference in sight, we submitted our final recommendations covering this subject.

Moreover, now that the U. N. General Assembly has approved in principle the calling of a charter review conference, and a special committee has been set up to undertake the preliminary planning, it is especially timely for a public examination such as this, of ways and means by which the United Nations can, indeed, be improved.

CAUTIOUS OPTIMISM IN U. N. JUSTIFIED

The basic theme of my comments tonight is one of optimism—cautious but definite optimism. I have faith in the U. N., justified faith, and in our ability to help make it achieve the objectives which are dead to the hearts of mankind.

I have particular faith that some of the recent achievements of the U. N. will, in the future, emerge to still larger proportions.

I refer, for example, to the outstanding contribution which has been made to the cause of peace by the successful visit of the Secretary General Dag Hammarsjkold to the explosive Middle East.

I refer, too, to the formation of the International Atomic Agency.

The actual harnessing of atoms for peace in accordance with President Eisenhower's historic address of December 1953, will represent one of the most magnificent landmarks of this 20th century, if it can reach fruition, as we earnestly hope it will.

THE ATOMIC CLOUD OVER THE WORLD

The mighty atom symbolizes both hope and danger:

Hope in the form of a world of greater plenty.

Danger through the dread heat, blast, and radiation effects of nuclear explosives. The latter problem—radiation—provides a particularly ominous background of our deliberations. I refer, for example to possible radioactive contamination of the waters of the oceans, of plant and animal life, and most important of all, of human beings—not only in the present generation but in the genetic traits of future generations.

With scientific developments accelerating, we may expect our problems of this nature in the jet-atomic age to multiply further. And our margin for error, our area of leeway, of possible mistakes—becomes narrower and narrower.

Man is still simply at the threshhold of still more dramatic phases of the Atomic Age—dramatic for good or for evil.

In the light of this and other clouds over the world, the U. N. simply has to succeed.

Dwight D. Eisenhower has said that there "is no alternative to peace." That means that there is no alternative but to work through the U. N. on behalf of these most priceless of all goals—the preservation of human freedom and the preservation of a just and durable peace.

Let us look now for a brief moment—backward—into the world of 1945, as compared with 1956.

EAST-WEST STRUGGLE IMPAIRED CHARTER HOPES

We quickly see that the great aspiration, born during World War II, the hoped-for-agreement among the Big Four soon deteriorated into a chronic East-West struggle.

That epic clash was symbolized by 33,000 heroic American dead, 110,000 United States wounded in the Korean war, plus 14,000 casualties from other gallant United Nations forces and a half-million brave South Korean casualties.

But the East-West clash is symbolized as well in virtually every geographic area of the world—a political, economic, social, cultural, propaganda contest—sometimes smooth, sometimes crude, but always there.

Inevitably, the U. N., conceived in the high hopes of San Francisco, the hopes of Big 4 unanimity, was jarred again and again by bitter dispute and by consequent stalemate and frustration.

U. N. HAS BEEN MATURING

This not to play down the organization.

Quite the contrary, it is to point out that we have learned a lot—the hard way—since 1945.

At that time, we tended to look upon the U. N. in a kind of aura of perfection. Many Americans didn't actually expect to have much to do in caring for the U. N. or in guiding it toward maturity. At that time, they felt we had helped give birth to something new and perfect, and we were rightly proud of our part.

Yet, we soon thought that the United Nations had a mind of its own. It didn't always do our bidding.

Too, it started things without seeing completion. And we saw that member nations, over the Western member group, like members of a family, didn't always see eye to eye.

Simply put, the organization was still too young to face all the most acute world problems successfully. To ask a 3, or 4, or 11-year-old child to perform all the family duties is sheer folly.

It took us a while to realize the significance of this analogy, and to proceed to let the U. N. handle those functions, commensurate with its development.

But the international organization did learn through experience what it could do. Today, the U. N. is stil not ready to meet every problem troubling the family of nations.

But it can be called on increasingly for constructive assistance. I believe that American foreign policy toward the U. N. must take this objective realistic point of view.

PHASES OF U. N. ACHIEVEMENTS

Other speakers this week have no doubt touched on a number of major issues where the Organization has come to the forefront:

The Korean conflict proved the historic force of collective security against outright aggression.

The continued meetings of the U. N. Disarmament Commission have been long and tedious. But the work of this group has proved that the Soviets can definitely be moved. Comparison of their 1946 position on reduction of armaments with their policy papers of today confirms this fact.

The world forum function of the U. N. has also shown us that moral forces and public opinon can, indeed, be successfully aroused.

The evolution of U. N. Technical Assistance and the work of auxiliary agencies—UNICEF, WHO, FAO—have proven most salutary.

ADAPTATION OF THE U. N.

As we proceed into the 11th year of the U. N., we see that a new look must be taken at its methods of operation and certain governing laws. For this reason, great importance is rightly attached to review or possible amendment of the U. N. Charter.

However, we must carefully weigh several factors in discussing this problem.

Chief Justice Marshall referring to our Constitution said that "it was intended to endure for ages to come, and consequently to be adapted to the various crises of human affairs." The Constitution has, in fact proved to be a flexible document, and it had adjusted to the growth of our country.

Similarly, the charter has often adjusted to new situations without the necessity for rigid amendment. U. N. legal powers, as such, are now, no more or no less; principles and goals have not changed. Indeed, the adjustments have brought end-goals close to fulfillment, by experimenting and avoiding futility and overcoming stalemate.

SOME CHARTER PROVISIONS HAVE FALLEN INTO DISUSE

The evolution of the charter is most interesting to note. In some cases, we have seen specific provisions fall into disuse, while others have been applied in a way that the charter framers perhaps never contemplated.

For instance, we have seen Security Council enforcement powers under article VII set aside, with the impossibility of great power unanimity. Similarly article 106 on interim enforcement measures has settled into disuse.

IMPRESSIVE NEW FUNCTIONING

On the other hand, new functions and interpretations have taken form. The General Assembly has become the leading forum for consideration of political issues. New activities in the colonial field have grown out of interpretations of article 73 regarding responsibilities with respect to non-self-governing territories. The emerging role of the Secretary General has opened another major outlet in the peaceful settlement of disputes.

All of these illustrations are not to presume that the charter is so flexible that we can change it at will, merely by interpretation. Certainly a member that supports a broad interpreation in one instance might find such a precedent against its interests in another situation. And a General Assembly which might seek to enlarge its area of power by narrow voting margins would no doubt find its influence weakened in a short time.

The point is that we must strike a happy medium between the extreme positions of loose as against strict construction.

We must also bear in mind the fact that we cannot stage a review conference, until the most thorough preparations have been undertaken by other member states, as well as by the U. N. Secretariat.

THE IMPORTANCE OF MEMBER NATIONS' SPIRIT

Whether or not the review conference will serve a lastingly constructive purpose depends largely on the attitudes with which members approach this conference.

We must have some kind of true spirit of accord, if this meeting is really to work out. This means that a number of agreements definitely have to be reached between the Soviet Union and the United States.

Of course, we have learned through experience the pitfalls of our dealings with zig-zagging Russia. So we must not be deluded by her latest tactical shifts—the new Bulganin-Khrushchev soft line.

We would nonetheless hope that the Soviet Union could join in the planning of a review conference, in cooperation with the community of nations. We should pledge ourselves to do everything consistent with out national security to bring it about. But we must not wear rose-colored glasses.

And we must remember that not all the problems complicating charter review are based solely on Soviet-American postwar relations.

Differences, as you are all aware, exist between large and small nations, between the developed and less-advanced countries, between states with colonial holdings and the newly independent countries.

However much we may be interested in some specific change, it must be remembered that 75 other nations at the coming conference will each have their proper vote.

The highly articulate Asia-African bloc, now stronger than ever in numbers, truly will play a particularly significant role. We welcome the enlarged role of the newly independent nations, although we recognize that the problem of securing agreement inevitably becomes more complex.

Unless we understand all the above considerations prior to the calling of a review conference, we are almost certain to become disillusioned when events occur which cannot be foreseen or planned.

SENATE HAS VITAL RESPONSIBILITY

Now, the responsibilities of the Senate with regard to the United Nations and other peace and security organizations are, of course, obvious.

First of all, we have the basic obligation of being a well-informed body. Likewise, we have dual constitutional responsibility. No amendments to the charter proposed at any future conference can become effective without the advice and consent of the Senate.

Secondly, the Senate has the continuing function of advice in foreign affairs. We need not and would not stand apart from a review conference and wait to see what may be produced in the way of amendments to the charter. We may work with the President and the Secretary of State on what changes, if any, are believed desirable or acceptable.

In turn, our subcommittee, in its study of charter review, has been guided by certain basic principles.

First of all we did not try to draw up precise proposals for specific changes in the language of the charter. Any international agreement involves negotiation and compromise. And these functions are, under the Constitution, essentially within the responsibility of the executive branch. Instead, we have attempted to suggest areas which we believe might be profitably explored by the Chief Executive in conference with other United Nations members.

And in our report recommendations, we have not intended to speak for the Senate as a whole, or to make any advance commitments as a group of individuals regarding future responses to specific proposals. If the President submits recommendations, it will then be time for the Senate to give them careful and thorough consideration, bearing in mind not only the subcommitee's study, but, of course, the existing international and domestic conditions.

IMPORTANT SENATE COMMITTEE WORK

Again the importance of an informed public on this subject becomes obvious. The President and Senate cannot formulate an effective foreign policy without the backing of the people. Consequently, one of the chief aims of our Senate Subcommittee on Charter Review has been to foster an intelligent American public opinion.

We have done this in several ways. During the 3 years of intensive study and research into all problems of Charter Review, we have accumulated a wealth of documentary materials—materials which have been published and subjected to careful analysis. Not only are these intended to educate the interested citizen, but we have strongly urged the Department of State to scrutinize the many specific proposals and recommendations for Charter revision.

At the same time, we have held public hearings at which we received testimony from top officials in the executive branch. And our 18 days of public hearings outside of Washington represent the first trial in taking a major issue of foreign policy directly to the people for testimony and discussion.

Witnesses were drawn from all walks of life, and their observations served to enrich our own understanding of the problems before us. Thus, we were able to tap new sources of wisdom throughout the country on this subject—sources which might have otherwise remained dormant.

PRINCIPAL SUBCOMMITTEE RECOMMENDATIONS

Let me, for a moment, focus attention on a few of the chief recommendations incorporated in our final subcommittee report.

Few aspects of the U. N. have been more widely debated than the veto problem. There is no doubt but that it has long hampered the operation of the Security Council.

Yet, more is involved here than a simple mechanical device. We cannot ignore the fact that we have insisted on the rule of unanimity in the Charter, and certainly for valid reasons.

The criticism thus really lies in misuse of the veto by Russia.

How can we now best approach this problem?

We might look for clearer distinctions between the more procedural, as against substantive questions. This is difficult, although in several minor instances, we have seen issues successfully listed as procedural through voluntary agreement.

Admittedly, the major scope of Security Council work still requires Great Power unanimity. The increase in the number of issues which can be considered as procedural will in turn depend on East-West relations.

The Vandenberg resolution of 1948 certainly remains a valid objective of policy. But except, possibly, in cases of pacific settlement and the admission of new members, it is obvious that present circumstances do not permit further restriction of the veto power.

NEW THINKING ON ADMISSION OF MEMBERS

The membership provisions of the Charter have undergone change in view of recent package developments in admission of new members. It would seem that article 4 of the Charter deserves reevaluation.

We have long wearied of the arbitrary Soviet veto on admission of western-sponsored nations. Some way had to be found within the purview of the Charter to allow qualified, peace-loving nations to become members.

The so-called package arrangement last December signified several developments and new interpretations. The practice of abstention in this case prevented total paralysis of the Security Council, in an instance where an outright veto could be sidestepped. Thus, the principle of the Vandenberg resolution was reaffirmed in removing the veto on memrebship questions through protocol agreement.

At the same time, it was felt that the admission of a majority of qualified applicants would strengthen the United Nations morally and materially. And their participation would outweigh the obvious disadvantages, incurred by membership of the four satellites—which are, of course, hardly independent nations.

OTHER CHANGES BECAUSE OF ENLARGED MEMBERSHIP

The admission of new members will, no doubt, require future review of the seat allocations with in the various bodies.

This, in turn, will affect the voting requirements in decisionmaking which may require Charter amendment.

We can also expect new and important political problems brought before the General Assembly with the increased membership. The United Nations will speak with wider authority. It will more accurately reflect underlying conditions as they are in the world, and call our attention more decisively to the crucial problems of our age.

But a greater sense of responsibility must be assumed by all members, if the enlarged organization is to develop further in a sound and practical way, and if problems are to be solved and not aggravated.

ADVANCING CRUCIAL GOAL OF SECURITY

Another central issue is, of course, the matter of collective security under the Charter. We have learned that the original premises of universal collective security under the charter have not been attainable.

Consequently, to fight aggression, alternative methods of collective defense had to be developed.

The Uniting-for-Peace resolution and our sound regional defense pact with 42 nations have answered Russia's abuse of the veto. They have given us free world security inside the Charter, but outside the veto.

These indispensable security arrangements have definitely not impaired the United Nations machinery which can still operate in those areas not at issue among the permanent powers.

And if further machinery is necessary for the defense of the Nation, a logical step might be to explore the possibilities of linking together the various regional and other defense treaties in which we now participate.

They represent fairly close to the maximum strength which we could actually hope to mobilize in the present period, for defense against Communist aggression.

This approach could leave unimpaired the peaceful settlement and other useful machinery of the United Nations itself. It could leave intact the enforcement machinery of the U. N., available whenever some agreement among the Great Powers would permit its use.

OTHER ISSUES FOR REVIEW

These, then, are but a few of the questions which must be thoroughly though out by the Senate, the President, and by the American people, in preparation for a truly successful review conference on the U. N. Charter.

Member countries will want to take a fresh look at a good many other issues which were considered at San Francisco in 1945.

These include the impact of the United Nations on domestic jurisdiction.

The status of the specialized agencies.

And the progress of the trusteeships and dependent territories.

The alternatives on all of these are numerous, and surrounding factors highly complex.

Yet, the problem of formulating policy on these questions is not as serious as it might at first seem. These are problems which have recurred before the United Nations in one form or another during the past 10 years. The American Government has taken positions on many of these before.

The issues have been aired, and opposing points of view made known. Within reason, then, it would be possible to predict what alternatives are likely to be acceptable to a majority of the members taking part in the review conference.

There will undoubtedly be wide room for negotiation and accommodation. And if we can eventually have a sincere and thoroughgoing exchange of ideas on some of these matters, as they relate to the charter, we may hope for useful results from the review conference.

ACCENT ON THE SPIRIT, NOT JUST THE FORM

There will be trial and error, therefore, as there has been in the past. No absolutely set plan for review and revision, no rigid formula, few hard and fast overall commitments on our part will be feasible.

We must always act by honor and principle, but still, at least partly, play by ear—adjusting, adapting, we must seek constantly, not basically a perfected form, but rather, basically, an improved spirit—an improved attitude, a more dynamic will toward agreement on the part of all nations.

CONCLUSION

In 1945, when the Senate ratified the U. N. Charter, our Foreign Relations Committee expressed the belief that United States "participation in the United Nations is in accord with our national interests, and * * * our contributions to the United Nations will be repaid many times."

Membership in the U. N. is still absolutely in our national interest.

President Eisenhower, in his latest state of the Union message, stressed the central aim of our foreign policy: "The waging of peace, with as much resourcefulnes, with as great a sense of dedication and urgency, as we have ever mustered in defense of our country in time of war."

We know that the U. N. is a vital instrument in setting the tone for international harmony. We rightly took the lead in forming this international organization. It is our continuing responsibility to utilize it to the fullest extent, aware of its limitations, yet inspired over its potential.

Peace takes practice.

The charter has set forth some very important rules of the game. Within this framework, whether there is formal amendment or not, the nations of the world can practice until peace and security are genuinely accomplished.

God grant, we hope and pray, that there will be sufficient time, a genuine spirit, in which to succeed.

Educational TV in Maryland

EXTENSION OF REMARKS

OF

HON. DeWITT S. HYDE

OF MARYLAND

IN THE HOUSE OF REPRESENTATIVES

Friday, July 13, 1956

Mr. HYDE. Mr. Speaker, under unanimous consent I insert in the Appendix of the CONGRESSIONAL RECORD an article from the July 8, 1956, issue of the New York Times entitled "Maryland Project":

MARYLAND PROJECT—SCHOOL NETWORK TO TEST EDUCATIONAL TV

(By Jack Gould)

An experiment of potentially great importance is to be undertaken in the months ahead at Hagerstown, Md. Under a 3-year plan, to be started next week, all 45 public schools under the jurisdiction of the Washington County board of education are to be linked by a closed-circuit television network.

This project promises to be much the most comprehensive test of television usefulness within a school system. Programs will not actually be broadcast for reception in the home; they will be limited to the school buildings.

The fund for the advancement of education is going to assume the substantial cost of making a study and evaluating the effectiveness of TV as a teaching tool. The Radio-Electronics Television Manufacturers Association is donating all the necessary equipment. The Washington County school system will meet the operating costs.

GOAL

The purpose of the experiment will be to find what exactly may be television's role in the formal educational process.

William Brish, superintendent of schools in Washington County, says the test should provide an opportunity to learn to what extent the television screen may supplement the textbook.

One primary concern, of course, is the shortage everywhere of qualified teachers. Will TV enable one gifted teacher to serve many communities rather than only a single classroom? Which courses lend themselves to TV and which may not?

Eight schools in Hagerstown will be equipped this fall to try TV. The others will be joined by September 1958.

Starting next week, a group of 40 teachers is scheduled to participate in a TV workshop at Hagerstown. Among the matters to be covered is the instruction of teachers in the use of TV. Direct instruction and supplemental instruction by means of plays, films, and talks will be examined.

The Hagerstown experiment is both the latest and most dramatic evidence of the growing importance of closed-circuit television in the educational sphere. Unquestionably, there is and should be a place for educational television that can be received on present sets in the home. But the cost of such an operation is extremely high in terms of the budgets of the education world. The self-contained closed-circuit operation by comparison is much more feasible.

In this connection a most interesting and challenging study of closed-circuit TV has just been made by Sir George Barnes, who later this month formally resigns as director of television for the British Broadcasting Corporation. On Sept. 1 he becomes principal, or, in American terms, president, of the University College of North Staffordshire.

At the invitation of the Fund for the Advancement of Education, Sir George recently visited a number of American universities and closed-circuit video was one of his special interests.

It is Sir George's belief that the educational use of TV must be most carefully and thoroughly developed, that it is not a glamorous cure-all for all the problems that may beset education.

POTENTIAL

But Sir George fundamentally believes that with skill, experience, and understanding television can become a most important educational tool. To learn to use that tool, to know its possibilities and limitations, can be of aid not only in coping with rising student enrollments in the western world, but in assisting backward nations to acquire the skills and dignity that are the rewards of knowledge.

What is to be the American role in international TV? Is it to be a mere commercial repetition of the Hollywood motion-picture past? Just more export of the same type of escapist entertainment that so often gave a distorted concept of American values and interests?

Or this time are we as a nation more mature and more prepared to recognize that the screen has a higher usefulness and purpose? Might we not employ television to teach the poorer peoples of the world how to read and write, how to drive a truck? Is this constructive and positive education not really the most basic of defenses against communism?

But the maximum and most beneficial use of the exciting medium of television cannot come before we ourselves know much more about its capabilities. Every person working in educational TV, often against discouraging odds, should take heart and recognize the way of the pioneer is seldom easy.

In comparison with the costly and spectacular doings of the commercial entertainment world, the Hagerstown experiment—and others like it—are bound to attract less notice for the moment. But for future generations over the world the type of television being advanced by the Hagerstown community could have a far more lasting and significant influence.

Need for Low Income Public Housing

EXTENSION OF REMARKS
OF
HON. ELMER J. HOLLAND
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Friday, July 13, 1956

Mr. HOLLAND. Mr. Speaker, under leave to extend my remarks, I wish to include in the RECORD a statement pertaining to the need for low income public housing.

Mr. Speaker, the recent action of the Rules Committee tabling H. R. 11742, the general housing bill, is a body blow to the families most in need of Government housing support, namely, our families in the lowest income brackets. It is my understanding that the primary objection to the bill on the part of those Members voting to deny a rule was against the bill's public-housing provisions. For those of us who understand the urgent housing needs of our lowest income families, this type of reasoning is absolutely incomprehensible. Frankly, what some members of the Rules Committee regard as a vice is in fact the chief virtue of the bill.

The inescapable fact is that most of the unfortunate people now forced to live in slum areas do not have sufficient income to enable them to afford decent, safe, and sanitary private housing. Unless the Government provides decent housing at a rent which they can afford to pay, these poor unfortunate people are doomed to live in slums with all their attendant social evils.

Take the subject of slum clearance as a single example. Here is where the opponents of public housing fall flat on their face. Now when you clear slums people have to move. The best available data shows that approximately half of the families who live in slum areas cannot afford adequate private housing. And remember that under the law displaced families must be housed in safe and sanitary accommodations which they can afford. For these families the only answer is low-rent public housing.

Actually, H. R. 11742 proposes only a rock-bottom minimum public housing program. It would provide 50,000 units a year for a 3-year period, and an additional 10,000 units a year for a 3-year period for elderly families.

This total will barely take care of the public housing needs of families displaced by slum clearance operations, let alone fulfill the overall need for public housing.

I would like to see the House pass legislation authorizing a public housing program of much greater magnitude. But I think that it would be a national calamity to run the risk of losing even the minimum number of public housing units proposed by H. R. 11742.

Mr. Speaker, somebody once wrote a book called Progress and Poverty in describing an earlier stage of our American history. Despite our great economic strides forward we still have a distressing amount of poverty and want, and most of it is concentrated in our slums. We cannot in conscience ignore the vicious social evils which arise from slums and slum housing. We must have a sizable public housing program because that is the only answer for our lowest-income families.

Mr. Speaker, I hope and pray those members of the Rules Committee who voted to table the general housing bill will reconsider and let us have the housing legislation the national welfare demands.

Social Security Benefits at the Age of 60

EXTENSION OF REMARKS
OF
HON. EUGENE SILER
OF KENTUCKY
IN THE HOUSE OF REPRESENTATIVES
Friday, July 13, 1956

Mr. SILER. Mr. Speaker, some people may consider Friday, the thirteenth, an unlucky day, but I consider this as a very lucky day when I am permitted to speak for millions of Americans who have been earning bread in the sweat of the human face over the productive years and who now only hope for a few declining years ahead that will permit them to have a little peace of mind and well-earned rest without constant worry over grocery bills and other similar charges upon everyday living as the old-age period of life overtakes them.

On February 28, 1955, I introduced H. R. 4489 seeking to reduce social-security retirement age to 60 years and to provide total and permanent disability benefits for those who have been working and covered under the law for a period of 12 quarters. I thought mine was a good bill then and I think it is a good bill now, although the House Ways and Means Committee has never seen fit to report my bill favorably up to the present time. If my mind does not change, I expect to introduce this same bill or one similar to it as long as I stay in Congress, or until ultimate success is assured on this proposition.

What is social security? Well, it is something that does not cost the taxpayers or the Government anything whatever for the payment of any of its benefits, strangely enough. It is insurance pure and simple. And insurance benefits always come from insurance premiums. If the risk is high, the premium must be high. If you take fire insurance on a paperboard house 2 miles from a fireplug, the policy cost, or the premium fixed, is necessarily high. But the fellow that wants to protect his house is always willing to pay the cost of protection and always wants his insurer to have actuarial soundness at all times. So, all that is now needed for safe social security benefits at 60 and sound disability benefits as mentioned is for a provision of a suitable premium to be paid by employers and employees that will be commensurate with the added benefits. From all my conversations with various people that would be affected, there is practically no objection among them for the added cost in view of the happy prospect of the added benefits.

We have heard much talk about our annual foreign aid that has already cost taxpayers $55 billion. So now, what about a discussion of some American aid that will cost taxpayers nothing whatever?

In one of the great newspapers of the country, in its issue of July 11, 1956, there was a front page article emphasizing the impossibility of a person over 45 years of age ever getting a job. A Labor Department survey shows, according to this article, that 3 out of every 4 employers ban middle-aged people. We all know this is true. Today, according to the news article, there are 47,400,000 people in America over the age of 45 years. But if we should provide social security benefits for workers at the age of 60 years, there would be many millions less people applying for these jobs and facing that vicious ban against the hiring of persons 45 years of age and over. Many would not seek or need these jobs at all since they would be able to live plain and simple lives in their little homes on the hills and up the hollows with some social security benefits coming in each month to keep the wolves of want away from their doors.

Moreover, if social security retirement at 60 years should become a general practice, there would be millions of job opportunities added for our young people all over America who are constantly coming out of the schools of the land. Every time a 60-year-old employee would retire, another job would be open for some willing youth of 18 or 20 years of age.

So, these are the stanch arguments for my bill or one similar, briefly summarized:

First. No cost to our taxpayers.

Second. Helping hand to our aging population.

Third. Additional job opportunities for our young people.

It is also worthwhile to observe that added social security benefits such as I have mentioned would inure to thousands of butchers, bakers and candlestick makers throughout the country. Now money is a medium of exchange. So, added money is just added exchange that eventually finds its way into the hands of all who have anything to sell. Once upon a time, a man said he had loaned a football player a dollar. His friend asked if he ever got it back. "No," said the lender, "I only got a 'halfback' on my books." Well, if we should in-

crease social security benefits, many tradesmen and taxpayers could expect to get many real "halfbacks" in their cash registers through channels of trade and commerce. And I am not talking about football players—just plain old "e pluribus unum," is what I mean.

Senator GEORGE, of Georgia, just recently stated, in talking about social security amendments now pending, "If we can get this through, then I am ready to go away from the Senate." So, perhaps it is proper for me to say, "If I can get my own social security amendment enacted into law to help our ordinary people, then I will be ready to go away from the House and close my own career in that great body."

A Threat to Free Enterprise

EXTENSION OF REMARKS
OF
HON. GEORGE A. DONDERO
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Friday, July 13, 1956

Mr. DONDERO. Mr. Speaker, under leave to extend my remarks in the RECORD just granted by the House of Representatives, I include an editorial which appeared in the Pontiac Press of Pontiac, Mich., on Monday, July 9, 1956.

There are people in the United States who would like to see so-called big business destroyed. They believe it is harmful to our country. I remind them that whenever the United States gets into trouble or is threatened with war, the Government of the United States immediately contacts and appeals to big business to produce the sinews of war to defend ourselves.

Threatening to harass General Motors or any other big business in the United States is nothing more nor less than a threat to destroy the free competitive enterprise system which built our country, and it is also a threat to kill the very source of production and employment under our system of government.

The editorial follows:

GM BUS ANTITRUST SUIT FREE ENTERPRISE THREAT

So long as certain governmental bureaucrats regard size as a sin, General Motors can probably reconcile itself to further harassments.

Big targets are easier to hit than little ones and the Attorney General can anticipate greater applause when he trains his artillery on the champion.

Mr. Brownell is threatening to wave his big stick directly at the bus industry, and that strikes the Pontiac area amidships.

Much is at stake.

The Government learns that GM is making 80 percent of the Nation's buses and is wondering whether that's illegal or unfair or something. Certainly it appears to be indiscreet. There's nothing wrong with these buses, you understand. GM simply makes them so well they're in high demand.

Is the United States Government trying to decide whether it's permissible for one firm to do perceptibly better than another? Buyers are still actuated by the curious and ancient motive of wanting the most for their money. Obviously, that means a lot of them will buy the same product from the same producer if they are convinced that he excels perceptibly.

In a democracy, the people are free to trade where they please. They don't have to consult Mr. Brownell, Alice in Wonderland or Williams purple cow. If 9 out of 10 happen to like a GM bus, they have the right to buy one. That was the concept on which this Nation was founded. When GM has sold a certain number or a certain percent, can the Government tell them to cease or desist?

If GM diesel engines are better than others and GM proposes to equip only GM buses with GM diesel engines, does the Government figure that's a sin in itself?

Would Washington compel GM to refuse to sell when the buyers entered the showrooms? Would they have them tack up placards declaring:

"Closed for 2 months or until our competitors sell you some of their buses whether you prefer them or not."

Free competition would cease.

This would send all varieties of Pontiac area wage earners home by the thousands.

Ultimately, the Government would have to decide when GM competitors had sold enough trucks to allow GM to reopen—for a while.

They're going to rewrite sections of a lot of history books and redo the definitions of "democracy" and "republic" if ths conceit becomes a reality.

Hammarskjold Says Red China Should Be in the U. N.—People of the United States Think Otherwise

EXTENSION OF REMARKS
OF
HON. LAWRENCE H. SMITH
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Saturday, July 7, 1956

Mr. SMITH of Wisconsin. Mr. Speaker, under leave to extend my remarks I am including an article by that outstanding commentator, Mr. Constantine Brown, which appeared in the Evening Star for July 11. He points out that Dag Hammarskjold, Secretary General of the United Nations on a recent visit to Moscow declared emphatically that it was abnormal that the Chinese Peoples Republic was not a member of the United Nations.

Mr. Speaker, the overwhelming sentiment of the people of the United States is that the Secretary General is 1,000 percent wrong. They believe that until Red China redeems itself before the bar of world opinion for the atrocities it has committed against humanity that it must be excluded from entry into the United Nations.

Mr. Brown's timely article follows:

HAMMARSKJOLD AND RED CHINA—HE CALLS IT ABNORMAL THAT PEIPING, DECLARED OUTLAW, IS NOT IN U. N.

(By Constantine Brown)

During his visit to Moscow, Dag Hammarskjold, Secretary General of the United Nations, declared emphatically that it was abnormal that the Chinese Peoples' Republic was not a member of the U. N.

There have been many statements to that effect from the Soviet leaders, Prime Ministers Eden and Nehru, Marshal Tito, France's Foreign Minister Pineau, and many liberal groups in this country.

But the statement of the U. N. official is truly remarkable. He represents no particular country and should have no other policy than that of the world organization whose charter is based primarily on international morality.

The U. N. declared Communist China an outlaw by an overwhelming vote in 1951. At no time since has the People's Republic purged or attempted to purge itself of that censure. Many individual countries have changed their views for the sake of political expediency in the 5 years that have followed that censure. But the U. N. as an international body has not reversed itself in its denunciation of the Peiping regime as an international outlaw. Yet the head of that organization took it upon himself during his visit to Moscow to vindicate Communist China by stating that, the existing censure not withstanding, she should be admitted to the ranks of the so-called peace-loving nations.

It may be that international morality is a thing of the past—like the horse and buggy or mustache cups. It may be that expediency has now become the main guidepost in international affairs. However, even expediency, which we ourselves have practiced since the end of World War II, has its limitations—not necessarily because it is more than often immoral but because in the long-run it does not pay dividends.

What would our people have said if the FBI, having trouble catching up with Dillinger, had sent J. Edgar Hoover to talk things over with the gangster and, accepting his word that he would behave himself, suspended prosecution efforts. The parallel is not as far-fetched as it may appear. The gang headed by Mao Tse-tung, Chou En-lai and Chu Teh is guilty of even greater crimes toward the civilized world and the U. N. than was the late American public enemy No. 1.

Since the condemnation of the so-called Chinese People's Republic, its leaders have been guilty of wanton murders and unbelievable cruelties against prisoners from the U. N. armies. Yet the chief of that world organization, whose charter is based on the highest humanitarian principles, said on July 5 in Moscow that he considers abnormal the fact that Communist China is not one of the members.

That our close ally, Britain, should have taken a path away from interntional morality is understandable in this day and age. The London government was prompted in its recognition of Red China less by the desire to pick up a few hundred millions in trade than by the anxiety to keep the Commonwealth together. And the Indian subcontinent appears to Sir Anthony Eden far more important in this scheme than Australia, New Zealand, and South Africa which share our point of view on the Peiping regime. Hence, the British Prime Minister's concurrence with Nehru's policy of accepting Communist China into the U. N. at the earliest moment after our elections are over.

What is surprising is that some prominent persons and groups in this country should espouse the Peiping cause. We have suffered at the hands of the Chinese Communists far more than the rest of our associates in the war in Korea.

As a result of the summit meeting, we have begun diplomatic discussion with the Chinese Communists for the sole purpose (so the official version says) of freeing the remainder of our prisoners still kept in dungeons in China. The conversations between Ambassador Johnson and Red China's Wang have gone on for nearly a year. And even these talks, intended to bring the Chinese Communists within the international law on the matter of prisoners of war, have proved their bad faith. They liberated some but kept the rest with the intention of blackmailing Secretary Dulles into meeting for-

mally with Chou En-lai. Such high-level talks would further raise the prestige of the Peiping regime and help open the doors to Red China's admission to the U. N.

Despite the crimes of the Chinese Communists against their people and ours, Dulles is frequently criticized in inner circles of the administration for his subbornness. It appears that an epidemic of expediency in the remaining free countries has contaminated some of our own political thinkers.

Increasing Rates of Compensation for Service-Connected Disabilities

SPEECH
OF
HON. JOHN E. HENDERSON
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 12, 1956

Mr. HENDERSON. Mr. Speaker, it has long been recognized that this Government, as an expression of a grateful Nation, has a responsibility to look after the welfare of the disabled veterans who have incurred their disabilities by reason of valiant and loyal service in our Armed Forces. I am happy and proud that our National Government has always recognized this responsibility with sufficient flexibility so that as the needs of those disabled veterans change, the contribution of the Federal Government can also be changed. And so it is with the bill H. R. 12038, which is before the House for passage.

Times have changed and the status of our disabled veterans has also changed. The cost of living has increased and the present compensation which service-connected disabled veterans are now receiving, is insufficient to meet the daily needs and the necessary reserves for emergencies which the veteran faces. Consequently, the Congress, this year, giving due recognition to the needs of the veterans, will vote to increase the disability payments as follows:

For a 10 percent disability, the payment is increased from $17 to $19; for 20 percent disability the payment is increased from $33 to $36; for 30 percent disability, the payment is increased from $50 to $55; for 40 percent disability, the payment is increased from $66 to $73; for 50 percent disability, the payment is increased from $91 to $100; for 60 percent disability, the payment is increased from $109 to $120; for 70 percent disability, the payment is increased from $127 to $140; for 80 percent disability, the payment is increased from $145 to $160; for 90 percent disability, the payment is increased from $163 to $179. If the disability is rated as total, the monthly compensation is raised from $181 to $225.

All additional payments for disabilities such as those which require additional aid and attendance through the loss of both limbs and the like, are increased by $30. There has been a further liberalization with regard to veterans with service-connected disabilities who have dependents. Formerly, the law read that the veteran must be, at least, 60 percent disabled in order to receive compensation for his dependents. This provision has now been amended to read 50 percent.

Mr. Speaker, since I feel that those of our veterans who have service-connected disabilities and whose disabilities have been rated as genuinely disabling are entitled to increased compensation in order to meet the needs of life for themselves and their dependents, I am pleased to vote in favor of this legislation, H. R. 12038.

Address by Representative Francis E. Walter, at the Annual Banquet of the Department of Pennsylvania Encampment, Veterans of Foreign Wars, Benjamin Franklin Hotel, Philadelphia, Pa.

EXTENSION OF REMARKS
OF
HON. B. W. (PAT) KEARNEY
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Friday, July 13, 1956

Mr. KEARNEY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address by Hon. FRANCIS E. WALTER:

ADDRESS BY REPRESENTATIVE FRANCIS E. WALTER, AT THE ANNUAL BANQUET OF THE DEPARTMENT OF PENNSYLVANIA ENCAMPMENT, VETERANS OF FOREIGN WARS, BENJAMIN FRANKLIN HOTEL, PHILADELPHIA, PA.

During the past few months, the people of the free world have been subjected to a new propaganda barrage of dazzling size and intensity.

Most of you have become aware of it in one form or another. It originates in Moscow. In essence it seeks to persuade us that communism has suddenly transformed itself into a sweet, reasonable way of life and that we can collaborate, in fact should collaborate, with Soviet Russia with a calm and untroubled conscience.

As part of this campaign, the new rulers of Russia are making some startling disclosures. Joseph Stalin, who carried the banner of Soviet communism to nearly half the world, has been unmasked by his successors as a mad criminal who is guilty of the most horrible excesses against the Russian people and against the people of the other countries upon whom he imposed his tyranny.

The men who have made these disclosures profess to be deeply shocked by these facts, although they themselves participated in the very crimes for which they now lay all the blame on Stalin. Throughout the Communist world, these supposed disclosures are being received in a wild orgy of apology and self-abasement.

Now, for all of us who have had any contact with communism and who have not kept our eyes closed during the past years, Mr. Khrushchev isn't saying anything new at all. We have long been aware of what Stalin, with the very eager help of Mr. Khrushchev, achieved while he was in command of the Soviet empire. We have not been fooled before and there is no chance of our being fooled now.

If this were just another one of the many propaganda assaults that this world has been subjected to with varying degrees of success for the past several decades it wouldn't present any problem. The knowledge of the essential character of the Soviet Union and the global apparatus would make it easy to dispose of such new overtures. Unfortunately, this new campaign cannot be written off so simply. The new course that Stalin's successors are taking is having a tremendous impact in the free nations, in the so-called neutralists nations, and even regrettably in the United States itself.

From many sides, even from people whom we would expect to know better, we are urged to believe that a new era of peaceful coexistence has now begun. We should enter the embrace of Soviet friendship. We are even asked to believe that the despots who have ruled Russia since the revolution of 1917 have now vanished and that they have been replaced with a new breed of men, men intoxicated with the distilled milk of human kindness.

Yet fraudulent as this campaign may appear to everyone of us here tonight, the success that it is having is almost beyond conception. In Western Europe the defense structure which we have built during the past years at such great labor is crumbling. In Asia one nation after another is anchoring itself ever more firmly to Moscow. Even in countries with which we were once stanchly allied, whose traditions and aspirations we once thought were linked closely to our own, there is an unprecedented crest of anti-American hatred. And Tito, upon whom we have poured so many millions in the delusive hope that he would stand with us, has once more slipped on the Kremlin harness and has been designated to lead other countries into the Soviet grasp.

Here at home we are fast losing sight of the menace that communism embodies. The long chronicle of Communist subversion and conspiracy and deceit is being blurred until it is almost unrecognizable. The once "clear and present danger" of communism is coming to be regarded now as a danger remote and indistinct. The achievements of the Committee on Non-American Activities and other agencies, which have worked so long to expose the character of communism and the conspirators who serve it, are in danger of being swept aside.

The entire pattern permits only one conclusion: There is more possibility of the success of the international Communist movement now than at any time in the past—not by sudden revolution in our major cities but by the slow erosion of the strength that has enabled us to withstand the onslaughts of other enemies throughout our history.

I am sure that this must be a profoundly disturbing realization for you who are listening to me tonight. You have an especially acute grasp of the meaning of freedom and the way of life which we cherish. You are dedicated to the great traditions and institutions of America. You have tested your faith in armed combat. Many whom you have known and who are not here tonight have made the greatest possible contribution to the purchase of our liberty. Because you have been so directly involved with the issue of freedom, the forces that oppose that freedom today, are more than a threat to the Nation's security. They are a personal affront to everyone of you.

Times change and concepts change, science advances and so do other aspects of our society. The horseless carriage becomes the sleek, high-powered Cadillac. The technology of industry progresses—and so does the technology of treason.

Today's revolutionaries are no longer raucous, frenzied fanatics. They no longer shout openly for a blood-bath in which to drown the world. Their voices have become softer and their language more polished. They are no longer the "prisoners of starvation" beyond the pale of respectable life. Today they walk surely in the once restricted provinces of the university, the church and even finance and industry. Where once the threat they represented was an isolated and

easily definable one, today it has become diffused throughout the tissue of the Nation until even the most astute diagnosis has difficulty detecting its presence. The struggle today is lo longer one between reputable citizens and outcasts. It is a conflict over the basic values which this country embodies, over the very definition of men and of life itself.

Just this week in Washington, the Committee on Un-American Activities has been examining one phase of this problem, a phase which, in many respects, represents the whole. The thing that we have been concerned with is a "Report on Blacklisting" published by the Fund for the Republic, a tax-exempt institution endowed with some $15 million from the Ford Foundation. The report was prepared under the direction of John Cagley, formerly executive editor of Commonweal magazine. Mr. Cogley told the committee that he and his staff had spent more than 2 years studying cases of "blacklisting" in Hollywood and in the radio and television industry in New York.

Now, everyone with any decency deplores blacklisting, at least in the sense that we usually use the term. Blacklisting, as we ordinarily understand it, is a vicious and despicable practice. You know the kind of blacklisting I am talking about—firing someone or refusing to hire him because he has been engaged in some legitimate and morally defensible activity or because he is a Democrat or Republican, or a Negro or a Catholic or a Jew. Nobody would condemn that kind of blacklisting more than I would.

But the Fund for the Republic talks about another kind of blacklisting—one that has nothing to do with being a Democrat or a Republican or a union man or a member of some minority group. Strangely enough, it has to do only with one kind of people—Communists. This kind of blacklisting means taking action against the Communist conspiracy, and the report draws upon the revulsion we feel about blacklisting in the usual sense to arouse our condemnation of employment practices directed against Communists and against Communists only.

The report pretends to be completely objective and impartial. Actually it is about as partisan and prejudiced as it is possible to be. By the omission of some material and by the selection of other, by repeated emphasis on some facts and suppression of others, it makes an indictment of everyone who has been active in opposing the employment of Communists and Communist sympathizers in the entertainment industry. Moreover, several of the staff were already committed to a specific viewpoint before they began their work on the report and had backgrounds that made it difficult, if not impossible, for them to be anything approaching objectivity or impartiality. Witnesses who testified before the committee confirmed that the report just isn't worth the paper it's written on.

The report considers membership in the Communist conspiracy as a "political belief." It holds that anyone who refuses to hire a Communist and anyone who hires a Communist—because he is a Communist—is engaged in "political discrimination." It tries to create the impression that people are being penalized for their beliefs and that the innocent as well as the guilty are being destroyed by a vast machinery of persecution which has a bunch of extremists and crackpots at the controls. Its total effect is to blacken the name of every organization and every individual who has sincerely and patriotically been engaged in trying to get rid of Communist conspirators in the movies and on radio and television.

This report is of tremendous concern to all of you here. For one thing, when it deals with television and radio, and with the movies and the theater, it deals with something that is very familiar to everyone of us, something that plays a very big part in our lives. Right now in Philadelphia, an actress is appearing who is identified as having participated actively in the Communist movement. This actress, Gale Sondergaard, has been named by a half dozen people before the Committee on Un-American Activities as a member of the Communist Party. Hers is one of the cases discussed in the fund report but no mention was made of her background.

Further, this report is made possible by the money which all of us pay in taxes. The millions of dollars which the Fund for the Republic has to work with are beyond the reach of the Internal Revenue Service. The fund, unlike you and me, doesn't have to pay its own way with the Government. It is allowed to enjoy all the privileges of any organization or citizen who contributes to the support of the country but it escapes all the financial obligations which customarily accompany those privileges. So, inasmuch as we are in a way paying for the conclusions which Mr. Cogley and his staff have reached, we should at least get our money's worth to the extent of seeing precisely what they have to say.

If the charges which the report makes are true, then we are faced, indeed, with a very grave menace to the traditions of civil liberty and fair play upon which this country is founded. If innocent people are being thrown out of their jobs simply because of what they believe, if fanatics have established some kind of Ku Klux Klan of the air and screen which deprives good citizens of the right to work, for no justifiable reasons, then the report and the people who prepared that report are to be congratulated for having alerted us in such a fashion.

If, on the other hand, the report is not accurate and if the charges it makes are not true, then the report can be considered of value only to those people whose interests it would further—the participants in the Communist conspiracy.

The Committee on Un-American Activities has studied the problem of Communist infiltration in the entertainment industry in very great detail over a period of years. The conclusions that we have reached after hearing hundreds of witnesses and after extensive investigations are totally different from those of the Fund for the Republic.

We have not found any evidence of a blacklist of the kind that the report describes. We have found no lists which are used to banish people from jobs. We have found no clearance men who, as the report so eloquently puts it, have the power to wound and the power to heal. Nor, as the report seems to imply, anybody who wounds in order to heal—and for considerations which have nothing to do with patriotism.

I can tell you what we have found.

We have found a very serious infiltration of the entertainment industry by Communists and Communist sympathizers. We have found that increased infiltration of the entertainment industry is one of the foremost objectives of the Communists at this very moment. We have found that a number of persons who have cooperated loyally in exposing the Communist conspiracy in the entertainment industry have been denied work. I have in my desk at this very moment a letter from a prominent New Yorker containing the names of a number of people who have been denied employment because they dared to testify before the Committee on Un-American Activities. On the other hand, many persons who have been identified as Communists are still finding employment in the entertainment field.

The Communists know that movie screens and television channels are weapons of far greater potential power than any of the nuclear devices whose secrets we guard so jealously. Control of the media of communication and information means the control of the mind, and for the Communists this would mean a victory of far greater importance than victory on a dozen battlefields of war. The Communists know that before they can ever hope to win they must first destroy the freedom of the mind. They must undermine our reason and cripple our spirit. They must debase our standards and values and reduce them to rubble before the Communist tide can inundate our civilization.

Now, it is my feeling that the Fund's report proceeds from one basic error. It fails to recognize that the deprivation of employment of Communists and Communist sympathizers is possible not because of some self-appointed censors, but because—and only because—the American people themselves do not want Communists on their movie screens and on their radio and television programs. Without this repugnance of the American people to Communists and Communist sympathizers, there could be no successful action against Communists in the entertainment industry or anywhere else for that matter. When the report condemns denial of employment to Communists or Communist sympathizers, it is not just condemning some so-called pressure group or extremists. It is condemning all the people of the country who are exercising one of the most fundamental of the rights guaranteed them under the very system of government which communism seeks to destroy.

The American people realize that action against Communists is not a persecution for beliefs. Communists are being penalized, not for their beliefs, but for their actions—not for thinking something but for doing something, and doing something to further the objectives of communism. In the last analysis, the question of whether Communists and their sympathizers shall be permitted in the entertainment industry or in any other area is one for the American people to determine. The Fund for the Republic apparently does not believe that the American people have the competence or the right to express their disapproval of subversion. Nor does it believe that an employer has the right to pay or to withhold jobs from persons whom he believes are opposed to the very system from which they derive their income. It is peculiar that the report deals at great length with the rights of Communists but never with the rights of loyal patriotic citizens.

In California, where the report says much of this so-called blacklisting is taking place, there is a law that prohibits any employer from discharging or threatening to discharge anyone for political activities. But the California Supreme Court has ruled that this does not prohibit an employer from discharging anyone whose loyalty to the Nation has not been established to the employer's satisfaction. The reason for this, the court declared, is that disloyalty and subversive activity cannot be regarded as a protected political activity.

The Communists, and many who join them in their thinking, have always tried to encourage the belief that for some peculiar reason they have rights beyond those accorded to the ordinary citizen. The Communists, in this view, should not be prosecuted for any crime because this would be political retaliation—yielding to hysteria—though a Democrat or a Republican can be prosecuted for the same crime without arousing any protest on that score. Communists can't be fired from jobs in industry or from a university no matter how much they attempt to poison the atmosphere because, we are told, this would be political discrimination. As a matter of fact, if this view would prevail it would be advisable for everyone to become a Communist because he would no longer be subject to any of the normal difficulties or risks of everyday life. Being a Communist would automatically make him exempt from all social, moral, and political responsibility.

Fortunately, it does not seem as if this point of view will prevail. Treason and subversion have not yet become higher forms of patriotism. The American people are still able to think clearly on this subject and I am certain that they are not going to throw away the Constitution and the other guarantees of liberty which they have in order to establish other rights for those whom they can regard only as inflexible enemies. The structure of freedom and of liberty in America is a well-defined one. It was erected with great prudence and with great foresight. It was not designed to engineer its own collapse. It can be toppled only if we close our eyes and ears to the rules of commonsense and reason and stand aside for those who seek our ruin.

Report of the Attorney General's Committee on the Antitrust Laws

EXTENSION OF REMARKS
OF
HON. ESTES KEFAUVER
OF TENNESSEE
IN THE SENATE OF THE UNITED STATES

Friday, July 13, 1956

Mr. KEFAUVER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article which I wrote for the Mercer Law Review, of the Walter F. George School of Law, of Mercer University, at Macon, Ga. The article deals with the report of the Attorney General's Committee on the Antitrust Laws.

I think the article is a timely one, Mr. President, in view of the fact that a few days ago the House passed by an overwhelming vote House bill 1840, which amends the Robinson-Patman Act so as to prevent selling at discriminatory prices where the result would be to create a monopoly or to lessen competition. The bill has received extensive hearings in the Senate committee, over a period of 7 or 8 days; and the report on the bill has been printed. The bill is now on the agenda of the committee. I can think of no measure which would give more needed protection to small business and to merchants. They have had a very difficult time in meeting discriminatory prices. They have had a difficult time in surviving in the face of increased monopolistic influences.

Enactment of the bill is very greatly needed. I hope very much that the bill will be approved by the Judiciary Committee at its next meeting, and will be placed on the calendar of the Senate, and will be considered by the Senate and passed.

Mr. President, we talk a great deal about wanting to help small businessmen and small entrepreneurs, but very few measures for that purpose are passed. This bill will give them some relief. The bill is backed by small business associations, retail grocers, wholesale grocers, and druggists' associations. Throughout the country there is tremendous interest in the bill.

The article which I had the privilige of preparing, and which appeared in the Mercer Law Review, issued by the law school which is named after the distinguished senior Senator from Georgia [Mr. GEORGE], deals with this problem. For that reason, I feel that it will be of interest to the Members of the Senate; and I ask that the article be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

THE ATTORNEY GENERAL'S COMMITTEE REPORT IN PERSPECTIVE

(By ESTES KEFAUVER, United States Senator from the State of Tennessee; A. B., University of Tennessee, 1924; LL. B., Yale University, 1927; Member of Congress, 1939–48; member of firm Kefauver, Duggan & McDonald, Chattanooga, Tenn.)

In a statement which I made before the Committee on the Judiciary of the House of Representatives on May 9, 1955, shortly after the issuance of the report of the Attorney General's Committee on the Antitrust Laws, I stated:

"It (the report) is a gigantic brief for the nonenforcement of the antitrust laws. It is a massive sedative designed to be absorbed by the enforcement agencies and the courts in the prosecution and trial of antimonopoly cases. The result can only be complete immobility on the monopoly front. To paraphrase General Sherman, if a complaint is received it won't be investigated. If it is investigated, it won't be brought to trial, and if it is brought to trial it won't be won."

Six months later in hearings before the House Small Business Committee, Prof. S. Chesterfield Oppenheim, the co-chairman of the Attorney General's Committee testified that the office of the Administrator of Federal Courts had sent a copy of the report of the Attorney General's Committee to every Federal judge in the United States. According to that testimony, Professor Oppenheim had suggested such action to the attorney general.

Quite apart from questions as to its propriety, the action is significant in that it illustrates the real and ultimate purpose of the report, which is to provide for every judge a complete guide or handbook on how to intepret the antitrust laws. It is handy; it is well-organized for the purpose; it has the appearance of being authoritative, enlightened and sophisticated; and it will save our overworked Federal judges, harassed as they are by overcrowded dockets, a great deal of time and labor which would otherwise have to be spent in looking up previous cases, analyzing legislative history, and carrying on the multitude of tasks required in the writing of a reasoned, well-considered opinion.

What was the special occasion for the report's appearance? Why was it felt that at this time a report of this type should be prepared? Certainly it could not have been the desire to obtain "clarification" of the antitrust laws, since the report warmly endorses the application and extension of the Rule of Reason in place of what are somewhat improperly termed "per se" rules. One can embrace either the need for clarification or the rule of reason but not both at the same time. As Prof. Louis B. Schwartz said in his dissent, "One can have more uncertainty and fewer per se rules, or less uncertainty and more per se rules. Antitrust critics will have to make a choice."

As one who has had the opportunity to observe firsthand the play of forces, the development of issues, and the activities of affected interests, my personal impression is that basically the report is merely the latest in a series of efforts to modify antitrust law enforcements. These efforts were touched off by four major decisions during the middle and late forties. Had the reasoning of this report been followed, those decisions would never have been handed down. And today, although the latter two decisions are still the law of the land, there is, I am sure, the hope on the part of the report's sponsors that, guided by its precepts and logic, the courts in the future will see the error of their ways and reverse these unfortunate mandates. What are these four cases?

They are, first: *Corn Products Refining Co.* v. *F. T. C.*;[1] second: *F. T. C.* v. *A. E. Staley Manufacturing Co.*;[2] third: *F. T. C.* v. *Cement Institute*;[3] and fourth: *Triangle Conduit Co., Inc.* v. *F. T. C.*[4]

The first two of these cases, the *Corn Products Co.* case and the *Staley Co.* case were brought under section 2 of the Clayton Act as amended by the Robinson-Patman Act.[5]

The significant facts in the *Corn Products* case were these: The Corn Products Refining Co. has two plants for the manufacture of glucose or corn sirup—one at Argo, Ill., within the Chicago switching district, and the other at Kansas City, Mo. In selling glucose, the Corn Products Co. used its Chicago plant as a basing point, charging the Chicago base price plus freight from Chicago on all sales, whether they were made from the Chicago plant or from the Kansas City, Mo., plant.

Under this practice buyers of glucose in Kansas City paid a fictitious or phantom freight of 40 cents on every 100 pounds of glucose they bought. On all deliveries from the Kansas City plant to points freightwise nearer to Kansas City than to Chicago, buyers paid phantom freight of varying amounts. On all deliveries from the Kansas City plant freightwise more remote from Kansas City than to Chicago, the Kansas City plant absorbed freight. Under this practice purchasers were denied the transportation savings that normally would accrue to them by reason of their proximity to Kansas City, and the Kansas City plant realized varying mill nets depending on the point of delivery.

It is an interesting part of the record that 2 or 3 candy plants in Kansas City buying glucose from the Kansas City plant, in order to avoid having to absorb the freight charge from Chicago to Kansas City—although the product was never actually transferred—moved their plants from Kansas City to Chicago. The Federal Trade Commission found that the practice constituted a price discrimination within the meaning of section 2 (a) of the Clayton Act—i. e. the Robinson-Patman Act—and that it had injured competition among candy manufacturers. The Supreme Court upheld the Commission's order that the Corn Products Refining Co. stop such price discrimination.

The Staley case, which was decided on the same day, is a companion case to the Corn Products Co. case. The Staley Manufacturing Co. had its glucose plant at Decatur, Ill. In selling glucose it used the Corn Products Co.'s Chicago price as a base price. Under this practice, the Staley Co. charged buyers of glucose at Decatur the Corn Product Co.'s Chicago base price plus freight from Chicago to Decatur, although glucose was bought from Staley's Decatur plant.

On all sales freightwise nearer to Decatur than to Chicago, the Staley Co. charged phantom freight. On all sales freightwise nearer to Chicago than to Decatur, the Staley plant absorbed freight. The result was price differences depending on the location of the buyer. The Commission found this to be price discrimination within the meaning of section 2 (a) of the Clayton Act and that it injured competition among the buyers of glucose. The Supreme Court affirmed the Federal Trade Commission's cease-and-desist order and in doing so rejected the defendant's pleas that its prices were made in good

Footnotes at end of speech.

faith to meet equally low prices of its competitors.

The proceedings in the Cement case were under both the Federal Trade Commission Act and the Clayton Act. The Federal Trade Commission charged, first, that cement manufacturers had conspired to use the basing-point system to eliminate price competition among themselves in violation of section 5 of the Federal Trade Commission Act; and, second, that this had resulted in price discrimination that substantially lessened competition among the sellers of cement. The Federal Trade Commission's record in this case—50,000 pages of testimony and 50,000 pages of exhibits—reveals concerted action among cement manufacturers extending intermittently over almost half a century designed to eliminate competition in the sale of cement. The basing-point system had become the principal instrument in this program, but it had been supplemented by the standardization of trade practices and the use of freight rate books to make easy the calculation of identical delivered prices at all points of delivery. While the system did not work equally well through good times and bad, it worked well enough so that throughout the 1930's cement manufacturers persistently offered to supply cement on Government projects at prices identical to the fourth decimal place, although the prices were presumably submitted independently under secret and competitive bidding.

The Supreme Court, in reversing the lower court, affirmed the Commission's orders to cement manufacturers that they cease and desist from perpetuating the use of the basing-point system through any planned common course of action.

The Conduit Co. case involved an appeal to the Circuit Court of Appeals for the Seventh Circuit from the finding by the Federal Trade Commission that 14 corporate manufacturers of rigid-steel conduit had violated section 5 of the Federal Trade Commission Act[6] in the sale of their products. Section 5, of course, gives the Federal Trade Commission the right to prevent unfair methods of competition. The Commission's complaints charged violation of the law on two counts.

Count one alleged that the respondents had conspired to use the basing-point system of pricing and thereby had substantially lessened competition in the sale of rigid-steel conduit, and that that was an unfair trade practice within the meaning of section 5 of the Federal Trade Commission Act.

Count two charged that each corporate respondent had violated section 5 of the Federal Trade Commission Act through the concurrent use of a formula method of making delivered-price quotations. The Commission found that for any seller to quote prices under a basing-point system with the knowledge that his rivals are doing the same thing and with the result that such practices eliminate competition among them is an unfair trade practice. The decision of the Seventh Circuit Court of Appeals on May 12, 1948, upholding the Commission is today the law of the land, as it was in effect sustained by a 4-to-4 vote of the Supreme Court.[7]

These four cases were directed at a type of pricing method which is inherently discriminatory in character and is particularly injurious to the normal growth of underdeveloped areas. In a speech which I gave on the floor of the United States Senate on June 1, 1950, I described at some length the manner in which these pricing systems have retarded the normal economic development of the South and the West.

The effect of the 4 decisions was to give the Federal Trade Commission 3 weapons with which to attack basing-point systems. Where the circumstances were similar to those which obtained under the Staley and Corn Products cases, the Commission could attack the systems under the Robinson-Patman Act as discriminatory. Where proof of agreement could be found, as in the Cement case, they could be attacked as instruments of unlawful conspiracies. But, perhaps most important, where each seller individually followed the same system knowing that every other seller was doing the same and where the result was to substantially lessen competition, the system would be attacked under count 2 of the Conduit Co. decision as an unfair method of competition in violation of the Federal Trade Commission Act. This was a formidable armory, and it is little wonder that on April 28, 1948, the day after the Supreme Court's decision in the Cement case was handed down, Mr. Irving S. Olds, then chairman of the board of the United States Steel Corp., stated that industry was faced with two alternatives—either it must seek remedial legislation or it must educate the Supreme Court.

For 7 years big industry has labored in the legislative vineyard without avail. The Attorney General's Committee report represents an attempted "massive education."

When the Supreme Court in the subsequent Standard Oil[8] case held that good faith is a complete defense to a charge of price discrimination, it virtually rendered useless the first of these weapons. As long as good faith remains a complete defense, it is difficult to envisage the successful use of the Robinson-Patman Act against a basing-point pricing system. But the phrase "as long as" is important. The decision in the Standard Oil case was, in effect, by a 5 to 4 vote; the actual vote was 5 to 3 but Justice Minton abstained as he had written the decision in the Circuit Court of Appeals upholding the Commission. Thus, with the shift of one vote, this potentially powerful weapon could once more be made effective. It is because of apprehension on this very point that such determined efforts have been made to secure the enactment of legislation which would in effect cement the Standard Oil decision into statutory law.

Perhaps after 7 years of unsuccessful effort on the legislative front it was thought that nothing would be lost and perhaps much might be gained by issuing a document which among other things, would reaffirm to the jurists the correctness of their original views, as expressed in the Standard Oil decision, moreover, such a document might provide the opportunity of extending the Court's decision beyond the province which the Court itself had established.

Personally, I disagree strongly with the Court's interpretation of the law in this case. The Court, I believe, was guilty of substituting for congressional intent its own views, misguided in my opinion, as to what is economically desirable. But the Court at least set certain limitations as to the extent to which the "good faith" defense could be used. Now the Attorney General's Committee would wipe out these limitations and thus go beyond the Supreme Court's decision.

In the Standard Oil decision the "good faith" defense was limited to the meeting of "lawful" prices; the Attorney General's Committee would in effect extend it to the meeting of "unlawful" prices as well. The report says that "* * * a seller should be deemed to have met a lawful price unless he knew or had good reason to believe otherwise" (p. 182). The report does not describe how the Federal Trade Commission is going to establish the state of knowledge on the part of the discriminator as to the lawfulness of the price which he is meeting. This is not the lawfulness of his own price, about which he might be expected to know a little, although even here there might be room for doubt. It is the lawfulness of someone else's price. One can hardly imagine a more impossible burden of proof to impose upon the enforcement agency.

The decision limited the "good faith" defense to discriminations made to meet competitors' prices; the Attorney General's Committee would extend it to discriminations made to beat competitors' prices as well. The report says, "An incidental undercutting of the prices quoted by others, when in the course of genuinely meeting one particular competitor's equally low-price offer, hence should not invalidate a seller's defense" (p. 183). The report does not describe the circumstances under which an undercutting of price is only incidental.

In the Standard Oil decision the "good faith" defense was limited to defensive price discriminations made to retain an existing customer. The Attorney General's Committee would extend the defense to aggressive discriminations made to obtain new customers. The rationalization for this position consists of mere assertion. The report says that the Court "merely employed language describing the case at bar" and that a limitation of the defense to defensive price discriminations "would not be in keeping with elementary principles of competition * * *" (p. 184). The principle is to say the least unique. Just disregard what the Court clearly says, if it "* * * would not be in keeping with the elementary principles of competition."

The Attorney General's Committee certainly has the right to its opinion that the Supreme Court's decision does not go far enough. One can, however, question the propriety of the Committee's efforts to create the impression that what it regards as right and proper has already been accepted by the Court and is today the law of the land. But what is really astounding in its implications is the Committee's bland statement that what it considers the law should be, not what the law is, now governs the enforcement of the law. The report states, "Since the statute may be presently interpreted as we propose, we do not consider legislative amendment necessary now" (p. 184).

The Attorney General's Committee would also immobilize the other two weapons, except where overt evidence of conspiracy was found. It must be remembered that such evidence was present in the Cement case. But its appearance in concentrated industries is becoming more and more of a rarity. The large corporations have long ago learned the importance of not keeping in their files letters, minutes, memoranda, or documents of any kind which would constitute direct evidence of conspiracy. One of the functions of the corporation lawyer is to keep his client from making precisely this type of mistake.

Now the manner in which the Attorney-General's committee sought to cope with this issue represents, whether intended or not, an interesting case example of how to create a misleading impression without actually making a misstatement. After citing the decisions in recent FTC cases, the report says, "Such developments fostered the notion that conspiracy necessarily followed from identical conduct by competitors—provided each knew what the other was doing." (p. 38). Assuming the unstated justification, i. e. that the effect of the practice substantially lessens competition the question arises as to whether this is the law of the land? The report says no, because, "The Supreme Court laid this notion to rest in *Theatre Enterprises, Inc.* v. *Paramount Film Distributing Corp.*" (p. 38). The report then goes on to quote the following passage from that decision:

"The crucial question is whether respondents' conduct toward petitioner stemmed from independent decision or from an agreement, tacit or express. To be sure, business

Footnotes at end of speech.

Footnotes at end of speech.

behavior is admissible circumstantial evidence from which the factfinder may infer agreement. * * * But this Court has never held that proof of parallel business behavior itself constitutes a Sherman Act offense. Circumstantial evidence of consciously parallel behavior may have made heavy inroads into the traditional judicial attitude toward conspiracy; but conscious parallelism has not yet read conspiracy out of the Sherman Act entirely." (P. 39.)

The report then draws this conclusion:

"This committee is in full accord with that Supreme Court reasoning. 'Conscious parallelism' is not a blanket equivalent of conspiracy. Its probative value in establishing the ultimate fact of conspiracy will vary case by case. Proof of agreement, express or implied, is still indispensable to the establishment of conspiracy under the antitrust laws." (p. 39.)

The crucial phrase in this interpretation is "under the antitrust laws." The Theatre Enterprises [9] case was a Sherman Act case. The notion of conscious parallelism to which the committee was objecting and which the report says had been laid to rest by the Theatre Enterprises case developed from Federal Trade Commission Act cases. The principal cases cited by the report in its reference to development which "fostered the notion that conspiracy necessarily followed from identical conduct by competitors" are the Cement case and the Conduit Co. case, both of course FTC Act cases. The Theatre Enterprises case is obviously not relevant to the issue which the report is here discussing. It is possible that the authors of the report might attempt to defend themselves on the grounds that technically the Federal Trade Commission Act is not considered to be an antitrust law. But such a defense would be specious, since the whole point of the argument is to use the force of the Theatre Enterprises decision against those cases which gave rise to the conscious parallelism doctrine.

The distinction is of course fundamental. Since the Federal Trade Commission Act was intended to go beyond the Sherman Act and prevent in their incipiency practices which if not arrested would ripen into Sherman Act violations, what is not a violation of the Sherman Act may well be a violation of the Federal Trade Commission Act. In this connection it is interesting to note an often overlooked observation of the Court to be found in the Cement decision:

"While we hold that the Commission's findings of combinations were supported by evidence, that does not mean that existence of a 'combination' is an indispensable ingredient of an 'unfair method of competition' under the Federal Trade Commission Act."

Incidentally, I agree with Prof. Eugene Rostow that even insofar as the Sherman Act itself is concerned, "The emphasis given to the limited decision of the Supreme Court in the Theatre Enterprises cases should not be misinterpreted" and that it "in no way weakens the authority" of such earlier Sherman Act cases as Interstate Circuit,[10] Paramount Pictures [11] and American Tobacco Co.[12]

There are many other aspects of the report with which I thoroughly disagree. Among other things, I disagree with the evidentiary requirements it has advanced as necessary to prove a violation of the Celler-Kefauver Anti-merger Act, with its attempt to read the rule of reason into the Clayton and Federal Trade Commission Acts which Congress enacted for the specific purpose of placing on the statute books antitrust laws to which the rule of reason would not be applicable, with its recommendation for an increase in penalties as being unduly and almost ridiculously modest, with its recommendation for the extension of consent decrees, with its direct attack on private triple-damage suits and with its almost complete disregard of the problem posed by the existence of monopolistic size and power.

But in this article I have endeavored to stress what I consider to be the key issue which precipitated the far-reaching and continuing attack on the antitrust laws, of which the report is merely the latest manifestation. For the reasons which I have endeavored to set forth, the committee's interpretation of the law on this issue is in manifest error. I am confident that the courts of the land will recognize the error and will enforce the law in accordance with the intent of Congress—assuming, of course, that cases involving the issue are ever brought forward.

Airport Meanderings

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Friday, July 13, 1956

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial which appeared in the Washington Star on Thursday, July 12, which discusses and comments on Washington's airport problem:

The meanderings of the Commerce Department with respect to Washington's critical airport problem resemble those of a rudderless airplane whose pilot is lost in a fog. The record of the department's varied airport recommendations in recent years shows an amazing amount of indecision, course-changing and acrobatics of the Immelmann turn sort. And the end is not yet. What the next policy decision of Secretary Weeks or his advisers will be is something to wonder about.

Latest of the department's moves is a recommendation that Baltimore's Friendship Airport be designated as an "interim" supplemental Washington air terminal, pending action on the Burke project. Secretary Weeks keeps steering back to Friendship, despite all the expert testimony and reports rejecting the Baltimore field as unsuitable for Washington air passengers. It is no secret, of course, that Maryland legislators, worried about the lagging business at Friendship, have sought to twist the Secretary's arm. The trouble with Mr. Weeks' Friendship gestures, past and present, is that they apparently have been dictated by political pressures, not by objective advice from aviation authorities. In fact, the first official study by the Civil Aeronautics Board of the proposal that Friendship serve as an alternate Washington airport is just being made. The logical procedure for the Secretary to have followed would have been to await completion of the study. But logic seems to have played little part in departmental peregrinations.

Is there any logic in the confusing and conflicting airport suggestions that have emanated from the Department of Commerce since it first recommended the Burke airport plan? When political pressures began to build up on both sides of the Potomac over the Burke site, with resultant cutting off of further appropriations, the Department began to back away from Burke. But as traffic congestion at the National Airport grew more dangerous, the department's Civil Aeronautics Authority urged action on a second airport. So did the Senate Commerce Committee. So did President Eisenhower, in naming the Secretary of Commerce, the Budget Director, and the Secretary of the Air Force as a special committee to review the situation and bring him a report. The report was something of a classic in the realm of muddled advice. It proposed in effect that the Government do an outside loop on the Washington airport matter. The Government's nearly $1 million investment in land at Burke was to be forgotten and primary responsibility for building an auxiliary airport here was to be shifted to the District, Maryland, and Virginia. Meanwhile, runways and other facilities at the present airport would be improved and Friendship could be used as a "supplemental airport" if desired.

This report was so absurd that it soon was filed away and, presumably, its authors would prefer to have it forgotten. In the meantime the Senate Commerce Committee demanded prompt action on Burke or some other appropriate auxiliary airport. So Secretary Weeks came up with a new report. This time he revived an old plan for joint use of Andrews Air Force Base by commercial and military aircraft, with Burke as the best alternative and Friendship as a third possibility. However, he overlooked checking with the Air Force first about the Andrews proposal. Air Force opposition blasted the Andrews idea. That left Burke once more the leading contender. As a result, the President has urged Congress to appropriate $34.7 million to complete the airport at Burke. But political pressures are building up once more against this logical recommendation. It is anybody's guess whether political expediency will win out against public safety in the long-drawn-out airport controversy.

Events in Poznan

EXTENSION OF REMARKS
OF
HON. JOHN R. PILLION
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Friday, July 13, 1956

Mr. PILLION. Mr. Speaker, I am pleased to insert the following resolution adopted at the meeting of the Central Council of Polish Organizations, Inc., of Buffalo, N. Y., held on Tuestday, July 10, expressing the feeling of American citizens of Polish descent in connection with the events in Poznan:

CENTRAL COUNCIL OF POLISH ORGANIZATIONS, CLUBS AND SOCIETIES, INC.,
Buffalo N. Y., July 12, 1956.

At the regular meeting of the Central Council of Polish Organizations, Inc., of Buffalo, N. Y., representing over 180,000

Poles, held on Tuesday, July 10, the following resolution was adopted, for the purpose of expressing the feeling of American citizens of Polish descent in connection with the tragic events in Poznan, resolves:

"We salute the heroic spirit of the people of Poznan who have voiced the legitimate right of the Nation to ask for bread and freedom. Their rightful demands were met with bullets.

"The Communist agents of Moscow, who are responsible for the murder of Polish workers on the streets of Poznan, must be warned that the day will come when they will be brought to account for their crimes.

"At the cost of hundreds of dead and wounded, the people of Poznan have unmasked the Communist lies about the worker's paradise in the so-called people's democracies. The Poznan events prove that there is no change in the Communist system which is based on armed terror and that any talk of liberalization of conditions in the captive countries is a dangerous illusion.

"The whole free world will follow with utmost attention further developments in the situation of Poznan. Any reprisals, undertaken under the cloak of judicial procedure, will meet with indignation of the public opinion of the free world.

"Americans of Polish descent, together with the free Poles residing in America, assure the people of Poland that they will continue their efforts to bring about the realization of those ideals for which the workers of Poznan gave their lives.

"We appeal to the American Government and the United States Congress as well as to the other governments and parliaments of the free world to initiate an international action to condemn the crimes perpetrated by the Communists in Poznan, to employ all peaceful means to effect really free elections in Poland under international supervision and to restore freedom and independence to Poland and other captive countries."

Yours truly,

JOHN F. ASZKLER,
President Central Council of Polish Organizations, Inc.

United States Highways

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 11, 1956

Mr. MULTER. Mr. Speaker, the following article by Thomas Furey, from the New York World Telegram of July 11, 1956, is interesting reading:

JAVITS IMPERILS UNITED STATES ROAD PLAN, MOSES ASSERTS

(By Thomas Furey)

Robert Moses today forecast the doom of the nationwide $33 billion Federal roadbuilding program if the courts uphold the opinion of Attorney General Jacob K. Javits that the State was not responsible for the deaths of six children in Brooklyn's expressway cavein.

The city construction coordinator, in a hard-hitting report to Mayor Robert F. Wagner, characterizes the attorney general's thinking as "irresponsible" and "a legal hodgepodge."

REFERS TO REPORT

Mr. Moses was referring to a report issued July 2 by Mr. Javits on the cavein of the Brooklyn-Queens Expressway in which the attorney general said the State had no obligation to supervise the manner or method of the work performed. Mr. Javits added that it was incumbent upon the city to provide for adequate safety regulations on construction projects.

In his report today to the mayor, Mr. Moses declared:

"The only way to characterize the opinion issued by the attorney general is to say that it is irresponsible."

Mr. Moses said that if the Javits opinion is upheld, the effect will be "to completely destroy the $33 billion Federal roadbuilding program just passed by the Congress and authorized and approved by the President of the United States."

POINTS TO UNITED STATES LAW

He pointed out that Federal law places responsibility directly on the States and prohibits assignment of responsibility to localities or cities. He added:

"There is not a single municipality in the country that would or could operate a system for building these roads under the Federal bill if responsibility for the work done through State contracts is evaded by the State as is done by this opinion."

The city's construction chief declared "it was incomprehensible" how any State could make a decision that it has no responsibility for highway construction. He asserted that the effect of Mr. Javitz' opinion "would be to sabotage the program."

"Obviously," he said, "what the attorney general had in mind in writing this report was to find a way for the State of New York to evade claims for damages in the case of the Brooklyn accident."

SUITS THREATENED

Already actions have been threatened by the parents of children who lost their lives in the June 12 tragedy.

Mr. Moses pointed out in his seven-page memorandum that the Federal legislation and State laws completely regulate the national expressway. He cited the New York law under which, he said, the State makes the plans and specifications, lets the contracts, supervises the contracts and the work performed and pays the contractors and those who do the supervision for the State.

He went on to say that the attorney general's assertion that the State was not responsible is invalid "in the face of the plain language of section 40 of the State law which provides that 'the performance of every contract for the construction or improvement of a State highway shall be under the supervision and control of the superintendent of public works'."

Mr. Moses asked in his report how the State could "evade responsibility through tortured reasoning as that of the attorney general?" He termed Mr. Javits' opinion "a legal hodgepodge which ignores laws, contracts and precedents established and in force for many years in the State Department of Public Works."

Hats Off to Congressman Morano

EXTENSION OF REMARKS
OF
HON. EDWARD P. BOLAND
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Friday, July 13, 1956

Mr. BOLAND. Mr. Speaker, I am pleased to insert in the RECORD an editorial from the Springfield (Mass.) Union under date of July 11, 1956. It tips its editorial hat to our colleague from Connecticut [Mr. MORANO] for turning down a bid to dinner from the Polish Embassy in Washington. Mr. MORANO's action, I am sure, was irksome to the embassy but will be applauded by the millions who were shocked at the answer that the Polish Communist Government gave to the workers who asked for more bread. That answer was written in bullets, blood, and death. If any proof was needed of the patent fraud of the so-called Polish People's Republic, the massacre of Poznan furnishes it. For Poznan clearly showed that the Red government is neither Polish nor a republic.

The editorial follows:

GOOD FOR HIM

As a member of the House Foreign Affairs Committee, Representative MORANO, a Connecticut Republican, has turned down an invitation to the party at the Polish Embassy in Washington which has been arranged to observe the founding of the Polish People's Republic. Mr. MORANO probably violated the canons of diplomacy when he informed Polish Ambassador Romuald Spaskowski that he could not accept the offerings of the festive table and bar while people in Poland are starving.

The Congressman from the neighboring State to the south does not represent United States diplomacy, of course, and United States diplomacy, however reluctantly, embraces the pragmatic recognition of the Polish People's Republic. But we say, "Good for Mr. MORANO." We think he represents the people of this country in his forthright stand against hobnobbing with the Red oppressors of the Polish people. And that's a Congressman's job—representing the people

A New Surface but the Old Substance

EXTENSION OF REMARKS
OF
HON. HAROLD D. DONOHUE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 13, 1956

Mr. DONOHUE. Mr. Speaker, I should like to include a very timely editorial entitled "Russia's New Look," which appeared in the June 4, 1956, issue of the Worcester (Mass.) Telegram.

The article follows:

RUSSIA'S NEW LOOK

Soviet Russia moved swiftly over the weekend to erase further traces of the Stalin era when the ruthless dictator held the Soviet in a grip of totalitarian terror.

Sweeping Soviet Government changes underscore the new Bulganin-Khrushchev policy of trying to win friends and influence people by a softening of the Moscow attitude toward both Russian citizens, and the world generally.

In a decisive governmental shakeup, the Soviet Union yesterday granted much greater power to its various Republics. It was a move toward decentralizing the huge power bureaucracy built in the Kremlin by the late dictator. The Soviet abolished its centralized ministries of justice, inland waterways and road transport—an action calculated in itself to show the world how different is the look in Moscow today.

These changes came on the heels of the resignation of V. M. Molotov, and his replacement as Foreign Minister by D. T. Shepilov, former Pravda editor and a skilled propagandist.

The inscrutable Molotov personified the ruthless intransigeance of the Stalin dictatorship. The younger and affable Shepilov personifies the new Soviet plan to try to win support by less harsh methods.

Shepilov is adept in the use of propaganda words; he is, nonetheless, a dedicated Communist convinced of the ultimate triumph of world communism.

Slowly the face of Russia is changing, as these moves pull the nation further away from Stalinsm. A correspondent recently back from Moscow said the change in atmosphere has been amazing. Muscovites are actually joking about the former terrors of a police state, the forced-labor camps in Siberia, and the censorship imposed by Stalin.

The Bulganin-Khrushchev team has turned a smiling face to the world, emphasizing better relations in foreign policy, more mutual trade, and peaceful coexistence. The return to the Soviet orb of President Tito, of Yugoslavia, is one of the positive accomplishments of the new regime.

The changes are so profound and dramatic that the Western alliance is actually embarrassed in knowing how to cope with them. Americans recognize, of course, that the Soviet is not changing because of any sudden love for its fellow men around the world. The Soviet is changing because Bulganin-Khrushchev apparently believe in the old saw that more flies can be caught with sugar than with vinegar.

The West has, indeed, been caught off base without positive policies to meet effectively the new conditions. It is trite, and positively foolhardy, to dismiss all of Russia's overtures with dire warnings that "you can't trust those Russians, anyway." Some more positive approach than that must be taken, if the world is to take full advantage of the changing political climate in Russia. It is possible that Russia will soon be in the mood to make the United Nations the instrument for peace and progress that it should be. This is the hope.

Not Guilty—By Association

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Friday, July 13, 1956

Mr. MULTER. Mr. Speaker, the following column by Drew Pearson, which appeared in newspapers throughout the country on July 13, 1956, makes very interesting reading.

If the facts he tells about were told about a Democrat during a Democratic administration, front page headlines would declare guilty every Government official directly or indirectly involved. Since it refers to Republicans, it is merely of passing interest to most editors.

The article follows:

ROLE OF IKE'S KIN IN CTC DEAL TOLD

(By Drew Pearson)

EDITOR'S NOTE.—The brass ring, good for one free ride on the Washington-Merry-Go-Round, today goes to President Eisenhower's brother-in-law, a quiet but potent personage in the Capital.

The least publicized relative of President Eisenhower, his brother-in-law, Col. Gordon Moore, is a soft-spoken mild-mannered, retired Army officer who sits in a well-appointed but not overly ornate office in Washington's Walker Building.

All around him on the walls are mute reminders of his relationship to the First Family—an oil painting of Ike as a five-star general, photos of Ike and Mamie, pictorial highlights of the President's career.

Officially Colonel Moore is an expediter of airline business and a lender of money to nonsked airlines.

"I'm just an old soldier trying to make a living," he explains self-deprecatingly.

When you examine his business and compare it with his pecuniary status shortly before his brother-in-law entered the White House, the conclusion is inescapable that he has done well.

STREETCAR SALE

Colonel Moore's name was potently passed around Washington financial circles last week as a result of the biggest transportation deal in District of Columbia history—the $13,540,000 sale of the Capital Transit Co. which supplies the streetcars and buses for the Capital's ambulatory population.

For months, various groups had made offers to buy Washington's bus and streetcar system. Then suddenly, at a surprise midnight meeting, an offer was accepted from O. Roy Chalk, millionaire owner of Trans-Caribbean Airways. Similar or better offers were rejected.

In putting across his sudden deal to run the transit system, Chalk had the assistance of both Colonel Moore and his attorney, Edward F. Colladay, close to the Republican National Committee.

Chalk, however, went out of his way to conceal Moore's connection.

For 2 weeks he ducked inquiries from this column. He even instructed the Willard Hotel to deny he was registered there, though staying in room 601. His business partner, Morris Fox, blandly denied that Ike's brother-in-law had anything to do with the deal.

It has now been definitely established, however, the Colonel Moore introduced Chalk to Robert C. Baker, an executive director of the American Security and Trust and also a Capital Transit director; that he telephoned Harry McDonald, a rival bidder, and urged him to get together with Chalk, not compete with him; and Colonel Moore, franker than his associates, acknowledged to this column that he had helped put the deal across "in a small way."

FORTUNE'S RISE

The careers of Roy Chalk and the President's brother-in-law have been inextricably intertwined ever since the spring of 1952 when Chalk took a longshot gamble that Gen. Eisenhower would be the next President of the United States. At that time Col. Moore's economic fortunes were at a low ebb, so low that he and his wife had offered to sell their house.

At this point Chalk hired Moore for $6,500 to handle public relations for the independent Military Air Transport Association.

Moore was hired three times and fired twice before the Republican Convention in 1952. He was fired and rehired as Ike's fortunes ebbed and flowed. The last time he was fired by the Military Transport Association Chalk stepped in and hired him directly for Trans-Caribbean. They went to the GOP Convention together, and a week after Ike was nominated, Col. Moore was promoted to vice president of Trans-Caribbean.

BUSINESS BOOMS

Almost overnight, Moore blossomed out with his own business. He lent money, as a broker to small airlines and trucking companies.

What he does is borrow money from American Security and Trust, then turn around and lend the money to the small companies as an advance on payments they have coming from the Government. As his commission, he taks out 1.5 percent.

Two airlines executives told this column they could get the same service for half Moore's commission, but they pay Moore extra for his political influence. Moore also arranges direct loans for small airlines through American Security and Trust, charging a middleman's profit.

How a man of Moore's 1952 income of $6,500 could suddenly start doing a million-dollar business with American Security and Trust is a mystery. The bank's president, Daniel W. Bell, former Under Secretary of the Treasury, told this column he could not discuss a client's business.

There's nothing wrong with the business Col. Moore conducts. He merely benefits from having friends in high places.

Study Mission Trips by Members of Congress

EXTENSION OF REMARKS
OF
HON. EDNA F. KELLY
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Friday, July 13, 1956

Mrs. KELLY of New York. Mr. Speaker, recent coments in periodicals and in arguments in the Congress against the authorization and appropriation for foreign aid—mutual security bill—have strengthened my belief that study mission trips by Members of Congress are essential. I do not believe the opposition to foreign aid is a question of dollars. I believe the objections that exist are directed at the willingness of the leaders of the free world to accept and to appease the new Soviet leaders. Soviet objectives have not changed but their method of attaining world domination has veered to a new course. The apathy of the peoples of the free world is an expression of hope that the Soviet will now cooperate.

The leaders of the free world must implement their beliefs in bold new policies. The program is mutual. United States policy has vacillated in leading the free world to this objective. NATO must be strengthened by the mutual action of the free nations. NATO was a military deterrent. To weaken and to destroy NATO are the aims of the Soviet. The failure of NATO to reach and to maintain the goals established has weakened NATO. The United States should not waiver in enforcing mutual security.

The United States is accepting the ideas of the agreeing nations to make the former military pacts into economic pacts. They must be both; not one or the other.

The House Foreign Affairs Study Mission to Europe last fall, of which I was chairman, wrote the following observation in its report to the House:

The meeting of the Foreign Ministers at Geneva began on October 27, 1955, and continued until November 16. The study mission arrived in Geneva on October 31 and left the afternoon of November 2. The contact of the study mission with the conference was entirely through the Secretary of State and

members of his staff. The study mission was convinced when it left Geneva that nothing would be accomplished at the meeting. This situation confirmed the judgment of all the foreign officials with whom the study mission discussed this matter that they expected nothing to come of the conference.

The two meetings during 1955 at Geneva (July and October) focused attention on one of the critical aspects of United States foreign policy. It was apparent everywhere the study mission went during its 2 months of travel that there had been a great relaxation of tension, apathy, a decided let-down in the NATO defense effort, and an alarming rise in neutralism. Most nations were giving a higher priority to their domestic problems and their conflicts of interest with their neighbors than to the Soviet threat.

Our representatives at Geneva acknowledged that, in general, this relaxation had occurred. They pointed out, however, that the objective of United States foreign policy was to promote world peace and security. They said that the United States should not, therefore, consider a course of action to be a failure which has led nations to feel that the prospects of peace were brighter than they had been previously and to believe that they were more secure than they had been for 7 or 8 years. The United States representatives at Geneva argued that a foreign policy which required continuous fear and tension to make it effective defeated its own purpose.

The study mission had noted, nevertheless, in nearly every country a conviction on the part of government leaders that the Russian smiles did not indicate a change in Soviet objectives and that the Communist danger had not diminished. The typical attitude appeared to be "We have not been fooled by the Russians; we fear that other nations may have been; there is no question but that public opinion within our country has shown an unjustified optimism." While all of the foreign officials talked to were sufficiently restrained as to avoid direct statements to this effect, there were frequent implications that statements of United States leaders last summer had been too optimistic and that the opinion of their own people toward Russia tended to be influenced more by the prevailing opinion in the United States than anything else.

There can be little doubt that serious damage was done to the NATO defense effort by the flareup of national rivalries which has occurred between Greece and Turkey. This flareup might have been prevented if the attention of the western nations had not been permitted to waiver from the necessity of meeting the common danger.

It is clear that the only good out of Geneva was to again alert the world that Russia is insincere in its objective for world peace. The study mission regrets that a setback to the free world must continually take place in order to reconfirm this fact to the people of the world. Allied unity, the NATO alliance, and the pacts in Europe have been weakened to such a degree by the Geneva atmosphere that bold, new, dynamic programs must be devised on a crash basis to overcome the gains made by the Soviet during this period. The U. S. S. R., encouraged by the acceptance of their smiles, of their new approach and their new look, again abrogated the trust of the free world and in this environment, established a foothold in the Middle East to further obstruct and divide the free world by igniting historical issues which were at the stage where solution was in sight.

The free world must always be ready to negotiate with the U. S. S. R. to obtain a just and lasting peace, but must always bear in mind that the first objective of the Communists is to conquer and enslave the world. We must never permit ourselves to be caught in that which is described in the direct quote used so ably by Congressman ROBERT C. BYRD, of West Virginia.

"War to the hilt between communism and capitalism is inevitable. Today, of course, we are not strong enough to attack. Our time will come in 20 or 30 years. To win, we shall need the element of surprise. The bourgeoise will have to be put to sleep.

"So we shall begin by launching the most spectacular peace movement on record. There will be electrifying overtures and unheard of concessions. The capitalist countries, stupid and decadent, will rejoice to cooperate in their own destruction. They will leap at another chance to be friends. As soon as their guard is down, we shall smash them with our clenched fists." (The words of Dmitry Manuilsky, about 25 or 30 years ago, in a lecture at the Lenin School of Political Warfare in Moscow.)

It is clear that a program designed to meet danger will have to be adjusted from time to time when and if the danger diminishes. It is also clear that if such adjustments are made by those participating in the program when the danger hasn't diminished the effort is weakened and the enemy has won a round.

The following article by Constantine Brown as it appeared in the Washington Evening Star of July 12, 1956, substantiates the observations of the study mission.

TWO MAJOR THREATS IN EUROPE—CHURCHILL REPORTED CONCERNED OVER NATO'S WEAKNESS AND CYPRUS WAR

The publisher of a large metropolitan paper last week had an unusually long conversation with the world's foremost elder statesman, Sir Winston Churchill. Despite the fatigue and discomforts inherent in his advancing years, Sir Winston appears still to have a better and more realistic understanding of world conditions than the younger men to whom he has handed over the leadership of Great Britain in these trying days.

The former British Prime Minister seems to be particularly concerned over two important problems confronting Europe—outside, of course, the perennial threat from communism. One is the increasing weakness of NATO and the second, the tension between Greece and Turkey.

Despite official statements to the contrary, NATO has at present neither brawn nor a moral determination. The announcement last month that two of its top commanders (the supreme commander, Gen. Alfred Gruenther, and the commander of the NATO ground forces, France's Marshal Juin) will retire this fall is a significant indication. It is more than a safe speculation that the two distinguished soldiers do not want to remain identified with what so many describe as a moribund organization. It is true that both have given other reasons for their quitting. General Gruenther, who is in his late fifties, is said to be leaving because he has been offered a highly remunerative job in industry in this country. This explanation is not quite plausible. Many of our distinguished commanders such as Generals MacArthur, Bradley, Ridgway, Bedell Smith and Admirals Halsey, Denfeld, and Carney obtained well-paid positions with business firms after they retired at the statutory age of 62 or later. The explanation that Marshal Juin has given up his NATO command because he did not want to serve under Gen. Lauris Norstad—a much younger man—does not hold water either. He had served in the past under Generals Ridgway and Gruenther, both his junior in age and rank.

Sir Winston did not elaborate on these staff changes when he took a dim view concerning the future of NATO, but pointed out that the enthusiasm for the coalition has waned in most European countries where coexistence and neutralism have taken deep roots. The attitudes of the Scandinavian members, Iceland, France, and even Germany, where the rank and file is opposed to a military force of 500,000 men, are clear indications of the shape of things to come. The allied combat forces at the western borders of the Red curtain are now composed almost exclusively of Americans and British. And Britain, in the throes of another economic crisis, soon may be compelled to withdraw at least 1 of her 4 divisions.

Sir Winston is said to be more disturbed than any other European or American statesman about the growing danger of a Turkish-Greek conflict over any settlement of the Cyprus issue. The Turks are determined that there shall be no union of Cyprus with Greece. The former Prime Minister observed that the strengthening of the forces of both countries in eastern and western Thrace is disturbing. The Balkans, like the Middle East, are dangerous powder kegs. A minor incident easily could bring about an explosion, the United Nations notwithstanding.

There is no question that the Greek Government headed by Prime Minister Karamanlis will do its utmost to prevent anything as serious as a Greek-Turkish clash. But Karamanlis must reckon with a highly emotional and explosive public opinion. Some of the Athens newspapers are violent in their denunciation. The Greek press is more free than that in any other country in the eastern Mediterranean in saying that Turkey is provocative. The rank and file of the Greek people are avid newspaper readers and pay much more attention to editorials (particularly those of an inflammatory character) than to sports, financial news, or comic strips. Hence, public opinion is formulated by newspapers more than in the West.

Diplomats may dismiss such editorials as poppycock, written for the purpose of increasing the paper's circulation. But those who know Greece and the Greek people do not take such writings lightly. Greece is militarily in better shape than she has ever been before. And the Greeks are being told that, under certain circumstances, they could find support from Marshal Tito, the Arab States, and even from the U. S. S. R.

On the other hand, the Turks are not people to be easily scared or pushed around. Last year's anti-Greek demonstrations in Istanbul have shown that underneath, the Turkish masses still hate the Greeks and that the present Turkish-Greece alliance is nothing more than a marriage of convenience which easily could end in a spectacular divorce.

Socialism—Republican Style

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 11, 1956

Mr. MULTER. Mr. Speaker, whenever a Democrat suggests Federal aid to any part of our economy or to a large segment thereof, most of our Republican friends immediately label it "socialism" and "a step toward communism."

When our Republican friends make such suggestions, it is not socialism nor communism, it then is "conservatism where property is concerned" or "liberalism" where human rights are concerned."

I direct our colleague's attention to the article by Joseph L. S. Terrell, as it appeared on the front page of the Wall Street Journal of July 9, 1956, and sug-

gest that the matters discussed therein are worthy of the attention of the appropriate congressional committees.

The article referred to was placed in the Appendix of the RECORD of July 12, 1956 by Senator JOHN J. WILLIAMS and appears at page A5487.

United States and Western Policy Failure in the Near East

EXTENSION OF REMARKS
OF
HON. HAROLD D. DONOHUE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 13, 1956

Mr. DONOHUE. Mr. Speaker, I should like to include a very lucid editorial, entitled "A Long Way to Go," which appeared in the June 6, 1956 issue of the Worcester (Mass.) Telegram.

It is axiomatic that a sound foreign policy must deal with basic issues of contention if it is to be both morally and diplomatically successful. This editorial sharply points up the vital need of such a policy, spearheaded by our own State Department, if any stable peace settlements is to be achieved in the Near East.

Let us pray that our responsible executive department officials will prove equal to the challenge before it is too late.

The article follows:

A LONG WAY TO GO

When U. N. Secretary General Dag Hammarskjold returned from the Middle East 4 weeks ago, he warned that a final settlement between the Arab states and Israel is probably still far off.

He has good reason to be pessimistic. That fact was underlined the other day when the Security Council voted on a British resolution to have Mr. Hammarskjold continue his good offices.

The resolution made official what already had been made clear in the debates leading up to Monday's vote. There is no inclination on the part of the Western powers to dig into the basic issues which have kept the Middle East in turmoil.

The Security Council praised the Secretary General's work in obtaining a cease fire. And it authorized him to continue his efforts to obtain compliance with the 7-year-old armistice terms. But beyond that, the council resolution did not go. Even a phrase expressing the council's hope for a settlement on a "mutually acceptable basis" was stricken out at the insistence of the Arab bloc, backed up by the Soviet Union.

The Western powers, in short, have recognized that there can be no "mutually acceptable" settlement so long as both sides cling to their present positions—and neither side has shown any willingness to retreat from those positions.

The Arab states, backed by Soviet power, are demanding that any settlement must be made on the basis of the United Nation's 1947 partition resolution. This resolution led to the Arab-Israeli war which ended with Israel's acquisition of more territory than the 1947 partition had provided. To go back to that partition scheme would force Israel to give up a third of her territory. This she will not do. Since the 1949 armistice, Israel has argued that the Arab states, by going to war to block the 1947 partition plan, have lost the right to invoke that plan now.

Even should some way be found to establish the 1947 partition, there are signs that the Arab states may not really go along on that basis. Syria has declared that the very existence of Israel must be done away with. With their new-found ally in Moscow, the Arabs are raising their demands.

Thus far, the West has evolved no policy to cope with this difficult and explosive situation. That was made abundantly clear when the West accepted the watered-down resolution the week relating to Mr. Hammarskjold's role. The West may have good reasons for not wishing to stir up the basic issue at this particular juncture. And it can take some small encouragement that Mr. Hammarskjold did succeed in obtaining a cease fire, however unstable it may be. But the issue of peace or war in the Middle East has not been settled—it has merely been postponed.

Balancing the Budget With Deficits

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Thursday, July 12, 1956

Mr. MULTER. Mr. Speaker, the following article from the Wall Street Journal of July 12, 1956, speaks volumes:

GOVERNMENT FARM SURPLUS DISPOSAL AND LOSSES INCREASED IN FIRST HALF—EISENHOWER SAYS $1.2 BILLION OF GOODS WERE SOLD AT A DEFICIT OF $471 MILLION

WASHINGTON.—President Eisenhower told Congress Federal farm surplus disposal soared during the first half of this year. Losses mounted, too.

In his fourth semiannual report on operations under the key surplus disposal law, the President said the Government arranged to unload $1,264,800,000 of farm commodities at a loss of about $471,000,000. That compares with $491,000,000 of unloading during the previous 6 months. In that period losses came to $297,000,000.

January–June commitments raised the total to $2,953,000,000 since the program started late in 1954. Clear losses have reached $1,324,000,000.

RETURN IS SMALLER

Actually, the Government's return is even smaller than the loss figures indicate. Besides his outright giveaways, Uncle Sam sells farm produce for foreign currency, most of which is pumped back into the purchasing country as foreign aid. Barter deals account for another chunk of disposal totals, with the Government receiving minerals and other goods instead of cash.

Foreign currency sales moved the most surpluses, according to the report. In the first half of this year, the Government signed agreements to sell $801.2 million of farm commodities by this route. When the sales are completed the equivalent of $537.8 million in foreign currency will be deposited to the United States account.

Of this total, the United States will loan to foreign countries $273.2 million for trade and economic development projects, will use $157.7 million to pay American expenses abroad, will contribute $87.3 million to "common defense," and will devote the balance to development of markets for United States farm produce, purchase of strategic materials, purchase of goods by third countries, and international educational exchanges.

Foreign currency sales during the last 6 months of 1955 totaled $211 million, for which the United States is due $143 million in foreign currency.

SALES FOR FOREIGN CURRENCY

Since this phase of the program started, the Government has arranged to sell farm commodities which cost $1,466,900,000 for $1,041,900,000 in foreign currency. Sales include $526.1 million of wheat and flour, $367.9 million of cotton, $165.7 million of fats and oils, $123.8 million of rice and $109.2 million of feed grains. Figures also include $87.4 million for ocean-shipping costs.

Another $218 million of farm commodities will be given away for overseas famine relief and similar assistance, the President reported. Grain accounts for $150 million, fats and oils $31 million, dairy products $27 million, cotton $7 million, and dry beans $3 million. About $78 million of the total was authorized during the January–June period, compared with $32 million in the previous 6 months.

Outright donations in the United States and abroad through voluntary agencies and intergovernmental organizations declined to $129.4 million from $197 million in the previous half year, the President said. These donations total $681 million through the life of the program. Dry milk accounted for $33.2 million of the January–June donations, cheese $21.3 million, butter $20.1 million, and butter oil $19.7 million.

Barter contracts were signed during the first half of 1956 to trade $256.2 million of farm commodities for a like value of stockpile materials. That compares with $51 million in the prior 6 months, and raises the total to $587.1 million. No figures are available on how much bartered farm produce costs the Government to acquire and handle.

Need for Air Safety

EXTENSION OF REMARKS
OF
HON. OVERTON BROOKS
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES

Saturday, July 7, 1956

Mr. BROOKS of Louisiana. Mr. Speaker, under leave to extend my remarks I present an editorial which appeared in the Shreveport Journal of Wednesday, July 11, 1956. This editorial strikes me as being peculiarly forceful at this time. The Civil Aeronautics Administration, composed of experts in the field of aviation and engineers of outstanding ability, should be using its time and its talents in making our commercial aviation program more efficient and safe. To tinker around with social reform programs when millions of our people who are using the skyways of America depend upon this agency for safety and life, is holding CAA up to public censure.

One-hundred and twenty-eight American citizens have lost their lives due to inefficient regulations and faulty handling of our skyways. The American people have a right to expect more serious consideration of their aviation problems. There can be no doubt but that CAA today stands before the bar of public opinion confronted by most serious charges.

The editorial follows:

CAA BACKS INTEGRATION, NEGLECTS SAFETY

Recently, we observed in these columns that the Civil Aeronautics Administration

has shown itself more concerned with the problem of racial integration than with its primary mission of providing adequate facilities and regulations for the Nation's air traffic.

Our remarks were occasioned by the CAA's announcement that "no Federal aid airport program funds will be made available for the development of separate facilities or space in an airport building * * * for use now or in the future for separate racial groups." In other words, the CAA had taken it upon itself to assume judicial and law-enforcement authority to uphold the United States Supreme Court's ruling against segregation, although separate Federal channels are available for this purpose.

In a letter to Congressman OVERTON BROOKS, who brought our editorial to the CAA's attention, Administrator C. J. Lowen took issue with our views and declared he could not agree that his agency was giving more attention to the segregation issue than to traffic safety. But now it has been brought out that inadequate air safety rules—the responsibility of the CAA—were the cause of the recent collision of two airliners in which 128 persons lost their lives. Out of conflicting testimony given by Civil Aeronautics Board officials at an investigation of this greatest air tragedy of all times, the implication is plain: Had the two airliners been operating under proper safeguards established by the CAA, the passengers aboard them would not have been plunged to their deaths in the Grand Canyon. According to the International News Service, it was indicated at the hearings that "rules will be changed to keep airliners in flight farther apart, both horizontally and vertically, in an attempt to prevent another such disaster in the future."

We repeat our observation: The CAA improperly has shown itself concerned with a purely social issue—the issue af segregation—when it should have been serving this Nation by devoting its time to its primary mission of providing adequate facilities and regulations for the Nation's air traffic.

And we repeat another of our observations, too: Congress should take away from the CAA both the power and the funds with which it makes appropriations to help build rest rooms, waiting rooms, and restaurants in municipal airports throughout the Nation. Perhaps if Congress will relieve the CAA of its self-assumed duty of enforcing the Supreme Court's anti-segregation ruling, it can get back to the important task of trying to protect the lives of American air travelers.

Mission Accomplished

EXTENSION OF REMARKS
OF
HON. GORDON CANFIELD
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 20, 1956

Mr. CANFIELD. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following article from the New York Times of July 6, 1956:

MISSION ACCOMPLISHED

With the closing of the books of the United States Treasury last week for the fiscal year 1955–56 the Eisenhower administration might have been forgiven if it contemplated the final estimates on income and outgo with justifiable pride. For they constituted unimpeachable arithmetical evidence that the administration had successfully carried out one of the most important of all the promises Mr. Eisenhower made to the American people in his election campaign of 1952—namely, the promise to balance the Federal budget.

The budget inherited by the present administration from its predecessor—the budget for fiscal 1952–53—was trimmed substantially in the 5 months that remained to work on it, but still ended up in the red by roughly $9.5 billion. How far we have come since then is revealed with the termination of fiscal 1956. The totals for that period show a surplus amounting in round figures to about $2 billion. Some unofficial estimates, however, place it as high as $2.4 billion.

The 1955–56 fiscal year will go into the records as the first time the budget had been balanced since 1951 and only the fourth time in the last quarter of a century. And it will represent the first fiscal 12 months in which the public debt has been reduced since 1948.

But merely to say that this is the first balanced budget in 5 years does not tell the whole story. The real significance of this year 1955–56 in the history of the Nation's financial affairs is that it was the culmination of a program that President Eisenhower set in motion as soon as he took office—a program which had a balanced budget and a return to debt reduction as its twin objectives. This program, in turn, was part of a broader program for ending the steadily spiraling inflation that has characterized the war and post-war years. The balanced budget of 1951, by contrast, was brought about largely by a huge, unexpected and unanticipated rise in revenues of that year, a "windfall" produced by the Korea boom. What makes the balancing of the budget in 1955–56 a solid achievement is the fact that it has been done the hard way, and the only way that is consonant with wise and courageous fiscal policy.

Revenues for 1956, at $67.7 billion, are only $2.9 billion above the revenues for 1953, in Mr. Eisenhower's "inherited" budget. The big difference in the two budgets will be found on the spending side, with expenditures for 1956 at $65.9 billion, as against the $74.2 billion in the budget of 3 years earlier.

Fear and Security

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Friday, July 13, 1956

Mr. MULTER. Mr. Speaker, I commend to the attention of our colleagues the following editorial from the Washington Post of July 13, 1956.

FEAR AND SECURITY

It is scarcely conceivable that President Eisenhower has considered the full implications of the effort in Congress, with administration support, to nullify a major Supreme Court decision on the Federal security program. The Court's decision in the case of Kendrick M. Cole was compatible with sentiments often applauded by the President. It said in effect that the security program ought to be limited to genuinely sensitive positions in the Government rather than applied as a blanket to all positions in the civil service. This is also one of the recommendations of a group of some of the country's best lawyers in the admirable study of the security program conducted by the Association of the Bar of the City of New York.

That the President may not have had an opportunity to review the Supreme Court decision and the subsequent actions of his subordinates is understandable. Mr. Eisenhower was stricken with ileitis the morning of June 8. The Supreme Court decision was not handed down until June 11, when Mr. Eisenhower was in the hospital. Introduction of the Walter bill classifying all Federal jobs as involving "national security," and the indorsement of it by Attorney General Brownell and Chairman Young of the Civil Service Commission, all occurred during the President's absence. As far as can be ascertained, he has not talked to either Mr. Brownell or Mr. Young. Yet as Mr. Eisenhower completes his convalescence he is confronted by a full-blown effort to reimpose one of the worst facets of a system for which the administration has been repeatedly criticized.

Mr. Eisenhower has often spoken of his desire to safeguard the security program against unfairness and abuse. In his 1955 state of the Union message he pledged: "We shall, in the process, fully preserve our traditions and the basic rights of our citizens." Previously he had extolled the traditional right of Americans to meet their accusers "face to face." Just before his recent illness he reportedly asked former Sen. Harry Cain to prepare a memorandum on the operations of the security system after the latter had given him case histories of some of the most flagrant abuses. These are the comments and actions of a man of conscience who is seeking to do the right thing.

Should the President not then take a careful look at what his subordinates are attempting to do through the Walter bill to negate the Supreme Court decision? Is it not time to place genuine security requirements in perspective, to face up to the fact that a fear psychosis has been dominating the program? The report of the New York bar recommends that the program be delimited to cover some 1.5 million persons in really sensitive posts instead of the 6 million persons who have been covered by this and allied programs. This is the advice of disinterested top-notch legal experts who have studied the problem with no partisan purpose but with the view of evolving a program that will really protect both national security and individual security.

Does the President not sense the opportunity now to revise the program and make procedural improvements that will relate to real needs, instead of ritualistically accepting the plea of fearful men who have learned nothing from the excesses and insecurity of the past? Will not Mr. Eisenhower, if he reads the New York bar report and heeds his own sensible instincts, conclude that the Walter bill is a monstrosity and that the security program ought to be limited and refined, not expanded?

We Also Need More Teachers of Science

EXTENSION OF REMARKS
OF
HON. HARRIS B. McDOWELL, JR.
OF DELAWARE
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 10, 1956

Mr. McDOWELL. Mr. Speaker, the following editorial from the Saturday Evening Post, June 30, 1956, clearly depicts the problem our great Nation faces with regard to the lack of science teachers. My resolution, House Joint Resolution 654, is designed to institute an investigation into this and many other important matters concerning lack of facilities and proper educational programs that seriously endanger the edu-

cational, technological, and scientific future of America.

The editorial follows:

WE ALSO NEED MORE TEACHERS OF SCIENCE

It is too late to prevent Soviet spies from stealing our industrial and military secrets, but it is not too late to do something about an even more important matter, the alarming lag in the training of scientists and engineers.

A few months ago in Oklahoma, a series of aptitude tests was conducted by the Oklahoma Curricular Improvement Commission, in the hope of picking up students who might be encouraged to take courses in the natural sciences. The commission is sponsored by Oklahoma's Frontiers of Science Foundation, which has been set up to do something about the shortage of scientists in that area.

Even if young people with scientific aptitudes could be persuaded or enabled by scholarships to pursue their studies further, many of them would have a hard time finding qualified teachers. On this matter Dean Robert MacVicar, of the Graduate School of Oklahoma A. & M. College, has some discouraging figures. For the 2 years 1955 and 1956, colleges in Oklahoma graduated about 250 bachelors of science majoring in physics or chemistry. Of these, only 13 indicated their intention to teach, and up to now, none of the 13 is actually teaching. The figure does, however, include 7 of the 1956 class who may or may not stay with their present intention.

One explanation, of course, is that young bachelors of science are now being offered by industries starting salaries twice as high as the highest salary they could ever expect to earn in teaching. Teaching salaries cannot be completely competitive with industry, but surely we should value our survival sufficiently to make the inducements more attractive than they are now.

Another important factor is the attitude of Selective Service toward young scientists. At present the requirements for recruits are not great, but the official attitude is pretty much that of the Michigan draft board which recommended deferring an outstanding science student for 4 years, but added that "he should be willing to submit himself for military service at the completion of his fourth academic year." In other words, just when promising scientists become essential in their jobs, they are expected to take 2 years out in close-order drill and allied subjects.

The U. S. S. R. has no such inhibitions. During the Battle of Stalingrad, when the very existence of the U. S. S. R. was at stake, not a single scientist of any age was drafted for military service.

In a democracy this selective process is not so easily carried out. It is undeniably wrong to set off science students as an untouchable class apart. And Mrs. Jones, who has 3 boys in the Army and 1 dead in Korea, naturally wants to know why Mrs. Smith's son across the street is living the life of Riley at the university. The obvious answer, of course, is that the things Mrs. Smith's son is working on at the university might make possible a weapon which would have the effect of releasing Mrs. Jones' boys from having to slog it out in the infantry.

What to do? For one thing, an Executive order could lay it on the line that no promising scientist working on an essential project, or a topnotch student in the scientific field, should be drafted. For another, our rich foundations could finance nationwide aptitude tests and scholarships for promising science students. But very little is likely to be done by anybody until the public becomes sufficiently aware of the urgency of the problem and determined to solve it.

Leadership

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Friday, July 13, 1956

Mr. FLOOD. Mr. Speaker, we in Pennsylvania who know the benefits of the progressive, dynamic administration provided by its youthful chief executive, Gov. George Leader, are most happy to find his achievements hailed in other parts of the Nation.

I ask unanimous consent to have inserted in the RECORD an editorial entitled "Ray of Hope," from the Omaha (Nebr.) Public Ledger, acclaiming Governor Leader and Secretary of Welfare Harry Shapiro for their aggressiveness and determination, and the attainment of results, in the mental health program in Pennsylvania.

As the editorial states, "Pennsylvania emerges as a bright spot in an otherwise gloomy picture in the mental health program." The editor of the Omaha Public Ledger declares that Pennsylvania is fortunate, indeed, to have a "crusading Governor," and a dedicated man like Harry Shapiro as secretary of welfare. We of Pennsylvania concur.

The editorial follows:

RAY OF HOPE

Probably no aspect of our national life is as dismal and as discouraging as our thus-far losing battle against mental illness. Half of all our hospital beds, 700,000, are in mental institutions, yet thousands of mental patients are turned away. Some are in jails, some sleeping on floors and some in triple-decker beds in State hospitals. One authority estimates the mental cases are increasing by 16,000 a year, that our present tax burden for their care is a billion dollars a year and will increase by 100 millions as each year passes.

But out of this gloomy picture looms one bright spot, the Commonwealth of Pennsylvania, where Governor George Leader has fought with determination and dogged persistence for enlarged appropriations for the State's mental institutions and, perhaps equally significant, to keep their administration free from politics.

The Pennsylvania Legislature, which has just wound up a 17 months session notable for a bitter running fight between the Governor and the solons on revenue-raising plans, came through with a heartening $26 million increase in the biennial appropriation for mental health.

Sharing honors with Governor Leader in this resounding victory for the mental-health program is State Secretary of Welfare Harry Shapiro, who went to work at 10 in a Philadelphia paper-box factory, made a fortune in the Horatio Alger tradition, studied law, practiced the profession and served in the State senate. In his present post, Secretary Shapiro is achieving a boyhood ambition inspired by the life of Dorothea Dix, the nurse who made the world realize that insanity is sickness and not a visitation of the wrath of God.

Harry Shapiro has two guiding principles. He will not yield to political tradition or to party pressures. He is firm in the belief that sick minds, as well as sick bodies, can be largely cured, and operates the institutions in his charge on that premise. On both points he has the aggressive support of Governor Leader, who has seen to it that political spoilsmen no longer use the welfare department as a refuge for party hacks or its employment rolls as patronage for "the faithful." And he has made it clear that there must be no interference with the truly noble task of making human kindness and modern medical science the handmaidens of the mentally ill.

Not every State, of course, has a Harry Shapiro, or a crusading governor to fight for his views. But Pennsylvania's example is one that any State might well follow.

Is Racial Integration the Answer?

EXTENSION OF REMARKS
OF
HON. JOHN J. FLYNT, JR.
OF GEORGIA
IN THE HOUSE OF REPRESENTATIVES
Friday, July 13, 1956

Mr. FLYNT. Mr. Speaker, under leave to extend my remarks in the Appendix, I include, verbatim, a sermon preached by Dr. Roy O. McClain, pastor of the First Baptist Church, of Atlanta, Ga., on Sunday, June 17, 1956.

This sermon was televised in addition to being heard by a large congregation in the First Baptist Church, of Atlanta, Ga. It was heard and the pastor was seen as he delivered it by thousands of people in television audiences. Dr. McClain is an outstanding minister in the Baptist denomination of the Christian faith. He is respected and admired for his commonsense, sound judgment, brilliant intellect, and sterling character. He is a man devoted to the service of his God and also to the service of his fellow man. There is not one scintilla of bigotry, bias, prejudice, malice, or hatred in his makeup, and I am quite confident that this sermon, which is printed below, came as the result of soul-searching thought and prayer. This sermon has come from his heart, his mind, and his lips, not in an effort to influence any individual or groups but it comes as a specific and mature answer to those who say we must mix all races in order to be truly Christian. In order that as many persons as possible who desire to read this masterful sermon may do so, it is included below:

IS RACIAL INTEGRATION THE ANSWER?—A SERMON PREACHED AT THE FIRST BAPTIST CHURCH, ATLANTA, GA., JUNE 24, 1956, BY DR. ROY O. MCCLAIN, PASTOR

Today we stand at the crossroads of decisive action; the direction taken can determine the ultimate destiny of civilization. Masses are on the march, the oppressed and downtrodden are making a decisive bid for their place under the sun. To ignore this march of men is to forfeit one's right in the struggle that decency, fairness, honesty, and equality might win.

Five reasons have led me to speak on the racial issue today. The fact that some politicians have used the issue to traffic in human life is reason enough. Often this traffic has provided an effective smokescreen behind which the politician covered his own lack of qualifications for office. Human life is not a pawn for political chessplayers, nor is

it a football to be kicked around by toes of sectional expediencies. The subject is timely in that during the past 24 months more strife and hatred have been engendered among various races than in any other decade of normal progress. There is much heat and little light. Where there exists a noxious, emotional miasma, one fires from the hip in all directions. Where reaction to the question at stake is deepseated to the point of being reflexive, there is more inflammation than inspiration. All the talk of integration without commensurate integrity is vain semantics. I speak on the subject because silence is no defense against social evil. "Freedom is placed in jeopardy more by those who refuse to exercise it than by than by those who will not permit it." We cannot find our safety in the dark. There are times when silence is golden, and there are times when silence is yellow.

Moreover I speak on the subject because it affects the lives of millions and therefore is not too big for the church. "This is a day of glad tidings and we hold or peace. We do not well." The church must face forthrightly all that appears in the human equation, bringing to bear the relevance of the message of Jesus without fear, indecision, or consequence. Courage ever is in close proximity to a cross. Not the least of reasons is an admission of the ease of dwelling in ivory towers of idealism, dreaming of utopias, extolling the virtues of ethical presuppositions, and never facing the ugly facts of today's realism. There are feelings of unity and understanding which exist only in the imagination of many without commensurate effort to translate the imaginary into practical reality. The idealism of eternity must be brought to bear on the realism of time. Contact must be made if man, as he is, shall ever be as he ought to be in God's sight. There is no place along the firing line where immunity is assured those who would volunteer to fire. Nor is it a time when leaders are to disenfranchise their right to lead by ostentation of their own unique visions. A train engine, disconnected from freight cars, is not pulling the load, merely demonstrating its own speed. Christian idealism is not compensatory fiction—it is relevant redemption.

Admittedly there is great variance in opinion. This sermon makes no bid for finality or exhaustiveness: It pleads for a plateau on which the majority of indigenous Christians can stand without being stampeded into the camps of radical on either extremity. The author speaks as a native Southerner, who has no ulterior motives in this endeavor, who fought side-by-side with men of variant colors and cultures, and who has dedicated his life to the proclamation of the basic tenets of the Christian faith. As Christians on this, as well as all issues, we can disagree, but we cannot be disagreeable. The sermon is intended to be a part of the solution—not a part of the problem. Though the way through the woods is not know by detailed analysis, at least we can begin on the right track basing our thoughts and deeds on two major premises: The spirit of Jesus Christ and the will of God.

THE HISTORICAL PERSPECTIVE

The resurgence of racial tension must be seen first in the light of historical perspective; 1956 must be seen in the context of 1856 and A. D. 56. This is an old problem as any student of anthropology readily will admit. The Egyptians segregated the Israelites when they were taken into bondage. Greeks, in their heyday, regarded all non-Greeks as barbarians. The Romans looked upon the Syrians as fit for nothing more than menial tasks, whereas the Chinese voiced their walled-in exclusiveness by calling all outsiders foreign devils. In India a caste system exists despite all the piety of many prayers. Despite the monotheism of Palestinian Jews, they regarded Samaritans as halfbreeds and refused to walk through their country; instead, they would go down to Jericho, cross the Jordan, journey up the east bank, and cross over into Galilee. Hitler used the racial superiority myth as a whip to intimidate, misrepresent, and murder.

And now today in South Africa with a self-appointed arbiter to voice his Calvinistic determinism, Johannes G. Strijdom is sowing the seed of racial bitterness. I am trying to represent the fact that racial prejudice, heat, and strife are not exclusive birthrights of southerners. In many nonsouthern communities of our Nation, though not finding "white only" signs over drinking fountains, one will find a functioning policy of apartheid as much as in other parts of the world. Psychological ghettoes are as damaging as shanties on dark alleys. Recounting these facts of history never justifies the cruelty of man's inhumanity to man, but it takes a step in the direction of explanation.

What is the origin of the Negro? The human race is divided into three major human groups: Caucasoids, Negroids, and Mongoloids with several redivisions of these major categories. One erroneous guess as to the Negro's origin is that Noah placed a curse upon Ham and the latter became black. This, like many other violences done the Scriptures, simply is not true. The Bible does not so state. Noah was in no frame of mind nor disposition of soul to pronounce a curse on anyone; the first thing he did after his waterlogged experience was to get drunk.

The Negro race originated in climactic and environmental conditions under the aegis of God. He is black for the reason some men are not black: God made him that way. There are two chemicals in the body determining the color of one's skin: carotene and melanin. When carotene predominates, the skin is white; a lesser amount results in yellow skin, and dominance of melanin produces darker skin.

This being the case, let it be known to those of lighter colors that being dark is no crime. My favorite color is green but to insist that green is superior to blue involves an indefensible position in the philosophy of color.

There is no case on record where an Indian, another minority group, was ever ashamed of the color of his skin. There is nothing basically wrong in being a Negro—not a "nigger" for that word means stingy and miserly, whereas most Negroes are usually generous and affable. Racial pride is at stake and one should never be ashamed of being himself. The Genesis account recalls, "And God looked upon all that He had made and saw that it was good."

Slavery and the modern dilemma

How did the Negro come to the American scene? Ah, too many are poor students of history here. Not one of them elected to come to this New World; instead, he was forcibly transported by scheming men. The Duke of York through his connections with the "wild new country" bargained with Yankee buccaneers to provide a pool of manual laborers for the riverboats, factory handlers, and kitchens of the wealthy. To unload the booty from the Far East required big muscles and the black man was so equipped. But the extreme winters of the North and East proved too much for the man from Equatorial Africa; then a bargain was struck with southern plantation owners to employ the slaves in the fields of rice, indigo, and cotton. Once again the economic interpretation of history is brought to light as any objective historian knows quite well. The Negro flourished under the hot sun of the South, and the prospering southerner became a source of envy and, later, contempt. Only then did the rank and file above the Mason-Dixon Line make slavery a moral issue—after it had become financially unprofitable. The point is: Slavery was totally wrong from start to finish, but let never be believed that it was the exclusive sin of the Deep South, as many currently believe.

Then the Civil War—and the consequent ugly scab which has not healed to this day. Sudden freeing of 4 million slaves among 12 million whites gave rise to counter-intimidation, domination, carpetbaggers, scalawags, Union soldiers pulling up the last turnip, disenfranchisement, and crystallization of sectional antipathies.

EVOLUTION OR REVOLUTION

Two antinatural techniques are being employed to produce growth: One is illustrated by the culture of Ming trees where the tree is pulled up at certain intervals and the tap roots are pinched off. This process stunts the growth. The other technique is that of the hothouse where plants are forced to unnatural growth only to wilt when they are placed out in the hot sunlight. The analogy is apparent: One can no more legislate righteousness than education can be legislated. Natural growth is evolutionary—not revolutionary. Violent unheavals of thought or deed usually retard instead of promote progress. Yet, let one not mistake evolution as a substitute for faiure to grow. The snail's pace is not worthy of human emulation. But to coerce, foment and strain growth is to give rise to a gangly plant that will not survive the heat of realism. Imposition of one culture upon another speaks not of wisdom nor Christian charity. Jesus never forced his affections upon anyone. In each case it was elective. Forced integration is as much an assault on freedom of action as forced silence is an assault on freedom of speech. Physical closeness without psychological and spiritual nearness means nothing! The magnitude of the problem is such that it is not solved by those who step promptly, confidently, angrily forward with ruthless remedies. Overplaying one's hand is bad judgment—this induces the strongest kind of resistance.

It is a little known fact that prior to the Civil War there were hundreds of manumission societies which were dedicated to the task of liberating the slaves by compulsion of enlightened conscience. One year prior to the outbreak, over 3,000 slaves were set free without a shot fired. Slavery was not right; yet the attendant, subsequent evil of ten thousands of killings—often among brothers—repeated history's old effort to state that two evils equal one right. Yet, eager beavers and hotheads had their say and the shots were fired and human progress thrown into reverse. Now, will it be revolution or evolution? Every Christian citizen should know the difference.

The colored people in America have made phenomenal progress despite the forces to hold them back. Ninety years of freedom have witnessed the march of men and women, boys and girls of their race to achievements beyond compare. Marion Anderson made the Metropolitan Opera not because she is a Negress but because she has a good voice. Merit still opens more doors than crowbars. A part of the great hope lies not in agitation but in qualitative discipleship.

Schools have come in for more than their share of this controversy. Litigation began on the academic level. Since I have tried to be fair throughout this treatment, let our whole nation be told the truth. Southern Negroes are not being taught in one-room log houses with a pot-bellied stove in the center of the room, where the teachers are paid in sasafras and sow belly. I will be the first to admit that our facilities are far from what we want them to be and what they shall be, but the last 10 years have transformed the physical scene in the majority of cases. Georgia has come in for more than its share of national disdain on this issue. But let it be known that there

are 8,500 Negro teachers who are paid $15 million annually for their services. North Carolina pays $22 million annually and in two Southern States the average Negro teacher's salary is higher than white teachers. No invidious comparisons here—just let the facts be known.

In the whole gamut of education I do not propose the answers, yet in the South it is commonly believed that human nature being what it is—not what it ought to be—shall result in wealthy whites sending their children to private schools, wealthy Negroes sending their children to private schools and the poor whites and poor Negroes having to fend for themselves with, in some cases, the rise of a cruel caste system which belongs to no real democracy. Equality of opportunity does not mean wholesale amalgamation of the races, but no cruelty is quite so cutting as bringing life into the world which has no social status. "The greater the aspiration, the greater the humiliation, when denied." I saw the children fathered by American servicemen and Japanese mothers. The children did not belong to Japan or to America. This is an inexcusable tragedy.

AGENTS OF CONFUSION—PROFESSIONAL REFORMERS

Let me not be misunderstood; our yards in the deep South are not as clean as they should be, not as clean as we want them to be, but we stedfastly resent those who would come to sweep our yards for us. Time is judgment enough upon us and with the patience and guidance of God, we will sweep.

Not the least among the forces to cloud the issue is the unfair representation the South has received from some nonsouthern sources. In far too many cases the press has represented this section as a trilogy: moss, magnolias, and moonshine. Many a nonsouthern graduate student has been assigned as a thesis for doctoral dissertations, "the poor, unfortunate South." Prejudice is just as ugly a specter if it poses its head in one section of a country as in another. Geography is hardly the decisive factor. We can receive little inspiration from the nonsouthern church which recently debated the merits of sending missionaries to the South since they were sending missionaries to Africa but who, when their benediction was pronounced, stumbled over poorly clothed children in the slums of their own city on the way home. A less-charitable mood than the present would have called to mind those timeless words of Holy Writ, "Physician, heal theyself." One thing the Negro adamantly and justifiably resents is the fact that some sections accept him with a flamboyant public display of self-righteousness by professional reformers, unwillingly tolerate him by many of the middle classes and despise him by the poor. The efforts of professional reformers often run roughshod over the fact that the South is educating one-third of the Nation's children on one-sixth of the Nation's income, that a disproportionate load of national tariffs has been standing operating procedure and that discriminatory regional freight rates still speak of the necessity that when a nonsouthern cries "prejudice" one needs only to say, "look who is talking."

No doubt many of the personnel in the National Association for the Advancement of Colored People are able leaders and are financed by many whose gifts are sincere contributions to help a cause. The digit of time is too brief to assess the value of any such association, but if one succeeds by tightening tensions and deepening the rivers of distrust, then this association has succeeded indeed. Zeal needs the stable temporizer of judgment if its gains are to be of lasting value.

To speak of plurality in society must not speak of a first- and second-class citizenry. There must be equality of opportunity. However, to force one culture upon another, to take from those who have made gains and, without individual merit or consideration, thrust upon another is not Christian ethics but communistic manifestoes. The old Communist line goes, "from each according to his ability to each according to his need." All the grandiose palaver notwithstanding, this line vitiates the very promise on which Jesus told the parable of the talents. He concluded by saying, "to him who has (gets) shall be given and he shall have abundance, but to him who has (gets) not shall be taken even that which he has." Closer physical contact without spiritual and psychological nearness means nothing. Were the Communists to infiltrate any of the agencies championing minority causes, it would not be for humanitarian reasons, instead, to set one race against another for easy Communist exploitation.

THE CONCLUSION

What is the conclusion of the matter? "The wrath of man does not work the righteousness of God." There is sin on both sides. Too many times the white man's sin is dominance, economic greed, mulattoes, and cruel impatience. The Negro's sin, in some individual cases, is hatred engendered by the long historical process, immorality—common-law marriage and sensuality. These sins are on both sides and their presence speaks of continuing tension and racial animosity.

Seventy years ago one of the great southerners—Henry Grady—used the term "the new South." Once again we are praying and working for a new South—one free of our many weaknesses and sins. Admission of much guilt is the first step in forgiveness. There would be no new South without Negroes—whose lot is constantly being improved, though not as fast as many of us would like. We dream of a new South where a free society does not have to pay for its convictions by intimidation or economic strictures. The solution is not in law or ethical presuppositions; these will not lessen the tension. Prohibition taught us that just to pass a law did not stop men from drinking. Though law is necessary to regulate man's rights and wrongs, ultimately law is not the basic solution. If social progress is measured solely in legal equations, grace and love will never play the field. This is neither the time nor the place for discussing the philosophy of law, but if the freedom accrued by law violates the objectives of the law, then law becomes man's burden, not his blessing.

Peaceful and harmonious relations will come only when each member of each race becomes a reconciler in the spirit of Jesus Christ. The prevailing disenchantment calls for full commitment to God knowing that He must be God of all or he will not be God at all. The answer is not in compulsion but in conversion—it is too much to expect changed living from unchanged lives.

One of the noblest Negroes of all times conceived of the white and colored races in terms of the white and black keys on a piano. Said he, "The whites are for the expressed purpose of naturals—the blacks for sharps and flats giving musical color to harmonies. If each lost its distinct identity, the principle of music would be lost."

This is the hour to prove to a world in turmoil that America can solve her own problems in the spirit of the One who died for all.

CHANGE OF RESIDENCE

Senators, Representatives, and Delegates who have changed their residences will please give information thereof to the Government Printing Office, that their addresses may be correctly given in the RECORD.

LAWS RELATIVE TO THE PRINTING OF DOCUMENTS

Either House may order the printing of a document not already provided for by law, but only when the same shall be accompanied by an estimate from the Public Printer as to the probable cost thereof. Any executive department, bureau, board, or independent office of the Government submitting reports or documents in response to inquiries from Congress shall submit therewith an estimate of the probable cost of printing the usual number. Nothing in this section relating to estimates shall apply to reports or documents not exceeding 50 pages (U. S. Code, title 44, sec. 140, p. 1938).

Resolutions for printing extra copies, when presented to either House, shall be referred immediately to the Committee on House Administration of the House of Representatives or the Committee on Rules and Administration of the Senate, who, in making their report, shall give the probable cost of the proposed printing upon the estimate of the Public Printer, and no extra copies shall be printed before such committee has reported (U. S. Code, title 44, sec. 133, p. 1937).

GOVERNMENT PUBLICATIONS FOR SALE

Additional copies of Government publications are offered for sale to the public by the Superintendent of Documents, Government Printing Office, Washington 25, D. C., at cost thereof as determined by the Public Printer plus 50 percent: *Provided*, That a discount of not to exceed 25 percent may be allowed to authorized bookdealers and quantity purchasers, but such printing shall not interfere with the prompt execution of work for the Government. The Superintendent of Documents shall prescribe the terms and conditions under which he may authorize the resale of Government publications by bookdealers, and he may designate any Government officer his agent for the sale of Government publications under such regulations as shall be agreed upon by the Superintendent of Documents and the head of the respective department or establishment of the Government (U. S. Code, title 44, sec. 72a, Supp. 2).

RECORD OFFICE AT THE CAPITOL

An office for the CONGRESSIONAL RECORD is located in Statuary Hall, House wing, where Mr. Frank Brodie is in attendance during the sessions of Congress to receive orders for subscriptions to the RECORD at $1.50 per month, and where single copies may also be purchased. Orders are also accepted for the printing of speeches in pamphlet form.

CONGRESSIONAL DIRECTORY

The Public Printer, under the direction of the Joint Committee on Printing, may print for sale, at a price sufficient to reimburse the expenses of such printing, the current Congressional Directory. No sale shall be made on credit (U. S. Code, title 44, sec. 150, p. 1939).

PRICE OF THE CONGRESSIONAL RECORD

The Public Printer is authorized to furnish to subscribers the daily RECORD at $1.50 per month, payable in advance.

Remit by money order payable to Superintendent of Documents, Government Printing Office, Washington 25, D. C.

PRINTING OF CONGRESSIONAL RECORD EXTRACTS

It shall be lawful for the Public Printer to print and deliver upon the order of any Senator, Representative, or Delegate, extracts from the CONGRESSIONAL RECORD, the person ordering the same paying the cost thereof (U. S. Code, title 44, sec. 185, p. 1942).

Daily Digest

HIGHLIGHTS

Both Houses acted on strategic minerals bill.

Senate passed judges' dependents' benefit bill and 17 sundry measures and took up social security bill.

House passed miscellaneous bills.

Senate committee approved mutual security appropriations bill.

Conferees agreed to file report on foreign travel tax bill.

Senate

Chamber Action

Routine Proceedings, pages 11427–11434

Bills Introduced: 6 bills and 1 resolution were introduced, as follows: S. 4211–S. 4216; and S. J. Res. 196.

Page 11431

Bills Reported: Reports were made as follows:

H. R. 10670, to extend coverage of D. C. Unemployment Act to employees of District municipal government employed in D. C. (S. Rept. 2559);

H. R. 6040, to amend certain administrative provisions of the Tariff Act of 1930 and to repeal obsolete provisions of the customs laws, with amendments and with minority views (S. Rept. 2560);

S. 3619, to amend the D. C. Public School Food Services Act (S. Rept. 2561);

H. R. 5853, to regulate the practice of veterinary medicine in the D. C. (S. Rept. 2562);

H. R. 10375, relating to recognition for meritorious service by members of the D. C. Police and Fire Departments (S. Rept. 2563);

H. R. 2603, to increase the area within which officers and members of the Metropolitan Police force and the Fire Department of the D. C. may reside, with amendments (S. Rept. 2564);

S. 2578, to amend law relating to residence of assistant assessors for D. C. (S. Rept. 2565);

S. 3887, to amend act providing that cabs for hire in D. C. be compelled to carry insurance for protection of passengers (S. Rept. 2566);

S. 3889, to amend the act granting additional powers to the Commissioners of D. C. (S. Rept. 2567);

H. R. 11002, to regulate and license pawnbrokers in the D. C. (S. Rept. 2568);

H. R. 11488, to amend the D. C. Traffic Act of 1925 relative to motor-vehicle excise tax (S. Rept. 2569);

H. R. 4993, to permit certain improvements to business property in D. C., with amendments (S. Rept. 2570);

H. R. 10947, to designate the highway bridge over the Potomac River at 14th Street in the D. C. as the Rochambeau Memorial Bridge, with amendments (S. Rept. 2571);

H. R. 8149, relating to transfer of certain actions from the U. S. District Court for the D. C. to the municipal court for the D. C., with amendments (S. Rept. 2572);

S. 3465, relating to effective dates of increases in compensation granted to wage-board employees, with amendments (S. Rept. 2573);

S. J. Res. 179, to quitclaim certain property in Coahoma County, Miss. (S. Rept. 2574);

S. 4058, to extend for 10 years lease of tract of land to Chicago, Milwaukee, St. Paul & Pacific Railroad Co. (S. Rept. 2575);

H. R. 11375, extension of special school milk program (S. Rept. 2576); and

H. R. 11010, authorizing acquisition, maintenance, and operation of a bridge across the Mississippi River at Muscatine, Iowa, and Drury, Ill., with amendment (S. Rept. 2577).

Pages 11429–11430

Bills Referred: Five House-passed bills were referred to appropriate committees.

Page 11460

Sundry Bills Passed: Senate took from calendar and passed, as indicated, the following 17 measures:

Without amendment and cleared for President:

Life-insurance tax: H. R. 11995, to provide that the 1955 formula for taxing income of life-insurance companies shall also apply to taxable years beginning in 1956;

Cotton contracts: H. R. 9333, to give to certain consuming processors of cotton the privilege of buying cotton futures contracts in certain cases;

Appendix

Development and Utilization of the Water Resources of the United States

EXTENSION OF REMARKS

OF

HON. EARLE C. CLEMENTS

OF KENTUCKY

IN THE SENATE OF THE UNITED STATES

Monday, July 16, 1956

Mr. CLEMENTS. Mr. President, a most excellent presentation of sound views on the development and utilization of the water resources of our Nation was made on Saturday, July 14, by Maj. Gen. Charles G. Holle, Acting Chief of the United States Army Corps of Engineers.

In an address at the dedication of new locks and dams on the Green River, Kentucky, General Holle painted a graphic picture of the value of water as a natural resource. He summed up his views in this statement: "Today we find water taking its place as the most valuable single industrial raw material—the one resource which, more than any other, probably will influence the locations of factories and the economic growth of communities in the future."

As the sponsor in the Senate of legislation to increase Federal attention to benefits from low flow control, water storage, and reimbursement to those whose properties are adversely affected by government projects, it is quite natural that I was favorably impressed by comments which General Holle made on these subjects.

The full text of his address is such a worth document, Mr. President, that I now ask unanimous consent to have it printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

THE VALUE OF WATER—REMARKS BY MAJ. GEN. CHARLES G. HOLLE, ACTING CHIEF OF ENGINEERS, AT DEDICATION OF GREEN RIVER, KY. LOCKS NOS. 1 AND 2, JULY 14, 1956

I sincerely appreciate the honor of being invited to participate in this dedication as a representative of the Chief of Engineers. Before saying anything else, I want to point out that it would be impossible to properly dedicate Green River Locks 1 and 2 without acknowledging the vital part played by the Green River Valley Citizens League in bringing about their construction. Thanks largely to the league, these facilities have been built in what must be near record time. The first funds for this work were appropriated in May 1954. For the money to be appropriated and the construction completed on a project within 2 years and 2 months is quite unusual.

This achievement is, of course, a real triumph for the Kentucky congressional delegation and their colleagues from other parts of the Ohio Valley. But I am sure that Senator Clements, Ambassador Cooper and Congressman Natcher will bear me out when I say that legislators can do most when backed by a vigorous body of citizens, united behind a sound and worthwhile proposal.

Many a development which we in the corps consider eminently sound from the standpoint of river-basin engineering has remained unbuilt because the local people were divided or not visibly interested. Hence activities of groups like the Green River Valley Citizens League in unifying and focusing regional opinion are an indispensable part of the process of resource development.

As you know, these locks have been completed none too soon. Coal is already coming through them at a rate of better than 2 million tons a year, bound for the great powerplants at Madison and Joppa and in the Tennessee Valley. There is every prospect that this tonnage will quickly increase, that more coal deposits will be developed, and that new industrial potentialities in this area will be opened. That is one reason why navigation facilities have had first priority in the development of the Green River. But even while the locks were being finished, the Congress and the Corps of Engineers have been proceeding with consideration of the orderly development of other aspects of the water resources of this valley.

Last year the first $500,000 was provided to commence construction of the Rough River Reservoir. This year, in the appropriation bill recently signed by President Eisenhower, $1,500,000 is provided for the continuation of that work, and $100,000 is appropriated for the planning of Nolin (NoLIN) Reservoir. Other developments may be expected to follow in turn as problems affecting their design are ironed out.

Thus, the completion of these locks is but the first step in a well-rounded, comprehensive program for developing the water resources of the Green River Valley. Low-cost transportation by waterway and water storage in reservoirs for flood control and flow regulation are both fundamental requisites of industrial development in this area. You may be sure that the Corps of Engineers will continue to cooperate with you toward the full development of the water resources of this river basin.

For many years, in this part of the country, water was considered as free as air. Everybody realized it was a necessity of life, but nobody thought much about its dollars-and-cents value. But soon the increase of raft and keelboat and, later, steamboat traffic, proved that it was worthwhile to spend money on navigation improvements. Then the positive value of flood control was realized. Today we find water taking its place as the most valuable single industrial raw material—the one resource which, more than any other, probably will influence the locations of factories and the economic growth of communities in the future. And the programs of local, State, and national governments for developing and utilizing the water resources of our river valleys rank among the Nation's most basic and necessary undertakings.

Though the full implications of the value of our river and water resources are only now being borne in upon us, the national benefits of full, comprehensive development of the Nation's river basins have been recognized since early in this century when they were highlighted in a series of historic conferences on conservation. The President, Theodore Roosevelt, in a message to Congress, resulting from those conferences, said: "Every stream should be used to the utmost. * * * One use can often be made to assist another. Each river system, from its headwaters in the forest to its mouth on the coast, is a single unit and should be treated as such."

These principles underlie the Federal water-resources effort to this day. They form the basis of our approach not only to the Green River Valley, but to the great Ohio Valley of which it is a part. But even this sound analysis could not have foreseen the almost expotential increase in water use that has accompanied our growing population and increased standard of living.

As you know, the modernization of the whole Ohio River navigable waterway is now under way. The program will take some 20 years and will include construction or major remodeling of 19 locks and dams on the Ohio and 9 on the Monongahela. Backstopping this navigation development is a plan for a system of 81 flood-control reservoirs and 134 local flood-protection projects. Once completed, these works will not only greatly reduce the ever-present danger of flood disaster, but will substantially improve low-flow conditions on the Ohio and the affected tributaries, with indirect but worthwhile benefits to municipal and industrial water supply, pollution abatement, and the general usefulness of the river.

The only trouble with this program is that not enough of it has been translated into finished construction. Only 33 of the 81 reservoirs have ben built, with 5 more, including Rough River, under construction; and only 43 of the 134 local-protection projects have been completed, with 11 more underway.

The high degree of industrial and urban development on the riverbanks, and the capacity of the Ohio River to generate terrible floods, both make it imperative, in my opinion, to intensify the flood-control program in the Ohio Valley. That valley is an integrated economic community, and a great disaster in any part of it would lead to costly economic dislocations throughout its whole length and breadth.

At the same time, interest is being renewed in some aspects of river development that have been largely ignored in the Federal water resource development program. Among these, perhaps the most important is water supply. The historic National Conservation Commission of 1909 declared that "In considering the uses and benefits to be derived from the waters, the paramount use should be water supply." And there was considerable concern in that day over the problems of municipal and industrial water supply and low-flow regulation, and many proposals were advanced at the highest levels for a Federal program aimed at meeting these problems. Today in many parts of the country, including parts of the Ohio Valley, there are signs that such problems are becoming acute, and that water supply threatens to impose a ceiling upon further economic development.

It is perhaps not generally recognized that the water supply problem has two aspects. On one hand, there is what we might call the local aspect—the problem of individual communities and industries in finding sufficient water to continue to live and grow. Such problems have been considered primarily to be matters of State and local responsibility, and we in the Corps of Engineers believe that they should continue to be so considered. At the same time, we realize that these local or individual problems have become so widespread and serious as to

constitute in the aggregate a national problem, and officials of the Corps of Engineers have repeatedly expressed their belief that the Federal Government should cooperate with State and local agencies in the solution of these problems. In particular, we believe that water supply should be considered in all future investigations.

But there is another aspect of the water-supply problem, and that is the matter of maintaining minimum flow in regulated streams. When adequate flow is assured at all times, navigation stages can be more economically maintained; local pollution-abatement measures are made simpler and more effective; fishing and recreational values are conserved; water temperature, which has an important effect on industrial and recreational use and on bacterial pollution, can be better controlled; and many other valuable benefits ensue.

Basically these benefits are widespread and general. They extend throughout the entire length of the affected stream, and are interstate in character.

Too little water in a watercourse is as undesirable as too much water, and in many cases, both evils can be prevented through the same regulatory engineering works. Hence the relationship between low-flow regulation and flood control has been recognized for many decades. Way back in 1908, the Inland Waterways Commission, in its great pioneering report, said: "Engineering works * * * affect favorably the regimen of the streams, including floods and low waters. The annual floods of the United States occasion loss of property reaching many millions of dollars with considerable loss of life, while the low water of late summer involves large loss in diminished water supply, in reduced power, and in the fouling of streams with consequent disease and death." Thus in this, as in many subsequent documents, flood-control and low-flow regulation are treated as two aspects of the same function—the beneficial regulation of the amount of water flowing in a watercourse.

We in the corps are interested to note that Congress is now taking an increased interest in this aspect of the water-supply problem, and that your Senator CLEMENTS is playing a leading part in the effort.

Just what sort of activities are warranted, and how far the Federal interest should go, are of course matters for the Congress to determine. Reservoirs built by the Army engineers on the headwaters of the Ohio and other rivers are already providing substantial, though incidental, benefits in the abatement of low flows. It may well be that the time has come for Federal legislation, including perhaps an appropriate declaration of policy, giving Federal engineering and construction agencies wider latitude in the consideration of water supply problems in the planning, construction, and operation of their projects.

The increasing concern being manifested, not only in Congress but in all segments of our American community, over water-resource problems is one symptom of the dynamic growth of our country—the same growth that has led to the construction of these two new locks on the Green River. The locks will be valuable in enhancing the economic and industrial development of the Green River Valley, the Ohio Valley, and the Nation. This growth in turn may raise more problems, and may require still more construction. For in developing the Nation's water resources, we serve the continued and expanding development of America—a process that will never stop.

The united, cooperative, alert, and democratic action of the Nation's citizens, which has been exemplified so successfully here in the Green River Valley, will always be needed to guide and inspire our progress into the future. It is needed no less in helping determine the policies with which we meet our problems, than in advancing project proposals for construction.

It gives me great pleasure to dedicate these locks to your service and that of the Nation.

A Theory of Ice Ages

EXTENSION OF REMARKS
OF

HON. CARL HINSHAW

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 11, 1956

Mr. HINSHAW. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article entitled "A Theory of Ice Ages," by M. Ewing and W. L. Donn, a very interesting and unique approach to a very difficult subject. I hesitate to offer a scientific article of this length, but believe it is of sufficient importance and interest to warrant a place in the RECORD.

The article follows:

[From Science Magazine of June 15, 1956]

A THEORY OF ICE AGES

(By Maurice Ewing and William L. Donn)

This article is a preliminary report of new ideas related to the origin of glacial climates; it is based largely on observations made during the last 20 years. Glacial climates pose two problems: (i) the striking alternations during the Pleistocene epoch of glacial and interglacial stages and (ii) the even more striking change from the warm nonglacial climate, which prevailed generally from the Permian to the Pleistocene, to the cold and glacial conditions of the Pleistocene and Recent.

If it is difficult to answer the second question, it is even more difficult to solve both problems on the basis of a single theory. The present study [1] offers an explanation for the alternations in climate during the Pleistocene and proposes an explanation for the change from nonglacial to glacial climates.

PLEISTOCENE GLACIAL AND INTERGLACIAL STAGES

First we wish to develop the following principal points of the glacial-interglacial theory.

1. The melting of an Arctic ice sheet (such as exists at present) would increase the interchange of water between the Atlantic and Arctic Oceans, cooling the North Atlantic and warming the Arctic and making it ice-free, thus providing an increased source of moisture for the polar atmosphere.

2. Two factors would then favor the growth of glaciers: (i) increased precipitation over Arctic and subarctic lands and (ii) changes in atmospheric circulation, the latter also resulting from the warmer Arctic and cooler Atlantic Oceans.

3. The lowering of sea level would greatly decrease the interchange of water between the Atlantic and Arctic Oceans, which, together with the cooling effect of surrounding glaciers, would reduce Arctic surface temperatures until abrupt freezing occurred. The fairly sudden reversal of conditions favorable to glacial development would terminate the growth of glaciers abruptly.

4. As continental glaciers waned, the sea level would rise, causing an increased transport of surface waters northward until the Arctic ice sheet melted once again, completing the cycle.

Footnotes at end of speech.

5. Temperature changes in the surface waters of the Arctic and Atlantic Oceans are thus the causes of, rather than the consequences of, the waxing and waning of continental glaciers.

Abrupt change in Atlantic deep-sea sediments: Using radiocarbon measurements, Ericson et al.[2] and Rubin and Suess [3] have established dates as far back as 30,000 years ago for cores of deep-sea sediments. Using paleotemperature measurements based on the oxygen isotope ratio, Emiliani [4] determined the temperature of the water in which pelagic Foraminifera lived; his findings covered a time interval represented by the longest cores available. Suess [5] then combined these two sets of results by plotting the radiocarbon ages for three deep-sea cores from the equatorial Atlantic and Carribean against the paleotemperatures of Formaminifera tests. The resulting graph may be interpreted as showing a temperature decline of 1° C. per 11,000 years for the interval from 90,000 to 11,000 years before the present. Temperatures then began an abrupt increase at a rate of about 1° C. per 1,000 years from 11,000 years ago to a few thousand years ago. For the last few thousand years, temperatures have remained about as high as the maximum value that was reached during all Pleistocene interglacial stages (see Emiliani,[4] figs. 2 and 3).

The curve given by Suess for Core A 172–6 shows the abrupt temperature change beginning about 16,000 years ago as compared with the change shown at 11,000 years in the other cores. Since the time scale for this core depends on only three points, considerable interpolation is required, and since Emiliani shows that a strong solution of carbonates occurred in a number of places, linear interpretation is likely to be unreliable.

In addition, faunal studies by many investigators show that a well-marked change in most cores indicates the termination of the Wisconsin age. In 1935, Schott [6] described the faunal break in many equatorial Atlantic cores, which was later noted in more recent longer cores—for example, by Bramlette and Bradley in 1940 [7], Phleger, Parker and Pierson,[8] Ovey,[9] and Schott.[10 11] Most recently, radiocarbon measurements on a number of cores described by Ericson and Wollin [12] from the Atlantic Ocean and Caribbean Sea show that this characteristic break,[13] marking a change from cold to warm pelagic fauna, occurred 11,000 years ago.[2] Cores taken in the Gulf of Mexico show a similar faunal break,[14] although as yet no quantitative temperature or time measurements have been made. However, on the basis of the fauna change, it is possible to correlate the break in the Gulf of Mexico with that described in the Atlantic Ocean.

Cores from the Gulf of Mexico. Many sediment cores 30 to 40 feet long have been taken on the Mississippi cone,[15] which spreads over most of the deeper part of the Gulf of Mexico from a vertex just off the Mississippi Delta. These cores, which show a layer up to 2 feet thick of foraminiferal lutite, indicating warm water, overlie with a sharp transition a layer of essentially unfossiliferous lutite and silt, the bottom of which was never reached .Pending radiocarbon measurements, it seems reasonable to extrapolate the date of 11,000 years ago for the bottom of the foraminiferal layer. In cores taken on the nearby Sigsbee Knolls, which rise 20 fathoms above the cone and above the reach of turbidity currents, Foraminifers of the cold-water type are abundant throughout the silty layers.[14] It is concluded that the extreme scarcity of Foraminifera in the silty layer of the Mississippi cone is due to dilution from a great influx of clastics

Footnotes at end of speech.

in Wisconsin time. The sediments give no evidence of any climatic change except that 11,000 years ago.

Further, the beginning of rapid postglacial rise in sea level is indicated by the abrupt decrease in clastic deposition on the Mississippi cone about 11,000 years ago, when the drowned rivers retained their clastic sediments instead of discharging them into the gulf.[15]

The result of a very recent investigation of turbidity current deposits made by Heezen and Ewing[16] shows that an abrupt rise in sea level must have taken place about 11,000 years ago; this event is also taken to mark the close of the Wisconsin glacial stage.

Conclusions from Atlantic and gulf data: On the basis of these data, we regard 11,000 years ago as the date of the most recent significent temperature change in the Atlantic Ocean, and also as marking the end of the Wisconsin glacial stage. Additional breaks in isotopic temperatures[4] and faunal types[7 9 11 12] occur in many of the Atlantic cores which penetrate most of the Pleistocene. We regard these as marking the transition from earlier glacial to interglacial stages.

The data show that this fairly abrupt increase in temperature in the surface layers of the Atlantic Ocean about 11,000 years ago was the most significant temperature change of the past 60,000 to 80,000 years, although similar changes occurred earlier in the Pleistocene. Because the beginning of glacial retreat which closed the last Wisconsin substage (Mankato) occurred about 11,000 years ago—for example, Flint[17]—it appears that the oceans became warm abruptly at the time retreat commenced and remained warm during retreat of the ice.

We propose to show that the temperature of the surface layer of the ocean, rather than external conditions, regulated the climate of the land. Specifically, we suggest that the alternating warm and cold stages of Pleistocene climate are the effects of fairly abrupt alternations between warm and cold conditions of the upper layer of the Atlantic and Arctic Oceans. We are thus led to consider the cause of the pronounced fluctuations of the temperature of the Atlantic and Arctic Oceans.

Arctic Ocean cores and the influence of the Arctic. Three short cores (9, 14, and 16 centimeters long) and 1 long core (81 centimeters long) were taken in the deeper part of the Arctic Ocean by A. P. Crary and studied by D. B. Ericson. The upper 20 centimeters of the 81-centimeter core contain abundant Foraminifera (Globigerina), which decrease in the next underlying 10 centimeters. The long section below 30 centimeters consists of lutite, with granules and pebbles distributed sparingly throughout, and shows no Globigerina except for a few near the bottom. Several radiocarbon measurements on the Foraminifera of the 16-centimeter core[18] gave an age from 18,000 to 23,000 years. Other cores, collected elsewhere in the Arctic by Crary, show thin sediment zones above the foraminiferal layer. The presence of this upper foraminiferal zone, with no or only thin overlying sediment, indicates an abrupt end of conditions favorable to the growth of Foraminifera and suggests that the Arctic Ocean was open during the Wisconsin glacial stage. Further, the coarse fragments in the long lower section of the core are attributable to ice rafting under conditions that provided numerous icebergs free to move in open water. This condition would be met by an ice-free Arctic during Wisconsin time. The absence of Globigerina in the lower section of the core, except for the very bottom, can be explained by dilution by clastic sediments; and the presence of Foraminifera in the upper portion can be explained by a decrease in the amount of clastics. This is analogous to the similar, well-founded observations on cores from the Gulf of Mexico that were described in a preceding paragraph.

Based on the possibility that the Arctic Ocean can undergo both ice-free and ice-covered stages, we propose the following assumption: When the Arctic Ocean is ice-covered, surface temperatures in the Atlantic increase and continental glaciers decline; when the Arctic is open, surface temperatures in the Atlantic decrease, and continental glaciers develop. With this assumption in mind, let us examine the process by which an ice-free Arctic can bring about a glacial stage.

Consequences of an ice-free Arctic Ocean: Given an open Arctic Ocean, the resulting large increase in absorption of insolation is well known. The present circulation of water within the Arctic Ocean would be greatly increased[19] since the wind stresses would then be applied directly to the water. It is postulated that a marked increase in the interchange of water between the Arctic and Atlantic Oceans would occur which would tend toward equalization of temperatures, cooling the Atlantic and warming the Arctic. With the added effect of greater absorption of insolation, the ice-free condition of the Arctic Ocean could be maintained against the cooling effect of increased evaporation.

The present mean temperature of the surface of the Arctic Ocean in January is −35° C., and in July about 0° C. The vapor pressure of water (or ice) at 0° C. is 4.6 millimeters of mercury; at 3° C., 5.7 millimeters; and for ice at −30° C., 0.3 millimeter. The change to an ice-free condition would necessarily require an increase of winter ocean surface temperatures by at least 35° C. By extrapolating from the aforementioned data, it can be seen that the vapor pressure would increase by a factor of about 50 in the winter season, while the summer ocean surface temperature and vapor pressure would be only a little increased. The principal effect of an open Arctic is thus the providing of greater moisture during the long polar winter.

Although it is difficult to make a detailed analysis of the consequent changes in atmospheric and oceanic circulations and the results thereof, the following general conclusions seem reasonable.

1. The increased evaporation from an open Arctic Ocean, particularly in winter, would increase the precipitation over adjacent cold land areas, where lack of precipitation, rather than high temperatures, at present prevents the growth of glaciers (for example, Stokes).[20]

2. The present polar high, with clockwise circulation, would be replaced by a low-pressure area with counterclockwise circulation because of the contrast between the warm water and the surrounding colder land. The resulting reinforced counterclockwise circulation of the Arctic Ocean would tend to increase further the interchange of Atlantic and Arctic waters, judging from the present North Atlantic circulation.

3. The semipermanent North Atlantic low would be displaced roughly 10° to 20° southward. Increased zonal flow of air around the northern portions of this low would transport cool, moist air over eastern North America. At the same time, the presence of relatively warm water on all sides of the continents would promote the development of cool continental highs.

4. Winter and summer conditions over the continents would become more similar as a permanent continental ice sheet developed, with a resulting migration of the present polar front southward.

5. The contrast between the cold northern land areas and the warmer open Arctic Ocean would result in a second, although weaker, polar frontal zone surrounding the polar low.

6. A second belt of storms would therefore be present, providing some nourishment for growing glaciers at the northern margin, in addition to the stronger nourishment at the southern margin.

7. The Atlantic Ocean would be cooled by lowered air temperatures induced by continental glaciers and by the abrupt cooling effect of increased interchange with the Arctic Ocean already mentioned.

J. Chase has given a general confirmation of these views in an analysis (see fig. 1) that followed a presentation of the ideas of this paper at a colloquium at the Woods Hole Oceanographic Institution.[21] His analysis is based on a study of extreme conditions shown on historical weather maps and represents hypothetical mean isobars during a glacial stage having an open Arctic Ocean.

Termination of a glacial stage. The glacial tage would be brought to an abrupt close by the development of a new Arctic Ocean ice sheet. Along most of an Atlantic Ocean profile, through either Iceland or Spitzbergen, the sill depth between the Arctic and Atlantic Oceans is between 200 and 300 fathoms, and much of this is less than 50 fathoms, a depth generally accepted as the probable value for maximum Wisconsin decrease in sea level. When the lowering of sea level reached about 50 fathoms, a serious reduction in the interchange of water between these oceans would occur. The reduced inflow of warm Atlantic water, together with the cooling effect of the continental glaciers, would eventually allow a new Arctic Ocean ice sheet to form. The interchange of water would then be reduced to even less than its present-day value, owning to the reduced sea level. Thus, with the present radiation balance and the slow return to the current atmospheric circulation pattern, there would be no tendency to remove the Arctic Ocean ice sheet until sea level returned to at least its present position. A reversal of the phenomena described as consequences of an ice-free Arctic Ocean would consequently occur. Although gradual wastage of the continental glaciers would follow, the warming of the Atlantic surface water would be more rapid because of an abruptly diminished interchange with the Arctic.

If we consider the last glacial stage, we find that the studies of deep-sea cores indicate that 11,000 years ago is the date of the end of Wisconsin time. Furthermore, the end of Wisconsin glacial conditions in the ocean corresponds with, and according to our theory, caused the end of the Mankato substage on the continents. The glacial retreat between the Tazewell and Mankato glacial substage maxima (for example, Flint[17]) is only a minor fluctuation.

The interglacial stage: The transition from glacial to interglacial conditions in the Atlantic Ocean would be simultaneous with the time of maximum continental glaciation (neglecting minor fluctuations). As the continental glaciers wasted, their cooling effects would diminish. The consequent rise in sea level would slowly enlarge the cross section of the channel between the Atlantic and Arctic Oceans, providing an increase in the northward transport of warm water as is occurring at present. Eventually a condition would be reached where the Arctic ice sheet would disappear.

Considerable evidence has been given by Berezkin[19] and by Crary, Kulp, and Marshall[22] which indicates that the Arctic Ocean has been warming recently. If that trend continues, open water over the entire Arctic Ocean might occur within a few centuries, with consequent glaciation in northern latitudes.

Footnotes at end of speech.

The presence of five temperature maxima, marking past interglacial stages, all at about the same temperature as the present [4] is strong evidence that an internal, self-regulating mechanism controlled the climate during the Pleistocene. Emiliani's graph of temperature versus time (fig. 3 [4]) gives compelling evidence of oscillations of the system between two quasi-stable states, with the significant external conditions remaining constant throughout. This implies that present temperature is at the maximum value expected for an interglacial stage and that a decrease in temperature marking the onset of the next glacial stage may be expected within some few thousands of years.

In describing Pacific cores, Emiliani notes (p. 561 [4]) far less conspicuous temperature variations than in cores from the Atlantic. He explains this on the basis of greater vertical circulation in the Pacific, which seems to be a rather ad hoc solution. The observed uniformity in Pacific temperatures, however, is an expected consequence of the theory proposed here, in which strong temperature changes should be limited to the Atlantic and Arctic Oceans. These observations also imply that some mechanism, involving only the Atlantic and Arctic Oceans, is the most reasonable solution for the Pleistocene climatic variations.

Interpretation of Wisconsin glaciers. Our theory provides a new explanation for the Scandinavian and Siberian ice sheets. According to Flint,[23] this sheet had a maximum thickness of about 10,000 feet, tapering off strongly to the north and east, and less strongly to the south. The combined lateral extent was from about 5° W. at the British Isles to about 110° E. at the Taimyr Peninsula. In view of the long continental path and the prominent mountain barriers to the south and west, it seems difficult to imagine nourishment from storms arriving from these directions. However, nourishment from the north would be provided by an ice-free Arctic Ocean, but would be almost impossible with the ice-covered ocean usually assumed for the glacial age. The steep north slope of this ice sheet further supports the theory that the source of precipitation was to the north.

The Laurentide ice sheet, which covered nearly 5 million square miles at the Wisconsin maximum,[23] extended westward to meet the Cordilleran glaciers, and eastward to a line seaward of the present Atlantic coast, with its southern boundary along the Missouri and Ohio Rivers. The maximum thickness has been estimated by Flint [23] to be about 10,000 feet. Although the northern boundary is not well known, it has been assumed to be thin, but recent observations by G. Hattersly-Smith [24] give evidence of very severe glaciation on Ward Island and northern Ellesmere Land at about 83° N. Here again, as with the northern and western margins, it is difficult to explain the sources of nourishment on the basis of present-day circulation and an ice-covered Arctic Ocean. However, the modified circulation described here provides for sources of precipitation from the Atlantic and the Arctic Oceans, in addition to that coming from the south.

Finally, it is well known that the areas of the northern hemisphere covered by Pleistocene glaciers are centered roughly at the northeastern coast of Greenland, near the strait through which Atlantic and Arctic waters interchange (see, for example, Flint, plate 3 [25]). For the most part, glaciation in other areas was minor and was controlled directly by mountains. The distribution of Pleistocene glaciers again indicates the strong influence of both the Arctic and North Atlantic Oceans on Pleistocene continental glaciers.

Climatic optimum. Evidence for open water in the Arctic Ocean in post-Wisconsin time has been accepted by many writers for example, Brooks,[25] and attributed to the "climatic optimum" or "thermal maximum" which many climatologists believe prevailed during the long interval from about 7,000 to 2,500 years before the present. The evidence is found in part on islands and remote shores where correlation with established chronology is difficult. We suggest that this evidence for an ice-free Arctic pertains to the open Arctic we have postulated for Wisconsin time rather than to the climatic optimum.

Other evidence for a climatic optimum is found further south on the continents where it is correlated reliably with post-Wisconsin chronology. Although the climatic optimum is correctly dated here, we believe that it is a minor climatic fluctuation because it left no conspicuous evidence in marine sediments.[4 12] Also, according to Fisk,[26] there is no evidence of higher sea level than the present in the Gulf of Mexico during all of post-Pleistocene time.

Early man in the Americas. The facts about early man in the Americas support the idea of an ice-free Arctic during Wisconsin time and hence during earlier glacial stages. According to recent prevailing opinion—for example, Eiseley,[27]—early man reached Alaska from Siberia in great numbers during late Wisconsin time. The usefulness of the accepted land bridge between Siberia and Alaska would have been very limited if the Arctic Ocean had been ice-covered and the climate far colder than at present. The Denbigh flint complex (northwestern Alaska) has been estimated from geologic correlations to correspond to warm periods either earlier than 12,000 years ago or about 8,500 years ago.[28 29] Based on direct observations of the Denbigh flint work, Giddings [29] concludes: "The Bering Strait region was already a culture center at the time of deposit of the Denbigh flint layer." Giddings further notes "that most of the early flint techniques were distributed primarily on a broad band centering at the Arctic Circle; they seldom strayed south."

We believe that these observations refer to the time of the relatively warm and open Arctic Ocean prior to 11,000 years ago. The implication of a long-established culture in the arctic region conflicts strongly with the conventional concept of a Wisconsin ice sheet continuous from the North Pole to the Ohio River. If the Arctic Ocean were open in Wisconsin time, we should expect evidence of settlements along most of the shores of the Arctic, contemporaneous with those in Alaska. Giddings [29] has already pointed out a similarity between cultures for the Denbigh complex and settlements in northern Siberia.

About 11,000 years ago, the break-up of the ice permitted such rapid migration of Arctic population southward that the southern tip of South America was reached in a few thousand years.[27 30] The initial avenue from Alaska was the high plains east of the Rocky Mountains,[27 31] which would have no mountain barrier if it commenced in the low unglaciated area north of the Brooks Range and fronting on the Arctic Ocean. Following glacial retreat at the close of the Wisconsin stage, the route along the high plain east of the Rockies would have opened, while that from northern Siberia would have closed as sea level rose and ice formed in the Arctic Ocean. Thus, as early man migrated southward, continued migration from northern Siberia was cut off.

INITIATION OF PLEISTOCENE GLACIAL CLIMATE

Although the theory we have presented attempts to provide an explanation for the alternations of climate during the Pleistocene epoch, it cannot give an explanation for the initiation of cold Pleistocene climate. A solution to this problem is offered now.

Reconsideration of the hypothesis of polewandering. Following the recognition of the extent and distribution of Pleistocene glaciers, many scientists sought an explanation of glacial climates in terms of major shifts in the positions of the poles. Much of the early work was summarized in 1883 by Hann,[32] who believed that great secular changes in climate could only be accomplished by changes in the earth's axis of rotation. Kelvin and other physicists demonstrated that significant pole shifts would be impossible in view of the accepted evidence for high rigidity of the earth, thereby directing most subsequent studies toward alternative explanations. However, although they used different bases for their hypotheses, Köppen and Wegener [33 34] and Milankovitch [35] never abandoned this idea.

In recent years attention has again been directed toward this hypothesis as it became clear that the earth could not be considered as a completely rigid body. Thus, Vening Meinesz [36] concluded that, "The forces causing tectonic orogeny which are probably exerted by sub-crustal currents must have been amply sufficient for a shift of the poles," and he assumed a pole shift of many degrees as the basis of his explanation of the major fracture pattern of the earth's crust. Runcorn [37] indicated that the earth's surface could undergo large displacements relative to the interior as a result of convection currents. In considering the direction of magnetic fields indicated by studies of paleomagnetism, Runcorn [38] believes that the variation in these fields could be fully explained by pole wandering.

Using a different approach, Jardetzky [39] recently reevaluated the work of Milankovich, concluding "• • • there was possible a slow secular displacement of the crust in space, which was progressive during all geologic periods. The cause of the rotation of the crust is the existence of a moment of centrifugal forces acting on the crust and due to the asymmetry of the distribution of masses in the outer shell."

The possibility that adequate forces exist to produce relative movement between the earth's surface and the interior has led us to reopen the question of the effects of pole wandering on secular changes in climate. It should be noted that the poles wander, according to present conception, in a relative sense. The differential movement between an outer shell and the interior results in different points on the surface assuming the positions of the poles.

Climatic consequences of pole migration. The poles are presently located in positions of extreme thermal isolation, in marked contrast to the conditions that would prevail if both were in the open ocean. If the North Pole were located in the North Pacific (for example, 35°N and 180°W) and the South Pole at the antipodes of this, in the South Atlantic Ocean, the free interchange of water with the polar regions would preclude formation of polar ice caps. The free interchange would further tend to equalize temperature extremes both geographically and seasonally. A resulting weak and uniform latitudinal temperature gradient would occur, in contrast to the present zonality. This kind of climate must have prevailed between the Permian and Pleistocene glaciations (and probably during the long intervals between other glacial periods), according to inferences made from the geologic record by all authorities.

Based on different investigations, Kreichgauer,[40] Köppen and Wegener,[33] Milankovich,[35] Köppen [34] and Creer et al.,[41] have placed the North Pole in the North Pacific Ocean for a long interval beginning with the Cambrian. Although Milankovich gave no dating, the other investgators estimated that the pole arrived in the Arctic Ocean during the Tertiary. On the basis of the worldwide distribution of corals of various

Footnotes at end of speech.

Footnotes at end of speech.

Footnotes at end of speech.

ages, T. H. Y. Ma [42] concluded that sudden displacements of the solid earth shell with respect to the interior occurred. He also located pre-Cretaceous pole positions at distances of more than 90 degrees from their present positions in order to reconcile the fossil record with the appropriate climate, and concluded that abrupt shifts of the earth's crust during the Tertiary then carried the poles to their present locations. From studies of rock magnetization, Hospers [43] concluded that pole migration since Eocene time could have amounted to 10 degrees. It is proposed here that the migration of the poles from an open-ocean environment to the thermally isolated Arctic and Antarctic regions resulted in the change from the warm equable climate to the glacial climates of the Pleistocene.

Assuming that the North Pole migrated into the Arctic Ocean, the cooling effects of high latitudes would have become concentrated in this region owing to the isolation of the Arctic from the other oceans. In the same way, the migration of the South Pole from the freely circulating southern oceans to the Antarctic Continent would have concentrated cooling effects over the land. Both polar regions became sources of cold "polar" air that contrasted strongly with the warm air from equatorial regions. The Pleistocene and Recent climates, characterized by marked zonality, were thus established. Growth of glaciers requiring for the most part only ample precipitation on cold continental regions (for example, Haurwitz [44]) was greatly favored by this climate. The Pleistocene type of climate may thus be expected to continue as long as the poles remain near their present thermally isolated positions.

The motion of the poles was probably somewhat intermittent. If we consider convection to be the mechanism producing this motion, orogenies would be good indicators of convectional activity. The beginning of rapid polar motion would coincide with the major orogenies at the end of the Tertiary, and possibly also at the end of the Cretaceous. The climate oscillations within the Pleistocene were far too rapid to be related to movements of the pole in and out of the Arctic region.

As a consequence of the theories proposed, the principal alternations between glacial and nonglacial stages would occur in the Arctic. Relatively minor changes would be expected in the Antarctic, resulting primarily from the slight warming and cooling of the Atlantic Ocean. Despite these minor changes, such as the present decrease in Ancarctic ice, the theory requires a secular increase from zero thickness at the beginning of the Pleistocene glacial epoch. There is some evidence that this has occurred. In many parts of the world, phases of high sea level are recorded by elevated beaches. Although there is some disagreement about correlations, many authors—for example, Zeuner [45]—identify 5 or 6 such beaches, at elevations up to about 100 meters. Zeuner showed that a graph of beach elevation against time is approximately linear. He recognized that "it seems probable that this straight line represents a more or less continuous drop of sea level in the course of the Pleistocene on which the oscillations due to glacial eustasy were superimposed." It is now suggested that this apparently secular decrease in sea level, with attendant preservation of the beaches showing successive decreasing sea level maxima, can be accounted for by the secular growth of an Antarctic ice cap. Numerous estimates that the total decrease in sea level due to present ice caps is about 60 meters have been made; an additional decrease of about 50 meters can be attributed to thermal contraction of the sea water, if the present mean ocean temperature is taken as about 10° centigrade below the Tertiary mean. We can thus provide for a secular decrease in sea level of about 100 meters, which seems to account for the highest of the elevated beaches.

CONCLUSIONS

The theories of the origin of the Pleistocene glacial climate and of the glacial and interglacial stages proposed here are in complete harmony with the doctrine of uniformitarianism. No external influences or catastrophic events are required to initiate or maintain these conditions. It is postulated that some mechanical process has caused the poles to migrate to positions very favorable for the development of glacial climates. The major changes within the Pleistocene are considered here to have resulted primarily from the alternations of ice-covered and ice-free states of the surface of the Arctic Ocean.

For the most part, this article pertains to the Pleistocene glacial epoch and the warm interval between the Permian and the Pleistocene. Although little is known about possible glacial and interglacial stages during the Permian and Proterozoic glacial intervals, the initiation of such intervals could have been a consequence of the same mechanism as that proposed here for the initiation of the Pleistocene. The warm periods prevailing during the long intervals between the times of glaciations before, as well as after, the Permian could also be explained, according to the theory proposed, as a consequence of the location of the poles in regions of freely circulating oceans.

The consequences of the ideas presented are that the Pleistocene climate will continue while the poles maintain their present locations and that the Recent epoch can be considered as another interglacial stage.

[13] In many of the deep-sea basin areas, continuity in deposition is destroyed by the erosional or depositional action of turbidity currents; hence the chronology of the past cannot be determined with precision. However, when it became possible to take, or select for study, cores undisturbed by such action [D. B. Ericson et al., Geol. Soc. Amer. Spec. Paper No. 62 (1955), pp. 205–220], the pattern of deposition where a layer with warm-water fauna overlies a layer with cold-water fauna was unmistakable. A second complicating factor is introduced by animals, whose filled burrows frequently disturb sediment contacts. Allowance must be made for this effect in estimating the rate of change of sediment type.

Defense

EXTENSION OF REMARKS

OF

HON. J. HARRY McGREGOR

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Monday, July 16, 1956

Mr. McGREGOR. Mr. Speaker, I have made many trips to my district during the last year and I firmly believe that the people it is my honor to represent have confidence in President Eisenhower's judgment as to what constitutes adequate strength. I sincerely believe, Mr. Speaker, that the President knows more about military affairs than many of his citizens. Our ground forces, air defense squadrons, surface ships, and guided missiles are completely modern and ready for

immediate service at any time. I am sure that this administration's defense policy has achieved the greatest efficiency, economy, preparedness, and adaptability in peacetime history. A prosperous economy easily convertible to war has been maintained, while cutting defense costs by $10 billion. Research in weapons has permitted shift from manpower to weapon power. I am sure that all will agree, regardless of politics, that this is an excellent record.

Friendliness of Rotarian Is Being Felt Around the World

EXTENSION OF REMARKS
OF
HON. FRANK E. SMITH
OF MISSISSIPPI
IN THE HOUSE OF REPRESENTATIVES
Thursday, June 14, 1956

Mr. SMITH of Mississippi. Mr. Speaker, a private citizen of Inverness, Miss., is doing outstanding work in developing the person-to-person contacts which can do more than anything else to improve relations between the nations of the world. Under unanimous consent, I include the following article from the Memphis Commercial Appeal, in regard to the activities of Mr. Will Price:

FRIENDLINESS OF ROTARIAN IS BEING FELT AROUND WORLD

(By Marie Hemphill)

INVERNESS, MISS., July 7.—The enforced idleness that followed a serious heart attack led Will Price of Inverness into a hobby that is practically a one-man campaign to improve international relations.

During the past 3 years he has carried on a voluminous correspondence with Rotary Clubs and Rotarians in 27 countries on 5 continents.

After his second bout with a heart ailment, Mr. Price's doctor informed him he would have to give up all his activities and take life easy. But taking life easy was a hard job for a man who had always been busy, and Mr. Price dreaded the long days ahead with nothing to do.

For 9 years he had been secretary of the Inverness Rotary Club, but after his illness the president appointed him international service chairman. This was a position that had meant practically no work in the past, but the new chairman made it one of far-reaching importance.

It began the day he noticed, in looking over the official register, that there is a Rotary Club in Inverness, Scotland. Having plenty of time on his hands, he wrote to the club president, explaining his own delta town was named for the Scotland's Inverness and telling him about life in this part of the world.

PROMPT, WARM REPLY

After this letter brought a prompt and warm reply, Mr. Price selected other clubs that appealed to his interest. In all, he has written 157 letters—long letters full of friendliness and good will, as well as information about the Mississippi Delta and the United States.

Eighty-five of these have been answered in the same friendly spirit, some containing the promise of a visit. The Prices are looking forward to a visit in December from one of their Rotary friends, Bertil Salfors, from Boras, Sweden, who is associated with the International Olympic Games.

A number of Inverness residents living abroad have felt the influence of this Rotary correspondence. For instance, Mr. Price wrote to the Osaka, Japan, club, telling them about a fellow townsman and cotton man, James Baird, who was living there. The results of this communication practically overwhelmed the surprised Mr. Baird.

Not only was he invited as a highly honored guest to a club meeting, but a half holiday was declared in his honor in this city of 500,000 people, and for 2 weeks he was wined and dined quite sumptuously by prominent officials and dignitaries.

SPECIAL COURTESIES

Miss Eloise Bowles, of Inverness, who is with Civil Service in Wiesbaden, Germany, was visited by a delegation of Rotary Annes, and other Deltans were contacted by Rotary clubs and shown special courtesies.

Mr. Price does a good bit of research on the countries where his letters are going, and he receives all sorts of brochures, booklets, pictures, and pamphlets. These he gives to the local school library for reference, but he keeps all the letters and the copies of the ones he writes.

There are such interesting addresses in his file as Akranes, Iceland; Palembrang, Indonesia; Kilcaldy, Scotland; Habro, Denmark, Drogheda, Ireland; Jesselton, North Borneo; Kowloon, Hong Kong; Port Elizabeth, South Africa; and Pusan, Korea.

A former Berlin resident now living near Isola assists him with his German correspondence and the others he sends to the language department of Mississippi Southern College for translation.

A rather puzzling coincidence is that not a single answer has ever been received from a South American country, although at least 25 letters have been sent there.

One of the most unsual replies came from a young German lawyer who had spent a year at the University of Chicago. He said he heard and read much of the problem of segregation from a Northern viewpoint, and he would like to hear the Southerners' side of the question. He especially wanted to know what really happened in the Emmett Till case.

Mr. Price's theory is that world peace will come about only through a better understanding between people. He's doing his bit to promote this situation and taking good care of his health at the same time.

Communism and Security

EXTENSION OF REMARKS
OF
HON. J. HARRY McGREGOR
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Monday, July 16, 1956

Mr. McGREGOR. Mr. Speaker, in checking the records I am pleased to note that we have new anti-Communist laws which will protect our country and our people. Among these new laws is one revoking citizenship of Communist conspirators convicted in the future. Second. Increase penalties for harboring Communist fugitives from justice. Third. Extend sabotage definition to include biological warfare items. Fourth. Require registration of Communist-action and Communist-front printing equipment. These new laws and others of similar nature will go a long way toward stamping out communism in our country. Certainly our loyal citizens will appreciate this added protection.

Rededication of the Nation to the Ideals of Patriotic Americanism

EXTENSION OF REMARKS
OF
HON. EDWARD MARTIN
OF PENNSYLVANIA
IN THE SENATE OF THE UNITED STATES
Monday, July 16, 1956

Mr. MARTIN of Pennsylvania. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address which I delivered at the annual convention of the Veterans of Foreign Wars, Department of Pennsylvania, in Philadelphia, on Friday, July 13, 1956.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

ADDRESS OF UNITED STATES SENATOR EDWARD MARTIN, OF PENNSYLVANIA, AT THE ANNUAL CONVENTION OF THE VETERANS OF FOREIGN WARS, DEPARTMENT OF PENNSYLVANIA, IN PHILADELPHIA, JULY 13, 1956

It is a great honor to address this convention of American veterans who have served in all parts of the world to uphold the honor of the United States and the glory of our flag.

We meet again in rededication to the sacred ideals of patriotic Americanism.

We are assembled to commemorate the valor of the American fighting man and to honor the memory of our comrades who gave their lives on the altar of freedom.

Here, in this convention, we renew our sacred obligation to care for the widows and orphans of our fallen heroes and to advance the welfare of those who are disabled by wounds suffered in our Nation's defense.

One of the outstanding purposes of our convention is to consider how we can best contribute to the great task of keeping our Republic free, strong, prosperous, and at peace.

There is a patriotic inspiration for every American in the historic city of Philadelphia. Here the courageous patriots of 1776 defied the power of the world's greatest empire when they drafted and adopted the Declaration of Independence.

The men who signed that immortal document pledged their lives, their fortunes, and their sacred honor in support of their belief that freedom—the right to life, liberty, and the pursuit of happiness—are inalienable, and that these rights are a divine endowment from the Creator of the universe.

The pledge they gave was not an empty gesture. It was just as real as their love of liberty. They were fully aware of the risks involved. They knew that they would pay with their lives if disaster overtook their fight for freedom. Each was a marked man with a price on his head.

Their way was not easy. Some of them sacrificed all they possessed in the cause of independence. Some suffered the destruction of their homes at the hands of the British. Some were driven into exile and their families exposed to severe hardships. Others fought gallantly in the Continental Army.

The patriotism and sacrifice of the signers should be an everlasting inspiration for every loyal American. Their example should be a constant reminder that freedom is won on the field of battle and retained by the people through their attention to their Government.

The United States was established on the proposition that "we, the people" are the Government. The American system placed upon every citizen an equal share of responsibility for good government.

It is therefore an obligation of citizenship to take an active interest in public affairs.

That means taking part in politics. It means working for the election of men of honor and integrity to public office. It means helping to develop an atmosphere of civic responsibility to protect and promote the principles on which our Nation grew great and strong.

Yes, my fellow Americans, under the two-party system by which we reach political decisions, the battleground for good government is in the arena of politics.

We need a deeper understanding of practical, patriotic politics—the kind of political activity that is based on the highest standards of morality, honesty, sincerity, and love of country.

Just as we hold sacred the principles of our religious faith, so must we hold fast to the highest ideals of political action.

One of the tragic siuations in our country their civic duties by so many of our people.

So many of our good citizens who are sound, honest, and sincere, fail to realize that the course of their lives may be affected by politics. Such people fail to understand the real meaning of America—and many, I regret to say, do not even take the trouble to vote on election day.

It should be a matter of deep concern to all of us that more than 40 percent of our eligible citizens never bother to go to the polls.

I call this to your attention because this year we are in another Presidential campaign. I recognize that the VFW, as an organization, makes no attempt to influence the political thinking of its members. I support that policy—but nevertheless I think it is patriotism—not politics—to go out and urge your fellow citizens to vote. No one should neglect this paramount duty of citizenship. It will make us a stronger Nation if decisions are made by a majority, with all the citizens participating.

I am not suggesting that you join one party or another. This is not a political speech. But I do say that you can serve you city, county, State, and Nation by joining the team that best represents your hope for a better America.

Unless we pay more attention to the kind of government we have, we will not enjoy the full benefit of the great advances being made in science and production.

The wonders that lie ahead cannot be imagined by any one of us here today.

Who knows what greatness is around the corner? Who knows what mysteries of nature will be revealed in the atomic age? Who can visualize the new frontiers to be explored in industry, science, and research?

The course of world progress may be completely transformed by scientific discoveries, new inventions and technological advances in the near future. We must be prepared to meet the challenge of a changing world.

That means we must arouse more widespread interest in public affairs at all levels of government. We must support constructive legislation that will place the long-range benefit of the American people above temporary expedients.

As an example of how legislative action bears upon the future of our country and the everyday lives of our people, I would point to the road bill just enacted by Congress.

As the ranking Republican member of the Senate Committee on Public Works, I had a great deal to do with bringing the road bill to final passage.

I have been very much interested in our highways and other transportation systems for many years. Much of this interest grew out of my military experience in the movement of troops across the country. In this duty I found our highways and bridges grossly inadequate to serve our defense needs.

The new road program is the biggest public works project ever undertaken by any nation in world history. It involves more people, more area, and more money than any previous project except for war.

We must keep in mind that all the great expenditures for war purposes are wasted. Their principal purpose is destruction while the funds invested in a modern, adequate, and safe highway system will add in so many constructive ways to the welfare of our country.

The new highways will be designed to serve the national defense as well as our civilian needs for commerce and industry. They will serve our social and political needs by bringing the different sections of our country closer together for the interchange of ideas and opinions. They will be engineered for safety and thus cut down the tragic toll of death and injury on our highways.

The combined Federal and State expenditures under this program will reach a total of $51 billion over a 13-year period. And it is to the credit of Congress that the Federal Government share of the cost will be financed on a pay-as-we-build basis.

Outstanding in the new program is the plan for a 41,000-mile network of roads designated as the National System of Interstate and Defense Highways. These will be built to the highest engineering standards. They will connect 42 of the 48 State Capitals and 90 percent of all the cities in America having more than 50,000 population.

The overall program makes substantial increases in funds to bring the other highway systems up to modern standards, including primary, secondary and urban roads.

I have sketched over lightly the magnitude of this great undertaking, but what it really means to the economic strength of the Nation can be illustrated by a few figures.

It has been estimated that the highway program will create at least 300,000 new jobs on direct highway construction alone and twice as many in related industries. It will take many thousands of additional workers to produce the steel, cement, asphalt, stone, sand and gravel that will be required. The production of roadbuilding machinery and equipment will have to be greatly expanded.

Each billion dollars' worth of new highway means an additional 16 million barrels of cement, 76 million tons of sand and gravel, 510,000 tons of steel, 100,000 tons of asphalt, and a $500 million outlay in new construction equipment. In a single year, the Federal highway program will require over 5 million tons of steel and 112 milion barrels of cement.

These figures are most impressive, but of equal importance is the fact that the whole plan will be carried out in each State of the Union under the authority of the State and in accordance with the American plan of free enterprise.

I am proud of this magnificent peacetime achievement. It is a courageous forward step in American progress. It reflects the amazing growth of our country in population and economic development.

At this time I have a suggestion to make which I hope will appeal to many of you.

You have come from all parts of Pennsylvania to attend this convention. I hope that while you are here you will visit Independence Hall, the Betsy Ross House, Christ Church and Valley Forge. These sacred shrines of American Independence are always inspiring. They remind us that the true American can defend our country in two ways—on the battlefield and by participation in government.

Good government is the bulwark of our liberties.

If we pay closer attention to our Government we can preserve for all time the precious freedoms won by the loyalty and sacrifice of heroes and patriots in every generation of our history.

Atom to the Fore

EXTENSION OF REMARKS

OF

HON. ALBERT GORE

OF TENNESSEE

IN THE SENATE OF THE UNITED STATES

Monday, July 16, 1956

Mr. GORE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Atom to the Fore," which was published in the St. Louis Post-Dispatch of July 13, 1956.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

ATOM TO THE FORE

A lot is happening just now on the atomic energy front. The Senate has just passed, 49 to 40, the Gore bill for the construction of 6 public atomic powerplants for peaceful uses. Coincidentally comes the news of the new plan of Soviet Russia for nuclear-power development in Europe. Moscow has made another "new look" move by proposing that European nations, plus the United States, join in a new international agency for the control of atomic power for peaceful uses.

That the Eisenhower administration needs to do more in this field than it is doing is made clear by the reaction of Japan to the atomic performance in the United States. Japanese Atom Chairman Matsutaro Shoriki has talked with atomic delegations from both the United States and Britain. As a result he is convinced that the British are 5 years ahead of us in the development of the atom for peace.

So although he is in general a supporter of United States policies, he is looking to England for leadership in the development of atomic electric power. "The British maintain," he says, "that they will be producing electrical power at a feasible cost at Calder Hall," which the English put into operation May 22. "American experts have at least six similar projects in the works but they could not tell me when they would be able to match Calder Hall."

Adm. Lewis L. Strauss, chairman of the Atomic Energy Commission, presumably still believes the United States is in the lead in the development of the peaceful atom.

But it is plain that the Senate does not share the Strauss optimism. This became clear when the upper chamber put its approval on the forward-looking bill of Senator GORE, of Tennessee.

And it now becomes evident also that the Japanese do not believe Chairman Strauss' protestations of leadership.

What, after all, do these protestations mean if the AEC can neither show the Japanese a commercial-scale atomic power plant in operation nor give them any idea at what time one will be in operation?

If the Japanese turn elsewhere than to the United States for atomic leadership today, other countries which this Nation hopes to lead into freedom through prosperity may do the same.

Americans may, of course, take a cousinly pride in the accomplishments of the British. if the men of Tokyo go to London rather than Washington for atomic leadership, all is not lost. Both countries are of the free world.

But the outstripping of both England and the United States by the Soviet Union would be a serious matter for the entire West, and it has become a serious matter to be contended with because of the United States' wordy inactivity thus far in putting the atom to the service of people in their homes and places of business.

The Senate serves the best interest not only of the country but of peace in the world by passing the Gore bill and sending it to the House. Speaker RAYBURN and the House leaders, we trust, will see that it comes to a vote as soon as possible. Here is an opportunity too good to miss.

Explanation of Vote on Federal School Aid Bill

EXTENSION OF REMARKS
OF
HON. HERBERT H. LEHMAN
OF NEW YORK
IN THE SENATE OF THE UNITED STATES
Monday, July 16, 1956

Mr. LEHMAN. Mr. President, Mr. Irving Engel, a distinguished citizen of New York, and one of our most prominent attorneys, who is also president of the American Jewish Committee, has recently written a letter to the editor of the Port Jefferson Record, a newspaper published in Port Jefferson, Long Island, N. Y. This letter deals with the recent vote of Congressman Stuyvesant Wainwright, in whose district Mr. Engel resides, on the Federal school aid bill and his explanation of that vote.

It is a self-explanatory letter. It is also a most lucid critique of the contradictory position taken by some Members of the House when they voted for the Powell amendment but against the school-aid bill.

This letter illustrates a point that I have been making, namely that a very large number of those who voted against the school-aid bill in the House were not moved by opposition to the antisegregation amendment, but to the school aid program itself. Their opposition, moreover, was based on a completely mistaken premise—that the school-aid bill would bring about Federal interference in education. This premise is completely without foundation, as shown by the language of the bill itself. The language in question is quoted in Mr. Engel's excellent letter to the editor of the Port Jefferson Record.

I ask unanimous consent that this thoughtful letter be printed in the Appendix of the RECORD.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

ENGEL, JUDGE, MILLER & STERLING,
NEW YORK, N. Y., *July 13, 1956.*
EDITOR, PORT JEFFERSON RECORD,
Port Jefferson, Long Island.
To the Editor:

One of the truly regrettable events of the current session of Congress was the defeat of Federal aid for public school construction. The result flies in the face of the overwhelmingly supported recommendation of the White House Conference on Education. In his "Weekly Report from Washington," in your issue of July 5, Congressman WAINWRIGHT explains why he voted in opposition to such a measure.

Federal aid, according to Mr. WAINWRIGHT, "* * * would allow the tentacles of Federal interference to enter every classroom, to reach all the young children of our Republic."

The Kelley bill (I am not here implying a preference for it over the administration-sponsored measure), against which the Congressman voted, actually establishes that such fears are unfounded. In section 405, headed "Assurance Against Federal Interference in the Schools," there appears the following language: "In the administration of this act, no department, agency, officer, or employee of the United States shall exercise and direction, supervision, or control over the personnel, curriculum, or program of instruction of any school or school system." Here, in words so clear and unequivocal that their meaning is unmistakable, is effective refutation of Mr. WAINWRIGHT's expressed alarm.

But, even if the Kelley bill carried no such explicit injunction against Federal interference in local school affairs, there is ample precedent to prove that Mr. WAINWRIGHT's fears are unfounded. For there is a long history—170 years—of Federal aid to education. Over this extended period of time the Congress has enacted numerous measures in the form of both land and monetary grants to the States in aid of education; yet at no time has there appeared a semblance of Federal interference in or control of State or local school systems. To this day, there is no more deeply imbedded American tradition than the inviolability of State and local control of our schools.

In sum, throughout a century and a quarter of Federal aid to education there remains strictly reserved to the States and local communities: (a) the certification and selection of administrative and instructional school personnel, as well as the determination of standards of their employment; (b) the selection of subject matter to be taught; (c) the selection of textbooks and other instructional materials; (d) the planning and development of school plant and equipment; (e) methods of pupil grading and promotion; and (f) requirements for graduation.

It follows that Mr. WAINWRIGHT's irrelevant references to what happened in Hitler's Germany and Lenin's Russia, allegedly because of the centralization of education, cited by him as examples of what could happen if the Kelley bill were passed, are decidedly unfair and unwarranted. It may very well be that Mr. WAINWRIGHT simply has not read the Kelley bill carefully.

Parenthetically, the Congressman did vote for Federal aid for school construction in areas affected by the military, evidently because he believed the need in these sections of the country is acute. But the needs of the public schools elsewhere in the Nation are equally pressing. How, then, does the Congressman square his opposition to the Kelley bill with his support for Federal assistance to military and other federally impacted areas? If I may suggest it, Mr. WAINWRIGHT has apparently lost sight of the fact that we are dealing in both cases with the needs of children; that when children are deprived of educational opportunity—whether because of overcrowded classrooms or double and triple sessions—it is next to impossible to make up that loss.

Congressman WAINWRIGHT is on firm ground when he inveighs against those States which flout the Supreme Court's decision on segregation. But he is opposed to Federal aid to education in any form—with or without the Powell amendment, which would deny, Federal funds to those States and school districts which defy the Court's ruling. Indeed, he voted against the Kelley bill with the Powell amendment. Therefore, his injection of the segregation issue into his discussion of Federal aid is really in the nature of a nonsequitur.

I should like to suggest to Congressman WAINWRIGHT that education is our first line of defense. By delaying Federal aid to education our children are being shamefully short-changed. Ought not the Congressman reassess his opposition on this extremely important problem?

Cordially yours,

IRVING M. ENGEL.

Government Takes Important Role in Ohio Valley Industrial Boom

EXTENSION OF REMARKS
OF
HON. CARL ALBERT
OF OKLAHOMA
IN THE HOUSE OF REPRESENTATIVES
Monday, July 16, 1956

Mr. ALBERT. Mr. Speaker, I recently had the privilege of touring a portion of the Fourth Congressional District of West Virginia with our distinguished colleague, the Honorable M. G. BURNSIDE. The amazing revolution that is taking place in the Ohio Valley in that area is one of the most spectacular phenomena I have ever seen. In New Haven, W. Va., Congressman BURNSIDE and I visited the Philip Sporn plant of the Appalachian Electric Power Co. and we also visited the Kyger Creek plant of the Ohio Valley Electric Corp., and the new Kaiser aluminum plant, of Ravenswood, W. Va. These neat establishments symbolize the mechanical genius and industrial might of our country. The Kyger Creek and Philp Sporn plants are fueled by slack coal and represent a new hope for the coal industry in this country. The Kaiser aluminum plant will undoubtedly spearhead the unparalleled industrialization of that portion of the Ohio Valley as satellite and related plants start competing for locations in the area.

The keen interest among both management and labor in the development of this Ruhr of America reflects the tireless efforts of our colleague, Congressman BURNSIDE. He has devoted himself to the development of his district, which heretofore has suffered a serious labor depression. In a guest editorial which he wrote for the Huntington Advertiser July 9, 1956, Congressman BURNSIDE explained the important role which the Government has taken in the Ohio Valley industrial boom. This editorial follows:

GOVERNMENT TAKES IMPORTANT ROLE IN OHIO VALLEY INDUSTRIAL BOOM—A GUEST EDITORIAL BY CONGRESSMAN M. G. BURNSIDE

(EDITOR'S NOTE.—This is another in a series of guest editorials giving suggestions of prominent men on means of speeding industrialization of the Ohio Valley.)

Huntington, pivotal point of the Central Ohio Valley, at the threshold of an industrial and population development that stggers the imagination. Seven billion dollars of Government and private funds are now committed to the expansion of industry throughout the sweep of the valley, with the Fourth Congressional District of West Virginia, which I represent in Congress, participating to an extent undreamed of a few years ago. The detailed story of this industrial colossus has been told and pictured in the nationally circulated magazine, Fortune.

Happily, I had a part in this ranaissance of modern civilization while sitting in the 81st and 82d Congresses. From that same vantage point now in the 84th Congress I have the pleasure of working daily with the busy people of Huntington and the Fourth District as they plan and strive to make our dream of prosperity come true.

National defense, the dispersement of industry, coal—the black diamonds of the hills of West Virginia, vast quantities of cheap electricity, are subjects constantly before committees of Congress.

The Ohio Valley has beckoned. Finally Government and Industry are responding.

Congress has moved slowly, but the wheels have been turning and they now grind exceedingly well.

The new canalization of the Ohio River will provide an inland waterway unsurpassed for its tonnage capacity. Enabling legislation for this project includes byproducts of almost equal importance—flood control, storage of water for industrial use, and pollution of streams safeguards.

The production of cheap electric power from readily accessible coal, as encouraged by Congress, is a magnet to industry from the production to the fabrication stages. Our free-enterprise system, from small to big business, has been quick to move in on the ground floor.

Transportation augmenting the greatly expanded river traffic, is on the march. I am working daily with committees preparing legislation to help the development of roads, rail, and air transportation to keep the pace. Plans for Federal highway systems will provide new superhighways, thus releasing State funds for more and better State roads. Railroads are being helped to extend all of their facilities. New roadbeds and new rolling stock. We are constantly building new airports and enlarging those already in operation. I am impressed with the forward looking, fearless planning of airline management, railroad executives, and highway engineers. No stone will be left unturned to provide all ways and means for the steadily increasing movement of men and materials.

As this cycle of prosperity gains in momentum, we in West Virginia must be on the alert to do our parts and gain our rewards.

Education, from schools of the small villages to the technical courses of Marshall College, must be prepared to double and triple services.

Farmers will be called upon to produce as they never produced before. Labor has been alerted, because as factories are built and production gets underway, there may soon be more jobs than there will be people to fill them.

I can assure you that Congress is well aware of this bustling expansion, and as your representative I am voicing your needs at every opportutnly. New and greatly enlarged Federal Buildings are being built in Huntington and Parkersburg. Others are in the offing. For the safeguard of public health, new hospitals are even now being built with the help of Congress, and more are to come. Adult education, old-age insurance, and the cultural atmosphere of the valley are getting their share of congressional attention.

It is my unfaltering belief that the time is here, the die has been cast, and the Ohio Valley will be to the United States what the Nile is to Egypt, the Thames is to England, the Saar is to Europe, and the Amazon to South America. We in West Virginia have truly arrived at a wonderful age.

Budget and Savings: Public Debt

EXTENSION OF REMARKS
OF
HON. J. HARRY McGREGOR
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Monday, July 16, 1956

Mr. McGREGOR, Mr. Speaker, I am most happy to note that in the final report of the fiscal year we finally have arrived at a place where we again have a balanced budget. The records will show, Mr. Speaker, that Government spending has been cut from $10 billion to $14 billion below the level of the previous administration, despite the continued heavy demands of the cold war. The record shows that Government spending is taking only 19 percent of the national income, which is a 6 percent cut from the 25 percent share of the previous administration.

I repeat, the 1956 budget has been balanced and we will have approximately $2 billion surplus. Mr. Speaker, this is a good record but I firmly believe that with the continuation of our existing practices we will be able to again lower our national debt and give the people of our Nation another tax reduction.

Diplomacy of the Heart

EXTENSION OF REMARKS
OF
HON. EDWARD J. THYE
OF MINNESOTA
IN THE SENATE OF THE UNITED STATES
Monday, July 16, 1956

Mr. THYE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Diplomacy of the Heart," which appeared in the Washington Post and Times Herald of this morning. It is an excellent editorial. The young doctor who is the subject of the editorial is to be commended. He will do much in furthering the relations of America with the Asiatic people.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

DIPLOMACY OF THE HEART

One American, a young former Navy doctor, has just set out on what seems to be the ultimate example of effective person-to-person contact with a foreign people. Dr. Thomas A. Dooley and his personally recruited unit of former Navy corpsmen will spend 8 months among the mountain tribes of Laos in southeast Asia setting up a pilot project for treatment of yaws, trachoma, malaria, malnutrition, other diseases. The aim of this mission is to demonstrate American good will in a practical manner, to show that this Nation is not ignoring the Asian's physical needs while, as Dr. Dooley puts it, "we hand him pious platitudes."

This 29-year-old doctor, who did heroic work treating Vietnamese refugees from communism following the fall of Dien Bien Phu, and later wrote a book about his experiences, has already demonstrated what a single individual can do toward becoming a grassroots diplomat. After resigning from the Navy, he singlehandedly recruited manpower, supplies, transportation for his mission (he is also giving the proceeds from sale of his book to its support) and got approval for it from the State Department, the International Cooperation Administration, and the Laotian Government. It is sponsored by the International Rescue Committee and it will work through the Ministry of Health of the Kingdom of Laos—thus avoiding, as Dr. Dooley point out, "the impression of meddlesomeness and/or neocolonialism."

Dr. Dooley's project is being undertaken at a time when there is tendency both in this country and abroad to deride traditional American idealism, which has been one of this Nation's greatest sources of strength. By his personal example the young doctor affords assurance that this idealism is still alive and kicking.

Tribute to Hon. James P. Richards

EXTENSION OF REMARKS
OF
HON. JOHN J. RILEY
OF SOUTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Monday, July 16, 1956

Mr. RILEY. Mr. Speaker, the distinguished gentleman from South Carolina, the chairman of the Foreign Affairs Committee, the Honorable JAMES P. RICHARDS, of the Fifth South Carolina District, is an alumnus of the University of South Carolina. Because of the eminence of his position, the bipartisan approach which he has used in all matters pertaining to foreign affairs, and the high regard in which he is held not only by the alumni of the University of South Carolina but by all the leaders of my State, the librarian of the University of South Carolina is preserving for posterity the record of the historic debate on the Mutual Security Act of 1956 in the library of this old and honored institution. This tribute to our distinguished Representative from South Carolina was proposed by Mr. James A. Hoyt, himself a distinguished resident of my State and a great American. I enclose herewith his letter of proposal and the acknowledgment by Dr. R. L. Meriwether, who is president of the South Caroliniana Association:

COLUMBIA, S. C., *June 20, 1956.*

Dr. R. L. MERIWETHER,
South Caroliniana Library,
University of South Carolina.

DEAR DR. MERIWETHER: The debate in the House of Representatives on the Mutual Security Act of 1956 will go down in the annals of Congress as one of the historic debates of this era. The central figure in that discussion was a Representative in Congress from South Carolina, Hon. JAMES PRIOLEAU RICHARDS, of the Fifth District, an alumnus of the University of South Carolina.

During the debate, lasting more than 3 days, remarkable tributes to Mr. RICHARDS were spoken by many of his colleagues, Republicans and Democrats. These tributes were truthful and sincere. As chairman of the House Committee on Foreign Affairs in the 84th Congress, and a member of the committee since 1935, Mr. RICHARDS has been a diligent student of foreign affairs. His knowledge and experience are recognized by all Members of the House.

In this recent debate the House sustained its committee chairman over the opposition of President Eisenhower and of Speaker RAYBURN; Representative JOE MARTIN, the Republican leader; and Representative JOHN MCCORMACK, the Democratic leader of the House. That was a very remarkable thing.

The many expressions of respect for Mr. RICHARDS were in line with what was said in the debate by one of the ranking Republican members of the Foreign Affairs Committee, Mr. VORYS, of Ohio. He said:

"DICK RICHARDS is a great American and a good fellow and my very dear friend. I have fought with him toe-to-toe and shoulder-to-shoulder, and I might say that I would rather be shoulder-to-shoulder with him than toe-to-toe. But wherever he stands in a fight you will find he is a fair fighter, a fast friend, and a true American."

Because Mr. RICHARDS is retiring voluntarily from Congress at the close of the 84th Congress, and because his part in this debate is so remarkable, I am presenting to the South Caroliniana Library for preservation such portions of the CONGRESSIONAL RECORD,

June 6, 7, 8, and 11, 1956, which contain the discussion and action of the House of Representatives on the Mutual Security Act of 1956, H. R. 11356.

Respectfully,

JAMES A. HOYT.

THE UNIVERSITY
SOUTH CAROLINIANA SOCIETY,
Columbia, June 25, 1956.

Mr. JAMES A. HOYT,
Columbia, S. C.

DEAR MR. HOYT: We are greatly obliged to you for the pages of the CONGRESSIONAL RECORD with the record of Congressman RICHARDS' speeches and remarks on the foreign-aid bill. These will be bound, with your letter on the front, and will be on exhibit at the 1957 meeting of the society.

Sincerely yours,

R. L. MERIWETHER.

GTA Daily Radio Roundup

EXTENSION OF REMARKS
OF
HON. WILLIAM LANGER
OF NORTH DAKOTA
IN THE SENATE OF THE UNITED STATES
Monday, July 16, 1956

Mr. LANGER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD the GTA Daily Radio Roundup broadcast by the Farmers Union Grange Terminal Association of St. Paul, Minn., on Wednesday, June 27, 1956.

There being no objection, the text of the broadcast was ordered to be printed in the RECORD, as follows:

GTA DAILY RADIO ROUNDUP, WEDNESDAY, JUNE 27, 1956

Announcer: Senator MILTON R. YOUNG'S statement urging a "Yes" vote by farmers in the July 20 wheat referendum is another in a series of broadcasts by public officials on this important question. Here, speaking over the GTA radio network, by transcription for his Washington office, is the North Dakota Senator:

Senator YOUNG: The wheat-referendum election, to be held on July 20, is a tremendously important one. An adverse vote by farmers would mean that price supports for wheat next year would drop to $1.20 a bushel. Secretary Benson has not, as yet, set price supports for next year's wheat crop. I am urging him to do so immediately. The lowest price he could set would be $1.79. The highest would be $2.14 per bushel.

If the so-called modernized parity formula has been permitted to go fully into effect, the minimum support this year would have been $1.64, rather than $1.79 which is now the case. It was prevented from going into effect by an amendment to the farm bill proposed by M. W. Thatcher, of GTA, and sponsored by me in the Senate.

Simply stated, this amendment prevents the so-called modernized parity formula from going into effect for next year's crop, and holds parity at the present level for another year, or until Congress can enact a new and much fairer parity formula. It means 15 cents a bushel more for wheat farmers.

I know the low wheat acreage farmers receive under quotas is hard to take—and especially for the small farmer. The alternative of an adverse vote and $1.20 wheat supports would be much worse.

I think it is tremendously important that farmers cast a heavy vote for wheat quotas on July 20.

The Honorable William R. Bradford, a Great South Carolinian and American

EXTENSION OF REMARKS
OF
HON. JAMES P. RICHARDS
OF SOUTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Monday, July 16, 1956

Mr. RICHARDS. Mr. Speaker, the greatest men in public life are not always in the highest positions. Many serve their State and country as members of the legislative bodies of the several States. The Honorable William R. Bradford, of Fort Mill, S. C., is one of the greatest of these. He would have served with equal distinction in the Congress of the United States.

Unlike Members of Congress, members of State legislatures seldom serve more than 10 or 12 years, at most. Different reasons may be attributed for the more rapid turnover in the membership of the legislatures. One of these reasons, perhaps the most potent one, is the low salaries paid the members. In my own State, South Carolina, the salary is $1,000 annually.

Another reason for the rapid turnover in the membership of the legislatures is the fortune of politics. Not infrequently it happens that the electorate becomes dissatisfied with particular legislation, or the absence of legislation regarding what is considered an important matter. This brings changes in the personnel of the legislature.

Now and then it comes about, however, that members of the legislature are returned session after session for long periods. Such an exception has happened this year in the district I have the honor to represent in this body. When I was first elected in 1932, and for years prior thereto, one of the four house members representing York County in my district was William R. Bradford, who is still a member of the legislature. Only recently he was renominated for another 2-year term, which is equivalent to election. In the recent campaign, and 2 years ago, he broke all records in accumulating votes, and that without putting on the usual glad-handing adjunct.

In his legislative work Mr. Bradford is always serious minded. He has been a member of the Ways and Means Committee longer than any other member in the history of the State and has represented his county a greater number of years than any other member it has heretofore sent to the State capitol in Columbia. He is a former chairman of the Ways and Means Committee and has been a member of the committee since he first entered the legislature.

Mr. Bradford has served in the House of Representatives with 16 Governors of South Carolina. He was there when United States Senators were elected by the legislatures. He was there when the ballot was placed in the hands of women, and was likewise there when the national prohibition resolution was passed and when it was repealed. He saw the troops marching down Main Street in Columbia on the way to the Mexican border to curb Villa's bandits in 1916.

One of the units of the 30th Division which passed before him in mental review as it left for service overseas in World War I was Company G, 1st South Carolina Infantry, which he had organized and which was to cover itself with glory for the part it played in breaking the Hindenberg line. That engagement brought the Congressional Medal of Honor to two of its members, Sgt. Tom Hall—posthumously—and Lt. James C. Dozier, who for many years has been Adjutant General of South Carolina. In World War II, Mr. Bradford's contribution to the cause of the country was a son, S. Sgt. Morrow Bradford, who lost his life as a member of the 8th Air Force, United States Army, over Cologne, Germany, on December 29, 1944.

As a member of the South Carolina House of Representatives, Mr. Bradford heard the announcement in the statehouse of the deaths of Woodrow Wilson, William Jennings Bryan, Franklin D. Roosevelt and numerous other American statesmen of worldwide renown.

The esteem in which he is held in his home county was attested by the unveiling some months ago of an oil portrait of him in the auditorium of the courthouse at York.

I am pleased to thus pay tribute to Mr. Bradford before I retire from this House in January, next. He has always been a loyal, consistent friend of mine, and my father, who served in the legislature with him, as he was of my uncle, John G. Richards, who served South Carolina as chief executive from 1927 to 1931.

North Dakota Electric Co-Op Opposes Interest Rates by Hoover Commission

EXTENSION OF REMARKS
OF
HON. USHER L. BURDICK
OF NORTH DAKOTA
IN THE HOUSE OF REPRESENTATIVES
Monday, July 16, 1956

Mr. BURDICK. Mr. Speaker, I have just received a copy of the resolution passed by the members of the James Valley Electric Cooperative, Inc., at Edgeley, N. Dak. This resolution will indicate the attitude of the folks out there toward the interest rates proposed by the Hoover Commission. The resolution follows:

INTEREST RATES

Whereas the interest paid by Rural Electrification Administration cooperatives is an important item in the cost of electricity sold by an REA cooperative; and

Whereas the Hoover report made recommendations that would result in an increase in the rate of interest paid on future loans: Now, therefore, be it

Resolved, That the members of the James Valley Electric Cooperative, Inc., go on record opposing the interest recommendations of the Hoover Commission and that copies of this resolution be sent to members of the North Dakota delegation in Congress.

Needed: A Workable Policy for the Technical Assistance Program

EXTENSION OF REMARKS

OF

HON. LAWRENCE H. SMITH

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 12, 1956

Mr. SMITH of Wisconsin. Mr. Speaker, in the course of the hearings before the House Committee on Foreign Affairs when the mutual security bill was under consideration, one of the most interesting witnesses to appear was a Mr. G. Corson Ellis, of Chicago. At that time Mr. Ellis testified that the greatest need, if the technical assistance program is to achieve its objective, is a workable policy; that at the present time there is none.

Mr. Ellis testified that he was requested by the administrators of the foreign-aid program to investigate the possibilities of developing an industrial program for India. He is a leading authority on management problems and is a partner with the well-known management consultant firm of A. T. Kearney & Company of Chicago, and he is also the vice president and director of the Association of Consulting Management Engineers in the United States.

Recently Mr. Ellis wrote a paper entitled "Needed: A policy." Mr. Speaker, under leave to extend my remarks I am including his complete statement:

NEEDED: A POLICY

(By G. Corson Ellis)

The underdeveloped countries of the world are engaged in a determined effort to raise the standard of living of their people. Most of the plans for so doing involve the industrialization of their economies to a greater or lesser degree. Unfortunately industrialization has come to be thought of as a touchstone by which, in a relatively short time, the sufferings and poverty of the people can be alleviated. Little thought has been given to the difficulties which will be encountered on the road or of the time it will take to attain the objectives. We, through our foreign-aid program, have contributed to this thinking or rather to the lack of it.

That our technical-assistance program has met with some success is evidenced by the fact that the Russians are currently embarking on something of a similar nature. Since we may anticipate an expansion of this effort it would seem to be the part of wisdom to examine our own program to determine whether or not it is based on sound principles and policy.

That the industrial segment of our technical-assistance program is meeting with something considerably less than complete success is apparent to anyone who has had the opportunity to observe it in action and who has any understanding of what makes an industrialized economy work. This failure is largely due to the fact that we have no stated policy under which the program operates and but little comprehension of our objectives and of the essentials needed to meet them.

If we have any policy in regard to industrial technical assistance, it merely states that we are prepared to assist less favored nations in their efforts to raise their standard of living. How to do this is not stated and certainly not understood either by the State Department, by the International Cooperation Administration, by its representatives in the field, or certainly not by those foreign nations that are the recipients of this assistance. The policy, such as it is, is largely opportunistic and hence makeshift.

Since there exists no statement setting out clearly what we are and what we are not prepared to do, and since there is but little understanding of what the objectives of the program should be, we are placed in the position of having foreign governments asking for practically anything and everything they can think of. This they proceed to do with the most fertile of imaginations.

As a result, we are inevitably placed in a position, either of undertaking projects which we believe to be unsound or of being diplomatically embarrassed by turning them down. Thus we are on the defensive with respect to such projects instead of placing the requesting nation in a similar position when it requests assistance outside the purview of our stated policy. This alone places us in an embarrassing if not an untenable position.

As a result of our lack of policy, such programs as we have been undertaking have had but the vaguest of objectives and unfortunately for the most part, have derived from certain basic misconceptions as to the essentials of an industrial economy. These misconceptions must be corrected and the facts understood before we can state what our policies should be.

The first of these misconceptions is that capital is the principal need of such an economy. This misconception is widely held not only in foreign countries but also by our own people. It is a trap into which many supposedly intelligent men have fallen. It is an obvious oversimplification and one which has done a substantial amount of harm. The proponents of this concept are responsible for many of the unsound demands which are made. They seem to ignore the need for a country to put its financial house in order and to make itself financially worthy.

Capital is not the key to industrialization. It is but one number in the combination.

Proponents of this concept ignore the fundamental principle that trained management, trained technicians, and trained labor are the indispensable element to success. Capital without management is sterile. Management and technical know-how follow capital. Foreign capital brings trained managers and trained technicians and these man can train their successors. Trained men alone can create the environment under which others can be trained and under which an economy can develop.

Unfortunately, it has only been recently realized by those responsible for the implementation of industrial technical assistance, that the building of power stations, dams, irrigation projects, steel mills, and other industries is futile unless men are available to manage them. The building of an irrigation dam in Afghanistan with no thought of the men to run it or of training the people in the use of irrigated land is a classic example of the blunders that a lack of sound thinking can produce.

The principal lack of underdeveloped countries is trained men. Those countries which will make the most rapid progress toward industrialization and thereby toward the improvement of the lot of their people are those which encourage foreign capital and thereby encourage the importation of foreign managerial and technical know-how. On well managed foreign corporation will have a greater impact on the economy of a country than all the so-called industrial assistance of the kind which we have been sending.

If foreign capital is to be attracted, in turn attracting managerial and technical skills, the country in question must evidence a favorable attitude toward capital, a sound government fiscal policy and a reasonable stability and integrity in the government. Undue emphasis upon socialism or unsound government fiscal policies are the quickest way to discourage the investment of this capital and its companion—management.

The overemphasis on the importance of capital and the failure to realize the importance of trained men to the industrial economy leads logically and inexorably to the second misconception, namely, to an underestimation of the difficulties of training men, of the time required to do so, and of what skills that should be taught.

The underestimation of these difficulties derive from the beliefs that education alone will create managerial and technical know-how, from the widely held belief that techniques and technicians are management or that management can be created in the universities, technical schools, or schools of business administration, if these exist.

Education is obviously the foundation upon which trained men are built but educated men are by no means trained men. Educated men must be forged in the fire of experience and tempered in an environment sympathetic to their development before they are fit to take the reins. That environment does not exist in underdeveloped countries. Further, this development takes time.

The concept that techniques such as cost accounting, job evaluation, or material handling are management displays an ignorance of the nature of management which is tragic. Yet, this is what we are teaching. We are giving the carpenter tools without being sure he knows how to use them, without a plan of the house we wish built. This is obviously fallacious, yet we make but little effort to dispel this fallacy.

Techniques and technicians are but the tools and servants of management. They are by no means the essential ingredient. Management is leadership, marshaling the resources, human and material, of an enterprise to attain a common objective. Management is not learned out of books; it is not developed over a long period of time through exposure in a favorable environment to the hard school of experience. The understanding of human motivations is the key to management leadership, getting people to work together in a team action and making them like it.

The overemphasis of the importance of capital in industrial development, the failure to understand the much greater importance of properly trained men, and the lack of understanding of human motivations the world over lead very logically to the third basic misconception, namely, that competition is evil.

We have reason to know that competition is the only force which makes for constantly improved quality at constantly improved prices to the people as a whole. It is the only automatic governing force which imposes upon capital, upon management, and upon labor alike the need for constant improvement. It further acts both as a check upon the abuses of an unbridled capitalism and as a stimulant to constant improvement no matter what economic philosophy prevails. What is more important, perhaps, is that without competition whatever is done to improve the operations of industry will serve only to fatten the already fat pockets of the owners and will not be passed on to the people as a whole.

The fourth basic misconception arises from this one. In almost every country in the world today there exists the belief that the profit motive is somehow or other to be deplored and that there is something above reproach in the supposed devotion of the Socialist industrial manager to the public interest. This is their substitute for competition; in fact it is to be noted that the Socialist does not permit competition.

This belief ignores the stultifying influence of the bureaucracy of socialism, of the part played by the initiative, risk taking, and hard work of the individual in the economy inspired by the desire to improve his financial and social lot. Above all it ignores the

fact that men do not change, do not improve their ways unless there is an incentive or a positive force to goad them into so doing. The most effective forces in this respect so far known are competition and individual incentive.

Finally, deriving from the overemphasis on capital and on technical processes there exists an overemphasis as to the importance of productive facilities and as to production techniques, tending to ignore or at least to minimize the important fact that distribution or, if you will, marketing is at least as important if not a more important factor in an industrial economy than is production.

When we consider that in our own country the consumer usually pays in excess of twice the manufacturer's price for the latter's product and that in countries where the distrbution system is less well developed this factor is multiplied many times, we begin to recognize the importance of adequate distribution.

One has only to observe the impact of the entrance of Sears Roebuck & Co. on the economies of Latin America to appreciate that one of their stores in a country, operating on the typical American philosophy of more goods for more people, of better quality at lower prices and exerting pressure toward these ends on thousands of suppliers, can have a greater impact on the economy of a country than all the technical assistance we can possibly offer. Adequate distribution will not only train men in merchandising but it will force the manufacturer to do an even better job. Distribution creates markets. Markets create jobs. Jobs create a better standard of living. This, above all, needs to be understood. It is not understood by our own people nor by those they assist.

While these misconceptions are by no means the sole obstacles to industrialization, we can do little about such others as the religious and social moves of the people. We can and should, however, do what we can to see that the true nature of a successful industrial economy is better understood. Yet, in our effort there is little if any attempt so to do either because those charged with its execution do not understand these essentials or because they do not have the courage of their convictions.

Few will argue against the premise that trained management and trained technicians are the key to raising living standards. Obviously, in less privileged countries, for at least some time to come, until nationals can be trained, management must either come to manage foreign controlled institutions or must be hired from more favored countries to supplement the pitifully small numbers of nationals available to do the job.

However, the task is so vast that even with the greatest encouragement of foreign capital and even with the greatest of incentives for foreign managerial talent, these sources cannot begin to supply the managerial needs of the underdeveloped world. Our Government certainly cannot begin to attract either the quantity, much less the quality, of personnel required. Adequate personnel is the weakest part of our program.

It follows then that the only long-range solution of the problem lies in the development of nationals within the limits imposed by the abilities of its people to a point where they can run their own show. The argument that this will take too long is specious; there is no other way. This, then, must be our long-range objective, the essence of our policy. We can only help those who help themselves.

In somewhat more detail:

First, we should preach these basic principles in an endeavor to create an understanding of the true needs of an industrial economy. However, it must be remembered that any such preachment should not be done in the spirit of selling our way of life per se, but should be rather in the spirit of assisting in the creation of an atmosphere in which men can grow and can contribute increasingly to the well-being of their countries.

Second, we should encourage the flow of investment capital to these countries, first: by endeavoring to create in them atmospheres favorable to foreign capital and, secondly: by providing incentives to American capital and to its companion management, to invest in these countries. In most underdeveloped countries the opportunities for profit substantially exceed those available in this country. The American businessman needs education in these opportunities, provided always, of course, that favorable atmospheres exist.

Third, our policy should state that we are not in the business of giving money away. Our policy should state that we stand ready to participate in loaning money for those projects which are economically sound. We must remember that we cannot buy friendship. Our gifts in the past have not improved our relationships. They have created suspicion. A hardheaded businesslike approach will gain us more respect and more friends than an attempt to bribe any country to our side of the fence. Above all, we should not attempt to compete with the Russians who, with practically no outlay at all, often force us to the position of underbidding them. This is a humiliating experience for a great Nation. We should stand on the truth.

Fourth, we should state that we will not extend assistance, financial, material, or technical unless the recipient country is willing to participate not only in the financing of the program but also, to the extent possible, in developing the people to administer the project upon its completion.

We should state that we will assist these countries in a program which will develop the leadership, the managerial and technical competence which will permit them ultimately to run their own industries though it may take a generation. Such a program must of necessity include assistance and advice in bringing their undergraduate institutions, colleges, universities, and technical schools, as well as their graduate institutions, to a point where they can provide the basic raw material of industry—educated men.

An extremely important aspect of such a program will relate to adult education. This can be fostered partially through the universities but in its essence the demand must spring from the people themselves and their desire to improve their skills. One of the most effective mediums for doing this is the professional society. One of the most encouraging symptoms in underdeveloped countries is the interest which has been displayed on the local level by managers, prospective managers, technicians, and prospective technicians, in the enlargement of their knowledge through participating in the work of managerial and technical associations.

In India, for instance, about a dozen of these organizations have sprung up within the past 2 years and others are being formed. This is a movement which is spreading throughout the world. Its very existence is proof that there exists, in most of the countries of the civilized world, a body of men who, of themselves, are willing to study and work and give of their time that they may improve their knowledge and thereby their position in life.

This desire is an essential ingredient. It must be encouraged and nurtured for without it nothing can be done. We cannot help people who do not have the fundamental desire to be helped.

However, education or discussion groups are not enough to develop the managers and technicians of the future. Some means must be provided for on-the-job training, for the accumulation of experience by doing. Some means must be found by which the quality and quantity of trained men can be multiplied sufficiently so that they have a real impact upon the economy of the country and so that men who are trained by our missions can in turn train others. This need can be supplied by the managerial or technical consulting organization.

If each member of the mission sent to a foreign land could be supplemented by as many as five nationals as counterpart consultants the efforts of our people would be multiplied accordingly. These in turn could train other consultants who would train others until there would be developed a corps of sufficient size to make the necessary and lasting impact upon the economy.

There are certain essentials to such a program. It should be independent of the government of the recipient country although it might have to be subsidized, until it can be made self-supporting, through fees paid by the institutions served. The counterparts should be of the highest caliber, trained or partially trained personnel resources of the country should be used to the fullest extent possible; the caliber of personnel sent from this country should be the very best and broadest that can be found and, finally, the engagements undertaken should be selected to give the greatest possible breadth to the training program.

Finally, we should continue and encourage the interchange of educators, managers, and technicians through the so-called productivity teams. The emphasis should be placed less on the narrow technician than in giving these people the opportunity to see broad gage management at work and to participate in training their countrymen. It is indeed rare to encounter anyone who has been a member of one of these teams who has not returned to his native land with a vastly improved understanding of, and friendship for, the United States.

In formulating any policy, it must always be remembered that a program which is suitable for one country may not be suitable for another. The advanced economies of Western Europe need but little assistance although the interchange of ideas should be continued.

The primitive economies of some of the countries of the Far East are not proper subjects for industrialization except of the most elementary kind. There are no trained men to run the institutions. In fact, there are practically no educated men to train.

It is principally in the semideveloped economies of Central and South America, the Philippines, India, Pakistan, and some of the countries of the Near East that the greatest opportunities exist.

Each country must be made the subject of a study to determine what, in our view, are its needs and its abilities. No program can be evolved without such a study. The recommendations derived from these studies should coincide with our policy.

We, therefore, need a statement of our policy, not only to guide our effort but to protect us against unsound and unrealistic requests for assistance. We need a statement of where we stand. We need to be courageous in this statement, to stand for what we believe is right. We need to have the courage to say "No" but at the same time we need to know when to change or modify our policy. Policies are, after all, guideposts, not straitjackets.

The success or failure of our effort will depend largely on the attitude which we adopt in offering it. To expect that another country will change its views, or its politics, as a result of aid which we offer is unrealistic. It has not worked in the past and it will not work in the future. If we approach this problem with the conviction that improving the living conditions of other countries is good business, that it will create markets for us in the future, that what adds to the well-being of the world will add to our well-being and will enhance the chance

of peace, we can be assured that the respect of those we aid will be ours. We are rapidly losing the respect of others with unrealistic "giveaway" programs.

What is more important, we undermine the self-respect of the recipients by making them the objects of charity. We need to bolster this self-respect by basing our policy on helping others to help themselves.

We have no policy. We need one.

Resolutions Adopted at the 15th Annual Meeting of Dairyland Power Cooperative Held in La Crosse, Wis., on June 6, 1956

EXTENSION OF REMARKS
OF
HON. LESTER R. JOHNSON
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Monday, July 2, 1956

Mr. JOHNSON of Wisconsin. Mr. Speaker, under leave to extend my remarks, I would like to put in the CONGRESSIONAL RECORD the resolutions adopted at the 15th Annual Meeting of Dairyland Power Cooperative held in La Crosse, Wis., on June 6, 1956.

I am glad to call to the attention of my colleagues the following resolutions:

RESOLUTION NO. 1—EXPEDITE DEVELOPMENT OF NUCLEAR ENERGY FOR POWER PRODUCTION

Whereas our Federal Government has created an invaluable national resource after investing $15 billion in the development of atomic energy to the point that a relatively smaller effort remains necessary to find practical application to peacetime use of the atom; and

Whereas no substantial progress to date has been realized as a result of passage of the Atomic Energy Act of 1954 wherein it was the intention of the Congress to achieve through private enterprise the rapid development of the use of the atom, and we are falling behind nations which started later, and such progress we have thus far achieved has resulted primarily from further taxpayer subsidy of costs; and

Whereas the Congress is now considering the Gore bill, which makes clear the intent of Congress that a Federal Atomic Power program shall be undertaken as one of the major objectives of Government policy and directs the Atomic Energy Commission to pursue the only feasible program for the practical application of atomic power by constructing six large experimental demonstration plants of different types, and to be geographically located to greatest advantage to power hungry areas; and

Whereas nuclear fuel generation can prove particularly advantageous to rural power cooperatives such as Dairyland Power Cooperative in its efforts to reduce the cost of power on the farm in order that electric power may contribute more fully as a tool of production: Now, therefore be it

Resolved, That in addition to whatever may be done by private enterprise, that we urge the Congress to take all practical steps in support of legislation which will keep the Atomic Energy Commission pushing ahead as rapidly as possible in the development of nuclear fuel generation for peacetime uses.

RESOLUTION NO. 2—FEDERAL PUBLIC POWER POLICY

Whereas the Federal public power policy adopted a half century ago and pursued in some instances with vigor has proven a sound method of developing those national resources historically recognized by the Constitution as belonging to all of the people in such manner as to develop economically large geographical areas which in turn have contributed to the welfare of the whole country, particularly in times of national defense; and

Whereas the Federal public power policy has, in addition to providing power as the economic lifeblood of large areas, also provided a fair and equitable yardstick of the true cost of power production, thereby creating a relatively small (12½ percent) but nevertheless effective element of competition by comparison in the critical field of power production which is inherently monopolistic, and extremely difficult, if not impossible, to effectively regulate; and

Whereas there are only a few remaining power sites available which could and should be developed by and for the people as an absolute necessity to our continually expanding economy under the sound Federal power policy of first availability of power to public agencies and other nonprofit organizations for the wholesome overall benefit of the entire public: Now, therefore, be it

Resolved, That we urge the Congress of the United States to take immediate action to pass the Hells Canyon bill, and the Niagara bill for the development by the New York Authority.

RESOLUTION NO. 3—TRANSPORTATION AMENDMENTS ACT OF 1955 (H. R. 6141)

Whereas during 1956 Dairyland Power Cooperative will purchase one-third of a million tons of coal to fuel its steam powerplants, and whereas our projected load growth studies show that within a decade these purchases will triple, and whereas because of these purchases Dairyland has a vital stake and interest in any new proposed national transportation policy, particularly when it affects the transportation of coal on the Mississippi Waterway; and

Whereas the Congress of the United States is now considering H. R. 6141 entitled "Transportation Amendments Act of 1955" which, among other provisions, would extend the full regulatory powers, including ratemaking, of the Interstate Commerce Commission to inland waterway transportation of bulk commodities, and which we believe would result in undesirable restrictions of competition and unhealthy limitations on the ability of small operators to enter and operate successfully in the transportation field with a consequent growth in monopolistic control of transportation and undesirable and unnecessary increase in costs to the detriment of commerce in the United States; and

Whereas if this legislation should become law it would result in an unnecessary extension of Federal authority and an attempt to legislate higher transportation costs to evade our traditional free enterprise concept of competition to provide the greatest service at the lowest cost by forcing a Federal agency into the role of guaranteeing a profit to operators regardless of whether they operate with efficiency; and

Whereas the effect of this legislation would result in an increase in Dairyland Power Cooperative's price of coal from 25 to 40 cents per ton when fuel is already the largest factor in our production costs: Now, therefore, be it

Resolved, That we the delegates, at this 15th annual meeting of Dairyland Power Cooperative, representing 93,000 farm families in Wisconsin, Illinois, Iowa, and Minnesota do respectfully urge our United States Senators and Congressmen to oppose H. R. 6141 in the Congress as an unnecessary extension of Federal authority, deleterious to healthy competition in our free-enterprise economy and which can only result in unfair and discriminatory increases in operating costs to American industry in general and to Dairyland Power Cooperative specifically.

RESOLUTION NO. 4

Be it resolved, That the secretary be instructed to bring these resolutions to the attention of our Senators and Congressmen if and when the matters contained in each are current.

I hereby certify that each of the foregoing resolutions was unanimously adopted at the 15th annual meeting of Dairyland Power Cooperative, held at the vocational and adult school at La Crosse, Wis., on June 6, 1956.

Respectfully submitted,
DAIRYLAND POWER COOPERATIVE,
WILLIAM E. RABE,
Secretary, Board of Directors.

The Insane Asylum Business

EXTENSION OF REMARKS
OF
HON. USHER L. BURDICK
OF NORTH DAKOTA
IN THE HOUSE OF REPRESENTATIVES
Friday, July 13, 1956

Mr. BURDICK. Mr. Speaker, inasmuch as the mental health bill is in conference, I would like to insert the following article in the RECORD. It appeared in the Colorado Springs Gazette Telegraph of May 12, 1956, and contains information that is vital to every citizen of these United States. It was sent to me by Mr. Robert Donner, of Colorado Springs, Colo., who for years had been an earnest and persistent leader in the fight to preserve the traditions, ideals, principles, and constitutional freedoms on which our Nation was founded. If we are to preserve any vestige of our liberties, the constant pressures and misrepresentations to which we are being subjected must be understood and resisted.

The article follows:

THE INSANE ASYLUM BUSINESS

This business of the Government getting into the insane asylum operation on a large scale is increasingly intriguing.

The Alaska mental-health bill is the most vicious and pernicious of all of the attempts being made, both at national and at State level. It is pending in the Congress, and, if passed, will set aside a million acres of terrain, more or less, to serve as a sort of American Siberia for persons who are declared insane.

Who are these persons? Of course there is an extremely small segment of the human race who are incurably deranged. But a million acres in Alaska seems like a pretty large back yard for a bedlam. That is, of course, unless there are a great many more insane people than we have been led to believe.

Ah, perhaps this is it.

A glance in the publication in the World Health Organization library called "The Psychiatry of Enduring Peace and Social Progress," gives us a clue. This booklet was published in 1946 and contains some remarks by G. B. Chisholm, C. B. E., M. D.

Chisholm is a general in the Canadian Army and a celebrated psychiatriist.

In his first speech, General Chisholm sets the record straight. He reveals that the "basic psychological distortion" of persons is "morality, the concept of right and wrong." Obviously, the general goes on, people must be cured of this malady. He assures us that "most psychiatrists and psychologists and

many other respectable people have escaped from these moral chains."

The job of the psychiatrist is to free the race from "its crippling burden of good and evil." To this end, General Chisholm bends his second lecture. He says: "Psychiatry, thus far, has remained almost exclusively in the treatment field, and it is clear that its present resources are grossly inadequate for any attack on the problem of prevention" (of war, caused by a belief in morality). "The United States now needs some nineteen or twenty thousand psychiatrists" (1945).

"Some help may well be found in possible developments of shorter, more effective techniques of treatment. Shock, chemotherapy, group therapy, hypno- and narco-analyis, psychodrama, even surgery, can all be used and some of these methods may be employed by other than trained psychiatrists. There is no indication, however, that any developments in these fields will be able to meet the volume of needs previously suggested."

We should think not. With virtually everyone in the United States who believes in good old-fashioned morality now listed as having a "basic psychological distortion," the size of the problem facing these remolders of humanity is large indeed. A million acres doesn't seem like such a large amount of territory when you consider the millions who believe in right and wrong and, according to Chisholm, are in need of treatment.

Here is the nub of the argument: "Should attempts be made by the profession to induce governments to institute compulsory treatment for the neuroses as for other infectious diseases? If we believe in our wares, if more and more psychotherapy is what is needed, then surely it is legitimate and sound to do everything possible to educate the public to an appreciation of the need and to use all modern inducements which are getting results * * *. I believe there is an affirmative answer."

Of course the general isn't too confident of the effectiveness of all this. But then, since he has obviously cured himself of any belief in right, this doesn't deter him. He says: "True, we might suffer some embarrassment from our failures * * * but some martyrs had to be sacrificed to the cause of humanity, because reactionary forces fought back."

It is clear that this thinking, expressed in 1945 at the close of World War II, is what is behind the great agitation for Government to get into the insane asylum business.

We object. We object strenuously. We shall continue to object with all vigor.

We do not believe that people who hold to morality are mentally ill. Instead, we are of the opinion that any man like General Chisholm who holds to views of this type is in need of treatment by a nonpsychiatrist.

If the Government is granted the power to send the American people into madhouses simply because they maintain a belief in right and wrong, then we have, at one stroke, become as completely slave as the Russian people. What would become of religion? What would become of our civilization which is founded on morality?

This is a most serious threat to our individual freedom. And when you realize that most of the mental health bills pending provide for the decision of one or perhaps two psychiatrists to determine whether or not you are deranged, you should realize the danger of granting the Government this power.

Something must be done about this and with all speed.

Last year, a bill along this line was defeated in the Colorado Legislature.

Locally, moves are now being made which would result in pushing both statewide and national legislation. These moves must be defeated. Letters should be addressed to your Congressmen in Washington and to your representatives at Denver.

Vice President Nixon's Views on Asian Neutrality

EXTENSION OF REMARKS
OF
HON. GLENARD P. LIPSCOMB
OF CALIFORNIA

Tuesday, July 10, 1956

Mr. LIPSCOMB. Mr. Speaker, I should like to call attention to the following editorial from the Washington (D. C.) Evening Star of Friday, July 13, 1956:

OFFENDING MR. NEHRU

Vice President NIXON is under the guns again—this time because he has said some things that are supposed to have offended India's Prime Minister Nehru.

Mr. NIXON'S first comment was made in a speech at Manila on July 4. He said that Asia's neutral countries had "far more to gain by standing together with the free nations than by remaining aloof." Mr. Nehru, replying in London, said he thought this was "undemocratic" because it implied that Mr. NIXON wanted all people to think as he does. A few days later, in Pakistan, Mr. NIXON spoke again. He said that anyone "who suggests that Red assistance is not inconsistent with freedom is reading history incorrectly." And he added that Soviet aid is offered, not with strings, but with a rope attached, and "the recipient runs the almost certain risk of having the rope tied around his neck."

That is the substance of the exchange which set the handwringers to work in this country. Senator KEFAUVER said it is an incredible fact that Mr. NIXON is engaging in what appears to be an open feud with Prime Minister Nehru. Representative CELLER said he thought it was deplorable that Mr. NIXON had "gone out of his way to give needless offense to the Government of India." And others have made similar contributions to this teapot tempest.

Mr. NIXON, it seems to us, was merely stating what he believes to be true, and what probably is true. There is no good reason why he should not have said precisely what he did say. The notion that a spokesman for the United States should guard his tongue and say nothing, even though what he says is true, lest it might offend someone, is strange, to say the least.

We do not know whether Mr. Nehru really was offended or not. But if he was, he had little right to be. For it is doubtful that anyone alive today has been more outspoken and more blunt in his criticisms of others than the Indian Prime Minister.

He has said, for instance, that "communism, for all its triumphs in many fields, crushes the free spirit of man," which sounds pretty much like what Mr. NIXON was saying. He has denounced the Atlantic pact and the United Nations. He has accused the United States of a design to dominate Asia for an indefinite period. He has attacked Britain for its policies in the Middle East, and South Africa for its racial policies. The Baghdad and SEATO pacts have come under the lash of the Indian leader's sharp tongue. In fact, if there has been any occasion on which Mr. Nehru has maintained a discreet silence for fear of wounding someone's sensibilities it does not come readily to mind.

We do not say this in any spirit of criticism of Mr. Nehru. He is a man with an enormously difficult problem on his hands in his own country. He is trying to work it out in his own way. If he thinks India's best interests are served by remaining aloof from both the West and the Communist bloc, he ought to remain aloof. And he has every right, as he has done on many occasions, to attack both blocs and set forth the reasons why he wants no ties with either.

It seems to us, however, that Mr. NIXON is entitled to at least as much freedom of speech as Mr. Nehru. If he thinks the Asian nations would be better off by standing with the West than by remaining aloof, why shouldn't he say so? Because Mr. Nehru might take offense? We doubt very much that that is the case. In any event, Mr. Nehru certainly would resist any attempt to curb his freewheeling comments on the policies of other nations. And our guess is that he must be slightly amused by the current efforts in this country to gag Mr. NIXON.

The Workers of Poznan

EXTENSION OF REMARKS
OF
HON. T. JAMES TUMULTY
OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Monday, July 16, 1956

Mr. TUMULTY. Mr. Speaker, the uprising of the workers of Poland constitutes a challenge to the sincerity of the United States. The objection to the Soviet occupation of Poland has been demonstrated by all phases of Poland citizenry.

The uprising of the workers and youth of Poznan electrified the world. The following statement by Mr. Adam Ciolkosz certainly should be read by every freedom-loving person. The statement follows:

THE WORKERS OF POZNAN

Speaking of Poland, Czechoslovakia, Rumania, Bulgaria, and Hungary, Sir Winston Churchill told the Commons some 2 years ago that "no solution is in sight for those subjugated states, but time may find remedies which this generation cannot command." Thus, the liberation of central and eastern Europe was left to future generations. Former Ambassador George F. Kennan went even further when, a few weeks ago, he expressed the view that "there is a finality, for better or for worse, about what has now occurred in Eastern Europe." Now, the workers of Poznan have refused to subscribe to Sir Winston's and Mr. Kennan's pessimistic words and, for better or worse, took their own fate into their own hands. In a single day they destroyed the myth of a finality about Communist dictatorship and Soviet enslavement in central and eastern Europe.

They destroyed many other myths. They destroyed the myth of a possibility, or even desirability, of a gradual transformation from the Russian brand of communism via the Yugoslav brand of communism toward a full-fledged democracy. There are no shortcuts of this kind. The workers of Poznan stood up against both the Communist economic exploitation and the Communist political oppression. They demanded both: bread and freedom.

They destroyed the myth of a second revolution, a new spring or a thaw occurring in Poland. There is no thaw where the workers are forbidden to air their industrial grievances. There is no new spring where streams of blood of innocent people are flowing in the streets. There is no revolution where machineguns, tanks, and jets are thrown against defenseless workers; rather it is a counterrevolution. The first one was staged in August 1944 when Marshal Rokossowski looked while German bombers and artillery razed Warsaw to the ground; the second one was staged in June 1956 when Marshal Rokossowski's

armed forces got orders to crush the workers of Poznan.

They destroyed the myth that the emigrees from Poland and adjacent countries have lost touch with realities and ceased to understand what has been going on behind the Iron Curtain, whereas foreign journalists who spend a couple of days in Poland went on describing at length and with gusto (as did, e. g., Mr. Flora Lewis in the New York Times magazine of June 24, 1956) that on the part of the Communists in Poland "the direction now is clear enough: it is toward a greater freedom of speech, more contact with the West, an easier life." Which, a few days later, was demonstrated ad oculos in Poznan.

They destroyed, first of all, the myth that the dictatorship of the Communist Party has been based on and backed by the industrial workers. The most striking and politically the most important feature of the events in Poznan was that the whole of the industrial workers of Poznan (not a section of them, not even a majority of them, but 100 percent of them) was against the Communist Party. The usual cliché of the Communist Party being the organized expression of the minorite consciente of the nation, i. e., of the proletariat, was torn to pieces. The Communist Party, as unmasked in Poznan, is an organized and armed conspiracy against the workers. If it was not the Communist militia and the army, which is commanded by a Russian marshal and where every officer from the grade of a captain up is a Russian—nothing would be left from the "proletarian dictatorship" of Ochab and Cyrankiewicz in Poland.

Day after day the Communist government repeated that it has the situation "firm in hand." Nothing is farther from the truth, inspite the wave of Communist terror in Poznan which followed the workers demonstrations. Day after day the Communist government repeated charges against "agents of foreign powers" as responsible for events in Poznan. However, agents from abroad, should there ever be any, would never succeeed in leading the workers of a city like Poznan to a general strike. Day after day the Communist government repeated charges against the "reactionary underground." However, there is no organized underground movement in present-day Poland. Or, if there is any, the whole nation belongs to it. How else could one explain 50,000 people taking part in an anti-Communist demonstration (this figure was given by the New York Daily Worker of July 3, 1956) in a city of 365,000 inhabitants?

Again and again in the past people of Poland looked in vain to the West for help in their ordeals. In vain they asked for help during the siege of Warsaw in September 1939. In vain they asked for help during the battle of Warsaw ghetto in April 1943. In vain they asked for help during the Warsaw insurrection in August 1944. This time they shouldn't be left in lurch.

The primordial task is to protect and defend the heroic people of Poznan who are now falling victims to Communist vengeance. Their case should be taken up by noble souls, writers and artists, political and humanitarian movements, churches and religious leaders. Time is running short, immediate and forceful action is essential

Then, the wider political issue should be dealt with. Communist terror in Poland spells a danger to general security and peace, and therefore the events in Poland should be a matter of concern for the United Nations' Security Council. Would the Soviet Union dare to make use of the veto right in a period when Moscow assures of her will to coexist peacefully? Do Ochab and Cyrankiewicz and Rekossowski talk peace in Poznan?

Since September 1, 1939, Poland is essentially an international problem and would never cease to be one unless she is free and independent again. Hence the idea of an international conference, to be convened jointly by the United States of America, Great Britain, and France in order to restore Poland's independence and to ensure a free expression of Polish nation's will in conditions guaranteeing the freedom of such an expression. It goes without saying that Polish genuine representatives both from Poland and from exile shall participate in such a conference.

It is untrue that the Communists are an invincible force. They are not, and events in Poznan testify to that. It is unrealistic that the Communists cannot be driven out from power in Poland. They can, if the democrats in the West have the same courage and vision as the workers of Poznan. Anyhow, this time mere words of admiration and compassion would not do, only a resolute political action undertaken by Western capitals would be equal to the determination of the workers of Poznan.

The Eisenhower Administration Is Destroying the Nation's Capital Because of Hunt Country Leanings

---

EXTENSION OF REMARKS

OF

HON. FRANK THOMPSON, JR.

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Friday, June 29, 1956

Mr. THOMPSON of New Jersey. Mr. Speaker, if all of the current proposals for Federal agency exodus from Washington, D. C., to the suburbs are adopted, some 50,000 residents of the Nation's Capital will move out. This number is in addition to those Federal agencies that have moved to the suburbs during recent years such as the Pentagon, the National Institutes of Health, and the Census Bureau.

The New York Times of July 15, 1956, carried a very important article by Alvin Shuster which said of the present flight to the suburbs of Washington:

> There is a suspicion among some Members of Congress that agency officials, who generally have had free rein in selecting their sites, simply want hunt country to work in with plenty of free parking space and plenty of lawn.

The largest Federal construction program in years is underway with proposed and approved projects involving more than $400 million in the suburbs of Washington alone. The flight to Washington's suburbs is causing the greatest concern. "Homeowners in the countryside are complaining. Businessmen in the city are protesting that the trend could be disastrous to Washington's economy," the New York Times reports.

The Times says the agency officials responsible explain the exodus from Washington is due to the following reasons:

> It is Government policy to disperse for defense reasons, there are few suitable sites left in Washington, and the modern buildings they want to build would run into trouble with the Fine Arts Commission.

Not a single one of these reasons is valid.

I include the New York Times article for the information of my colleagues:

UNITED STATES AGENCIES JOIN RUSH TO SUBURBS—WASHINGTON BUSINESSMEN VIEW WITH ALARM REMOVAL OF THOUSANDS OF EMPLOYEES

(By Alvin Shuster)

WASHINGTON, July 14.—It won't be long now before a host of construction workers invade the scenic banks of the Potomac, the uninhabited woods of Virginia, and the gently rolling hillsides of nearby Maryland.

The largest Federal construction program is underway with proposed and approved projects involving more than $400 million in the Washington area alone. And, like many citizens of this town, more of the Federal agencies are turning to the suburbs for their new homes.

The trend is causing some concern. Homeowners in the countryside are complaining. Businessmen in the city are protesting that the trend could be "disastrous" to Washington's economy.

PLANS TO MOVE

This is what is happening:

The Central Intelligence Agency, which now has headquarters in a group of temporary buildings not for from Lincoln Memorial, wants to build a $56 million "Little Pentagon" on 700 acres near Langley, Va., over the vehement protests of area property owners.

The Atomic Energy Commission has started construction of its new headquarters, estimated to cost about $10 million, on 109 acres near Germantown, Md.

The National Bureau of Standards just this week filed condemnation proceedings for about 550 acres of property near Gaithersburg, Md. Its new home will cost roughly $40 million.

The Weather Bureau and the Coast and Geodetic Survey are planning a joint $31 million building near the Standards Bureau site.

And the Geological Survey wants to build another $23 million building on a site yet to be selected somewhere on the Potomac River in Maryland.

FARTHER AWAY

For some agencies, though, no place in neighboring Maryland and Virginia is far enough away. The Federal Civil Defense Administration, aiming to set a good example for its "dispersal" program, already has moved to Grand Rapids, Mich.

Congress is also studying a proposal to create the National Library of Medicine in Chicago. There is some very serious talk at the Navy Department about moving eventually to some landlocked State in the Midwest.

One estimate is that if all the proposals for Federal agency exodus were adopted, some 50,000 residents of Washington would move out. Washington over recent years has lost a number of Federal employees to outlying areas, what with the Pentagon in Virginia and the National Institutes of Health and the Census Bureau in Maryland.

All this, agency officials will explain, is because it is Government policy to "disperse" for defense reasons, there are few suitable sites left in Washington, and the modern buildings they want to build would run into trouble with the Fine Arts Commission.

But there is a suspicion among some Members of Congress that agency officials, who generally have had free rein in selecting their sites, simply want "hunt country" to work in with plenty of free parking space and plenty of lawn.

IN WASHINGTON, TOO

The exodus plans of some agencies do not mean of course that there is no new Federal construction within the city's limits. The new Senate Office Building is being built on Capitol Hill. And the State Department, at a cost of about $50 million, is expanding its present quarters over 4 city blocks.

In the planning stage are a new Civil Service Commission building downtown, a new Court of Claims on Capitol Hill, and another office building for Members of the House.

There are several explanations why all this happens to be going on now. For one reason, Congress in 1954 approved legislation providing for "lease-purchase" arrangements between the Government and private interests. The program is just getting underway.

Still another reason is this: Government, being Government, is not getting any smaller.

Leadership—Where Art Thou?

EXTENSION OF REMARKS
OF
HON. ELMER J. HOLLAND
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Monday, July 16, 1956

Mr. HOLLAND. Mr. Speaker, during the past week I heard the gentleman from Indiana [Mr. HALLECK], and the gentleman from Massachusetts [Mr. MARTIN], praise and laud the Eisenhower program.

I heard them plead with their fellow Republican Members to support this program, and, failing to persuade them, I heard them harangue the Members of this body in an effort to place the blame of their failure on the Democratic Members of this House.

I must admit they made two good political speeches that might go over at a political mass meeting where the listeners were ignorant of the facts in the case.

But, to make such a speech before Members of Congress, who have witnessed the performance of Ike's alleged leadership, is a brazen affront to the intelligence of the Members of this House.

Where is this great leadership they spoke about?

In the dictionary we find "leadership" defined as a quality possessed by a "chief, a commander, or the head of a group."

An individual, having these qualities, inspires others to follow.

A leader is expected to give orders and furnish guidance—and in order to become a leader, he must have followers to carry out his instructions.

The President of the United States should have the ability to do all these things.

I have served in both wars and have had an opportunity at close hand to study the work and the minds of the "big brass."

In the Army you will always find that the "big brass" shines in the glory of the successes, but very quickly passes the buck in the reverses, and looks for some whipping boy to be the goat.

This is so true in this administration as lately shown by the Members of this House who follow Ike, and who try to cover up the failure of the Republican Members of this House to follow the President's leadership.

We have just considered two administration "must" bills. One was the school construction bill and the other—mutual security.

The leadership in the White House told the Republicans in this House that these bills must be passed as they are part of the administration program.

On the school construction bill, let us turn to the record.

This bill was defeated by a vote of 224 to 194.

Of the 194 Republicans voting on this bill, 119 or more than 61 percent of the Republicans present in this House voted against the President of the United States.

Now to show how a little bit of hypocrisy works.

There were 148 Republicans in this House who voted for the Powell amendment. You would surmise when the Powell amendment was placed in the bill that in all sincerity they would be for the bill.

But, oh, no—as the record shows—96 of these 148 who voted for the Powell amendment switched entirely around and voted against the bill in its final form.

Is this following the leadership of Ike?

Of course, we know that all of the Republicans will be on his coattails on election day.

Now the second administration-sponsored "must" bill to get the "business" from the House Republicans was the mutual security or foreign aid bill.

This bill had been cut in committee and the word had come in from the White House to restore it in its original form.

No member of the Republican Party offered amendments—nor did the Republican leadership or the gentleman from Indiana make that effort.

The President failed utterly to sell his program to the people—merely uttering a few pious platitudes regarding the need for the higher amount.

And, they were afraid to make the RECORD for the RECORD would show more Republicans voting against the increase than the Democrats.

The RECORD shows that 36 percent of the Republicans voted against this measure.

Thirty-six percent of Ike's followers turned thumbs down on the administration request for any foreign aid.

Again, the Democrats fought to protect the best interests of the Nation.

I believe that the lack of leadership in the White House is nowhere more apparent than in the behavior of the Republican Members in the House of Representatives.

In these two specific cases—House Republicans have turned deaf ears to the "too late and too little" recommendations from the White House to support so-called administration bills.

The leadership of the Republican Party states it is well satisfied with the performance of the President since 1952.

If it was a figurehead they wanted, they have had just that.

Apparently, a lot of grins can hide a lot of sins.

The action of the Republican Party and the leaders of the Republican Members of the House, by their actions, have proven that today there is no leadership coming from the White House.

Ike's Fight Harder Than GOP Realizes

EXTENSION OF REMARKS
OF
HON. JOHN W. McCORMACK
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Monday, July 16, 1956

Mr. McCORMACK. Mr. Speaker, one of the best political analysts and writers throughout the country is James G. Colbert of the Boston Post, Boston, Mass. For years his evaluations of political campaigns have been correct to a marked degree.

On July 12, 1956, Mr. Colbert stated his opinions of the coming campaign for President and on the national level, which article I include in my remarks:

POPULARITY HAS DIPPED—IKE'S FIGHT HARDER THAN GOP REALIZES

(By James G. Colbert)

President Eisenhower's announcement that he will stand for reelection caused neither any great outburst of elation in the Republican Party nor any wave of dismay among the Democrats.

Democratic politicians in Washington took Ike's statement in a surprisingly matter-of-fact manner. After comparing notes on the sentiment in their respective States and districts, they came to the conclusion that at this stage he is far from certain of winning another term.

Republican candidates, hoping to ride into office on Mr. Eisenhower's coattails, obviously are beset with some doubts as to just how sturdy those coattails will prove to be.

To be sure, they greeted the President's statement with enthusiasm, but that enthusiasm was tempered by the feeling that Ike may be in for a much harder fight than many members of his party now realize.

There is little question but that Ike is no longer the overpowering vote-getter he was in the 1952 election. In fact, he is not political bugaboo, casting his shadow over the Democratic Party that he was even a year ago.

POPULARITY LESSENED

Four years in the White House, in the opinion of Democratic Congressmen, have made a heavy impact on the tremendous popularity that enabled Mr. Eisenhower to carry 39 States with 422 electoral votes in the 1952 election as compared to 9 States and 89 electoral votes in Aldai Stevenson's column.

Democratic politicos are not making any out-on-a-limb forecasts that Ike will be defeated next November. They concede privately that he undoubtedly will be a favorite to win. But they do predict that he will not make any runaway of the coming race.

That belief is not based solely on the President's health, although they feel that will cost him some votes. Nor does it stem from the fact that he will not wage as extensive and energetic a campaign as he did 4 years ago. That, too, will be a factor, and it also will reduce the help he will be able to give to lesser candidates.

The appraisals of Ike's prospects, as he prepares for his bid for reelection, have been founded principally on reports from sound politicians. They make it a practice to keep a sensitive finger on the public pulse and have found that his stock has dropped noticeably in some sections of the country.

SOLID SOUTH AGAIN

The South, with the possible exception of Florida, is now expected to be solidly behind the Democratic nominee for President. It is considered highly improbable that President Eisenhower could again carry Tennessee and Texas, as he did in 1952.

It is believed he will lose the border State of Missouri, which was in his column 4 years ago, and that he will have trouble holding such States as Arizona and New Mexico in the Southwest.

Despite Republican claims, Democratic Congressmen predict that he will suffer terrific losses in the Middle Western farm belt and that he will lose some States on which the GOP usually can count.

Two surprising forecasts are now being made in Washington on the basis of careful checks of voter sentiment. They are (1) the Democratic nominee for President will carry California and Indiana and (2) veteran GOP Senator HOMER E. CAPEHART of Indiana is in serious trouble.

HUGE VOTE SPLIT

That would represent a tremendous shift in votes. In 1952, President Eisenhower polled 2,897,310 votes in California to 2,197,548 for Adli Stevenson. In Indiana, Ike drew 1,136,259 votes to 891,530 for Adlai.

Two factors apparently are responsible for the tremendous turnover in Indiana. One is the feeling of the farmers over price parity. The other is the steel strike. Indiana is considered a part of the farm belt, but it also is a big steel-producing State.

One New England State which Ike almost certainly will not carry this year is Rhode Island.

California, Texas, Tennessee, Indiana, Missouri, Arizona, New Mexico, and Rhode Island between them have 105 electoral votes. Their loss wouldn't mean Ike's defeat. But it would be a very tidy pickup and a spectacular start for the Democrats.

It would place them in a position where they might make a real fight for the election, particularly since there are other farm belt States, in addition to Indiana, which may swing away from Ike.

Taxes

EXTENSION OF REMARKS
OF
HON. J. HARRY McGREGOR
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Monday, July 16, 1956

Mr. McGREGOR. Mr. Speaker, I am one who firmly believes that a heavy tax burden weakens the economy of our country. A tax increase means lower wages because of the decrease of our purchasing power. A tax reduction means an increase in wages because we have more money to spend. I am happy to note that this administration has given Americans the biggest tax break in history—starting in 1954. Each taxpaying family has received an average tax cut of $100 per year. Here is how this administration helped everybody:

First. Reduced personal income taxes 10 percent for most taxpayers—saving $3 billion.

Second. Cut excise taxes on handbags, cosmetics, movies, household appliances, and so forth—saving $1 billion.

Third. Revised the whole tax structure, reducing taxes by giving bigger medical deductions, special aid for working mothers, retired people, parents with working dependents, partial relief against double taxation of dividends, liberalized depreciation rules, and so forth—saving $1.4 billion.

Fourth. Working widow can now deduct $600 paid for care of her children under 12 years—saving $120 on $3,000 income.

Fifth. Parents can now deduct $600 for minor child as dependent even if he earns over $600—saving $120 on $3,300 income, $132 on $6,000 income.

Sixth. Retirement income of persons over 65 not drawing nontaxable social security benefits—schoolteachers, policemen, firemen, et cetera—is now exempt up to $1,200—saving up to $240 a year.

Seventh. Excise tax cuts on luggage, jewelry, telephone bills, movies, cosmetics, et cetera, gives Americans $1 billion more spending money a year.

Increasing Rates of Compensation for Service-Connected Disabilities

SPEECH
OF
HON. CLIFFORD G. McINTIRE
OF MAINE
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 12, 1956

Mr. McINTIRE. Mr. Speaker, I am of the firm belief that the veteran affected with a service-connected disability merits the highest degree of consideration relative to compensation.

Such a compensation should reflect an equitable allowance that permits the veteran suffering such a disability to perform in our highly active society in a manner that preserves his dignity as an individual. Such a compensation should mirror our country's recognition of his great sacrifice.

Much has been said about the cost-of-living index in determining a fair form of compensation. It should be recognized, however, that although this index is, in effect, a reliable instrument for measuring the financial outlays required for everyday living, it is merely a statististic, cold and calculating. It fails to measure the expenditure of energy and will required of those suffering service-incurred incapacities in overcoming those disadvantages associated with physical handicap, or in coping with the problems and adjustments so peculiar to our dynamic American complex.

Certainly we have no conceivable way of designing a factor that will blend with a cost-of-living calculation to give us a fair figure of compensation for the veterans here affected. However, we do know that our compensation solutions should—while we are using a human equation—be embellished with a plus rather than diminished with a minus; that if we are to err, it must—in instances where human principles are concerned—be on the side of mild leniency rather than on the side of severe stringency.

H. R. 12038, in my mind, meets all the requirements of a fair compensation for an unselfish sacrifice. It is not so generous as to reflect fiscal tomfoolery, and it is not so restrictive as to indict the freedom-loving conscience or the great American heart.

As a piece of legislation, H. R. 12038 strikes an ideal balance, and hence, in my opinion, poses as an ideal bill.

A Tidal Drift Toward Monopoly Has Set in Under Eisenhower Administration

EXTENSION OF REMARKS
OF
HON. MELVIN PRICE
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Monday, July 16, 1956

Mr. PRICE. Mr. Speaker, under leave to extend my remarks in the RECORD, I submit herewith an address by the Honorable Adlai E. Stevenson, made in Pemaquid, Maine, on July 14, 1956:

ADDRESS BY ADLAI E. STEVENSON AT DEMOCRATIC CLAMBAKE, PEMAQUID, MAINE, JULY 14, 1956

I'm delighted to be here and I've had a marvelous time all day. I've been wanting for a long time, longer, frankly, than I like to admit, to make this visit to Maine. Of course, there was a time when it wasn't considered safe for a Democratic politician to venture into this State. But that's all changed now, thanks to the good judgment of the people of Maine 2 years ago when they elected Ed Muskie.

It already seems strange to recall the disbelief there was at first, and then the consternation when the 1954 Maine election returns flashed across the country. The rest of us didn't know Ed Muskie then. And I suppose we had forgotten a little this State's older tradition for great independence of political judgment and action.

And now, today, I count it a very real privilege to be able to come here and to pay my respects to your Governor for a record of accomplishment which has won for him in 2 short years great stature in the counsels of his party and his Nation.

We know throughout the country of the work the new department of development of industry and commerce has done and is doing to bring new industry to Maine. We know of Governor Muskie's programs to revitalize State government and chart its future course, of his approach toward meeting the problems of old age which are so much on the minds of responsible public administrators everywhere these days, and of his programs for better education in Maine.

I would not for a moment presume to intrude an outsider's judgment upon that of the voters of Maine, and I know it wouldn't do me—or anyone else—a bid of good if I did. But surely, none will misunderstand a visitor, proud of his host, saluting him as one who stands in the vanguard today of the progressive young leaders who symbolize by their ideals of good government, by their faith in people and by their capacity for vigorous action the essential spirit of the Democratic Party.

Democrats the country over will be proud to see Gov. Ed Muskie returned again by the people of Maine to Augusta in the coming elections.

We will be equally gratified to have in Washington, next year, in our common council there, three other fine Democrats—Frank Coffin, Jim Oliver, and Ken Colbath.

I want to add one other personal note. To all who believe as an article of political faith that "good politics is good government, and good government is good politics" the

loss of Paul Fullam was more than a personal one. Speaking for the party to which he contributed so much of honor and respect may I just say how grateful we are, will always be, and how much we feel his loss.

To speak of these leaders of today's renaissance of the Democratic Party in Maine is not for a moment to disregard the much broader base of contribution there has been to it, a contribution in which I know many of you have taken part.

It is a cinch but it is true and it cannot be said too often, that democracy can be defined as that system of government which depends for its very survival upon the full participation of every one of its citizens. This is, really, what we mean by good government. Good government means clean government, yes, and it means forward-looking progressive government, and it means government in the interests of all the people, and it means several other things besides. But perhaps above all it means a government rooted in the hearts and minds and devotion of ordinary everyday citizens. For us in America, who love freedom and independence and who value the individual above all else, that government is good which comes from the people.

Sometimes people have wondered whether in this complex and massive society of ours it is any longer possible for government to rise from the people themselves. All too often we have heard the good citizen proud of his enlightenment dismiss politics as a shabby art unworthy of his attention, forgetting that in a democracy politics is the highest art.

And so it seemed to me of special significance the when the Democratic Party of Maine set out to draft its platform in 1954, it began by building from the ground up—by soliciting the opinions of a thousand citizens, by threshing out then in public debate what became in truth a people's platform, a living document which the legislature then enacted into law in major part last year.

I hope we can find ways in the Nation to increase the degree of people's participation in the affairs of government. This has always been a basic purpose and a guiding principle of the Democratic Party. But I think it is probably more important today than ever before. For we are moving ever faster into the age of bigness—always bigger business, bigger farms, bigger factories, bigger schools, bigger labor unions, bigger government, bigger everything.

And when we look at our most serious problems today we realize that a surprising number of them are the result of bigness, or at least that they have to do with the protection of the individual, of the small businessman, the small farmer. We're doing mighty well "on the average," but more and more this is an average between bigger and bigger units on the one hand and an ever-increasing number of weaker little units on the other.

Take for example this matter of small business. There isn't much about it in the newspapers. Yet I heard a very great deal about it as I traveled around the country this spring. Small business is in trouble. The difficulties I know your machine shops and small industries and retailers here in Maine are facing are only part of what is fast becoming a serious nationwide problem.

Today corporation profits are at an all-time high, yet the man who owns a small business, the man who's staying up nights trying to make enough money out of his retail store or his mill or shop—a lot of those men are today being pushed to the wall.

A tidal drift toward monopoly has set in, and the Federal Government has done very little to arrest it.

The trouble here is not a lack of remedies. There have been specific and constructive proposals made for supplying the readier access to capital and long-term credit that small business needs, for giving it a fairer share of defense contracts and other government contracts, for tax relief and for fuller protection against monopoly.

But what is lacking is any real heartfelt concern in the present administration for the smaller, weaker economic units. Much is said but little is done. And now, after 4 years of this do-nothingism, the Attorney General has the gall to put himself on a Sunday afternoon commercial television program and make a campaign announcement about the General Motors monopoly on making buses.

Perhaps we should be used to this sort of cynicism by this time. In the last few months the administration has suddenly become concerned with the school problem, the health situation, even the plight of the farmers, etc. As someone said, they're kissing the New Deal they've denounced and fought for so long—and with a straight face.

Small farmers are in equal trouble too.

Last week out in Iowa and Missouri many livestock farmer told me that he was worse off now than he was in the depression 20 years ago.

I'm told that in 1 county here in Maine 1 farm in every 3 has disappeared in the last 3 years. And I'm told that the average cash labor income equivalent for farmers here is as low as 10 cents an hour. These facts would be cause for concern at any time; they are shocking at a time when we are told that the rest of the country is wallowing in prosperity.

The farmer needs many things—better credit arrangements than those currently provided by the Farmers' Home Administration, to mention but one—for there are as many farm problems as there are farm products. But here again the chief difficulty common to all is governmental indifference—indifference to the human values of something like the family farm so long as the gross national product keeps on going up.

Here again, of course, we are getting election-year gestures. Yet I recall that when the Democrats in Congress tried to raise support levels for dairy products, they were assailed by the Department of Agriculture and many newspapers. Yet when President Eisenhower announced the identical support levels, it suddenly became an act of nobility. I was reminded that when the Democrats came out for 90 percent of parity that was called demagogery; but when Eisenhower proclaimed supports at 86 percent of parity, that was principle. Evidently the difference between principle and demagoguery is 4 percent, and the President who was applauded as a man of firm principles and flexible prices has got around to flexible principles and firm prices—in an election year.

We aren't going to solve the problems created by the surplus production of milk, for example, until we recognize the much broader form of the problem, its social and humanitarian aspects, and that productive capacity has to be viewed not as a curse but as a great opportunity.

Today only about a fourth of all the schools in the United States participate in the school-lunch program. How can we talk of a milk surplus when we know that millions of American children aren't drinking enough milk? If every school child in the country were given a pint of milk each day the so-called surplus would disappear within 12 months. I think we might properly suggest that consideration be given the idea that what's good for American children is good for American farmers, too.

There is so much to be done it seems to me in reasserting the idea of the individual, the human being, the family farm, the little-business man—yes, the little anything if you will—as the central idea in this democracy of ours. We must remember even as we become an inevitably more and more highly organized economy and society that the only legitimate goal of an organized life is the emancipation of individual energies.

I find myself thinking more and more often these days of Robert Browning's prayer: "Oh, Lord, make no more giants but elevate the human race." And it seems to me, returning to my earlier thought, that this depends today, as a practical political matter on people reasserting themselves as both the objects and the active governors of the democracy.

Driving down here today from Belfast I saw at firsthand the beauties and riches of the State of Maine. I saw forests and farms, fishing villages and resort towns and centers of small industrial enterprise. This lovely State has ready to hand everything man needs to fashion the good life for himself and his children.

Here in Maine things are not massive, man is not the plaything of blind forces, the individual is still supremely important. Maine today has its problems. But it has its own heaven-sent resources, and it has its tremendous tradition that elevates the individual above all else; here in Maine the wind in the pine blows free, and in sum it seems to me that Maine has no problems that free-men—and down-east Yankees—can't solve—with the help of Ed Muskie and the Democratic Party.

Resolution by National Committee of Americans of Polish Descent

EXTENSION OF REMARKS
OF
HON. EDITH NOURSE ROGERS
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES

Monday, July 16, 1956

Mrs. ROGERS of Massachusetts. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter and resolution:

NATIONAL COMMITTEE OF AMERICANS OF POLISH DESCENT, INC.,
New York, N. Y.

DEAR SIR: We are enclosing the resolution adopted by the governing body of the National Committee of Americans of Polish Descent at its meeting held at the headquarters in New York City on July 5, 1956.

We sincerely hope that you will give this resolution serious consideration.

Respectfully yours,

GEORGE BRAYNACK,
President.

RESOLUTION ADOPTED BY THE NATIONAL COMMITTEE OF AMERICANS OF POLISH DESCENT

The recent tragic events in Poznan, which took the lives of scores of victims, have revealed to the whole world the intolerable conditions which are prevailing in Poland.

The Communist system forcibly imposed on the homeland of our fathers is the result of the Yalta agreement which sanctioned the division of the world and delivered Poland to Soviet Russia. The President of the United States took part in the Yalta Conference with Stalin and became a party to that agreement. This country, therefore, shares the responsibility for the present state of affairs in Poland.

If the present international situation does not permit the administration to take the initiative of fully liberating Poland, it is, nevertheless, its elementary moral duty to resort to diplomatic action whenever the Communist rulers of Poland flagrantly violate fundamental human rights, as has been

recently done in the Poznan massacre of workers claiming for a betterment of their living conditions. No government has the right to shoot its citizens when they demand bread, as did the strikers in Poznan.

We believe it to be our duty to appeal to you, Mr. Congressman, asking you to undertake an energetic action in cooperation with other Members of Congress, in order to bring about at least a diplomatic intervention of our administration with the Communist government in Warsaw, asking them for:

1. A full public explanation of the tragic events in Poznan, their origin and causes.

2. Severe punishment of those responsible for the shooting of the workers and civilian populations of Poznan.

3. The prevention of retaliatory measures, executions, and other reprisals.

4. A guaranteeing to the citizens of Poland, and particularly the workers, of the right to put forward their justified political and economic demands.

5. An increase of the wages and an improvement of working and livink conditions of the workers so as to bring them to a decent level, such as they enjoy in western democracies, and particularly in the United States.

6. The granting of full political rights to the people of Poland in accordance with basic democratic principles and the traditions of Poland's history and culture.

S. 2875

EXTENSION OF REMARKS
OF
HON. JOHN W. McCORMACK
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Monday, July 16, 1956

Mr. McCORMACK. Mr. Speaker, under permission to extend my remarks, I include a press release made on July 6, 1956, by William C. Doherty, national president of the National Association of Letter Carriers, in opposition to amendments proposed by the United States Civil Service Commission to S. 2875.

The views of President Doherty, whom I greatly admire, are worthy of deep considerations:

President William C. Doherty of the National Association of Letter Carriers today charged that the amendments proposed by the Civil Service Commission to S. 2875 would completely emasculate the bill. Mr. Doherty further charged that the Commission amendments would favor the higher paid employees, pointing out that an employee with an average salary of $4,000 under present law receives a percentage equal to 1.62 percent of salary multiplied by years of service; an employee having an average of $5,000 or more receives 1.50 percent of salary multiplied by years of service. The Commission proposal would provide 1.75 percent for both those receiving $4,000 and those receiving $5,000 or more. The increase for those with salaries of $4,000 is a mere .13 percent per year, or 3.9 percent for 30 years' service, while the increase for those with salaries of $5,000 or more is .25 percent, or 7.5 percent for 30 years.

The majority of the employees in the lower salary brackets cannot afford to provide survivorship benefits under the present law. As a matter of fact, 1 out of every 3 retiring in the entire Government fails to make survivorship selection because of the severe reduction in annuities required; they simply cannot afford the reduction. S. 2875 would make it possible for survivors to receive up to $1,200 without prior reduction; the Civil Service Commission favors eliminating this most necessary provision.

The Commission's proposal would do away with the 30-year optional retirement provision in the Senate bill.

The employees are willing to pay an additional $90 million a year for these benefits. "We are not willing to pay this extra 1 percent if the bill is emasculated," Mr. Doherty declared. The estimated cost figures sent up by the Commission are inflated away out of reason. In 1955 all benefits, including survivorship benefits, cost a total of $345 million; yet the Commission has the effrontery to declare that the amendments will cost $454 million per year.

Mr. Doherty stated: "I appeal to the congress on behalf of the 105,000 members of the National Association of Letter Carriers to vote out S. 2875, the much needed Johnston liberalized retirement bill, exactly as it was passed by the Senate."

The Fallacy That Foreign Aid Is Good Business for the United States

EXTENSION OF REMARKS
OF
HON. LAWRENCE H. SMITH
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 12, 1956

Mr. SMITH of Wisconsin. Mr. Speaker, recently my attention was directed to a book written by Henry Hazlitt entitled "Will Dollars Save the World?" It was published in 1947, yet today it is important and timely as we consider the impact of foreign aid upon our domestic economy.

In the recent debates on the bill to authorize the expenditure of more than $4 billion the argument was made that it is good business for the United States to engage in this program because 80 percent or more of the money is spent in the United States. The argument is based on a false premise, to wit: that we can prosper by giving our money and goods away. It is not true that the United States needs foreign loans to keep full production and employment at home.

Mr. Speaker, under leave to extend my remarks I am inserting a short statement by Mr. Hazlitt on this very important matter and I commend it to the attention of all Members of the Congress:

WILL FOREIGN LOANS MAKE US RICH?

It is not true that the United States needs foreign loans to keep full production and employment at home. It is not true that we can get rich by giving our goods away.

More and more the strange idea is being put forward that America must make loans or gifts to foreign countries, not primarily to save them, but to save itself. We are told that our Government must make these gifts or loans not as a humane or charitable duty but out of shrewd self-interest. Newspaper commentators in the recipient countries have more and more been interpreting our Government's generosity to them on this theory. As early as June 25, 1947, Pravda declared that the Marshall plan was influenced by a desire to prolong a postwar boom in the United States and to lessen the ropening economic crisis here.

That Communist Russia should hold such a view is not surprising. It fits in perfectly with all the other claptrap that Communists have long preached about capitalism. But the theory is just as eagerly embraced elsewhere.

In its issue of July 12, 1946, the Eastern Economist of New Delhi put it forward in its most naked form:

"The United States lend-lease plan of helping the allies in the recent war has been acclaimed as an act of unparalleled generosity," (it said). "But it was also a brilliant and ingenious way of solving what would otherwise have been an intractable problem. * * * The productive power of America has multiplied itself so fast that it is now admitted that she cannot continue to give 60 million jobs unless she is able to have a large export trade. * * * In such circumstances it would not be such a foolish thing (as some might imagine) to give away goods to other countries, for on balance it would be better to part with surplus goods than to create unemployment. * * * Machinery would be set up by America whose purpose would be to provide gifts of loans to countries. * * * The United States Government will buy the goods, give them as gifts and reimburse itself by additional internal taxation. * * * If this is to play the world's Santa Claus, the United States of America is both rich enough and should have sense enough to fill the role."

This idea, in both crude and sophisticated guise, has been endlessly repeated in the French and British press.

That this idea should exist so strongly in the countries that wish to get more American loans and gifts is not surprising. What is much more strange is to find it endorsed by some American businessmen and even by some American economists.

Yet it is unadulterated nonsense.

If it were true that we could create prosperity merely by making goods to give away, then we would not have to give them to foreign countries. We could accomplish the same results by making the goods to dump into the sea. Or the Federal Government could order the goods made to be given away to the poor in our own country. It could furnish them with free overcoats, free lunches and free automobiles; order any amounts of new housing built, turn it over to them, and finance it by inflation or add it to the American taxpayer's bill. Simplest of all, it could turn over directly to American lower-income groups additional money taken from the taxpayers and let them buy with it whatever they themselves wanted. The goods, at least, would then remain in this country. Why confuse the issue by bringing in foreign nations and foreign trade?

It ought to be clear to the poorest intelligence that nobody can get rich by giving his goods away. What seems to confuse otherwise intelligent people when this proposition is applied to a nation instead of an individual, however, is the fact that it is possible for particular firms and persons within the Nation to profit by such a transaction at the expense of all the rest. It is true, for example, that persons engaged exclusively or chiefly in export business might gain on net balance as a result of bad loans made abroad. The exporter might profit at first by additional foreign sales. But if the foreign loan is not repaid, then those who make it lose the money. If it is a Government loan, then the loss must be made good out of increased taxes on every American. American consumers will then have just that much less money left with which to buy American goods. For every extra dollar that the foreign buyers have been given to buy such goods, in other words, domestic buyers would ultimately have one dollar less. Businesses that depend on domestic trade would therefore be hurt in the long run at least as much as those engaged primarily in export business had been helped. Considered individually, American consumers would be impoverished by higher

taxes. And considered collectively, the country would be poorer by the amount of goods it had given away.

So many confusions exist about foreign trade that it is possible here to call attention only to 1 or 2 of them that bear immediately upon the present issue. One frequent fallacy, for example, which is implied in the foregoing quotation from the Eastern Economist, is that the United States produces a surplus above its own needs and must find an outlet for this surplus. Nothing, of course, would be more foolish than for a country continually to produce more than it needed. From the standpoint of the nation as a whole, exports are produced to pay for imports. A nation with a permanent surplus of exports (including both visible and invisible items) would be merely a nation that was giving its goods away.

Wherever the most effective division of labor exists, wherever a nation devotes itself to producing what it can produce better, cheaper, or more efficiently than other nations, and is content to buy from others in turn the things that they can make cheaper, foreign trade follows as a matter of course. But it is a fallacy to suppose that a large export trade is in itself necessary to provide employment or to give 60 million jobs. If some of these jobs make exports that are not ultimately balanced by imports, then the labor is merely being thrown away. It is like a huge WPA project, with the added disadvantage that whatever is produced by the work goes to foreign countries instead of remaining at home. If, on the other hand, the exports are balanced either immediately or ultimately by imports, then as many American jobs are lost, or kept from coming into existence, by buying the imports (instead of home-produced goods) as were created in the first place by the exports. In an autarkic economy, the jobs that are lost by lack of exports are offset by the jobs provided to make substitutes for the goods that would otherwise be imported. It is not employment that suffers, but efficiency and consumer satisfaction. A sound two-way foreign trade is important from the standpoint of the efficient world division of labor and the maximum creation of wealth; but it is in the long run irrelevant from the standpoint of providing employment.

It is true, however, that changes in foreign trade, and temporary export or import surpluses (using exports and imports broadly, to include all goods and services) are important from the standpoint of employment and business acivity. An excess of exports, other things being equal is inflationary; and an excess of imports is deflationary. That is to say, an excess of exports, by making goods at home scarcer than otherwise, tends to raise home prices, while an excess of imports, by making goods more plentiful than otherwise, tends to lower home prices.

In a speech on May 8, 1947, Dean Acheson, Under Secretary of State, estimated that our annual exports of goods and services to the rest of the world during 1947 would total $16 billion, an all-time peacetime high, compared with annual exports of about $4 billion before the war. Against this, he said, we were expected to import only about $8 billion of goods and services. A later estimate, in the Midyear Economic Report of the President, published on July 21, gave a much larger figure of the export surplus: "The goods and services we provided to other countries (during the first half of 1947) ran ahead of what they provided to us at the rate of $12.7 billion a year."

Now except for that part of it which is financed out of immediate taxation, this export surplus of $12 billion a year is inflationary. It means that we are paying out $12 billion a year in wages, salaries, and profits for goods and services that we do not get. It adds $12 billion to the excess purchasing power competing for the goods that are left. We are increasing the volume of money incomes in relation to the goods produced for domestic consumption.

The Chickens Come Home

EXTENSION OF REMARKS
OF
HON. JOHN W. McCORMACK
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Monday, July 16, 1956

Mr. McCORMACK. Mr. Speaker, the confusion in Washington in the conduct of our Government by the Republican administration under the leadership of President Eisenhower, upon whom responsibility rests, is becoming more and more evident to our people.

The American people are deeply concerned with the uncertainty of leadership in the field of foreign affairs, and with our military and defense strength.

They know we are on the defensive throughout the world. They sense that our national defense is connected with a balanced budget, and that this is a dangerous calculated risk to take.

The people well know that our military strength is the main avenue or weapon by which our national objectives are attained in the field of foreign affairs.

In my remarks I include a well-considered article, The Chickens Come Home, written by Joseph and Stewart Alsop, appearing in the Washington Post and Times Herald of July 16, 1956:

MATTER OF FACT

(By Joseph and Stewart Alsop)

THE CHICKENS COME HOME

All sorts of elaborate theories have been put forward to justify the very heavy reductions in the Armed Forces which have been proposed by Secretary of Defense Charles Wilson and Adm. Arthur Radford, chairman of the Joint Chiefs of Staff. But there is hardly an informed man in the Pentagon who has the slightest private doubt that the theories are just so much camouflage for the following simple facts:

The Eisenhower administration came to power committed to lower taxes and balance the budget. Both laudable objectives have been achieved, largely thanks to the New Look at defense policy, which has permitted very sharp reductions in previously planned defense levels.

Even the New Look, however, would not have permitted a balanced budget for the current fiscal year if it had not been for an artificial process of one-shot defense reductions. For the current fiscal year the Armed Forces were told, in effect, to live off their capital in order to permit a balanced budget.

But it is not possible to live off capital forever. On the contrary, artificially low-defense spending for 1 fiscal year spells artificially high-defense spending for the next. Moreover, certain military hardware—like the B–52 heavy bomber—is reaching the stage where it must be bought and paid for. Thus the administration's fiscal chickens are suddenly coming home to roost.

The powers that be in the administration have been horrified by the size of these unwelcome birds. For example, in order to maintain the agreed-upon force levels for the Air Force (which many air officers, like Gen. Curtis LeMay, consider already grossly inadequate) it will be necessary to up Air Force spending a cool $6 billion in the next fiscal year.

Similarly, the artificial savings for the other two services must also be made up in the next fiscal year. Preliminary estimates by the services have put the overall increase in the neighborhood of $12 billion. Final and official estimates must be submitted to Secretary Wilson by October 1.

Any such increase would of course knock the budget for the next fiscal year into a cocked hat. It would also knock into a cocked hat the administration's budget-balancing boasts, which are counted on heavily as campaign material for this election year.

Secretary Wilson has thus ordered that defense estimates for the next fiscal year be held down to about the current level, or at most only a billion or so more. Because the current level is artificial, there is only one way that this can be done other than by abandoning the 137-wing Air Force program, to which the administration is absolutely committed.

It can only be done by the kind of very sharp reduction in military manpower which Wilson and Radford have been proposing to the dismayed Joint Chiefs. It is well to understand what a cut in manpower of 500,000 to 800,000 men would mean.

It would mean a large-scale withdrawal of American forces from Europe, which would drive the last nail into NATO's coffin. In a large sense, it would also mean that the United States had passed the point of no return in total dependence on the Strategic Air Command's ability to deliver hydrogen bombs to enemy targets.

No sensible man disputes that SAC must have the power to deliver its hydrogen bombs if the worst comes to the worst. But it is highly significant that Gen. Nathan Twining, Air Force Chief of Staff, has joined the Army and Navy chiefs in protesting the proposed cuts. As one high Air Force official has remarked, "We don't want to be left all alone with SAC."

The meaning of being left all alone with SAC was spelled out in Lt. Gen. James Gavin's recent testimony before the Senate Air Power Subcommittee. A hydrogen attack on the Soviet empire would result, Gavin said, in several hundred million deaths from radioactive fallout. The deaths would extend well back into Western Europe, or deep into Asia, depending on which way the wind blew.

Thus, in case of future local Communist aggression, the United States would be left with the choice of killing several hundred million people, including our friends, or doing nothing at all. The administration's much-vaunted New Look, in short, threatens to leave this country in the hopeless situation of a policeman armed only with a weapon which, if used, will destroy not only the criminal at which it is aimed but several city blocks round about.

Labor

EXTENSION OF REMARKS
OF
HON. J. HARRY McGREGOR
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Monday, July 16, 1956

Mr. McGREGOR. Mr. Speaker, I have just received a series of various reports relative to our economy, which of course included the labor field. I am indeed happy to note that employment is highest in history. An average of 63.2

million had jobs, which smashed all previous records. This record shows, Mr. Speaker, that approximately 3 million more held peacetime jobs than were held previously, even in war. We are in a sound economy, Mr. Speaker, when it is possible for our people to have jobs without war.

Both hourly and weekly wages are at an all-time record high averaging nearly 13 percent higher in peacetime 1955 than in wartime 1952.

Strategy on the Cheap

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Monday, July 16, 1956

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial which appeared in the Washington Post and Times Herald on Sunday, July 15, 1956, on the subject of proposed reductions in military manpower:

STRATEGY ON THE CHEAP

It is good to have Admiral Radford's denial of the proposal attributed to him for sweeping slashes in military manpower. The Chairman of the Joint Chiefs of Staff says that the eventual 800,000-man cut mentioned in new stories is a distortion of a staff study recommendation, and that he personally has reached no such decision. Adoption of any such plan, of course, would be clear evidence that the budget was determining American strategy rather than the reverse. There have been many quips in the past about civilians in Government having the real military minds. This is the first suggestion that the military should preempt the civilian role of the budgeteers.

Despite Admiral Radford's disavowal, however, there have been enough indications of a trend toward more exlusive reliance on air-atomic strategy to warrant discusson. This is the strategy of the big war. It proceeds on the assumption that any war would be "a general one, short, violent, and involving nuclear weapons." A consequent reduction in conventional weapons would face the country with the horrible dilemma, in any war that might break out, of meeting it with nuclear weapons that would invite an all-out war of annihilation, or of sitting by impotent. The "limited war" would become a near impossibility.

Now, a concern for the welfare of the economy on the part of military men, is within limits, commendable. But the major assignment of the Joint Chiefs of Staff, and the officers working under them, is to devise the startegy that is best suited to the defense of American interests, and then to ask for what they need. Budgetary requirements certainly figure in the ultimate determination of strategy, but it is the job of civilians rather than of the militarry to say what the economy will stand.

In point of fact, the economy will stand almost any military expenditure it has to stand; the limit has never been tested. Before Korea there was an assumption that $15 billion or even $12 billion was all we could possibly afford. Today the national budget is balanced with a military expenditure of nearly three times the latter amount. It is far cheaper—and safer—to undergo some budgetary stress than to find to our sorrow that the Military Establishment has prepared to fight the wrong kind of war.

The doctrine suggested by the reports of the Staff paper would complete the "New Look" by enshrining the atom as the determinant of military policy. Yet, if the current standoff with the Russians means anything, means that there is less and less likelihood of deliberate nuclear war. The point on which there is no assurance is the continued danger of small wars—over Quemoy and Matsu, in Indochina, in the Middle East. Would the American people really want to adopt a strategy which, far from providing more flexibility, would automatically transform small wars into big wars for want of any other means of response?

This newspaper hopes that the issue will be widely debated before there is any attempt to advance such a concept further including the implications for an essentially isolationist, Fortress American type of strategy and its bearing no questions of disarmament and nuclear control. It smacks of the idea that there is a cheap way to defense; and this is a proposition which has never yet worked.

They Knew It All the Time

EXTENSION OF REMARKS
OF
HON. JOHN J. ROONEY
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, July 16, 1956

Mr. ROONEY. Mr. Speaker, under the leave to extend my remarks in the RECORD, I include the following editorial from the New York Post of July 15, 1956:

THEY KNEW IT ALL THE TIME

Remember Dixon-Yates, also known as the 1954 mess in Washington?

Have a quick refresher course: President Eisenhower ordered the Atomic Energy Commission to sign up to buy power from Mr. Dixon and Mr. Yates to give to the Tennessee Valley Authority because the AEC was drawing so heavily on TVA's supplies.

That way TVA, cradle of public power and another of the Franklin Delano Roosevelt monuments, wouldn't have to grow any bigger. If TVA needed more power TVA could get it, in a roundabout way, from Mr. Dixon and Mr. Yates. The two southern entrepreneurs liked the idea so much they cheerfully agreed to put up a $107,000,000 plant to help Uncle Sam in his hour of need.

Naturally, there were raised eyebrows in many places.

The AEC members themselves couldn't get together on whether the deal could be made sweet enough to stand.

There were even some people in Washington, mostly Democrats, who questioned whether it was legal.

Attorney General Brownell took care of the spoilsports. He said the thing was legal as anything.

Then the ghost of a mysterious gentleman named Adolphe E. Wenzell got pried out of the secret files. It turned out that Mr. Wenzell had served as a consultant to the Bureau of the Budget on Dixon-Yates while at the same time functioning as an adviser to the investment outfit that was bankrolling Dixon-Yates.

The lid, of course, blew off.

The President quick like a flash threw out the contract.

Now comes the payoff:

Dixon-Yates sued the United States for $3,534,778.45 on account of the combine had put so much sweat, toil and money into the thing before it got killed.

Defending the suit, Attorney General Brownell argued in court this week that the whole contract was illegal in the first place. What's more, he said that Mr. Wenzell's dual role on both sides of the backdoor negotiation violated the "conflict of interest" statute, so all bets were off.

This is the same Herbert Brownell who defended the contract when it was being aired on Capitol Hill last year.

We're not saying that the Dixon-Yates crowd ought to get any money. We can't even figure out what the extra 45 cents is for. And we never knew how much the combine stood to make in the first place; nobody ever said.

All we wanted to do here, you see, was to bring the mess in Washington up to date. The Republicans harped on it so much when the crusade was rolling through the hinterlands in the 1952 campaign that we hate to see it neglected in 1956.

America and the International Atom

EXTENSION OF REMARKS
OF
HON. ALBERT GORE
OF TENNESSEE
IN THE SENATE OF THE UNITED STATES
Monday, July 16, 1956

Mr. GORE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD the text of an address on the subject America and the International Atom, delivered by Gordon Dean, former Chairman of the United States Atomic Energy Commission, at a dinner forum on Atoms for Peace, the occasion being the 90th anniversary of the Nation on Sunday, June 19, 1955.

The address delivered by Mr. Dean is timely apropos the bill passed by the Senate last week.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

AMERICA AND THE INTERNATIONAL ATOM

(Address delivered by Gordon Dean, former Chairman of the United States Atomic Energy Commission, at a dinner forum on Atoms for Peace on the occasion of the 90th anniversary of the Nation, June 19, 1955, at the Waldorf-Astoria Hotel)

Sixteen years ago several scientists, including the late Dr. Enrico Fermi, approached Albert Einstein and advised him that certain experiments with nuclear fission had approached a point where they felt the highest authority should know it. They asked the professor to go to Washington to see the President. But the modest professor said, "I really don't feel that I could disturb so busy a man." He was induced, however, to write a letter to the President. A friend sat down at a portable typewriter on the back porch of a home where Einstein was visiting. He might have used a better typewriter ribbon for one of the most important documents in human history. However, the simplicity and lucidity of Einstein's style were so effective that upon receiving the letter the President, on a little memorandum to General Watson wrote, "See that this is done." With that authorization $5,000 was appropriated and the atomic energy program of this country was begun.

Sixteen years after this event the United States had spent in excess of $10 billion on its atomic energy program; huge stockpiles of bombs had been accumulated; atomic en-

ergy programs had developed in a score of countries around the world; a submarine called the *Nautilus* was sailing the Atlantic, propelled by a nuclear reactor; another submarine, also nuclear propelled but of quite different design, was soon to be on its way; large public utilities both in this country and abroad are designing reactors to produce electricity from the heat produced by the fission of uranium atoms; industry, medicine, and agriculture are examining the effects of radiation to understand its dangers and to harness it to useful purposes. Reactors, that is nuclear furnaces, exist today in the United Kingdom, Canada, Sweden, Norway, and France, and will soon be building in many other countries including Holland, Denmark, Belgium, Australia, Italy, Turkey, Switzerland, India, and Brazil. Much has happened.

I have been asked this evening to talk briefly on the capacity of the United States to revolutionize the world through the fullest development of peacetime uses of atomic energy. That the atom has already had a terrific impact on the world is quite obvious; that its impact to date is only a fraction of its potential is equally clear. That the world will be revolutionized is clear. That the United States has the capacity to bring about this revolution is also clear. But that the United States will play the leading part it could have played, is today a very serious question.

The United States had remained, except in public pronouncement and speeches, significantly aloof from the world atomic picture. At the same time countries all over the globe are probing the nucleus of the atom.

We forget sometimes that the atom is international; that it knows no nationality, race, or ideology. It will go about its sometimes productive, sometimes destructive work just as loyally for a Russian, a Pole, or a Chinese as it will for an American, a Briton, or a Frenchman.

The atom obeys only one set of laws—the laws of physics. And man's mastery over the atom is directly proportional to his comprehension of these laws. The real top secrets in atomic energy are those that are still held by nature. Those which nature has released are generally known. Every now and then the scientists of one nation or another wrest a new secret from nature, either by accident or by dint of great effort. When this occurs, the nation that discovers the new information my lock it in a safe and disclose it only to those it considers to be loyal and trustworthy. But nature herself remains a security risk that cannot be controlled. The secret that has been learned by one may be and usually is quickly learned by another. It takes brains, knowledge, experience, skill, and resources, but these are not the exclusive possession of any one nation or any one group of nations.

The blunt fact is that while the United States has the capacity to revolutionize the world through the development of peacetime uses of atomic energy, in all probability the United States will play but a part in this revoluntionary process. We have no monopoly.

A little history is perhaps in order at this point.

Until a year ago the Atomic Energy Act of the United States prohibited interchange of information with other countries dealing with commercial applications of nuclear energy except in the field of radioactive isotopes. One reason for this legislative prohibition was that if any country which should build a reactor for the generation of heat—it would be manufacturing in the course of the process plutonium; that plutonium being fissionable or explodable could readily be fashioned into bombs. The reasoning was just that simple—and, I might add that up to a certain point of time quite valid. Seventy percent of the United States effort goes into making fissionable material. This is therefore the largest single effort of the United States program. Fashioning a bomb out of this material is comparatively simple and today the general theory is well known. Consequently we did not interchange information on the making of fissionable material because we did not wish to hasten the day when other countries could secure a bomb.

But many things have happened since the act was written. Canada has built reactors. England has built reactors and bombs. France has built reactors. All, therefore, produce plutonium. And within the past several years other countries have built them—not, I should add, to get bomb material but to find a way to get heat and eventually electricity from these reactors.

Furthermore in 1949 something very significant happened, something we sometimes forget when we make security policy. Russia exploded an atomic bomb and has since exploded many others. It followed that Russia had built reactors, and separated out plutonium. Since that date she has accumulated an imposing stockpile of bombs to which she has more recently added the much more destructive hydrogen bomb.

Almost a year ago Congress fully aware of these developments amended the Atomic Energy Act to permit transfer of information touching upon peaceful uses of atomic energy to friendly countries and set up a machinery for bilateral agreements whereby any atomic information could be interchanged except information dealing with the fabrication of atomic weapons.

Even prior to this the President had spoken eloquently for a sharing of the blessings of the atom. He painted a picture of the tremendous strides which mankind could make if all the scientists and engineers of the world could turn their inventiveness to exploiting the peaceful atom. The message stirred the people's imagination particularly in those countries which saw in the peaceful atom a new fuel, a new source of power.

Both before the President's speech of 1953 and since we have taken some steps which have been highly useful. Actually the atoms-for-peace program of the United States Atomic Energy Commission goes back to September 1947, when we first began the international distribution of radioisotopes. Such distribution was permitted even under the original Atomic Energy Act. Since then 46 countries have received in all many thousands of shipments from the United States. Nearly 5,000 individuals and organizations today throughout the world are employing radioisotopes in the fields of medicine, agriculture, and in their industrial processes.

In the more recent past we have made other notable strides in the field of international cooperation. A conference has been called under the aegis of the United Nations for this summer in Geneva where over 1,000 technical papers will be presented by various countries around the world, over 100 by the U. S. S. R. This is the first time at which the atom will literally be placed on an international stage. I hope the results will be significant.

In recent months, the United States has negotiated agreements with Turkey, Colombia, and Brazil and some 10 other countries whereby these countries will receive enough nuclear fuel and the necessary design material to build a research reactor. We can expect that many such agreements will be signed in the months ahead. There is, however, remaining one great area in which the United States has been deficient and that is in the field of making available information concerning power reactors. It was to this area and this great need that the President again addressed himself last week at Pennsylvania State College.

Again let me say that his proposal deserves quick implementation by the people in the Atomic Energy Commission, State, and Defense Departments.

Today in many parts of Europe, Asia, Africa, and the Western Hemisphere the lack of power is holding back economic and social developments. As one high placed observer recently said of Europe, "Next to peace, electric power is the primary interest of many governments. Unless something is done about it, the lights will grow dim over much of Europe."

People everywhere want cheap power. The atom gives great promise of supplying it. And the United States has many times in the past 2 years promised assistance in this field but we are not delivering on our promises. Our Government is still not quite willing to give the information necessary for friendly foreign countries to build modern power reactors, and we are not yet even willing to permit an American industrial concern to sell a power reactor to a foreign country—at least to countries which don't have them. This is not the fault of Congress, for Congress last year amended the Atomic Energy Act and set up simple procedures to accomplish the result. What then is holding us back? I very much fear that we are still operating on the theory that someday the Russians will be able to build a reactor, make plutonium, and fabricate a bomb.

Let me illustrate:

We are today building in this country two reactors optimized so as to produce power. One is a large central station powerplant being designed by Westinghouse and which will be operated by the Duquesne Power and Light Co. We are also building, at the request of the Army, a smaller, so-called package powerplant. But both bear the secret label. The design of neither is available to other countries nor for that matter to American industry except under security conditions. Today, foreign countries may have, as for years they have had, all the information they wish on the uses of radioactive isotopes. They may have the design of a research reactor and the unclassified literature and know-how necessary to build and operate a research reactor. But let's face it—what they want is atomic power, and American industry would like to supply the reactors to produce it.

We are simply not implementing the President's "atoms for peace" proposal. I submit that if we do not soon change our policy and take the secrecy wraps completely off these power reactors, our pretention that we are spreading blessings will have a very hollow ring.

The most significant and most dramatic item which America has to sell to the underdeveloped areas of the world is its latest knowledge on power reactors.

If we do not move soon, our friendly competitor, England, will surely do so. American abstinence from this area is even today causing many of the European countries to turn not to us but to other countries for assistance in solving their power crisis. Let me illustrate:

Sweden, intent upon building a research reactor and later a power reactor, knew that it would be useless to come to the United States. She therefore extracted uranium from her own shales, turned to France to bring the uranium oxide to the metal stage, to the United Kingdom for help in fuel fabrication, and to Norway for heavy water. Sweden built her research reactor and is building her power reactor. Less well developed countries such as India and Brazil have turned to France. In fact, practically every country in Europe has turned for atomic assistance to England or France and received it—assistance frequently refused by the United States.

Argentina recently perfected a process for producing pure uranium metal but she did this with the assistance of a German company. Illustrations of this are legion.

If we do not move soon, our unfriendly competitor—the U. S. S. R.—might even beat us to the golden opportunity. She has promised to supply information on her own power reactor at the Geneva Conference.

But the policy of secrecy on nonweapons uses has other effects which will soon be felt.

American industrial concerns which today are anxious to supply this potentially tremendous demand for equipment for reactors are not free to develop the market. At the same time England has a sharp eye on this attractive market and is today placing her know-how and machinery where her eye now is.

How does one engage in a full interchange of information and materials dealing with power reactors? There are two ways.

The first is to keep the secrecy label on these reactors and pick very carefully only those countries for interchange which we trust to keep the secrecy label on them by setting up security procedures satisfactory to this country.

I submit that this is completely unrealistic and that we are both tying our own hands and making for ourselves a few enemies rather than friends if we adopt this course. For every country we approve we will make an enemy of countries we turn down. Foreign countries are interested ultimately in the best and latest information on reactor design; certainly they will not secure cheap power if they do not have the best and the latest. But I am sure it will be completely unworkable if we try to police the security systems of all the countries with which we deal. I can visualize someone in a foreign country, friendly to the United States, expressing a point of view in a public speech which would make him suspect by our security standards, this followed with congressional investigations here into the arrangements made with that country, and finally charges, countercharges, and much ill will. And there is no reason for all of this if we face up to a few facts of life. One of those facts is that the only reason we have a security system is that we do not want to add to the Russian stockpile. Another fact is that the Russians have a stockpile, a sizable one; and within a matter of a few years will have enough of a stockpile perhaps to cancel out, for all practical purposes, the much larger United States stockpile. Since it would take the Russians about 3 years to take the latest reactor information and with it build a modern reactor; and since perhaps the most they could expect to add to their stockpile because of it would be a small increase in the amount of plutonium manufactured; and since this would be but a drop in the bucket compared to what they have already produced, and could have no effect on the canceling-out situation, I submit that if we operate on the assumption that there are real security considerations in the reactor field, we are tying our hands and the hands of the other countries of the West.

The notion that we can share atomic blessings with one and all and at the same time place the secrecy label upon them does violence to all concepts of security. Not security, but the appearance of security is all that will be achieved. This much is quite clear to me. But the point I really wish to leave with you is that in the field of peacetime uses there is no need and no room for secret labels.

An atom-for-peace ship plastered with secret labels had best not leave port.

The second way to implement power reactor interchange is for the Atomic Energy Commission to declassify with one bold stroke all power reactor technology, face up to the fact that the Russians long long ago perfected the bomb, face up to the fact that wihout such action we will make enemies out of three-quarters of the Western World whose security systems don't match ours, face up to the fact that what we are talking about here is nothing more than a new source of heat for power and that the world wants what comes from cheap power.

This is what is needed.

If we take this step, and it must be seen, in 1955 (and remember we need no new laws to do it) America can again assume her leadership position in the atomic field.

American industrial concerns will be freed to compete in the world markets. They will be able to sell power reactors to mining countries in the far north, the high Andes, and the jungles of Africa. They will be able to install large central-station powerplants in countries which now desperately need them. They will be able to supply the power to convert salt water to fresh, irrigate the deserts and alter the entire face of the globe. They will be able to make good friends and good will for America.

Antitrust Enforcement Under Assistant Attorney General Stanley N. Barnes

EXTENSION OF REMARKS
OF
HON. WILLIAM S. HILL
OF COLORADO
IN THE HOUSE OF REPRESENTATIVES
Monday, July 16, 1956

Mr. HILL. Mr. Speaker, Attorney General Brownell today issued a release highlighting the enforcement of our antitrust laws through the first 6 months of 1956. As we all know, Judge Stanley N. Barnes, recently elevated as a judge of the Court of Appeals for the Ninth Circuit, has been one of the outstanding heads of the Antitrust Division in our lifetime. Such minor criticism as has come Judge Barnes' way as the Assistant Attorney General in charge of the Antitrust Division, has been based more on honest differences of opinion rather than on anything else.

Even those who have differed with Judge Barnes in some of his official acts nevertheless have not questioned Judge Barnes' studious and vigorous approach in his efforts to protect our free-enterprise system through the administration of our antitrust laws. Judge Barnes' particular emphasis on the small business aspects of antitrust enforcement, I know, has given all Members of Congress truly interested in small business great satisfaction. I am sure that the statement of his successor, the Honorable Victor R. Hansen, that Judge Barnes' policies will be continued will also be a source of satisfaction not only to Members of Congress but to all small-business men everywhere in the United States.

The release follows:

DEPARTMENT OF JUSTICE

Attorney General Brownell announced today that actions charging price-fixing highlighted the enforcement of the antitrust laws during the first 6 months of 1956.

The Attorney General referred to a report made by Judge Stanley N. Barnes on the activities of the Antitrust Division since January 1, 1956. The report was Judge Barnes' final official act as Assistant Attorney General in charge of the Antitrust Division, before being sworn in as a judge of the Court of Appeals for the Ninth Circuit on July 3, 1956. It stated:

"Among criminal actions filed in the first 6 months of this year were cases involving charges that 2 major oil companies, Shell Oil Co. and Socony Mobil Oil Co., Inc., have each entered into illegal price-fixing agreements with independent service-station operators. It was alleged that, in these agreements, the filling-station operators gave up their right, as independent businessmen, to determine their own prices and agreed to post prices prearranged with the oil company.

"One of these cases is against an official of Socony Mobil Oil Co. This is the first case the division has brought under section 14 of the Clayton Act which makes a criminal offense an act by a corporate officer or agent which constitutes in whole or in part a violation by the corporation of any penal provision of the antitrust laws.

"In another of the cases, the defendant Shell has already been sentenced to pay a fine of $5,000, the maximum permissible under the Sherman Act. While the maximum penalty has just recently been increased to $50,000, this defendant's action occurred at a time when the highest fine was $5,000.

"The Antitrust Division has filed 29 antitrust cases since January 1, 1956. Thirteen of these are civil actions and 16 are criminal.

"One monopoly case filed charges, among other things, the monopolization of thermostatic temperature controls used to regulate heat in gas-cooking ranges. The defendants in this case are charged with agreeing to pool patents to acquire and maintain a dominant industry position, and with agreeing to restrict the licensing of these patents. The division is seeking to secure injunctive orders which will free this line of commerce from such restraints.

"Two cases filed this year involve alleged practices which impair the operation of the Government's cotton-disposal program. A part of the cotton acquired through the price-support program is offered for sale generally on a competitive-bid basis in which the bidder submits sealed bids. A group of cotton merchants was indicted on the charge that they had used a common purchasing agent who was permitted to fix the prices bid by them and allocate among them lots of cotton offered for sale by the Government. A companion civil action was filed to enjoin such restrictive practices.

"The Antitrust Division has continued its vigilant investigation of current mergers. A sixth important merger action was filed and consent judgments were secured in two other merger actions. These judgments against the Hilton Hotel Corp. and the General Shoe Corp. will prevent these defendants from making future acquisitions which may substantially lessen competition or trend to create monopoly and they also require divestiture of certain of defendants' holdings.

"Other cases filed this year include an action against several large rubber companies on the charge that they agreed to fix prices on rubber belts used in power-transmission units in the textile, railroad, oil, and machinery and other industries, as well as on home appliances.

"Many of the cases filed charged such well-recognized violations as price-fixing, boycotting and customer and territorial allocation. One such case charged the International Boxing Guild with conspiring with various of its affiliated local guilds to boycott nonmember managers of boxers, and promoters disapproved by the international or its affiliates. The indictment charged that the conspirators also boycotted professional boxing shows promoted for television audiences, known as studio boxing shows.

"Thirty-six cases have been terminated in the 6-month period ending June 30, 1956. This represents an increase of more than 71 percent over the number of cases closed in the corresponding period last year, in which 21 cases were closed. Of the 36 cases closed this year, 24 were civil and 12 criminal.

"The Division closed 12 civil antitrust cases by negotiated consent judgments.

Two of the most important of these related to cases charging monopolization of commerce in telephone equipment and of the tabulating industry. Both judgments contain extensive compulsory patent licensing provisions and divestiture provisions designed to establish freedom in which competition may develop.

"An important matter involving the participation of a labor union in a trade restraint was settled by consent judgment this spring. In this case, the union owned and managed a corporation engaged in the business of selling supplies for ships' stores. The union was charged in this action with using its power as a labor organization to compel vessel owners to obtain these supplies, known as 'slop chest' supplies, from the union's corporation and to compel ship owners to refuse to purchase such supplies from other dealers. A district court had held that these particular activities were not immunized from the antitrust laws by the Norris LaGuardia and Clayton Acts labor union exemption. Among other things, the judgment requires cancellation of provisions in collective bargaining contracts requiring vessel owners to purchase slop chest supplies from only the corporation.

"Other significant cases settled by consent judgments involved restraints on newspaper and periodical advertising, gear cutting and finishing machines and tools, booking and presentation of legitimate theater attractions, milk, linen supply and books.

"Nine criminal cases were terminated by entry of pleas of nolo contendere by the defendants. The Division has consistently opposed entry of such pleas. In some instances where nolo pleas have been accepted, the courts have indicated that defendants will not thereby be permitted to avoid or lighten the penalty for antitrust violations. In 1 case the court imposed suspended jail sentences against 7 individual defendants and in several instances fined defendants the maximum amount permitted by the Sherman Act.

"Two major decisions were handed down by the Supreme Court. These were in the McKesson & Robbins case and in the duPont cellophane case. The first one is an important victory for the Government and the second one a loss. The McKesson decision held that the 'fair trade' exemption from the Sherman Act, given to certain limited price-fixing agreements, does not include price-fixing agreements with independent wholesalers when made by a manufacturer who competes with them in selling its own products at wholesale.

"In its decision in the duPont case that commerce in cellophane has not been monopolized, the Supreme Court adopted a theory of 'the relevant market' which may require litigation before its meaning is clear. The Court recognized that cellophane is a part of commerce capable of being monopolized but ruled that 'cross-elasticity' of consumer demand for other products must be considered to determine the existence and effect of competition on that part of commerce alleged to have been monopolized."

The report noted finally that 99 Government antitrust cases are presently pending on the dockets of the Federal courts.

Attorney General Brownell further commented:

"Pursuant to new duties assigned by the 84th Congress, the Antitrust Division has prepared several reports to the President and Congress on special aspects of competitive enterprise. Two reports, as well as 1 supplemental report, have dealt with the economic effects of certain activities under the Defense Production Act; 1 report has been made on the competitive effects of the disposal of Government-owned synthetic rubber-producing facilities and 1 report has been made under the Small Business Act concerning problems of small business."

The Kind of Democrat I Am

EXTENSION OF REMARKS
OF
HON. BRADY GENTRY
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Monday, July 16, 1956

Mr. GENTRY. Mr. Speaker, a statesman and Member of this House, the Honorable HOWARD W. SMITH, of Virginia, delivered a notable address at the New York Herald Tribune Forum in October 1949. His subject was The Kind of Democrat I Am. This address is so timely even today that it should be read by every American who loves his country. It is as follows:

I am what may be termed a conservative Democrat. It is one whose normal habitat is south of the Mason and Dixon's line. I represent that congressional district in Virginia that was the home of George Washington, who conceived the idea of a Constitution; of George Mason, the great exponent of Democratic government who wrote the Bill of Rights; Thomas Jefferson, who wrote the Declaration of Independence and founded the Democratic Party; James Madison, the Father of the Constitution; James Monroe, author of the Monroe Doctrine, and John Marshall, Chief Justice of the Supreme Court who, by his decisions, breathed life and vitality into the Constitution.

We conservative Democrats adhere to the underlying and fundamental principles of government that guided the thinking of these and other statesmen who wrote our Constitution.

We conservative Democrats believe in certain fundamental principles embedded in the Bill of Rights.

We are unwilling to surrender our convictions to meet every real or fancied emergency that may arise in a modern world, distressed and torn by the swarms of strange ideologies sweeping over the earth.

These conservative Democrats refuse to either marry, betroth, court, or flirt with any of these foreign innovations in government.

Our convictions can be tersely stated by quoting the language of the 10th amendment to the Constitution. "The powers not delegated to the United States by the Constitution, nor prohibited by it to the States, are reserved to the States respectively, or to the people."

We therefore hold with the long-accepted theory that Congress has no power to enact legislation or expend the people's money on any subject that it is not given authority to deal with under the Constitution. These limitations of the constitutional powers are not more academic theories. In practice, they are vital to the welfare, the personal liberties, the rights of private property, and even to the social freedom to select one's associates and business affiliates.

I shall cite with necessary brevity some instances and some consequences of the failure of Congress to confine its functions to the power granted it under the Constitution.

In the field of social welfare, we have enacted the minimum wage law, forbidding the private citizen from working for a lesser wage or for longer hours than the Congress, in its wisdom, deems appropriate to his welfare; ignoring the obvious sequel that if Congress can fix a minimum wage, it can with equal power fix the maximum compensation that our supposedly free citizens may be permitted to earn.

The House of Representatives has repeatedly passed the antilynching bill, under which the Federal Government proposes to inject itself into the enforcement of the criminal laws and the police powers of the sovereign States.

The House of Representatives has, in each recent Congress, passed an anti-poll-tax bill, which undertakes to fix the qualifications of voters in the States in the face of the Constitutional provision reserving to the respective States exclusive authority to fix the qualifications of their voters.

For several terms past, we have had pending in both Houses of Congress, and enthusiastically endorsed by the platforms of both major parties, the so-called Fair Employment Practices Act, under which the Federal Government proposes, through the establishment of a hord of national investigators and enforcement officers, to dictate to the free American citizen whom he shall employ and to compel him to engage as his business associates persons with whom he prefers not to associate.

Time does not permit a detailed discussion of all the altruistic activities of the Federal Government that account in a large measure for the nearly bankrupt condition of the Federal Treasury.

Constantly rising over the past two decades, the Government debt has reached the appalling figure of $250,000,000,000—more money than any country has ever owed in all history.

The bulk of this debt comes from the necessary large expenditures of the recent war. While sound policy requires large expenditures and mounting debt during wartime, equally sound policy requires in peacetime rigid economy and reduction of the debt.

Today, in time of peace and unprecedented prosperity, our national budget is unbalanced, our debt is increasing.

In the first years following the war, our revenues were increasing and our expenditures decreasing so that in the fiscal year 1947 there was a surplus of approximately $2 billion, and in the year of 1948 a surplus of $8 billion.

But the year 1949 showed an alarming trend. There was a reduction in receipts and an increase in expenditures over the previous year, resulting in a deficit of around $2 billion, and in the present fiscal year the most optimistic predictions forecast a deficit of $5 billion.

This presents a picture that should alarm even the most unwary.

Our revenues are on the decrease, while our expenditures increase. No private business could long survive the fiscal policies of the Federal Government.

I do not believe we can continue these policies of irresponsible and reckless expenditures without ultimate disastrous results.

A few examples must suffice to indicate the trend of congressional thinking. The Congress recently passed a Federal housing bill which authorized appropriations to the extent of $18 billion, the bulk of which is to help pay house rent for one element of the people so that they may live in the kind of houses to which they would like to become accustomed. Thus, Congress takes the money of one taxpaying citizen to pay the house rent of another.

The Senate has passed, and the House almost passed, a bill to pay subsidies to those miners of certain minerals whose cost of production does not permit the profits to which they would like to be accustomed.

Last year we paid $225 million to subsidize the potato growers who, with a tempting subsidy in sight, raised more potatoes than the market could consume.

Housing subsidies, agricultural subsidies, shipping subsidies, mining subsidies, mail subsidies, and a score of other subsidies that drain the substance of our taxpayers to meet the demands of minority groups of all types.

We rob taxpayer Peter to pay supplicant Paul, if he can marshal a sufficiently potent amount of political pressure.

These briefly present some of the tendencies in Federal Government that go far beyong the functions delegated to Congress.

This Nation has been hewed out of the initiative, the ambition, sweat, and toil of our citizens, seeking by their own efforts to better their social and economic status. When we whittle away, bit by bit, the initiative and the fundamental freedoms of the people; when we teach them more and more, day by day, to depend upon handouts from the Federal Treasury to meet every actual or artificial emergency, we take away that initiative, that ambition, and the self-reliance that has made our country great.

This is the insidious way of the welfare state.

The hand that passes out the grants from the taxpayers' money becomes, in the natural course of events, the mailed fist of dictatorship. As more and more largess is distributed, so more and more restrictions and limitations are being imposed upon the liberties of the people.

Such has been the history of the growth of dictatorship.

I deeply resent these tendencies and policies, by whatever political party they are advocated. They are undermining too rapidly the freedom, the initiative, and the independence of our citizens.

Unless there is a swing back to the normal American way of life, I have grave fears for the future of our country.

I have been in Congress nearly 20 years, and watched with increasing alarm the growth of demands from pressure groups of all kinds that Congress enact legislation so foreign to the constitutional concepts of our legitimate functions that there seems no limit to the encroachment on personal liberties or the rights of the sovereign States.

What is the remedy?

There is only one.

Congress reflects the will of the people. The will of the people is transmitted to Congress by those who make the loudest noise and the most convincing threats of political reprisal.

Until and unless the great mass and majority of our thinking people awaken to their responsibility and assert their demands for sound business in Government and a return to the constitutional limits upon the functions of Congress, we shall continue the present policy until some time, some said day, we find that we have gone too far to retrace our steps.

In a democracy a people get the kind of government that they deserve.

If they think little, they deserve little. If they do little about it, they get little results.

If the present trend of Government is wrong, as I believe it is, it will continue wrong as long as a slothful and indifferent people remain impervious to, and neglectful of, the danger signals flying all about them.

Communist World Versus Free World

EXTENSION OF REMARKS
OF
HON. H. R. GROSS
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 12, 1956

Mr. GROSS. Mr. Speaker, I call attention to an editorial published recently in the Waterloo, Iowa, Daily Courier. It follows:

DOES AMERICA HAVE SYMPATHY FOR TITO?

Vice President NIXON, in an address in the Philippines, declares that the United States has "no sympathy" for nations which make "no moral distinction between the Communist world and the free world."

This clarification of the American position is to be welcomed, particularly in view of some recent indications that this country had no objections to "neutralism."

But we would also like to see this policy enforced. Secretary of States Dulles recently went before a congressional committee to plead for continuation of aid to Yugoslavia.

How can NIXON'S statement be reconciled with the stand taken by Dulles?

Mr. Speaker, the question posed by this editorial is a proper one and it ought to be answered promptly and publicly for the benefit of all our people.

The Man Who Taught Beavers To Be Eager

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Monday, July 16, 1956

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following column written by James Reston which appeared in the New York Times, Sunday, July 15, 1956, on the subject of proposed reductions in military manpower:

THE MAN WHO TAUGHT BEAVERS TO BE EAGER
(By James Reston)

WASHINGTON, July 14.—Tony Leviero of the Times, the man who taught beavers to be eager, dug out of the Pentagon this week a plan by Adm. Arthur W. Radford, Chairman of the Joint Chiefs of Staff, to cut the Armed Forces of the United States by 800,000 in the next 4 years.

Leviero said the rest of the Joint Chiefs were in "revolt" against Radford on this point, and the admiral issued a statement saying in effect, that nothing had been decided, but that there would probably be cuts and the Joint Chiefs might be divided in their recommendations.

It's a pity to raise thumping problems like this in the midle of July, but the official tendency to rely more and more on atomic an hydrogn weapons raises the two most serious and most ignored questions in Washington:

How can the United States fight a limited Korea-type war if it steadily reduces the Army and the Marine Corps to the point where they cannot fight effectively without using atomic and hydrogen weapons?

How can the United States avoid drifting into a kind of atomic isolation—specifically, how can it avoid a massive withdrawal of its troops from Europe—if the trend toward smaller conventional forces and larger atomic forces is carried on for 4 more years?

The official answer to these questions is that the administration does not intend to repudiate its commitments to its allies in Europe or elsewhere and that it does not plan to abandon its conventional, or nonatomic, forces.

LITTLE WARS AND BIG WARS

Nevertheless, the United States is already in a position where it could not block a major assault by Communist China on Formosa, Quemoy and Matsu without using atomic weapons, and it is conceded privately, but not officially, that Admiral Radford's proposals would inevitably mean withdrawing some, if not most, of the five United States divisions now in Europe.

Political Washington is not indifferent to the proposed cuts. The Democrats have been protesting loudly enough about them for months, but they are concerned primarily with the effect of the cuts on the Air Force.

Senator STUART SYMINGTON of Missouri and HENRY M. JACKSON of Washington have been concerned primarily about how to win the big atomic war, if it comes; therefore, they have been opposing the Administration's cuts because they want more atomic weapons and more intercontinental aircraft.

This is an important aspect of the problem, but it is only one aspect. There are two major problems here: How to win the big atomic war if it starts, and how to deal with the more likely prospect of a small Communist war. It is this latter problem that is largely ignored in the current public debate.

Yet it is the little war that is most likely to break out in the next decade. Almost everybody here agrees on that.

THREE HUNDRED MILLION CASUALTIES

If such a war starts over secondary territories whose loss does not jeopardize the security of the United States, the problem obviously is to try to limit those wars and fight them with conventional weapons, for even a defeat in a secondary war may be preferable to massive atomic retaliation which the Congress has been told may cost "several hundred million lives."

How a war is to be limited after the first atomic bomb is dropped nobody here has figured out. Yet the means to fight a limited war are gradually being whittled away by those who are prepared to gamble on a smaller, cheaper, modern atomic military establishment.

The military posture of the United States several years from now will be determined by the outcome of the clash of ideas. Issues could be raised on the basis of precise information about the exact nature of Admiral Radford's proposals, but by the time such precise information is available the chances are that the policy will be set and public criticism then will do little good.

It may be, of course, that the advocates of almost total reliance on massive atomic retaliation are right. Maybe the fear of being hit by our strategic Air Force will be so great that it will deter not only the big war but little wars as well.

We know, however, that our atomic supremacy and our threats of massive atomic retaliation did not keep the Communists from fighting limited wars in Korea and Indochina. We may not have covered ourselves with glory in those conflicts, but we were able to limit them.

Whether we could do so in a few years without sustantial conventional ground forces is the question now being settled behind closed doors in Washington.

Avoid Nuclear Hysteria

EXTENSION OF REMARKS
OF
HON. PHILIP J. PHILBIN
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Monday, July 16, 1956

Mr. PHILBIN. Mr. Speaker, I ask unanimous consent to revise and extend my remarks in the RECORD and include therein an article entitled "Study Shows Atom-Cattle Escaped Ills."

This timely, interesting article relates to a herd of 47 cattle, which was exposed to the first atomic tests in southern New Mexico about 11 years ago.

It shows that, while these cattle were relatively close to the blast, none of them

suffered permanent injury or unusual after effects and no genetic defects were apparent in any of the cattle's offsprings.

We all know the terrible nature of nuclear weapons. But it is of vital importance that we do not succumb to hysteria in appraising the danger and possible effects of nuclear substances. We are living in the nuclear age. We must resign ourselves as individuals and as a nation to facing up to its problems with courage and fortitude. Under no circumstance can we permit unreasoning fear and apprehension to possess the thinking of the American people and divest us of our customary ability to consider all our problems in a rational way without undue emotion and without permitting terror to upset our judgment.

Come what may, America will live if its people remain strong and courageous and fearlessly face the problems of the hour and place reliance in the Almighty and faith in ourselves. Meanwhile, let us not allow the people to be indoctrinated with fear concerning nuclear substances. Let us use them to benefit America and mankind rather than as an instrument of futile terror.

The article follows:

STUDY SHOWS ATOM-CATTLE ESCAPED ILLS

OAK RIDGE, TENN., July 15.—Eleven years ago a herd of 47 cattle was unwittingly left within about 25 miles of history's first atomic test site in southern New Mexico.

When the United States dropped the first nuclear bomb near White Sands National Monument, the frightened cattle were burned.

"Fallout" from that historic blast dusted them, leaving sores on their skin. Later the hair of these first living victims of the atomic age began to turn white, and in December 1945, they were shipped to Oak Ridge.

Scientists wanted to know how the cattle had been subjected to radiation and whether atomic radiation would have harmful genetic effects on their offspring.

Merrill Bird, of the University of Tennessee-Atomic Energy Commission Experimental Farm, who has been in charge of studying the cattle since they arrived here, now has the answer. All but 7 of the original 47 cattle have died, some of old age, some of disease not connected with the atom, and some by sacrifice to scientific study.

Bird says the answers to the two questions are:

The cattle received only surface burns from beta rays. "When an animal's skin heals the hair comes back white," Bird explained. He added that this is true of farm horses and skin broken by saddles, harness, or halters.

No genetic defects were apparent in any of the cattle's offspring. The one bull of the herd, nicknamed Atom, was mated with cows in the herd and with cows from another herd used for comparison. Inbreeding also was tried to see if a bad strain might result. So far, none has.

"There's always a possibility (of a bad strain), Bird said, "but it is far from likely."

Reconsidering Power Policy

EXTENSION OF REMARKS
OF
HON. ALBERT GORE
OF TENNESSEE
IN THE SENATE OF THE UNITED STATES
Monday, July 16, 1956

Mr. GORE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Reconsidering Power Policy," published in the Memphis Commercial Appeal of July 14, 1956.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

RECONSIDERING POWER POLICY

A year and a day after the administration admitted defeat in the Dixon-Yates deal, it has gone into court with an all-out attack on the proposal.

The Dixon-Yates contract, we are now told, was unlawful, null and void. In brief, the Department of Justice has done a complete about-face from defending the deal against all attacks to saying the document was so faulty that it never became a contract.

When President Eisenhower announced the cancellation last July, the administration attitude was that when Memphis undertook to build a municipal generating plant the Dixon-Yates method became unnecessary.

That the Memphis plant killed Dixon-Yates was true enough, in a limited way. But the full truth is that Dixon-Yates was deathly ill and the administration was delighted to have it killed. How delighted becomes apparent a year later, when the administration adopts as its own most of the serious charges made against the deal during the long fight.

For the Government to join the attack on the Dixon-Yates shenanigans just before the party conventions and Presidential campaign is added indication of how far out of line this deal was.

The specifications are that Adolph Wenzell undertook to work for both sides at the same time during contract negotiations; that the Holding Company Act would have been violated by the contract, and that action on the contract by the Securities and Exchange Commission and the Atomic Energy Committee representing both houses of Congress was faulty.

These are the specifications, but in the face of these details it may still be that justice will require the Government to repay some of the cash expenses of the Dixon and Yates companies, because this money was spent only on the insistence of high Government officials.

Behind these details is the original case against Dixon-Yates—the secrecy of the first deal—the arrangement for the Government to pay $518,000,000 for electricity from a specific company—the awkwardness of buying at Memphis power needed at Paducah—the strangeness of buying power with the Government's experienced TVA experts in big power shut out of the bargaining room—and so on at length.

The President himself urged this contract after the exposure of the deal was well under way, and some Members of Congress were beginning to hold their noses for the very reasons now adopted by the Government.

It was the President in person who introduced the Dixon-Yates plan, then without a name, in his budget address of January 21, 1954. The conferences leading to the Dixon-Yates fiasco already had been under way several weeks. The President said plans were under consideration for private power to provide 500,000 or 600,000 kilowatts more of power for the Paducah AEC plant. That would release that much TVA power for other buyers.

But if the private power for Paducah was "not consummated as contemplated * * * the question of starting additional generating units by the TVA will be reconsidered."

The President said there would be reconsideration under conditions which now have arrived. This would be a most excellent time to announce results of the reconsideration.

Health Research Bill of 1956

EXTENSION OF REMARKS
OF
HON. PHILIP J. PHILBIN
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Monday, July 16, 1956

Mr. PHILBIN. Mr. Speaker, I wish to thank and commend the committee for bringing this very desirable and needed legislation to the floor for House action. I think there can be little disagreement concerning the objectives of this bill. It will enable us to step up our medical research and to increase the number of doctors and specialists in many important fields. Of great importance is that it will provide for a much broader and more effective attack upon crippling and killing diseases.

Private agencies have long been working to combat these diseases but Government help is essential, if we are to mount a broad, determined assault upon certain diseases, which are taking a great toll among young and old people alike and which are particularly destructive and deadly. There is no question that the leadership of the Government has provided great incentive to private individuals and agencies interested in strengthening and intensifying the campaign against these diseases. Anything that the Congress can do to promote the general health and to fight against the terrible killers, which take such a toll of human life in this Nation, will be a great contribution to the permanent well-being of the Nation.

I was very glad to learn that the committee also proposes to bring in S. 849, which provides for Federal grants to institutions for research into such afflictions as cancer, polio, heart disease, multiple sclerosis, epilepsy, muscular dystrophy, nervous disorders, mental illness, arthritis and rheumatism, blindness, cerebral palsy, tuberculosis, cystic fibrosis, diabetes, and other great enemies of the public health.

This great Nation cannot afford to fall behind in the fight against disease. We owe it to this generation and to posterity to make a determined drive to eliminate the great killers, which are daily destroying the lives of our people. We must continue this work so as to develop facilities to tackle these diseases and deliver their human victims of untold suffering, and in time we shall hope to accomplish their complete obliteration.

I personally believe that the Federal Government is at last on the right track in moving with speed to control these frightful menaces to our people. We should, not only adopt this program, but we should broaden the program so that much larger sums may become available for the general objectives of promoting public health, providing more effective research, more medical, nursing care and hospitalization at reasonable cost and generally stepping up the entire tenor and tone of our public health activities, which will raise the level of health throughout the Nation and in time throughout the world.

With all my heart, I urge the Congress, not only to pass this bill, but to continue our work in this vital field, and it is a vital field, because it deals with the lives of our people. This work will result in saving a great many lives, in restoring many to good health and useful citizenry. There is a humane significance to this type of legislation, which should put it right at the top of the list of our "must" legislative objectives. Health is life itself and, if we would keep our America strong, we must vigorously combat disease, adequately treat the sick with all the resources of modern science and the Government and thus make our Nation stronger, better, and happier in every way.

Dixie Leaders Draw Up Plea for Party Accord

EXTENSION OF REMARKS
OF
HON. W. J. BRYAN DORN
OF SOUTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Monday, July 16, 1956

Mr. DORN of South Carolina. Mr. Speaker, Gov. George B. Timmerman of South Carolina recently called for southern unity before the Democratic National Convention meets in Chicago. His remarks and suggestions were misinterpreted by several high political leaders here in Washington and by the press generally. As a result of his timely advice 7 State Democratic chairmen representing 7 States met in Atlanta last week. They unanimously adopted the following statement, which appeared in the Washington Sunday Star. This statement and the good work of Governor Timmerman will contribute much toward harmony and unity of the Democratic Party in Chicago.

The statement follows:

DIXIE LEADERS DRAW UP PLEA FOR PARTY ACCORD

ATLANTA, July 14.—Here is the text of the statement unanimously adopted today by the seven Democratic State chairmen meeting here:

"We, the State Democratic chairmen, respectively, of Alabama, Florida, Georgia, North Carolina, South Carolina, Tennessee, and Virginia make the following joint and unanimous declaration:

"1. We believe in the Democratic Party as the party which has most consistently and effectively promoted and protected the welfare of the people of the United States. As officials of State Democratic parties of Southern States, we represent the section which traditionally is the most loyal of all in the Nation to the Democratic Party. It is our firm desire and sincere expectation that this situation shall continue.

"2. We do not favor any bolts, walkouts, or third parties. We believe in the two-party system.

"3. Nearly 4 years of a Republican administration with its record of broken promises to farmers and others, indifference to other domestic problems, its failure to keep up with the demands of national security, and its favoritism to big business, coupled with its total lack of interest in small business, affords the Democratic Party an opportunity for victory in the coming November election. We expect to work loyally toward that victory.

"4. We believe that the South should wield strong influence in establishing a program which can be supported unanimously at the national convention.

"5. Those who would defeat us, would first seek to divide our Democratic Party. With this in mind, we have met to consider the elements of possible division within the party, hoping to contribute toward harmony in the national convention. The difficulties arising from our differences are not insurmountable; on our part we recognize the problems and political necessities of other States; we insist that they in turn recognize ours. We urge responsible Democratic leadership everywhere to work toward this end.

"6. The Southern States are gravely disturbed over the invasion of the sovereign rights of the States and the departures from the constitutional guaranties upon which our country was founded and became great. The people of the Southern States look to and expect the Democratic Party leadership in our respective States to stand firmly, calmly, intelligently and with determined resolve to protect these rights. We believe in and endorse the proposal for southern solidarity at the Democratic National Convention. We believe that the South should work together to protect itself and to preserve the rights of the States and of the people as guaranteed by the Constitution and as contemplated by its framers. Toward this end we recommend to the proper authorities in our respective States that there be held a joint pre-convention caucus of our Governors, delegation chairmen, delegation vice chairmen and the members of the convention platform and resolutions committee.

"7. All the foregoing we propose to accomplish within the framework of the Democratic Party. We believe that party unity is important to every section of the country and is essential and necessary for Democratic victory in November. We believe that a Democratic victory is a necessity for the Nation, and that the inept Republican administration should be removed from the White House."

Bill To Provide for the Appointment of Two Additional District Judges for the Eastern District of Michigan

EXTENSION OF REMARKS
OF
HON. JOHN D. DINGELL
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Monday, July 16, 1956

Mr. DINGELL. Mr. Speaker, I have today introduced a bill to amend title 28 of the United States Code, so as to provide for the appointment of two additional district judges for the eastern district of Michigan. The situation in the eastern district has been growing steadily worse since 1950 in spite of all efforts to improve it. In 1954 an additional judge was authorized—68 Statute 8—and appointed in this district; nevertheless the large increase in pending cases which started in 1950 has continued. In 1949 the total civil cases pending were 702; in 1950 they were 1,110; in 1951, 1,023; in 1952, 1,219; in 1953, 1,001; in 1954, 1,029; and in 1955, 1,159. The backlog of private civil cases has been building since 1945, when they were 246. Now they amount to 719 cases.

Statistics are dry things and I will not burden you with a recital of all of them respecting the workload in the eastern district of Michigan. I, therefore, present seven statistical tables, prepared by the Administrative Office of the United States Courts, and request that they be printed in the RECORD at the conclusion of my remarks, as an appendix thereto.

There are now six judges in this district. These judges cannot reasonably be expected to carry the heavy burdens they have been forced to carry. There is such a thing as working a willing horse to death.

The purpose of all judicial proceedings, whether involving private litigants or the Government, is to secure justice. The Government may perhaps be in a position to wait indefinitely, but for private litigants, justice, to be adequate, must be reasonably prompt. I recognize that in many instances, considerable time must elapse before a complicated case can be duly terminated. But the failure to provide the necessary personnel for the speedy trial of a case constitutes in actuality a failure of justice: Witnesses die or move away; evidence is lost; facts are forgotten or become hazy. Justice, after a time, ceases to be justice and becomes mere chance. One might as well spin a wheel or flip a coin. The situation in the eastern district is deplorable. Litigants have to wait, in some cases almost 2 years, for their justice. The median time for cases tried in 1955, from filing to disposition, is 19.2 months per judge; the median time ranges from 6.8 months to 23.5 months, with more than half the cases falling in the upper half of this range.

The district has had its share of long and time-consuming cases. In 1954, Judge Picard tried United States against Wellman, which included 6 Communist defendants and lasted for 61 trial days. In 1955 one personal-injury case lasted 20 trial days; a criminal suit ran 22 days, while a stockholders' suit ran 80 trial days. Some of the most time-consuming cases are Government antitrust suits. The following were pending as of the first of the year: United States against Associated Patents, Inc., filed June 22, 1951; United States against General Mills, Inc., filed June 26, 1951; United States against Michigan Tool Co., filed April 14, 1953—criminal; United States against Michigan Tool Co., filed April 14, 1953—civil; United States against Wholesale Produce Buyers Association, filed September 2, 1953—criminal; and United States against Wholesale Produce Buyers Association, filed September 2, 1953—civil.

I know that this may sound sentimental but I cannot help it. A phrase from the Pledge of Allegiance keeps running through my mind in this connection: "With liberty and justice for all." I cannot help remembering the pride and determination with which I repeated that pledge in the classroom as a child and I am sure that I, in common with all of you, have repeated that pledge a thousand times, with the same determination and pride, since reaching manhood. I appeal to you, let us keep the Republic a Nation with liberty and justice for all. Do not let justice in the Eastern District of Michigan become injustice through delay. Give me your support in the passage of this bill to the end that there will continue to be justice for all.

The tables follow:

TABLE 1.—*Eastern district of Michigan—Civil cases commenced and terminated, by fiscal year, and pending at the end of each year, beginning with 1941*

Fiscal year	Total civil cases			Private civil cases		
	Commenced	Terminated	Pending June 30	Commenced	Terminated	Pending June 30
1941	989	1,254	838	695	1,006	613
1942	844	1,085	597	705	845	473
1943	504	664	437	253	499	227
1944	459	475	421	195	212	210
1945	949	687	683	206	170	246
1946	883	1,017	549	276	272	250
1947	1,069	907	711	506	349	407
1948	760	752	719	457	348	516
1949	868	915	702	485	545	456
1950	1,470	1,062	1,110	503	473	486
1951	1,250	1,337	1,023	526	479	533
1952	1,370	1,174	1,219	560	527	566
1953	980	1,198	1,001	535	508	593
1954	978	950	1,029	611	520	684
1955	1,147	1,017	1,159	651	616	719

TABLE 2.—*Eastern district of Michigan—United States civil cases and criminal cases commenced and terminated, by fiscal year, and pending at the end of each year, beginning with 1941*

Fiscal year	United States civil cases (United States a party) price and rent control cases are in parentheses [1]			Criminal cases—cases transferred are not included in "Commenced" and "Terminated" columns		
	Commenced	Terminated	Pending June 30	Commenced	Terminated	Pending June 30
1941	294	248	225	362	360	143
1942	139	240	124	574	471	246
1943	251 (64)	165	210	567	564	249
1944	264 (73)	263	211	664	590	323
1945	743(559)	517	437	722	767	278
1946	607(480)	745	299	496	568	206
1947	563(388)	558	304	498	566	154
1948	303(138)	404	203	676	615	229
1949	413(257)	370	246	990	887	334
1950	967(285)	589	624	692	814	184
1951	724(278)	858	490	715	651	239
1952	810(452)	647	653	594	583	245
1953	445(130)	690	408	667	705	224
1954	367	430	345	581	625	197
1955	496	401	440	613	556	268

[1] Price and rent control cases are separately listed from 1943 to 1953. In many of these years they constituted a large proportion of all civil cases commenced, although they required on the average a relatively small proportion of court time per case for disposition. They are included in the figure which they follow.

TABLE 3.—*Eastern district of Michigan—Cases commenced per judgeship*

Fiscal year	Number of judgeships	Total civil cases		Private civil cases		Criminal cases (less immigration) [1]	
		Michigan, Eastern	National average [2]	Michigan, Eastern	National average [2]	Michigan, Eastern	National average [2]
1941	5	198	164	139	82	----	153
1942	5	169	168	141	77	107	161
1943	5	101	158	51	58	108	174
1944	5	92	169	39	56	124	184
1945	5	190	295	41	57	135	176
1946	5	177	321	55	70	91	142
1947	5	214	271	101	109	91	134
1948	5	152	295	91	117	125	123
1949	5	180	238	97	121	187	123
1950	5	294	222	101	113	129	116
1951	5	250	204	105	111	132	106
1952	5	274	236	112	126	111	112
1953	5	196	261	107	146	106	114
1954	6	163	210	102	127	88	103
1955	6	191	212	109	126	98	104

[1] Immigration cases have been eliminated from this table because they occur in volume in only 5 districts on the Mexican border and because the average judicial time per case for their disposition is small.

[2] This column includes 86 districts for 1949 and thereafter; 84 districts before 1949.

TABLE 4.—*Eastern district of Michigan—Time elapsing in civil cases tried* [1]

Fiscal year	Number of cases tried	Median interval in months from filing to disposition		Median interval in months from issue to trial	
		Michigan, eastern	National median	Michigan, eastern	National median
1945	43	13.0	9.0	8.9	5.3
1946	56	8.3	8.9	5.4	5.0
1947	57	10.4	9.0	7.1	5.1
1948	79	8.8	9.9	5.9	5.8
1949	102	10.3	10.4	7.3	5.9
1950	114	11.7	11.2	7.7	6.7
1951	109	10.8	12.2	7.1	7.3
1952	99	14.2	12.1	8.9	7.0
1953	112	15.3	12.4	7.9	7.4
1954	90	16.9	13.5	10.7	8.1
1955	89	19.2	14.6	14.9	9.1

[1] The median time interval in months is computed for the civil cases in which a trial was held, which were terminated during the year, excluding land condemnation, habeas corpus, and forfeiture proceedings. No median interval is shown for the years 1945 through 1952 where less than 25 cases were terminated after trial. For the year 1953 and subsequent years, where there were less than 25 cases terminated after trial, a median is listed with an asterisk (*) on the basis of the number of cases terminated after trial for the last 2 years, provided there were 25 such cases for the 2 years.

Donald B. Gillies: Rich Retirement

EXTENSION OF REMARKS

OF

HON. WILLIAM E. MINSHALL

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Monday, July 16, 1956

Mr. MINSHALL. Mr. Speaker, a great friend of the Cleveland community has hung up his pickax and seven-league prospector's boots.

After almost 50 years of continuous service with Republic Steel Corp. and Corrigan, McKinney Steel Co., a Republic predecessor organization, Donald B. Gillies has fully retired from active service.

Mr. Gillies was a vice president of Republic Steel until his 75th birthday in 1947 when he was relieved of his responsibilities as an officer of the company but continued a full and active business life as a mining consultant for Republic.

In announcing Mr. Gillies' retirement, C. M. White, Republic president, hailed the service Mr. Gillies has rendered to the company in recent years.

"His work has been of tremendous value to Republic in its mining and exploration ventures," Mr. White said. "In addition, he has been a great booster of the company, a true friend of the stockholders and management, and has been a great worker for the good of the communities in which Republic's properties are located."

Mr. Gillies, who will celebrate his 84th birthday on November 4 was born in Bruce Mines, Ontario. He received his university education at the Michigan College of Mining and Technology at Houghton, Mich., from which he graduated in 1893 with the degree of B. S. and E. M. In college he was a crack football player and trackman.

Following his graduation he went to Butte, Mont., where he got a job pushing a slag pot.

For a number of years he was mining engineer for the W. A. Clark properties in Butte and also worked in the gold-silver field of Tonopah and Goldfield.

In 1906 he became associated with Corrigan, McKinney & Co. as manager of the company's Mexican mining properties.

In 1916 he came to Cleveland as vice president in charge of the Corrigan-McKinney operations in the United States and Mexico. He was made president of the company in 1932 and held that position when Corrigan-McKinney and Republic merged in 1936.

His most important contributions to Republic have had to do with raw material reserves. In 1937, he interested Republic in the iron ore possibilities of the northern Adirondacks, and revived the almost dead iron ore industry in that area. In 1938 Republic acquired and still operates both properties at Port Henry and Lyon Mountain, N. Y. They are the largest underground iron ore producers in the United States.

In the late forties he investigated and recommended to Republic the rich iron ore deposits in Liberia in which the company has acquired a majority interest and which is now in full operation. Ore from this deposit is regarded as possibly the finest in the world, yielding 68 to 69 percent iron.

Within the past 2-years, he has been instrumental in exploring an important deposit of rutile, a titanium-bearing ore in southern Mexico. Through a Mexican subsidiary, Republic has acquired this deposit and is developing it now and will have mining and concentrating equipment in operation in 1957. The Mexican Government is now building roads and installing docks.

In addition to having served as president of Corrigan, McKinney Steel Co., Mr. Gillies has also been president of the American Institute of Mining, Metallurgical and Petroleum Engineers and of the Lake Superior Iron Ore Association. He is a member of the Mining & Metallurgical Society of America and of the Cleveland Engineering Society, and honorary member of the Montana Society of Engineers, and has been for many years chairman of the river and harbor com-

mittee of the Cleveland Chamber of Commerce. For 12 years he was captain of team No. 13 of the Cleveland community fund and is a retired treasurer of the Greater Cleveland Chapter of the American Red Cross.

In 1931 his alma mater gave him the degree of doctor of engineering, and the Montana School of Mines the degree of doctor of science in 1939.

As a result of his work in Liberia he was made a Commander of the Order of the Star, Republic of Liberia.

Mr. Gillies was the second honorary member of the Cleveland Junior Chamber of Commerce, has received the distinguished service award from the Cleveland Technical Societies' Council, and was recently made an honorary member of the Cleveland Engineering Society.

A brief and fitting tribute to this great American appeared in the Cleveland News editorial of July 12, 1956.

The editorial follows:

DONALD B. GILLIES: RICH RETIREMENT

One of this city's most colorful industrialists—and one of the most gracious men to stuff feet into high boots and lead exploring parties for ore—has announced his retirement. He's Donald B. Gillies, mining consultant for Republic Steel Corp., and a rare individual who mixed into an eminently useful career the ingredients of sound business, adventure, and civic cooperation.

The age of 83 is a respectable age at which to retire but, typically, Mr. Gillies left open the door for productive activity by saying he did not expect to "take on any serious responsibilities" henceforth unless Republic needed his further services.

Behind this stocky, shrewd executive will be 50 years of giant service to steel and to Republic. Behind him will be pacesetting for engineers and lesser-geared experts on explorations in Labrador and Mexico. Behind him will be a long history of rugged jobs to help him through college, and still more rugged jobs to carry him to his stature in a hardcase industry. We wish him affectionate good luck, and never will forget his determinated remark at the age of 80, when he said he'd never played polo but he "was going to." Maybe the leisure days ahead will permit him that new achievement.

Communist World Population Increases—While Free World Population Declines

EXTENSION OF REMARKS
OF
HON. LAWRENCE H. SMITH
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Monday, July 2, 1956

Mr. SMITH of Wisconsin. Mr. Speaker, I am inserting at this point interesting information upon the world population showing in the first instance that Communist populations are on the increase and in the free world they are declining:

To show how the population of the Communist world has increased since 1939 while the population of the free world has decreased, we have compiled the following statistical information.

The total population of the Communist world in 1939 was 170,467,000—this figure was the population of Russia in 1939—while the total population of the free world was 2,329,533,000.

Since 1939 the following annexations have been made by the Soviet Union:

Country	Date of effective takeover	Population
Polish territory	1939	11,800,000
Finnish territory	1940	450,000
Estonia	1940	1,122,000
Latvia	1940	1,951,000
Lithuania	1940	2,957,000
Tannu Tuva	1944	65,000
German territory (Koenigsberg)	1945	731,000
Japanese territory	1945	433,000
Rumanian territory	1945	3,200,000
Total		23,896,000

In addition, the following countries are considered to be under Communist control:

Country	Date of effective takeover	Population
Poland	1949	26,750,000
Albania	1945	1,200,000
Bulgaria	1945	7,350,000
Rumania	1945	17,300,000
Hungary	1947	9,691,000
Czechoslovakia	1948	12,952,000
Yugoslavia	1945	[1] 17,267,000
East Germany	1948	16,582,000
China	1949	582,603,000
North Korea	1953	9,313,000
Mongolian Republic	1945	920,000
Democratic Republic of Vietnam	1954	12,000,000
Total		713,988,000

[1] Yugoslavia broke with the Soviet Union in 1948. Recently there have been indications of at least a partial reapprochement between the 2 countries. In any case, however, the governing party of Yugoslavia is Communist.

The total population of Russia today is 214,500,000. This total combined with the 713,988,000 under Communist control gives a total of 928,488,000 in the Communist world today as compared to 170,467,000 in 1939. This amounts to an increase of 758,021,000.

The total population of the free world has decreased from 2,229,533,000 in 1938 to 1,726,512,000 today. This amounts to a loss of 603,021,000.

Therefore in 1939, Red world, 170,467,000; free world, 2,329,533,000. Free world superiority of 14 to 1.

In 1956, Red world, 928,488,000; free world, 1,726,512,000. Free world superiority of 2 to 1.

In 17 years, free world ratio slipped from 14 to 1 to 2 to 1.

Sources: Information Please Almanac, 1956; World Almanac, 1956; the Statesman's Yearbook, 1955; United Nations Population and Vital Statistics Reports, April 1956.

Also as part of my remarks I am including population statistics on the so-called uncommitted or neutral nations of the world.

The question of which is or which is not an uncommitted or neutral nation is a delicate one. The problem is easy in regard to states that openly declare their neutrality, such as Sweden, Switzerland, Indian, Indonesia, and Burma. The problem gets more difficult when one considers Austria, which is legally neutral but completely pro-West. It gets even more complicated when one considers some of the Arab states—for example, Saudi Arabia, which has signed a base agreement with the United States but which is closely associated with Egypt in her current dealings with the Soviet Union.

Apparently on the basis of whether or not they have joined an alliance the New York Times lists (populations supplied by Legislative Refence Service) the following nations as uncommitted:

Afghanistan	12,000,000
Bhutan	300,000
Burma	19,242,000
Cambodia	4,100,000
Ceylon	8,385,000
Egypt	22,651,000
Eritrea	1,104,000
Ethiopia	15,000,000
India	377,000,000
Indonesia	81,000,000
Israel	1,688,000
Kashmir	4,410,000
Laos	1,360,000
Lebanon	1,383,000
Nepal	8,432,000
Saudi Arabia	7,000,000
Sudan	8,900,000
Syria	3,670,000
Trust Territory of Somaliland	1,269,000
Yemen	4,500,000
Total	583,394,000

On this basis, that of not having signed a treaty of alliance, the following (off the map) could be added:

Austria	6,969,000
Finland	4,190,000
Ireland	2,933,000
Sweden	7,240,000
Switzerland	4,923,000
Yugoslavia	17,267,000
Spain	28,751,000
Total	72,730,000
Grand total	656,124,000

It should be added, however, that Spain has signed extensive base agreements with the United States, that sentiment in Austria is pro-West, and so on.

This information has been furnished me by the Legislative Reference Service of the Library of Congress.

Administrative Costs of Selected Federal Grant-in-Aid Programs, Fiscal Year 1955

EXTENSION OF REMARKS
OF
HON. LAWRENCE H. SMITH
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Monday, July 2, 1956

Mr. SMITH of Wisconsin. Mr. Speaker, under leave to extend my remarks, I am inserting a statement on the administrative costs of the Federal grant-in-aid programs for fiscal year 1955. This information was furnished by Mr. Ernest S. Griffith, Director of the Legislative Reference Service of the Library of Congress:

Administrative costs of selected Federal grant-in-aid programs, fiscal year 1955

	Expenditures for grants	Expenditures for administration	Administrative costs as a percent of grant payments
Federal grants to the State and local units:			
Department of Agriculture:			
Agricultural experiment stations	$18,570,076	[1] $479,291	2.6
Cooperative agricultural extension work	38,395,006	[2] 1,529,284	4.0
School-lunch program	81,642,074	1,130,789	1.4
Cooperative projects in marketing	2,199,548	[3] 35,985	1.6
State and private forestry cooperation	9,781,953	534,964	5.5
Commodity Credit Corporation, value of commodities donated	110,526,388	187,941	.2
Special school milk program	22,225,009	193,237	.9
Removal of surplus agricultural commodities, value of commodities distributed within States	56,403,564	825,000	1.5
Department of Commerce:			
Federal airport program	8,353,021	[4] 1,420,000	17.0
Highway construction	596,698,509	11,246,571	1.9
State marine schools	254,781	[5] 7,000	2.7
Department of Health, Education, and Welfare:			
A. and M. colleges	5,051,500	5,800	.1
Cooperative vocational education	30,522,885	137,187	.4
School construction and survey	120,932,499	969,007	.8
Venereal disease control	630,861	14,111	2.2
Tuberculosis control	4,490,652	26,560	.6
General health assistance	9,724,462	135,664	1.4
Mental health activities	2,317,073	9,434	.4
Cancer control	2,229,950	10,614	.5
Heart disease control	1,066,335	4,966	.5
Hospital construction, survey and planning	73,158,834	94,141	.1
Construction of community facilities	1,430,568	21,734	1.5
Maternal and child welfare services	[6] 20,256,773	928,390	3.2
Public assistance	[7] 1,426,599,101	1,483,583	.1
Office of Vocational Rehabilitation	25,599,938	791,000	3.1
Department of the Interior: Wildlife restoration	16,354,098	565,850	3.5
Federal grants to the State and local units—Con.			
Department of Labor: Unemployment Compensation and Employment Service Administration	$188,898,030	$3,768,106	2.0
Federal Civil Defense Administration: Disaster relief	8,882,223	223,378	2.5
Federal Power Commission: Payments under Federal Power Act	32,775	[8] 6,030	18.4
Housing and Home Finance Agency:			
Public Housing Administration, annual contributions	60,902,966	7,413,400	12.2
Defense Community Facilities and Services	2,436,644	[8] 50,000	2.1
Urban renewal fund	33,516,114	2,213,000	6.6
Federal-aid payments to individuals, etc., within States:			
Department of Agriculture:			
Agricultural conservation program	189,148,769	22,530,580	11.9
Administration of Sugar Act program	68,109,239	1,514,184	2.2
Commodity Credit Corporation, value of dealers' certificates issued incident to supplying feed to farmers in drought-stricken areas	51,131,424	[9] 1,160,172	2.3
Department of Commerce: State marine schools (subsistence of cadets)	216,415	7,000	3.2
Department of Health, Education, and Welfare: Research and training grants:			
National Cancer Institute	8,967,410	117,325	1.3
National Institute of Mental Health	5,303,059	124,135	2.3
National Heart Institute	8,378,406	116,187	1.4
National Institute of Dental Research	431,083	13,168	3.1
National Arthritis and Metabolic Diseases Institute	4,334,228	46,766	1.1
National Microbiological Institute	2,269,722	24,176	1.1
National Neurological Diseases and Blindness Institute	4,010,807	56,882	1.4
Itemized total or average	3,331,384,762	62,172,592	1.9

[1] Includes undetermined amount of administrative costs related to $500,000 or 23 percent of payments for cooperative projects in marketing.
[2] Includes undetermined amount of administrative costs related to $800,000 or 36 percent of payments for cooperative projects in marketing.
[3] Represents costs related to $900,000 or 41 percent of total grants for this program.
[4] Includes planning and surveys of airport projects.
[5] Estimated.
[6] Includes $11,919,292 for maternal and child health services, $10,613,059 for services for crippled children, and $6,724,422 for child welfare services.
[7] Includes $920,357,772 for old-age assistance, $82,225,748 for aid to permanently and totally disabled, $387,599,650 for aid to dependent children, and $36,415,931 for aid to the blind.
[8] Represents the annual salary of 1.2 persons.
[9] Includes a small amount of administrative costs for payments to assist States in furnishing hay in drought-stricken areas.

Sources: Statistics on expenditures for the various grant-in-aid programs was obtained from the Annual Report of the Secretary of the Treasury on the State of the Finances, Fiscal Year 1955, Washington, U. S. Government Printing Office, 1956, pp. 626–640. Data on administrative costs of these programs was obtained from the budget offices of the respective Departments of Government.

Russia: Expert Testimony

EXTENSION OF REMARKS
OF
HON. ALBERT H. BOSCH
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 11, 1956

Mr. BOSCH. Mr. Speaker, it has become increasingly evident that the rising tide of discontent is becoming harder to swallow for the rulers in the Kremlin. It behooves us to ever be alert and not misled by so-called new looks or gracious smiles. The recent uprising at Poznan, Poland, should give heart to those who speak sincerely and hopefully of shaking off the yoke of communism. Let us by our actions and deeds give encouragement to these subjected peoples in their fight for freedom.

Under leave to extend my remarks, I include an editorial from the Daily News of July 16, 1956:

RUSSIA: EXPERT TESTIMONY

The West has numerous experts on communism, and several times as many persons who think they are experts. If you're looking for a topflight expert on the subject, and on dictatorship in general, you can do a lot worse than to consult Generalissimo Francisco Franco, ruler of Spain.

In the bitter 1936–39 Spanish civil war, Franco fought Communists who had been trained and were largely directed by Red fighting men from Russia.

He learned a great deal about Red strategists, tactics, and tricks. Since his victory in 1939, the Gissimo has managed Spain largely by dictatorial methods, and has kept the Communist conspiracy pinned down.

Franco, then, should have some pretty useful ideas on the meaning of the Kremlin's new look—the smiles, the trips abroad by Red big shots, the endless chatter about peace and aid for backward countries, and the yells of "Stalin was a ring-tailed so-and-so" which go to make up present-day Soviet foreign policy.

These thoughts occurred recently to Harry F. Byrd, Jr., son of the eminent Virginia Senator and publisher of a couple of Virginia newspapers. Mr. Byrd wrote to Franco and asked his opinion on the new Soviet look. In reply, he got an impressive letter setting forth the Spanish dictator's views in detail. Byrd printed the letter in his newspapers.

Briefly, General Franco is not convinced that the new Kremlin policy is sincere, peaceable, or anything else Khrushchev, Bulganin, and their cronies say it is.

Franco says that if all had been serene in Russia, Khrushchev and his pals needn't have cut loose with their campaign to make a devil out of Josef Stalin, whom they had helped make a demigod while he lived. They could have gone along doing reverence to his memory, thereby keeping Communists inside and outside Russia quiet and as happy as these people who live on hate can ever be.

AFRAID OF THE SLAVES

Instead, the present Kremlin bosses turned on Stalin's name and fame, and are currently describing him as a heel in spades plus. By so doing, they have set Communists in a frenzy everywhere, and have weakened the party in all countries except possibly Russia itself. Why did they do it?

They felt forced to do it, says Franco, "because somebody is attacking and attacking strongly." Nobody is attacking Russia from the outside. Therefore, this attack must be coming from inside the Red slave empire.

The recent uprising in Poznan, Poland, and the persistent reports of widespread unrest in Czechoslovakia, Hungary, and East Germany bear out this theory.

As Franco sees it, the Kremlin Reds are fighting for time to save their own hides from the wrath of their slaves. If they can do that, they will later renew their drive to enslave the entire world.

If Franco is right (and he is by no means the only Westerner who sees the new Kremlin look this way), then it follows that here is a golden opportunity for the West to score heavily in the cold war, if not to win it. The obvious strategy would be to let the enemy stew in his own juice.

Instead of expanding trade with the Red Empire, our side could tighten its embargoes and enlarge its no-sales lists of specific goods.

WHAT WE COULD BUT DO NOT DO

We could refuse to receive delegations of Russian farm or building experts, or Russian musicians and actors, or Russian anything else.

Conversely, we could decline to let the Kremlin murderers build prestige at home and abroad by entertaining or having their pictures taken with prominent Westerners, such as President Eisenhower, British Prime Minister Eden, French Premier Guy Mollet, et al.

If the United States wanted to get really tough, it could withdraw its recognition of Soviet Russia, extended by F. D. Roosevelt in a fit of idiocy in 1933.

Up to now, the West is using none of these devices for letting outraged human nature take its course inside the Red Empire. On the contrary, Western leaders in the main seem bent on helping the Kremlin gang save itself.

All of which leads some people on this side of the Iron Curtain to wonder uneasily what's going to happen to the West in this cold war, after all.

Katyn Massacre

EXTENSION OF REMARKS
OF
HON. RAY J. MADDEN
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Monday, July 16, 1956

Mr. MADDEN. Mr. Speaker, I submit the following item from this morning's Washington Post and Times Herald.

Millions throughout the world are asking why the Kremlin leaders in condemning Stalin did not include or mention the Katyn Forest Massacre.

The item follows:

KATYN MASSACRE

Since the Washington Post and Times Herald has always been among those American newspapers very much interested in the Katyn Forest massacre and its investigation through Congress, your readers might be interested in the following letter which this writer just sent to the editor of Moscow's Pravda:

"As the founder and former executive secretary of the now defunct American Committee for the Investigtaion of the Katyn Massacre, Inc. (chairman: Ambassador Arthur Bliss Lane) which laid the groundwork for the great American congressional investigation of the massacre of 4,243 Polish officers in the spring of 1940 at Katyn, U. S. S. R., I want to ask you why the Soviet Government and the Communist Party have not yet admitted Stalin's and Beria's guilt in this greatest military crime in history.

"The printed record of the investigation, carried out by the Select Committee To Conduct an Investigation of the Facts, Evidence, and Circumstances of the Katyn Forest Massacre (chairman: Congressman Ray J. Madden) comprises 2,437 pages, the testimony of 103 witnesses, and 229 exhibits.

"No other crime in history has ever been the object of such long and thorough parliamentary investigation as the Katyn Forest massacre. The result of this investigation was the establishment beyond the shadow of any doubt of the fact that the Katyn massacre as well as the murder of another 11,000 Polish officers on Soviet soil was the work of the NKVD.

"You would render a great service to the cause of the truth if you would admit what the non-Soviet world has already known for a considerable time.

"Mr. Nikita S. Khrushchev has already blamed Stalin and Beria for so many crimes that the non-Soviet world cannot understand why he did not include the Katyn Forest massacre in his list of crimes committed by Stalin and Beria.

"I trust and hope—and with me the whole non-Soviet world—that you will no longer deprive the Soviet people of the truth which can easily be found in the 7 volumes and 2 special reports, published by the American congressional Select Committee To Investigate the Katyn Forest Massacre in 1952."

JULIUS EPSTEIN.

NEW YORK.

Minshall Will Hold Office Conferences Throughout District

EXTENSION OF REMARKS
OF
HON. WILLIAM E. MINSHALL
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Monday, July 16, 1956

Mr. MINSHALL. Mr. Speaker, it is my privilege and honor to represent the people of the 23d Congressional District of Ohio in the Congress of the United States. This district is of great national importance because of the outstanding contribution of our fine citizens to the general welfare of our Nation. The social, cultural, and industrial wealth of this district is unexcelled, and even the most casual glance through Census Bureau statistics will give ready evidence of the high educational and personal income levels of these true Americans.

As the Representative of this great district in the Congress, I have considered it my duty not only to be well informed of their opinions through personal contact and use of opinion polls, but also to be of the greatest possible service to persons having problems dealing with Federal agencies or departments by prompt response to individual requests and personal handling of their problems.

I also have a full-time congressional office in downtown Cleveland where I can meet with people personally at any time during frequent trips back to the district when my official duties so permit. During the time I am in Washington attending to legislative and official duties, a competent secretary is in charge of my Cleveland office to assist callers and to help them with requests for aid in dealing with the Federal Government so that I can be of every proper assistance to them.

A further service to the people of the 23d congressional district in addition to radio and television programs is my Washington Report which, in newsletter form, periodically presents a concise accounting of events and opinions on Capitol Hill and encourages its readers to correspond with me to let me know their views on these happenings and issues.

Last year, I initiated the idea of holding zone conference meetings in various suburban communities in the 23d district. The attendance was most encouraging, and it gives a wonderful opportunity to serve and learn at firsthand the individual needs of the people I am privileged to represent in the Congress.

With the understanding that Congress will not be in session during the latter part of September and early October, I will again this year from September 24 through October 11 follow the same procedure and have a series of conference meetings so that every resident of this suburban district can conveniently meet with me.

I am most appreciative of the fine cooperation of the many officials who have made these meeting places available as an aid in rendering this public service.

This is the schedule:

Lakewood: Monday, September 24, 1:30 to 4 p. m., Lakewood City Hall, mayor's office, 14532 Lake Avenue.

Rocky River: Monday, September 24, 6:30 to 9 p. m., Rocky River City Hall, 21012 Hilliard Road.

Pepper Pike and Hunting Valley: Tuesday, September 25, 1:30 to 4 p. m., Pepper Pike Town Hall, 28000 Shaker Boulevard.

Chagrin Falls, Chagrin Falls Township, Bentleyville, and Moreland Hills: Tuesday, September 25, 6:30 to 9 p. m., Chagrin Falls Council Chambers, 21 West Washington Street.

Independence and Seven Hills: Wednesday, September 26, 1:30 to 4 p. m., Independence Town Hall, 6675 Brecksville Road.

Brecksville: Wednesday, September 26, 6:30 to 9 p. m., Brecksville Town Hall, 49 Public Square.

Bedford, Bedford Heights, Oakwood, and Walton Hills: Thursday, September 27, 1:30 to 4 p. m., Bedford Police Station, 683 Broadway.

Maple Heights: Thursday, September 27, 6:30 to 9 p. m., Maple Heights City Hall, Mayor's Office, 5353 Lee Road.

Broadview Heights and North Royalton: Monday, October 1, 1:30 to 4 p. m., Broadview Heights Town Hall, 8938 Broadview Road.

Parma Heights: Monday, October 1, 6:30 to 9 p. m., Parma Heights Town Hall—new one, if completed.

Beachwood and Woodmere: Tuesday, October 2, 1:30 to 4 p. m., Beachwood Town Hall, 25511 Fairmount Boulevard.

Shaker Heights: Tuesday, October 2, 6:30 to 9 p. m., Shaker Heights City Hall, Mayor's Office, 3400 Lee Road.

Westlake: Wednesday, October 3, 1:30 to 4 p. m., Westlake Town Hall, Dover Center and Hilliard Road.

Bay Village: Wednesday, October 3, 6:30 to 9 p. m., Bay Village Town Hall, 350 Dover Center Road.

Berea: Thursday, October 4, 1:30 to 4 p. m., Berea City Hall, Mayor's Office, 47 East Bridge Street.

Fairview Park and Parkview: Thursday, October 4, 6:30 to 9 p. m., Fairview Park Town Hall, 20785 Lorain Road.

Brook Park: Monday, October 8, 1:30 to 4 p. m., Brook Park Village Hall, Council Room, 5950 Eastland Road.

Middleburg Heights: Monday, October 8, 6:30 to 9 p. m., Middleburg Heights Town Hall, 15700 East Bagley Road.

Warrensville Heights, Warrensville Township, North Randall, and Orange: Tuesday, October 9, 1:30 to 4 p. m., Warrensville Heights Village Hall, mayor's office, 4770 Warrensville Center Road.

University Heights: Tuesday, October 9, 6:30 to 9 p. m., University Heights Police Department, 2304 Warrensville Center Road.

Olmsted Falls, Olmsted Township, and Westview: Wednesday, October 10, 1:30 to 4 p. m., Olmsted Falls Village Hall, 7987 Columbia Road.

North Olmsted: Wednesday, October 10, 6:30 to 9 p. m., North Olmsted City Hall, mayor's office, Dover Center Road.

Cuyahoga Heights, Brooklyn Heights, and Valley View: Thursday, October 11, 1:30 to 4 p. m., Cuyahoga Heights Village Hall, 4863 East 71st Street.

Solon: Thursday, October 11, 6:30 to 9 p. m., Solon Village Hall, council chambers, 6315 S. O. M. Center Road.

No appointments are necessary for these conferences, and I urge individuals or groups to meet with me on the date and at the place most convenient to them. Every resident of the 23d district is cordially invited to talk over problems of national concern, to discuss personal problems with the Federal Government, or to just chat and get better acquainted. With the knowledge thus obtained, I know it will better enable me to represent the residents of the 23d district in the Congress of the United States.

Hells Canyon Project

EXTENSION OF REMARKS

OF

HON. GEORGE M. RHODES

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 11, 1956

Mr. RHODES of Pennsylvania. Mr. Speaker, the Hells Canyon Dam project is of vital importance because of the need for maximum use of our natural resources for the benefit of all our citizens. Under leave to extend my remarks, I include the following statement by Mr. Leo Goodman, secretary of the CIO National Committee on Atomic Energy, Power, and Resources Development, which he presented last year to the Senate Interior and Insular Affairs Committee in support of the Hells Canyon project:

STATEMENT OF LEO GOODMAN, SECRETARY, CIO NATIONAL COMMITTEE ON ATOMIC ENERGY, POWER, AND RESOURCES DEVELOPMENT, TESTIFYING IN BEHALF OF S. 1333, PASCO, WASH., HEARINGS OF THE SENATE INTERIOR AND INSULAR AFFAIRS COMMITTEE, APRIL 5, 1955

My name is Leo Goodman, Washington, D. C. I am secretary of the CIO National Committee on Atomic Energy, Power, and Resources Development. I am here in support of S. 1333, which will authorize the construction, operation, and maintenance of the Hells Canyon project by the Bureau of Reclamation.

My union has not only endorsed Hells Canyon Dam and the principles of full development it embodies, but has been one of the most active supporters of the gallant fight the people of this region have engaged in since 1953 to protect this tremendous river resource from being handed over to the Idaho Power Co.

A region, a Nation, or an entire civilization may forget it, but land and water condition the material limits of that civilization, and the extent of its ability to provide a best possible existence for the people who live there. Neither land nor water are limitless. Therefore, the responsibility of people is to plan, use, and conserve, so that what has been provided by nature is not only brought to full production but is not wasted or depleted in the process.

Here in the Pacific Northwest is a young region with a vast and still largely untouched natural resource that is poured out in prodigal waste into the Pacific Ocean every year. I am speaking of the Columbia River system, which holds nearly 40 percent of the hydroelectric resources of the United States.

From the standpoint of feasible projects, this river and its tributaries contain more than 60 percent of the Nation's hydro potential.

But to the present only 13 percent of the more than 30 million kilowatts on the Columbia have been harnessed. Eighty-seven percent of its falling waters are still wasted.

At the same time, the projects which have been built by the Federal Government to generate hydroelectric energy, control floods, aid in navigation, and irrigation of lands have demonstrated what can be accomplished for the welfare of both region and Nation, by what has already been accomplished.

Here in the State of Washington the industrial development has been phenomenal since the early days of World War II, when Grand Coulee and Bonneville Dams, bitterly opposed by the same private power companies which now oppose Hells Canyon, came on the line with the low-cost power that aided so formidably in our fight to save democracy.

The communities in this very area where we meet today are in the main the net results of this kind of development. The population increases which have taken place, the new industries, the thriving towns and cities, the great atomic plant at Hanford, are all monuments to the wisdom of a policy of resource development which must be continued and accelerated.

Perhaps some of you do not understand fully the relationship between Hells Canyon and your own area downstream. In the debate that has raged so long on this issue, it may have been lost to sight.

I am talking about the importance of upstream storage to downstream progress. I am talking about the vital role that the upstream storage at Hells Canyon will play in aiding the downstream areas in obtaining a firm supply of year-around power from their run-of-river dams like Bonneville and McNary, the Dalles, and, hopefully, John Day and the four lower Snake projects of the Corps of Army Engineers.

Right now I have learned that the Bonneville Power Administration has been forced to curtail interruptible power deliveries to industrial customers. This has been brought about by extremely low flows on Columbia River for the most part, and to some degree by unseasonable cold.

I recall the reports of the winter of 1952, where the water carried by the Columbia, dropped to a point where it was necessary to resort to a power brownout, suspension of interruptible power deliveries, and standby steam generation at excessive rates. I have read that this forced aluminum plants to shut down, threw hundreds of people out of work including members of CIO unions, reduced production of products essential to both defense and peacetime uses.

My question is this: Why is this necessary? Because there is a lack of up-stream storage which will fill in these periods of low flow—Hungry Horse Dam in Montana is already alleviatingg this situation to a degree. Upstream on Snake River is another project which, except for the obstruction of the Idaho Power Co., could have been under construction 3 years ago, preparing to store nearly 4 million acre-feet of water from the Snake River during the heavy spring and early summer runoffs when the Columbia is likewise at its peak. Then in the fall and early winter months, the gates would open at Hells Canyon Dam, and the wheels on the downstream generators would continue to turn out additional amounts of power instead of being obliged to lessen production, or even be turned off.

If the lower Columbia area is every to escape this threat, which as your liberal and distinguished senior Senator, Mr. MAGNUSON, described on the floor of the Senate when he spoke out for Hells Canyon, as a sword of Damacles hanging over the entire region, then it is only by going upstream that it can be done.

I am well aware of the interest of Washington and Oregon in the John Day project. I am well aware of the interest of Washington and northern Idaho in the four lower Snake River dams—Ice Harbor, Lower Monumental, Lower Granite, and Little Goose. All these have been authorized by the Congress.

But unless there is substantial storage such as is provided by Hells Canyon project to release through the turbines of these run-of-river projects, their power production will be substantially reduced. In the case of the four lower Snake projects, testimony by a representative of the Corps of Army Engineers in hearings last year, threw a grave shadow on their economic feasibility without large upstream storage releases to firm up their power output.

Of the 1,124,000 kilowatts of prime power which Bonneville Power Administration experts estimate would be added to the Federal Columbia River Power System by the construction of Hells Canyon, 436,000 kilowatts, or about 39 percent, come from the release of impounded waters through 8 downstream dams, in operation, under construction or authorized.

BPA estimates, for example that the four authorized Lower Snake dams without Hells Canyon storage would produce 520,000 kilowatts of prime power. With Hells Canyon this power production would be increased to 769,000 kilowatts, or about 48 percent. John Day project, authorized, would gain 56,000 kilowatts from Hells Canyon storage.

With this in mind why should this kind of storage represented by Hells Canyon 3,880,000 acre-feet, be sacrificed to the plan proposed by the Idaho Power Co. to provide only 1 million acre-feet of storage? How do you think the lower Columbia regions will benefit substantially from this? One million acre-feet of storage is not as effective as nearly 4 million.

Are you convinced that the Idaho Power Co. will operate its projects the way the Federal Government does, as part of a region-wide power system, a single integrated unit of many projects interconnected by a region-wide transmission gridback system? There is no assurance that it will do so, as it serves just one service area—its own, and will send you only its surplus dump power.

Do you think that what power you may receive as surplus to Idaho Power's needs will be the kind of 2 mill power as sold from the Bonneville system, and that it will not provide a tendency to raise the general power rate in the region? Not only that, 5, 6, and 7 mill power will not attract new industries into this region and stimulate existing industries to expand. Do you assume that Idaho Power will not ask for financial payment from the Federal Government for additional downstream power generated by release from its storage dam, and that this will not have some effect on Federal power rates?

We are facing an issue that cuts to the heart of the economy of the Pacific Northwest. We shall grow out here on an accelerated program of new starts, like Hells Canyon to control the river, to generate abundant supplies of cheap electric energy, and to provide the only basis now existing by which major industries can be persuaded to locate here.

We have tried the private power approach of scarcity at high rates. It doesn't work

when there are great sites along our river like that at Hells Canyon which demand the utmost in engineering skills and vision to turn the river to work for the maximum, not a partial development, inefficient, wasteful, at high cost to the consumers of energy, and with the other benefits, such as reclamation and recreation entirely or almost entirely ignored.

Through the Federal Government in pursuance of its lawful powers of developing our navigable streams which belong to all of us, the Pacific Northwest has taken a first major step forward in overcoming the blind greed and obstruction of the power lobby in throwing dams across the Columbia and its tributaries at Hungry Horse, Grand Coulee, Bonneville, Chief Joseph, McNary, and The Dalles.

We in the labor movement stand solidly with the farmers in desiring to protect and best utilize the State's water resources. We have looked behind this propaganda attack of the Idaho Power Co. which is raising the specter of the loss of Idaho's water in downstream power purposes. We believe this charge is absurd and without foundation. We have yet to find any instance of a public power development depriving upstream water users of water for consumptive purposes. We believe that the provisions as incorporated in S. 1333 adequately protect Idaho's right to upstream depletion for future expansion.

But the job is only in its beginning. The Northwest is within the space of a few years to pass into a power shortage. By the mid-1960's it will reach such proportions that it will constitute a major block to its continued expansion. It is irresponsible to await the shortage to develop before doing anything about it.

We must plan now, and the situation is such in the Northwest that the major utility responsibility should be assumed by the Federal Government. It has a responsibility to the REA's, the public utility districts, the industrial customers, yes, even to the private power companies which depend in large measure downstream upon low-cost Federal power for their ultimate customers.

Since 1949 there has been a joint comprehensive plan to bring new major projects into being. This is the plan agreed upon by the Bureau of Reclamation and the Corps of Army Engineers in 1949. It is probably the most exhaustive engineering and economic study of land water and people that has ever been drawn together in one whole. Hells Canyon was and is a most important upstream storage element of that plan.

I am aware of no such study or approach to the problem of developing the people's resources in this great river basin undertaken by any power company nor combination of power companies. They are just not constituted to do such a thing. This is a matter for the people and their Government to decide upon in the best interests of the region and the Nation. They must never allow such a power to pass from them and into the hands of private monopoly by default, by being blinded by self-serving propaganda, or by being stampeded into accepting under the duress of expediency anything less than the maximum development of the water resources of the Columbia.

The stake we of the CIO hold in this is great, both as working people and as citizens. The labor movement is interested in jobs, high wages, good working conditions. It is also interested in working to its utmost to help achieve a continually expanding economy whereby a growing labor force will always find opportunity for employment, buy goods from merchants and farmers, educate its children, and pay its share of taxes to maintain Government.

The Employment Act of 1946 established the policy of the Federal Government as being that of using all of its resources, in cooperation with those of farmers, labor and business, to achieve maximum employment at high wages.

Here is one dramatic instance of the need for the Federal Government to act in the full spirit of that policy and under the powers of the Congress derived from the Constitution and the various statutes establishing over-all programs to carry forward the 50-year policy of Federal leadership and responsible action in developing our rivers.

On behalf of the CIO, I once more urge that S. 1333 be enacted into law with the utmost speed, and the great Hells Canyon project authorized for immediate construction.

Coattail Riding

EXTENSION OF REMARKS
OF
HON. A. S. MIKE MONRONEY
OF OKLAHOMA
IN THE SENATE OF THE UNITED STATES
Monday, July 16, 1956

Mr. MONRONEY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD, a humorous article entitled "Getting in Practice for Coattail Riding," written by Malvina Lindsay, and published in the Washington Post and Times Herald of July 14, 1956.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

GETTING IN PRACTICE FOR COATTAIL RIDING
(By Malvina Lindsay)

I wasn't surprised to see that Senator Whoof had added an "I Like Ike" hatband to his "I Like Ike" necktie, lapel button, and sun glasses.

"How's your campaign coming?" I asked.

"We're in. It's a landslide."

"But you still have strong opposition."

"So what? Just as soon as Ike shows up on my circuit it's—poof." He gestured into the air.

"You're counting on his coming into your State?"

"Sure. Didn't he say he'd make a vigorous campaign? He's in better shape than ever before—can lick his weight in wildcats. You'll see. He'll go out and get a Congress to back him up."

"By the way, what's the Senate going to do about foreign aid?"

"You mean that globaloney stuff? Nothing, if I can help it. Why should Uncle Sam be a Santa Claus, a sucker, pour his money down a rathole, give away his shirt to foreigners who don't like him, sell the American taxpayer down the river——?"

"Please, just a minute. Isn't the President asking the Senate to restore the cut in foreign aid? Hasn't he put that first on the things he wants this Congress to do? Are you going to oppose him?"

"Me oppose President Eisenhower? Look at this." Senator Whoof opened his brief case and handed me a sheet of paper. "That's the statement I sent to every newspaper, radio, and TV station in my State."

It began: "Now that Dwight D. Eisenhower, that great American, that God-fearing leader, that immortal war hero, that peerless man of peace, will again lead his party——"

I stopped. "I'm a little confused," I said.

"All this confusion will be cleared up once we get a new Congress."

"But what's this one going to do about the President's program? Any chance in the Senate for a new school construction bill?"

"Not a ghost. It's pure unadulterated socialism."

"But the President wants something done."

"You mean they do." Senator Whoof gave me a significant look. "I'm not saying the President himself isn't trying to do the right thing but——" He stopped, compressing his lips tightly. "Now don't misunderstand me," he went on, "I think President Eisenhower is the ablest man in this country, the greatest leader in the world. Look at this."

The Senator drew from his briefcase a book of I Love Ike seals. "I send 'em to my women constituents," he said.

"Do you think anything will be done to modify the McCarren-Walter Act?"

"Why should anything be done? We have too many people with accents in this country already."

"But the President has asked that its inequities be removed—especially the fingerprinting provision."

"Dangerous. Ridic—I mean the President is a great man, a great personality, but—well, he sometimes gets unsound advice. You see they——" The Senator stopped again and tightened his lips. "Here, let me give you a present," he said, handing me an I Like Ike pencil. "Just ordered a big batch to hand out in my campaign."

"Any chance for any civil-rights legislation in this Congress?"

"Not an iota, if you ask me. People in this country have too many rights already. What they need is more direction. Look at youth. Women."

"But I understand the President has said he is asking very little on civil rights and that what he is asking he expects to get."

"Just let him try—no; I mean that of course we all want to back up the President, but Congress is just going to be too busy to get around to everything."

"You think this Congress will pass any bills?"

"Sure. It'll pass the pork—I mean the rivers and harbors appropriation and—well let's see * * * Say, this is off the record, but some of us are trying to get the Bricker amendment up again."

"So you can limit the President's treaty making powers?"

"No. No. We've just got to call a halt on all these foreign entanglements, this United Nations stuff."

"But I hear the President's going to campaign on world cooperation——"

"That doesn't mean a thing—what I mean is, that as far as I'm concerned, there's only one issue in this campaign. It's that the future of this country, the destiny of mankind, the fate of the universe depends on the election of Dwight D. Eisenhower."

Radio Address by Guy O. Stone, National Vice Commander of the American Legion, at Managua, Nicaragua

EXTENSION OF REMARKS
OF
HON. WALTER F. GEORGE
OF GEORGIA
IN THE SENATE OF THE UNITED STATES
Monday, July 16, 1956

Mr. GEORGE. Mr. President, I ask unanimous consent to have inserted in the Appendix of the RECORD a radio address by Hon. Guy O. Stone, of my State, who is national vice commander of the American Legion, delivered on July 4, 1956, at Managua, Nicaragua. I think it is an address of some considerable interest, though brief. Mr. Stone was, at the time, on an official tour of the American

Legion posts in Central and South American States.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

RADIO ADDRESS BY GUY O. STONE, NATIONAL VICE COMMANDER OF THE AMERICAN LEGION, ON JULY 4, 1956, OVER RADIO MANAGUA, MANAGUA, NICARAGUA

Thank you Mr. Ambassador (and Mr. Foreign Minister).

It is truly a great honor and genuine pleasure for me to be in this beautiful country and a particular honor to be asked to speak a few minutes here today in the company of such distinguished persons as his Excellency Oscar Sevilla Sacasa, Minister of Foreign Affairs of Nicaragua, and the Ambassador of the United States, the Honorable Thomas E. Whelan, of whom we in the United States are very proud.

Many people who have visited your country have told me that it is among the most hospitable of all the countries in Latin America and even my short visit has certainly justified this statement. The friendship of this country is more than a superficial one, as it is well-known in the United States that Nicaragua was one of the first countries in Latin America to declare itself on the side of the United States and its allies following the entry of the United States into World War II.

I would also like to pay personal tribute and that of the American Legion to those Nicaraguans who served in the Armed Forces of our country during World War I, World War II, and in Korea. These Nicaraguans gave the utmost proof of their firm belief in the principles so clearly enunciated in the Declaration of Independence, of which we celebrate the 180th anniversary, today. They joined with the young men of our country and other freedom-loving nations of the world in defense of the principles of individual liberty.

We are believers of firm cooperation among the Americas. On an occasion such as this, when we pay tribute to our great leaders, we also have in mind the magnificent work done by the great men of Latin America—Bolivar and the others—who led the fight for the freedom of their countries.

We in the American Legion are carrying out a great program which we term a program of Americanism. The principles which we endeavor to have the youth and citizens of our country believe in and support are of such a universal nature that they can be applied to any free and democratic nation if that nation has a firm belief in God.

There are several cardinal principles which underlie our whole Americanism program which is intended to develop more patriotic citizens and civic responsibilities.

Americanism is founded upon faith in, and devotion to God and country; upon the principles that right makes men; upon the value and dignity of the individual; upon the recognition of the importance and value of his spiritual, cultural, and material well-being and pursuit of happiness. In the historic document that laid the foundation for our liberty it is stated that man is entitled to life, liberty and the pursuit of happiness.

Communism is a Godless philosophy of life; it denies the existence of a supreme creator; it seeks to instill the mind of men over the will of God; it seeks to degrade the human being by making him a puppet of the state.

Communism denies the dignity of the individual; it glorifies a police state; to keep our countries strong in their belief in God we must defeat the evil influences of the Godlessness and materialism of communism; we must go back to God; go back to the Bible, back to prayer for understanding for ourselves and our families.

We believe that a true demoracy must be based on a firm concept of moral values or it is doomed to fail.

Before we will have universal peace, there must be a big change in the hearts of men everywhere—they must stop thinking in terms of fear and hate, and greed; they must begin to think in terms of love and trust and charity.

The whole world will have to learn to accept the concept that love and friendship makes life more worth living than the jungle law of survival.

All human beings must accept the importance of the rights of the individual as a basis of the free way of life.

S. 3116

EXTENSION OF REMARKS
OF
HON. TORBERT H. MACDONALD
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 11, 1956

Mr. MACDONALD. Mr. Speaker, it is my understanding that within the next few days the House will consider S. 3116, the International Cultural Exchange and Trade Fair Participation Act of 1956.

I am particularly interested in the fact that S. 3116 will help us to continue to send our top athletes and athletic teams overseas. The very favorable impact that has been made on foreign public opinion as a result of the appearances by these outstanding American athletic groups attests to the success of the program.

Reports from the foreign press and from our Embassies overseas constantly refer to the warm reception accorded American athletes and the value of their visits abroad in winning friends, respect, and understanding for the United States. An American track and field team recently toured African cities. Our consul general from Lagos, Nigeria, reported that he could recall no other event which resulted in such spontaneous outburst of good will as the visit of these young people to Lagos. A report from our consul general at Accra in the Gold Coast states that in less than 24 hours our young athletes had made more friends than any ordinary man can have in a lifetime. Never before has there been such a mad rush for autographs and addresses than there was at the Accra Sports Stadium when the Americans defied the burning heat to train before a packed crowd. From the Embassy at Liberia the report states that this was perhaps the most popular visit of Americans to Liberia. Not even during the President's inauguration did as many pictures appear in the press in a single week as appeared on the American athletes. The genuine friendliness, sincerity, and willingness to help displayed by the Americans won the hearts of all with whom they came in contact.

The American Embassy at Colombo, Ceylon, reported that the American tennis team which participated in the All-Asian Tennis Tournament in India last winter and toured neighboring countries captivated the crowds and drew literally pages of publicity in all of Colombo's nine daily newspapers. The Ceylon Sunday observer put it this way, "The American tennis stars came, conquered, and left Ceylon." As for the local assessment of their impact, the press, as cited above, gave them superb treatment and coverage while their personalities and friendliness charmed literally hundreds of people from all walks of life.

Comments on the visit of an American swimming team to Guatemala City stated that the team members without exception proved to be the finest of sports ambassadors, and the impression they left with Guatemalan athletes and the public in general will be a lasting one. The visit of a touring American swimming team in Vienna, Austria, was a complete and unqualified success which resulted in a considerable amount of favorable publicity for the United States among parts of the population which usually are not reached by other activities. Coverage was extensive in the press, including Communist newspapers, on the radio and television, both before and after the events.

I wholeheartedly support this legislation and urge the House to take favorable action on S. 3116.

Polish Revolt

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Friday, July 13, 1956

Mr. MULTER. Mr. Speaker, I am pleased to call the attention of our colleagues to the following excerpts from Drew Pearson's column of July 12, 1956, as it appeared in the Washington Post and other papers:

POLISH REVOLT

Here is some unwritten history regarding a previous revolt behind the Iron Curtain which may point to ways of helping the people of Poland today.

In June 1953, immediately after East Berlin workers tackled Red tanks with bottles and bare hands, crying for food, I suggested to Jimmie Riddleberger, then in charge of the State Department's German desk, now Ambassador to Yugoslavia, and to Gen. "Beetle" Smith, then Under Secretary of State, that United States food surpluses be given to the hungry rioters by priavte American service groups.

The Lions, Kiwanis, Rotary Clubs, I suggested, together with the American Legion, VFW, AMVETS, junior chambers of commerce, would probably be delighted to help finance the purchase and distribution of surplus food. If the offer was turned down, then East Berliners, with no boundary to worry about, could come across to West Berlin and pick up the food themselves.

I also figured this proposal would be right down the Eisenhower administration alley because it had been talking so much about private enterprise and keeping the Government out of private enterprise.

LIONS CLUBS READY

It so happened that te International Lions Clubs were holding their annual convention in Chicago at that time and they authorized

me to make a concrete proposal for the purchase of surplus wheat and butter which Secretary Benson had running out of his ears.

So I went down to see Secretary Benson. We brought in five of his top executives. They were polite, cordial, noncommittal.

"The executives of the Lions International," I explained, "are ready to buy your wheat at the same support price you paid for it—$2.60 a bushel—and butter for the support price you paid—60 cents a pound. They would like to take delivery immediately—this week in West Berlin. The State Department informs me that you already have a large supply there so that all you need do is to send a cable to release it there."

I stressed the need for speed, the fact that now was the psychological time to show that individual Americans were eager to help individual rebels against communism. I suggested that it was much better to have groups of Americans operate than the Government, because East Germans distrusted governments. They did not distrust people.

"Will you write me a letter about this?" requested Secretary Benson.

"I have already written one," I said, and pulled it out of my pocket.

Days passed—a total of 3 weeks. No word from Benson. Finally, Riddleberger phoned to say that he had taken $15 million out of the State Department budget to offer food to the East Berliners.

The State Department drafted an official announcement and President Eisenhower signed it. It was a fine gesture, and good politics here at home. But part of the bloom was off the rose. By that time it was July. The riots were over. And the official announcement by the United States Government was interpreted abroad as a pure propaganda gesture. It won us no friends.

BALLOONS TO POLAND

This unwritten history is told now for one reason only—the recent revolt in Poznan, Poland.

This time the State Department, acting more wisely, had the American Red Cross offer to send food to the Poles. The Red Cross, though organized under the wing of the United States Government, is not the Government. The offer was turned down.

However, it is still not too late for groups of patriotic Americans to offer food to the Poles. If the offer is turned down, it is still not too late to send the food in small packages by balloon. The Crusade for Freedom has been sending balloon messages into Poland ever since we inaugurated the idea from West Berlin in the summer of 1951.

Ohio GOP To Raise $5 Million for Campaigns

EXTENSION OF REMARKS
OF
HON. CHARLES A. VANIK
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Monday, July 16, 1956

Mr. VANIK. Mr. Speaker, please permit me to call the attention of the House of Representatives to the high cost of political campaigns. The Republicans in Ohio are reportedly raising $5 million to conduct the 1956 national, State, and local campaigns. The Ohio Republican finance committee reportedly has a goal of $4½ million while another half million is being raised by the Republican senatorial finance committee to aid in the reelection of a Republican Senator.

How can this much money be contributed for the purpose of the current political campaign without the contributors' receiving something of value in return? Under these circumstances, it is almost impossible for a person of modest means to consider a political career unless he wishes to ally himself to the interests and the causes sponsored by those who make large contributions to the political campaign effort. If something is not done soon to limit campaign contributions and campaign expenditures, democracy may be on the way out in America.

The following is the newspaper article on the subject prepared by Richard L. Maher, politics editor of the Cleveland Press, under date of Friday, July 13, 1956:

OHIO GOP TO RAISE $5 MILLION FOR CAMPAIGNS

(By Richard L. Maher)

Ohio Republicans will kick in nearly $5 million for the 1956 national, State and local campaigns.

About 25 percent of the huge war chest to reelect President Eisenhower, to elect C. William O'Neill as governor and to win elections on the county level will come from 3 northern Ohio areas—Cleveland, Toledo and Akron.

The Ohio Republican finance committee reportedly has a goal of close to $4½ million. Another half million is being raised by the Republican senatorial finance committee to aid in the reelection of United States Senator GEORGE H. BENDER.

It is reported that the Bender campaign will cost $650,000, with the senatorial finance committee raising $500,000 and the Republican State committee dropping in the other $150,000.

Republican headquarters has allocated about $150,000 for O'Neill's campaign. This is in addition to money raised by O'Neill and his backers on a State and county level.

The Ohio Republican finance committee, through which passes all money for local, State and national campaigns, operates through a series of local committees, such as, the Cuyahoga-Lake finance committee.

The Cuyahoga-Lake committee has a quota of $700,000. The Lucas-Wood committee (Toledo) has been told to pick up $335,000. The committee for Summit (Akron) and surrounding counties must raise more than $300,000.

About $500,000 is to be raised in the Cincinnati area.

Money raised by the committees and sent to the State finance committee is divided 3 ways; one-third to local campaigns, one-third to State campaigns and one-third to national. Out of the latter is paid cost of operating the local level finance committees, and some expenses of the local party committees.

Outside of the senatorial committee, it is understood that about $1½ million will be allocated for the State campaign, and $1½ million for local campaigns in the 88 counties.

The money is being raised by a professional fund raising group on a solicitation basis. Quotas are being assigned selected areas, and teams of workers within those areas are contacting business and professional men, industrialists and others who have given to GOP campaigns in the past.

A "suggested" gift for the campaign is mentioned to each person contacted.

In addition a plan is being worked out whereby small givers—those who put in $5 to $25—will be approached to help out in the fund raising.

The Beginning of Life Insurance in America

EXTENSION OF REMARKS
OF
HON. FRANK CARLSON
OF KANSAS
IN THE SENATE OF THE UNITED STATES
Monday, July 16, 1956

Mr. CARLSON. Mr. President, January 11, 1959, will be the 200th anniversary of the beginning of life insurance in America. During this 200-year period, life insurance has become a part of our American way of life. It gives peace of mind in the form of security to millions of our people and it gives stability to our entire economic picture.

I urge that the Post Office Department begin planning at the present time for the issuance of a stamp commemorating the 200th anniversary of the beginning of life insurance in America.

It is interesting to note that the life insurance business began in America when on January 11, 1759, Thomas and Richard Penn, successors to their father, the distinguished Quaker, William Penn, granted a charter for a company sponsored by the colonial Presbyterian Synod.

It was from this humble beginning that life insurance has grown to a program where we have billions of dollars of individual protection in the Nation.

The real purpose of the incorporation of the first life insurance business was to provide definite financial benefits, on the death of a clergyman, to his widow and children. The first company was sponsored by the Colonial Presbyterian Synod.

Dr. Alexander Mackie, who is president of the Presbyterian Minister's Fund for Life Insurance, has prepared a memorandum on the early history of life insurance, and I ask unanimous consent that his statement be printed in the Appendix of the RECORD.

There being no objection, the memorandum was ordered to be printed in the RECORD, as follows:

THE BEGINNING OF LIFE INSURANCE IN AMERICA

The life insurance business began in America when on January 11, 1759, Thomas and Richard Penn, successors to their father, the distinguished Quaker, William Penn, granted a charter for a company sponsored by the colonial Presbyterian Synod. The object of the corporation was to provide definite financial benefits, payable on the death of a clergyman, to his widow and children. These benefits were in proportion to the annual contribution (or premium, to use modern terminology) paid by the clergyman during his lifetime. These benefits were payable only to the families of such clergymen as participated in the plan by making an approved application and by paying the fixed annual premium. At first the premium was the same for ministers of all ages with the exception that if and when the insured married a second time, he would pay in the year of his remarriage alone, a double premium. About 1792, changes were made in the plan and premiums were stipulated according to the age at which a minister was insured. These premiums, effective in 1792, were calculated according to a mathematical formula de-

vised by Dr. Robert Patterson, vice-provost of the University of Pennsylvania and a mathematician of note. Dr. Patterson succeeded Elias Boudinot as Director of the United States Mint in Philadelphia. Patterson's leadership as an authority on mathematics and in the general area of the physical sciences, was recognized by his election to the Presidency of the American Philosophical Society. The formula used by Patterson to compute his life insurance premiums was based on an assumption of interest at 6 percent and on the expectancy of life at a given age.

In his calculations, Patterson had the benefit of what is generally regarded as the pioneer modern actuarial research of Richard Price, a dissenting English clergyman and a friend of Priestley, the discoverer of oxygen. Price had written several articles for the Royal Society which appeared from time to time in the published "Philosophical Transactions" of the Society.

He summarized his studies in life insurance in his epoch-making book on Reversionary Payments which went through several editions. Price was in correspondence with the American Philosophical Society.

While Patterson's table of premium rates represented an advance on the original rates charged by the American corporation, these original rates also represented a careful study in mortality and the scholarly application of mathematical principles.

The charter for the corporation was secured largely through the efforts of the Honorable William Allen, chief justice of Pennsylvania and a member of the committee appointed by the Presbyterian Synod. Allen was a man of great standing and influence in Pennsylvania and colonial affairs in general. He was on terms of particular social and political intimacy with the Penns.

Associated with him in obtaining the charter were the pastors of the First Presbyterian Church in Philadelphia, the Reverend Robert Cross, and the Reverend Francis Alison. Cross who was growing old, took only a passive part in the effort. The whole plan for the insurance company was evolved by Dr. Alison, his associate. Alison was an educator of considerable fame throughout the colonies. He had founded the New London Academy which later grew into the University of Delaware. In 1759, at the time of the granting of the insurance charter, he was in addition to his duties as copastor of the First Presbyterian Church, vice provost of the College of Philadelphia, and rector of the academy and charitable school connected with the college. This college is now the University of Pennsylvania.

In 1717 the Pennsylvania Synod had established a plan for the relief of the widows of clergymen. This plan was called the fund for pious uses and was administered by a committee appointed by the Synod. The unsatisfactory nature of the plan became soon apparent to Alison when he became a member of the committee. It neither paid guaranteed or fixed benefits, nor were those who hoped to make their families beneficiaries of the fund, compelled to make regular or definite payments toward its support. Payments were urged but were voluntary. Benefits were paid according to the amount of money which happened to be on hand.

Meantime, the Church of Scotland had evolved from a similar experiment a plan of fixed mandatory contributions and fixed benefits. Under the leadership of the Reverend Alexander Webster, a mathematician of unquestionable ability, a study had been made of the age at death over a period of years of the Scotch Presbyterian clergy, and the number of widows and children who survived them. Using these facts as a basis, Webster reached conclusions as to the rates which should be charged and the benefits which could be guaranteed—conclusions which received, at a later date, the enthusiastic commendation of Richard Price, the pioneer actuary. Webster's conclusions were amply justified by a period of 30 years' experience with his rates.

Webster's premium rates and death benefits were adopted almost bodily by Alison in setting up the original plan for the American Life Insurance Corp. Under Alison's plan, a minister could select as his annual rate 2, 3, 4, 5, or 6 pounds Pennsylvania currency. His family would receive an annunity 5 times the amount of his annual premium. The annuity would be paid to the widow as long as she lived but if there were children, part of it would be paid to them for a period not to exceed 13 years after the insured's death. If the widow remarried, her annuity was reduced to one-half. The capital for the corporation was raised by outright gifts secured from friends interested in the project both in America and Great Britain.

The original corporation consisted of 5 clergymen and 7 laymen. In addition to Alison and Cross, the clergy included Gilbert Tennent, a fiery evangelist known throughout the colonies as an associate of George Whitefield, Samuel Finley, later president of the College of New Jersey now Princeton University, and Richard Treat, a famous New Light divine. The list of laymen in addition to Allen was made up of a group of prominent Philadelphia merchants some of whom played important parts in the struggle for American freedom. At a later date, the corporation numbered in its membership such men as Elias Boudinot, president of the Continental Congress at the time of the signing of the treaty with Great Britain, Joseph Reid second president of Pennsylvania, Jared Ingersoll, member of the constitutional convention, Ebenezer Hazard, second Postmaster General of the United States, John Ewing, provost of the University of Pennsylvania and a host of others prominent in the early history of the American Republic.

This first American Life Insurance Co. was designated in the charter granted by the Penns as The Corporation for Relief of Poor and Distressed Presbyterian Ministers and of the Poor and Distressed Widows and Children of Presbyterian Ministers. It is still in business with its name changed to Presbyterian ministers' fund. Originally it was under the control of the church and insured only Presbyterian ministers. It is no longer under church control and has no corporate relation to any church. Its relation is purely one of sentiment and of history. It presently issues insurance to clergymen of all Protestant denominations. As of May 31, 1956, it had assets in excess of $63 million and outstanding insurance in excess of $158 million. Its principal office has always been in Philadelphia. The corporation meets regularly in May of each year. Special meetings were held throughout the year as the need for them arose. Insurance was granted without a medical examination but ministers known to be in bad health were refused admission. For the first year or two all Presbyterian ministers resident within a given area were invited to become contributors. After the lapse of a designated period, only men newly admitted to the ministry were given an opportunity to become policyholders. This automatically limited admission to men about 28 years of age.

The incorporation of the Presbyterian Ministers' Fund was followed by other efforts to establish life-insurance organizations. In 1769, the Church of England set up a corporation similar to that sponsored by the Presbyterians. The advent of the Revolutionary War interfered, however, seriously with its success. After the cessation of hostilities and the reorganizing of the Church of England in America as the Protestant Episcopal Church, the plan was put on a firm foundation. In New England a plan for a society by the Reverend William Gordon, a Massachusetts Congregational clergyman, seemingly came to nothing. A mortality table compiled by the Reverend Edward Wigglesworth and published in the Memoirs of the American Academy of Arts and Sciences indicated a trend toward investigation along actuarial lines and in 1786 bore fruit in a charter for the Massachusetts Charitable Corp. This corporation was intended by its founders as an insurance company for Congregational ministers. It became, instead, a dispenser of charity. In like manner, the Massachusetts Hospital Life Insurance Co. failed to follow its original plan and became in the course of time a mutual fund.

Several other efforts were made in America to establish the business of life insurance but it was not until the decade 1835–45 that the great commercial companies of today began ot make their appearance. In Philadelphia the Insurance Company of North America, incorporated in 1794, discontinued, after a brief experience, the writing of life policies. The Pennsylvania Company for Insurance on Lives and Granting Annuities, incorporated in 1812, wrote its last policy in 1872. It continues in the banking and trust business as the First Pennsylvania Banking & Trust Co. The Girard Life Insurance, Annuity, & Trust Company of Philadelphia incorporated in 1936 and now known as the Girard Trust Corn Exchange Bank, reinsured its life insurance contracts with the Equitable in 1900.

Testimonials to Mr. Max Abelman

EXTENSION OF REMARKS

OF

HON. EDNA F. KELLY

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, July 16, 1956

Mrs. KELLY of New York. Mr. Speaker, under leave to extend my remarks in the RECORD, I include several testimonials to Brooklyn's ambassador of good will, Mr. Max Abelman. I join my colleagues from Brooklyn who have paid tribute to Mr. Abelman in placing in the RECORD the various honors that have been bestowed on this great humanitarian. Brooklyn is proud of this outstanding citizen whose life is dedicated to helping his fellowman.

The Jewish Hospital of Brooklyn cordially invites you to a reception and tea in honor of Max Abelman who will be presented by the University of Manila with a special diploma of honor for his humanitarian activities. His Excellency General Carlos P. Romulo, Philippine Ambassador to the United States and past president of the United Nations General Assembly will make the presentation on Sunday afternoon, March 4, 1956, at 3 p. m. in the Nurses Residence Hall, 565 Prospect Place, Brooklyn, N. Y.

ISIDOR LEVITON,
President.
MAXIMILIAN MOSS,
Chairman of the Reception Committee.

BROOKLYN COLLEGE LIBRARY,
Brooklyn, N. Y., February 28, 1956.

Mr. MAX ABELMAN,
Brooklyn, N. Y.

DEAR MAX: An unexpected matter has arisen which will make it impossible for me to get to Brooklyn on Sunday afternoon, March 4. I had hoped that I could be present to witness the signal honor that will be conferred upon you. I shall be thinking of you on the occasion and, believe me, I never forget all you did for the library and the good

friends you made for the college while you were president of the Library Associates.

Most cordially.

H. G. BOUSFIELD,
Chief Librarian.

MALACAÑANG, MANILA, *May 15, 1956.*

Mr. MAX ABELMAN,
New York City, United States of America.

DEAR MR. ABELMAN: This is to acknowledge your letter of April 20 and the clippings from the CONGRESSIONAL RECORD which you enclosed containing the extension of remarks of Congressman EUGENE J. KEOGH. It is heartening to note that the ceremony conferring upon you a special diploma of honor at the instance of President M. V. de los Santos of the University of Manila was successfully held at the Jewish Hospital in Brooklyn in the presence of ranking officials of the Philippine Government. That should be a memorable day for you and I would like to reiterate here may congratulations.

Assuring you of my cordial good wishes, I remain,

Sincerely yours,

R. MAGSAYSAY.

WASHINGTON, D. C., *March 3, 1956.*

MAX ABELMAN,
The Jewish Hospital of Brooklyn,
Brooklyn, N. Y.:

Congratulations and best wishes to you on the occasion of your receiving the University of Manila award in recognition of your humanitarian activities.

RICHARD NIXON.

NEW YORK, N. Y.

MAX ABELMAN,
The Jewish Hospital Nurses Residence Hall:

Congratulations on great and much-deserved honor. Your contribution direct and indirect to countless thousands, not only Filipinos but people of all nationalities, is well known to me. Only illness prevents my attendance at ceremonies. My compliments to General Romulo, also a great friend to humanity.

GEORGE E. ARMSTRONG,
Former Surgeon General, United States Army, currently Director New York University Bellevue Medical.

RUSHVILLE NATIONAL BANK,
Rushville, Ind., March 17, 1956.

Mr. MAX ABELMAN,
Brooklyn, N. Y.

DEAR MAX: I received the invitation to the reception honoring you for your humanitarian activities which was held on March 4, 1956. I wished I could have been present. There is no one else I would have rather honored than you. With best wishes and kindest regards.

Sincerely yours,

PHILIP H. WILLKIE,
President and Attorney.

SUPREME COURT OF THE
STATE OF NEW YORK,
APPELLATE DIVISION SECOND DEPARTMENT,
Brooklyn, N. Y., March 9, 1956.

Mr. MAX ABELMAN,
Brooklyn, N. Y.

DEAR MAX: I regret that I was out of town on the occasion of the presentation of the "Special Diploma of Honor" by General Romulo on Sunday, March 4.

I did not wish the occasion to pass without extending my sincere congratulations to you as the recipient of this distinguished award.

Take care of yourself. Warm regards.

Sincerely,

GEORGE.

NEW YORK, N. Y., *March 6, 1956.*

Hon. MAX ABELMAN.

DEAR MAX: Mrs. Lockwood and I made a trip to Louisville last week and were not at home Sunday, so that we were denied the privilege of attending the presentation to you of the "Special Diploma of Honor" issued by the University of Manila.

This is a distinguished honor, but is well deserved, and we trust you will have many more years in which to continue your work for humanity.

Sincerely yours,

CHARLES.

BROOKLYN, N. Y., *March 4, 1956.*

MAX ABELMAN:

Illness confining me to bed prevents my extending personal congratulations on well deserved signal honor, please extend my personal greetings to General Romulo.

Sincerely,

EMIL BAAR.

BROOKLYN, N. Y.

Hon. MAXIMILIAN MOSS,
Chairman Reception Committee,
Nurses Residence Hall of Jewish Hospital:

Because of a family party this afternoon to celebrate the engagement of my son Jack I cannot attend the reception and tea in honor of our mutual and dear friend, Max Abelman. Please convey to Max my heartiest congratulations at this richly deserved tribute to him.

COUNCILMAN EDWARD VOGEL.

THE AMERICAN SOCIETY
OF ANESTHESIOLOGISTS, INC.,
Chicago, Ill., February 28, 1956.

Mr. MAX ABELMAN,
Brooklyn, N. Y.

DEAR MAX: I regret very much my inability to attend the reception and tea in your honor on March 4, 1956. I shall be in Miami as an examiner for the American Board of Anesthesiology at that time.

The presentation of special diploma of honor to you by His Excellency, Gen. Carlos P. Romulo, is only a small indication of your great value to this community, our State and our country.

Having worked closely with you during your affiliation with the hospital, I am in a position to realize your greatness and your deep humanitarian instinct.

To miss this presentation leaves me with a sense of loss which is difficult to compensate. I know that you will have many more presentations of this kind, and I can assure you that nothing will keep me away.

With best wishes for your future endeavors, I remain,

Sincerely yours,

IRVING M. PALLIN, M. D.,
Secretary to Medical Board.

JEWISH CHRONIC DISEASE HOSPITAL,
Brooklyn, N. Y., March 5, 1956.

Mr. MAX ABELMAN,
Brooklyn, N. Y.

DEAR MAX: I was very happy to be one of the guests yesterday at the presentation that was made to you by the University of Manila, and want you to know how deeply impressed I was in the recognition given to you by His Excellency General Carlos P. Romulo.

I listened with great interest to what he said, and knowing you for the many years I do, and knowing of your wonderful accomplishments, I want to say "Amen" to everything that was said, and wish for you many more years of good health and contentment, so that you may continue the humanitarian activities you have been interested in most of your adult life.

With kindest personal regards,

Sincerely yours,

IKE.

IRVING J. SANDS, M. D., F. A. C. P.,
Brooklyn, N. Y., March 6, 1956.

Mr. MAX ABELMAN,
Brooklyn, N. Y.

DEAR MAX: Cele and I congratulate you on the honor bestowed upon you last Sunday on being given a special diploma of merit by the University of Manila. We were delighted to be present at the happy occasion because we feel that you had deserved all the nice things that were said about you.

It was quite appropriate that the honors were given to you at the Brooklyn Jewish Hospital, for you have done so much in behalf of that institution and for so many people associated with it. I was also delighted to hear you mention the names of the late Mr. Jonas, Dr. Leon Louria, and Dr. William Linder. They certainly were the real builders of the Jewish hospital.

With best wishes for continued success and happiness, I am as ever,

Cordially yours,

IRVING J. SANDS, M. D.

THE CHESHIRE ACADEMY,
Cheshire, Conn., March 3, 1956.

Mr. MAX ABELMAN,
Brooklyn, N. Y.

DEAR MR. ABELMAN: What a pleasure it is to me today to have an invitation from the Jewish Hospital of Brooklyn to be present at a reception and tea in your honor. I note that you will be presented by the University of Manila with a special diploma of honor for your humanitarian activities and that General Romulo will make the presentation. Since I remember so very clearly the work you did in the past in the hospital I am not surprised by this news and I must say that I am highly gratified because of our personal acquaintance. I only wish that I could be present on Sunday. I should like nothing better but unfortunately I cannot make the trip for several reasons, the main one, unfortunately, being that my present state of health militates against any unnecessary exertion. This is a temporary situation only.

May you have great gratification from the presentation which I know you so highly merit. I shall be thinking of you and I am grateful to you for your suggestion to the hospital.

With my cordial regards, I am

Sincerely yours,

ARTHUR SHERIFF.

Brooklyn, N. Y., March 6, 1956.

Mr. MAX ABELMAN,
Brooklyn, N. Y.

DEAR MAX: Upon my return from Miami I found an invitation to a reception and tea given in your honor by the Jewish Hospital of Brooklyn.

I was sorry that I was unable to attend, but at the same time, I was most delighted to read of the honors bestowed upon you, honors that you so richly deserve.

May the Lord bless you with good health so that you may continue to enjoy the affection and esteem of your innumerable friends, among whom I beg to be counted.

Sincerely yours,

RABBI JOSEPH MILLER.

WASHINGTON, D. C., *March 2, 1956.*

MAX ABELMAN,
Care Jewish Hospital,
Brooklyn, N. Y.:

Heartiest congratulations and best wishes upon your latest and well-deserved honor with kindest regards.

ABE MULTER.

CONGRESS OF THE UNITED STATES,
HOUSE OF REPRESENTATIVES,
Washington, D. C., March 1, 1956.

Mr. MAX ABELMAN,
Brooklyn, N. Y.

DEAR MAX: Thank you for sending me notice of the dinner which will be given in your honor by the Jewish Hospital of Brooklyn. I certainly am very happy for you and feel that this is a great distinction of which you should be extremely proud.

I regret that I cannot be physically present to see you presented with this "Special Diploma of Honor," but a commitment of long standing will prevent my doing so.

With heartiest congratulations and every good wish.

Sincerely,

IRWIN D. DAVIDSON,
Member of Congress.

WASHINGTON, D. C., *March 2, 1956.*

MAX ABELMAN,
Care Jewish Hospital,
Brooklyn, N. Y.:

Heartiest congratulations and best wishes upon your latest and well deserved honor. With kindest regards.

ABE MULTER.

JACKSON HEIGHTS, N. Y., *March 4, 1956.*

MAX ABELMAN,
Jewish Hospital Nurses Residence Hall:

Congratulations on your well-deserved award. We from Middlesex salute you.

Dr. and Mrs. GIDDEON DRIMER.

CONGRESS OF THE UNITED STATES,
HOUSE OF REPRESENTATIVES,
Washington, D. C., March 1, 1956.

Mr. MAX ABELMAN,
Brooklyn, N. Y.

DEAR MAX: Because of a previous engagement, I will not be able to join you on Sunday afternoon.

I am very happy to hear of the honor that will be accorded you, and Stella and I extend our best greetings.

With kindest personal regards, I am,

Sincerely yours,

EMANUEL CELLER.

Peaceful Settlement of Labor-Management Contracts

EXTENSION OF REMARKS
OF
HON. THOMAS M. PELLY
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 11, 1956

Mr. PELLY. Mr. Speaker, the steel industry strike is bringing economic distress into the homes of thousands and thousands of American workers. Everyone including the public will lose by this tragic lack of ability of management and labor to reach an agreement. Public opinion is an important factor in achieving a fair adjustment of wages affecting the lives of so many human beings. But in this case, newspapers and other means of getting the facts to the public unfortunately have failed to prevent a stalemate.

Recently, two Seattle newspapers editorially called attention to the importance of the peaceful settlement of negotiations between the management and employees of the Boeing Airplane Co. The article from the International Association of Machinists weekly paper acknowledging these Seattle editorials is worthy of being reprinted so I include it hereinafter:

THANKS

This is to thank both big daily newspapers in Seattle, Wash., for the fine recognition they have given editorially to the settlement between IAM District 751 and the Boeing Airplane Co.

Both newspapers published editorials congratulating both the IAM members and the management at Boeing for their recent agreement bringing $8 million in new benefits to 22,000 employees over the next 2 years.

Said the Seattle Times:

"There's a solid, reinforced 'floor' to support the economy of Seattle and its surrounding area for the next 2 years. It rests securely on the new contract between the Boeing Airplane Co. and IAM District 751."

Said the Seattle Post-Intelligencer:

"The people of Seattle may well rejoice in the new contract between IAM District 751 and the Boeing Airplane Co., thus assuring for another 2 years the harmonious relations between workers and management in this vital Seattle industry. The Post-Intelligencer congratulates both the union and the company in arriving at an equitable agreement in a spirit of good will and fair bargaining." We could wish that the newspapers in Los Angeles, San Diego, Fort Worth, Atlanta, St. Louis, Hartford, and Newark had said a good word editorially on the recent successes of IAM aircraft negotiations in their communities. All of them, you can bet published full stories of our only aircraft strike this year, at Republic Aviation.

In their eagerness to print only the sensational news of strikes and trouble, the newspapers are—knowingly or unknowingly—responsible for some of the trouble between labor and management in this country. Their headlines are certainly responsible for exaggerating the trouble in the minds of both management and union members as well as the public. Actually, of course, almost 99 out of every 100 union-management agreements are signed without any interruption of work.

Sometimes, it seems almost as though some newspapers regret the headlines they lose through peaceful settlements. If their editors look on peaceful settlements as real achievements benefiting the entire community, they haven't bothered to say so in their editorial columns.

We can only hope that the editorial courage of the Seattle Times and the Seattle Post-Intelligencer in breaking the old pattern will inspire other editors.

The Quiz of John Cogley

EXTENSION OF REMARKS
OF
HON. J. WILLIAM FULBRIGHT
OF ARKANSAS
IN THE SENATE OF THE UNITED STATES
Monday, July 16, 1956

Mr. FULBRIGHT. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD, an editorial entitled "Cogley Quiz," published in the New York Times of July 13, 1956.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

COGLEY QUIZ

If the House Committee on Un-American Activities were really interested in examining all un-American activities it might long ago have used its great powers as an investigative arm of Congress to look into the thoroughly un-American area of blacklisting in the entertainment industry. Instead, it left that thankless job to the Fund for the Republic, but it has now suddenly raised its hackles because it didn't like what the fund's independent inquiry produced.

Exactly 3 days after the fund had made public its two-volume report on blacklisting, the House committee preemptorily subpenaed—did not invite—John Cogley, director of the study, to appear before it in Washington. The intention, according to Chairman FRANCIS E. WALTER, was to determine among other things "what the purposes of the fund and of Mr. Cogley truly are." Mr. WALTER'S strict objectivity may be considered against the background of his earlier query in announcing a forthcoming investigation of the fund itself: "Is this foundation * * * a friend or a foe in our Nation's death struggle against the Communist conspiracy?" Paul G. Hoffman, President George N. Shuster of Hunter College, Chester Bowles, Dean Erwin N. Griswold of the Harvard Law School and other noted Americans on the fund's board of directors must have deeply appreciated that comment by the Democratic statesman from Pennsylvania.

Be that as it may, the context and tone of questions put by the committee counsel to Mr. Cogley on the subject of his blacklisting report raise the strongest suspicions that here was an obvious effort to harass a writer for what he had written. Mr. Cogley himself is former executive editor of the highly respected liberal Roman Catholic weekly, the Commonweal, and he is capable of defending his own works. But we are concerned over any and every effort, no matter how it may be disguised, to intimidate a man for writing what he believes; and when a committee of the House of Representatives skates perilously close to doing that, we think it comes equally close to violating the first amendment.

Amateur Athletes

EXTENSION OF REMARKS
OF
HON. FRED SCHWENGEL
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Monday, July 16, 1956

Mr. SCHWENGEL. Mr. Speaker, because I was a former athlete and coach, I have a great interest in the problems that amateur athletes face, and because I feel that the amateur athlete is not wholly at fault for some of the charges that have been made, I ask permission to extend the following remarks in the Appendix of the RECORD and commend it to the study of my colleagues:

In response to the continued nationwide reaction to the suspension of Wes Santee, the National Amateur Athletic Union announced on March 24, 1956, that it planned further investigations of abuses of the amateur code. An AAU committee will start interviewing various sports leaders in the near future. Pincus Sober, member of the committee said:

To get a good cross section of opinion, we (the committee) intend to consult with meet directors, college athletic officials, athletes and newspapermen. The committee's report will be presented at the November annual meeting.

But in the midst of the Wes Santee controversy, a pertinent question was brought forward: "What about the promoters who offered checks to the boy—Wes Santee?" asked Phog Allen. "What do they get, a reprimand?" Johnny Fulton, a champion of 1946, expressed the same idea when he told a Life reporter:

I don't condone any athlete's going to meet a promoter and saying he won't run unless he's paid. But any meet official or promoter who pays him is even more guilty.

The guilty persons, more often than not remaining nameless, have paid

amateurs and have gone unpunished before this latest suspension was invoked against Santee. Two other well remembered situations and consequent losses of amateur ratings occurred in the careers of Jim Thorpe and Paavo Nurmi. Jim Thorpe, an all-round athlete, lost his amateur standing for playing bush league baseball during two summers. Although he was paid only $25 each week, it cost him his amateur rating. Finland's great miler Paavo Nurmi was also suspended for accepting money. Nurmi was certified as an entrant into the Olympics and made the trip to Los Angeles in 1932. But the counsel of the International Amateur Athletic Federation received evidence from Germany that money had been paid to Nurmi and ruled him ineligible to compete. Santee, Thorpe, and Nurmi will long be remembered as being guilty of dishonesty and cheating while those who offered them the way of guilt go on untainted personally and professionally.

An amateur's acceptance of money is not unusual. Many critics of the AAU's decree against Santee have declared that "he only did what many other amateur athletes have done before him, and his worst sin was getting caught." An amateur's acceptance of money has become an almost standard practice simply because he cannot afford to do otherwise. It is a full-time job being a competing amateur. However, the AAU still affirms its belief in the lofty ideal that an amateur is an athlete "who engages in a sport solely for the pleasure and physical, mental or social benefits he derives therefrom and to whom a sport is nothing more than an avocation." Joe Nowicki, a former collegiate track star and later an AAU official made the following statement to writer Jack Newcombe:

> It was the practice (while competing) to talk with other runners and find out what they were getting. If the man you were beating got more than you did, you asked for more the next time. When the Santee case broke, I thought it was unfair to start enforcing rules that have been waived for years. I know AAU officials who, when they were competing, took just as much as Santee did.

With such circumstances being a part of amateur athletics, it is difficult to say that the athlete alone should be branded guilty. Care should be taken that the punishment should not exceed the guilt, and the agency brandishing the punishment be completely blameless.

Although a few have suffered extreme penalties, many amateur athletes have accepted money and have come through unscathed. Life recently featured an article entitled "Athletes Tell How Illicit Payoffs Destroy the Amateur Code." Very candidly, former amateur athletes told how like Santee, Thorpe and Nurmi, they, too, accepted money. Elmore Harris, famous on the track between 1945 and 1947, was always paid, because he never ran unless the promoter met his price. Yet he nor the promoter were punished. In another instance, Johnny Fulton, the national 800-meter champion of 1946, was given an all-expense trip to Canada to encourage him to appear in one more meet of the season. This trip was financed by the AAU itself. Fulton once planned to take a job to earn $600 for his next semester at college, but on the condition that he run in their meet, Madison Square Garden promoters supplied Fulton with the money without his having to work. Another national magazine related an incident regarding the paying of amateur athletes: "This stuff's been going on for years," laughed a baseball man in New York. "We had a miler run an exhibition race once. He was in town for a big meet, and all he had to do was take a subway to our ball park. The fare was a nickel then. He made us pay him $750 for his 'expenses.'" Frank Sedgman, Australian tennis star, was offered $89,200 to turn professional. He turned down the offer. Meanwhile, Australian newspapers began a campaign for a cash wedding gift for the future Mrs. Sedgman. In 1952, this collection, a wedding present of $12,000, was given to the newly married couple, and Sedgman was able, financially, to remain an amateur. Russell Kingman, speaking for the United States Lawn Tennis Association, said if Sedgman were a United States player, the gift would have meant the loss of his amateur rating. Bryan Fuller, Australian official, replied:

> Amateurs must live. If they are not paid wages by sports-goods manufacturers, they must be paid by someone else.

Is it any more guilty to receive compensations than it is to give them?

Why does the issue of paying the amateur create controversy? Why do amateurs accept money, and why is it offered to them? There are many causes for cheating in amateurism. Most of the reasons, or excuses, offered by critics and amateurs reverberate to the AAU. Many critics of today's amateur athletic programs say that the AAU has taken action only on flagrant cases that could not possibly be overlooked, but little has been done to alleviate the cause of the cheating. The cause, as seen by the critics, is the meager $15 per day expense account. Under the current AAU rules an amateur can accept only $15 per day for expenses and a transportation allotment; their prize can be valued at no more than $35. Charles P. Grimes, representing Santee, contended that the AAU rule limiting athletes to the $15 daily over transportation was dead-letter stuff. He went on to say that he could prove these rules were waived by AAU officials on numerous occasions. While many are guilty of violating the rules, the guilt is not wholly the amateur athletes'. Yet theirs are the only names brought to the foreground of the news. The nameless promoters remain in obscurity.

Often, the equally or actual guilty person slips through the maze of redtape and intricacies of amateur sports controls. There is no single control agency governing all amateur sports. The Amateur Athletic Union claims jurisdiction over 19 sporting events. Other events are supervised by the National Collegiate Athletic Association, and some are controlled by still other organizations. On occasion, however, the usually unpunished persons involved in a sports scandal do receive their share of the penalties. The Pacific Coast Conference met recently at Vancouver, British Columbia, and dealt with amateur violations in the field of college sports. All of last year's University of California at Los Angeles' football players, freshmen and sophomores alike, lost a year of eligibility unless they can prove that they have not accepted "money under the table." However, the PCC did not stop with chastising the players, but the school, too, received a share of the punishment. UCLA was put on 3 years' probation, forbidden to take part in NCAA championships, deprived of Rose Bowl receipts, and Chancelor Raymond B. Allen caused the school to receive an additional $15,000 fine for his refusal to cooperate. The Universities of Southern California, Idaho, Oregon, Oregon State, and Stanford were also fined. The guilty, in this particular case, did not go entirely free but received their just share of the penalties.

In other cases punishments have been meted out to those who have deserved them. Bradley University, University of Kentucky, and Drake University are remembered as examples of the basketball scandals of the early 1950's. Gene Melchiorre, an ex-Bradley University basketball star, and six alleged gamblers were indicted in Peoria, Ill., September 14, 1951, on game-fixing charges. On September 25, 1951, New York District Attorney Frank S. Hogan revealed that 8 Bradley University and 3 Toledo University basketball stars were involved in 5 basketball fixes in New York City. Arrested as the fixers were Anthony Englisis and his brother Nicholas, both of whom were employed by the master gambler, Eli Klufofsky. Judge Saul S. Streit, of New York, on December 7, 1951, suspended the sentences and freed three ex-Bradley University players who pleaded guilty to game fixing. They were granted leniency because they helped identify the gamblers involved in the gambling ring. However, Judge Streit went on to point an accusing finger toward President David Blair Owen of Bradley University for overemphasizing basketball at his school.

Again, on April 29, 1952, Judge Streit suspended sentence on three ex-University of Kentucky basketball stars in a "fix" case. But he denounced their college as "the acme of commercialism and overemphasis" and their former coach Adolph Rupp, for having associated with Ed Kurd. As a result of the scandals, the University of Kentucky canceled its 1952–53 basketball schedule in accordance with the NCAA council's recommendation that Kentucky be put on probation for all sports in 1952–53 for violating NCAA rules. The council also rules that Bradley would be ineligible for 1953 NCAA basketball tourneys. The attempted bribery case at Drake University was perhaps the most noteworthy because of the Iowa law dealing with athletic briberies. This act was sponsored in the 1953 legislature by State Representatives Riggenberg, Burrows, Robinson, Weiss and Schwengel. Under the Iowa law, attempting to influence an athletic contest by bribing carries a possible penalty of up to $10,000 fine and as much as 10 years in the penitentiary. Floren DiPaglia, a Des Moines businessman, was the first per-

son to be tried and convicted under the new law. Ben Bumbry, Drake's leading scorer, was approached by DiPaglia in December 1953. Bumbry reported the incident to officials who indicted, tried and convicted DiPaglia of attempted bribery. DiPaglia was sentenced on April 19, 1954, to 10 years in a State reformatory.

It is not justice when the equally guilty, the promoters and others who pay the athletes, go unpunished. It is not justice when they are punished only infrequently and inconsistently. Public criticism has grown so loud that AAU officials have been busy defending themselves. "We will get around to those promoters" Pincus Sober promised. "There are some complications, though. The situation will have to wait until next winter." If such offenses remain permissible, it will encourage many others; however, one day will, if an effort is put forth, bring about the punishment which many days demand.

East and West Woo Neutral Nations

EXTENSION OF REMARKS
OF
HON. RALPH HARVEY
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Monday, July 16, 1956

Mr. HARVEY. Mr. Speaker, I ask unanimous consent to extend my remarks in the Appendix of the RECORD and include an editorial from a recent issue of the Courier-Times, of New Castle, Ind.

This excellent editorial by the editor, Scott Chambers, came as the result of his participation recently in the Indiana University Conference on Problems of American Foreign Policy.

The editorial follows:

EAST AND WEST WOO NEUTRAL NATIONS—IT BECOMES INCREASINGLY CLEAR THEY WILL CAST THE DECIDING VOTE FOR A COMMUNIST WORLD OR A FREE WORLD

As the military contest betwen the East and the West goes into an atomic stalemate and the struggle for survival between communism and freedom enters other fields, it becomes increasingly clear that victory will go to that side which wins the uncommitted world.

These nations which still have not chosen between communism and freedom are the neutrals, mostly new nations that formerly were the colonies of European powers; most of them located in Asia or Africa.

In a sense the Communist world, under the leadership of Russia, and the free world, under the leadership of the United States, are in a competition of courtship for the hand of these countries. Each side is wooing these neutral countries, and hoping to get the nod. We are greatly irked when one of these neutral countries tries to play one rival suitor off against the other, but that has been done before.

Whether we're selling merchandise or selling ourselves, it's always a good idea to get the customer's point of view.

The people in these countries have lived—some of them for centuries—as the subjects of colonies governed by some distant, impersonal power. They've been fought over and exploited in some cases, and have died young—thousands from starvation.

In short, they've been kicked around, and now they want to be treated like human beings; to eat at the first table. They want to be loved.

That's the customer—the girl we're wooing.

THE FLASHY YOUNG BUCK WHO'S NEW IN TOWN

How about our rival?

Russia is very much like a flashy young buck who's new in town. He has no record of spats in colonial days to live down. His line consists of a lot of lovey-dovey comrade stuff and telling the gal that we're trying to marry her for her money. There are no limits to what this boy, Russia, will promise, regardless of his intention or ability to deliver. He is always ready to go us one better. If we will build the dam in Egypt for 4 percent interest, he will build it for 2 percent. There are no strings on aid money—"Why, I trust you." (The strings come later.)

Such a guy has his attractions, and it's well to see how we stack up.

WE DO THE DANGDEST THINGS TO WOO A GIRL

How do we woo these countries who are going to cast the deciding vote on whether this is to be a Communist or a free world?

1. We might as well admit that we have one strike against us before we start. Rightly or not, these new countries blame their adversity on the European powers that owned and governed them for years. As an ally of these powers, we suffer a certain guilt by association. Our record in the Philippines, our only colonial experience, is as clean as a hound's tooth however, and we ought to tell that story often.

2. There are some little things we do that put us in a bad light. Our immigration policy seems to say, "Keep out. We're made of some sort of superior stuff, and don't want to be contaminated." Then there's the business of fingerprinting visitors to this country; decent people don't like to have their integrity questioned without cause. From time to time we make other mistakes. There's the Klan, and our lunatic uncle in Chicago who is still fighting George III. The heat of our campaigns brings on loose talk that sometimes gives the wrong impression abroad.

3. What is our record on aid to these countries? Senator GEORGE said recently:

"We talk of equality and the independence of nations and of economic opportunity, but we are niggardly in helping so-called neutral nations unless they accept the ties of our apron strings."

What stupid ass, attempting to woo a girl, would begin by talking about her obligations under the marriage contract?

4. We have not escaped the responsibility for the racial prejudice which the whole world knows to exist in America. This is important, because nearly all of these people who are choosing between freedom and communism are either black, brown, or yellow. The Supreme Court decision regarding segregation has been a godsend in helping us to allay the fears of an American attitude that is not good and a reputation that is worse.

5. If we seek the great desire of these peoples, as a suitor studies the heart's desire of his intended, we come inevitably to the fact that they want a higher standard of living. They want to eat like we do, drive some of our cars, and have refrigerators in which to keep their food. They want better medical care, hospitals, and a clean water supply. They want an opportunity to educate their children.

To do these things they need to trade either with us or with Russia. Russia is actively seeking their trade, but we are paralyzed by an evil, stupid tariff that limits our markets and closes opportunity to ourselves and others alike.

WE NEED TO DARE TO BELIEVE IN THE IDEALS WE PROFESS

To win the hand of these uncommitted peoples, we need above everything else a change in our attitudes—both official and unofficial.

We must get over any notions of superiority. They are both false and self-defeating.

We must get over doing the right thing in the wrong way. A friend who held Federal appointment once said to us: "I was hired by Herbert Hoover and fired by Franklin Roosevelt. When Mr. Hoover hired me you would have thought he was firing me, and when Mr. Roosevelt fired me you would have thought he was hiring me."

We must get wise to the fact that the surest way to lose our prosperity is to hoard it. That is both bad business and bad morals. We need a prosperous world in which to sell, and from which to secure our needs.

Lastly, we need to be honest with ourselves. We need to dare to believe in the ideals we profess:

And he answered, "You shall love the Lord your God with all your heart, and with all your soul, and with all your strength, and your neighbor as yourself."

But he said to Jesus, "And who is my neighbor?"

Jesus replied: "A man was going down to Jericho, and fell among robbers * * * who left him half dead. Now a priest * * * passed by on one side, and a Levite * * * passed by on the other, but a Samaritan * * * saw him and had compassion * * * bound his wounds * * * and brought him to an inn, and took care of him."

Is it barely possible that the ultimate weapon in the battle for freedom and the dignity of man is not the intercontinental missile—but love?

Niagara Power

EXTENSION OF REMARKS
OF
HON. HAROLD C. OSTERTAG
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, July 16, 1956

Mr. OSTERTAG. Mr. Speaker, the struggle to cram an unwanted public power project down the throats of western New Yorkers bids fair to reach a climax in these dying days of the 84th Congress. In the fact of overwhelming opposition to such a step, the public power advocates are set to steamroller the Lehman-Buckley bill through this House, giving the State of New York the right to redevelop power at Niagara Falls.

Mr. Speaker, the people who will be served by Niagara power do not want public development of this resource. They do not want Federal development, and they do not want State development. They have put the mathematics to the phony claim that public power is cheap power, and they are not deluded. It is merely power that is subsidized by the taxpayers at large for the benefit of selected users.

Last winter, Mr. Speaker, I canvassed the people of my district for their views on this issue, asking them if they preferred to see Niagara power redeveloped by the Federal Government, the State government, or private enterprise. Almost 76 percent said they wanted to see private enterprise do the job.

These views are strongly underscored in the mail that has poured into my office in the last 48 hours, as the threat of public redevelopment has reached major proportions.

Under leave to extend my remarks, I include in the RECORD a sample of this correspondence:

ROCHESTER, N. Y., *July 11, 1956.*

CONGRESSMAN OSTERTAG: Please do what you can to prevent the Lehman-Buckley bill from passing. The private enterprise bill should be approved.

Thanking you.

Mrs. M. C. BENJAMIN.

ROCHESTER, N. Y., *July 11, 1956.*

Congressman HAROLD C. OSTERTAG,
Washington, D. C.

DEAR CONGRESSMAN OSTERTAG: Will you kindly vote against the Buckley-Lehman bill and for Miller-Dondero bill. Thanking you for this favor.

Mrs. ROSE M. CRAGE.

JULY 11, 1956.

Congressman HAROLD C. OSTERTAG,
House Office Building,
Washington, D. C.

DEAR CONGRESSMAN OSTERTAG: I am opposed to the Buckley-Lehman bill, and I am asking you to vote against this bill.

I am in favor of the Miller-Dondero bill, and trust you will vote accordingly. Thank you.

MARGARET R. SMITH.

ROCHESTER, N. Y.

To: Congressman OSTERTAG.

From: Mr. and Mrs. L. H. DeKing, Rochester, N. Y.

We hope that you will vote "No" on the Buckley Niagara power bill. Government must be kept out of any further private business. If approved, the bill would be like a permanent millstone around the neck of the taxpayer.

SPENCERPORT, N. Y., *July 11, 1956.*

HAROLD C. OSTERTAG,
House Office Building,
Washington, D. C.

DEAR SIR: We are in agreement with our private enterprise system, therefore we are for the approval of the free enterprise bill sponsored by Congressmen MILLER and DONDERO.

Very truly yours,

EDWARD S. DREXLER.
MABEL B. DREXLER.

JULY 11.

DEAR MR. OSTERTAG: I am emphatically against the Buckley-Lehman bill now before Congress and hope you will vote against it.

Respectfully,

ALICE F. STEWART (Mrs. D. A.).

ROCHESTER, N. Y.

A. L. SWETT IRON WORKS,
Medina, N. Y., July 11, 1956.

Congressman HAROLD C. OSTERTAG,
House Office Building,
Washington, D. C.

DEAR SIR: We are violently opposed to the Lehman-Buckley power bill for Government control of Niagara power.

We have dealt with the Niagara-Mohawk Power Co. and their predecessors for over 50 years. They have always given good service at reasonable rates and have helped us in every way possible.

God help us if we ever are obliged to deal with a Government-operated power company.

Yours very truly,

A. L. SWETT IRON WORKS,
R. F. SWETT, *President.*

ROCHESTER, N. Y., *July 10, 1956.*

Hon. HAROLD C. OSTERTAG,
Washington, D. C.

DEAR SIR: On the radio last Sunday, Fred A. Seaton said the Niagara question is one for the people in the area to solve. President Eisenhower said precisely the same thing. I would like to know how I, as a resident of that area, can help to do this. I strongly oppose the Lehman bill and so does everyone I have talked to who has studied the issue. In addition I think the personal income taxes of New York State, even now unreasonably high, will reach catastrophic heights once the electric industry in our State is placed in the hands of a "mythical" organization known as the New York State Power Authority.

Sincerely,

EDWARD J. MASON.

ROCHESTER, N. Y., *July 11, 1956.*

Congressman HAROLD C. OSTERTAG,
House Office Building,
Washington, D. C.

DEAR SIR: Of the several bills now before you dealing with the Niagara power development, I feel that any giving the Federal Government or the State the right to build should be defeated. This is not a field for either to be involved in. If the State of New York is so interested in our welfare so that they feel they must give us cheap (?) power, let them have the residents of this State decide for themselves if they want it. Apparently they are somewhat afraid if they do their dreams of a new and powerful political plum will be defeated.

I request you vote "no" to all public-power bills and "yes" to private development.

Very truly yours,

GEORGE M. LYND, Jr.

ROCHESTER, N. Y., *July 11, 1956.*

Hon. HAROLD C. OSTERTAG,
House Office Building,
Washington, D. C.

DEAR SIR: I am firmly opposed to the Federal Government taking over development of the Niagara power in this State and therefore am asking you to vote against the Lehman-Buckley bill, and for the private-enterprise bill sponsored by Congressmen MILLER and DONDERO.

Yours respectfully,

R. WALTER DEVERELL.

ROCHESTER, N. Y., *July 11, 1956.*

Representative HAROLD C. OSTERTAG,
Washington, D. C.

DEAR SIR: I am writing to respectfully request you to vote against the Lehman-Buckley bill and instead support the private enterprise bill sponsored by Congressmen MILLER and DONDERO.

I am opposed to Government competing with private enterprise.

Wishing you success and thanking you for your efforts, I am

Very truly yours,

ALONZO B. WING.
GENEVIEVE A. WING.

ROCHESTER, N. Y., *July 11, 1956.*

The Honorable HAROLD C. OSTERTAG,
House Office Building,
Washington, D. C.

DEAR SIR: I am writing you on the matter of the Niagara power bill now before Congress. I am bitterly opposed to any further Government dabbling in the citizen's business no matter how noble the motivation might be. On the other hand, I am not in favor of the citizen going hogwild for his own selfish purpose. But here is an undertaking where Government is sticking its big nose right into the citizen's area. This citizen who wishes to undertake the job is already closely restricted and regulated and he only should do the job. And I fail to see what the recent disaster at the falls has to do with it except to make the job more urgent.

I am disturbed about the personal motives of the sponsor of the bill reported out of committee. Votes yes but what else? These Government projects, such as the one proposed, are financed by tax-free securities and due to their magnitude the taxes so represented run into large sums which of course must be paid by the rest of us so the few that get the gravy reap huge unearned rewards. These securities are risk free. They are equivalent to 10 to 15 percent return on taxable industrials. They are issued in large denominations obviously to make them attractive to the favored few. Where do Lehman Bros. and the Harriman interests fit into this picture? Why can't I buy tax-free securities in the denominations I can handle? Why should I pay 20 percent of the electric bills in Tennessee and other parts of the country such for instance the State of Nebraska?

If these so-called saving the natural resources of the country are to continue then the taxes should be exactly the same to those people as to the others. It is my belief that if the Government projects and I mean all Government, not just Federal or State, had to be financed by taxable bonds and other taxes were paid as they are by the stockholder-owned utilities, there would be no Government projects at all.

I understand Mr. Moses could not borrow the money for the St. Lawrence project as and when he nedeed it but had to take the full amount at once—a matter of 50 million in interest, tax free before a wheel turns—and who pays that bill besides me?

The bill covering the Niagara job regardless of who does it should carry provisions for the same 21-percent total tax now paid by Niagara-Mohawk and the securities should be no more tax free than those of the stockholder-owned companies of this or any other State.

We need power in our State and all I am asking is a bill which puts the cost burdens on the people who benefit and this very definitely includes the financing.

Very truly yours,

HARVEY J. KLUMB.

JULY 10, 1956.

Mr. OSTERTAG: After careful study, I feel very strongly that the private enterprise bill sponsored by Congressmen MILLER and DONDERO should be approved.

I believe that the Lehman-Buckley bill should be opposed.

Sincerely yours,

Mrs. EDWARD R. SHAW.

ROCHESTER, N. Y., *July 11, 1956.*

DEAR CONGRESSMAN: Many of my neighbors and friends in the 39th District agree with me that the Lehman-Buckley bill should be opposed. The development of Niagara should be carried out by private enterprise.

I strongly feel that we will better the interests of the people of New York State by approving the private enterprise bill sponsored by Congressmen MILLER and DONDERO.

Respectfully,

IRVING A. PEERS.

THE FIXIT SHOP,
Rochester, N. Y., July 11.

Mr. HAROLD C. OSTERTAG.

DEAR REPRESENTATIVE: Our Ike has voiced his opinion on "Get Government out of business" many times. What people of what country do LEHMAN and BUCKLEY represent?

I believe that you, Ken and the other honest representatives who play on Ike's team wearing the American uniform can pull the props out from under the L–B bill if you work together.

We, the working and voting people can't match the dough that is backing L–B. But we offer our support and confidence in you men. That can't be bought.

Past experience has proven that you and KEN have what it takes. Won't you please come through again and kill this un-American bill?

Thanking you for past considerations.

Respectfully,

FRED F. WARD.

ASSOCIATED INDUSTRIES
OF NEW YORK STATE, INC.
Albany, N. Y., July 10, 1956.

Hon. HAROLD C. OSTERTAG,
House Office Building,
Washington, D. C.

DEAR HAROLD: If the Buckley-Lehman bill for power development of Niagara by the State reaches the floor for vote in its present form, we urge your help in defeating this measure which will be so disastrous for private enterprise in our State.

It has been clearly demonstrated time after time that this measure is not in the public interest and is primarily favored by those in political life who wish to see the Government get ever greater control over the economy of the country.

We sincerely hope that the action of the House will be against the creation of additional tax-avoiding privileges and will support the principle of equality in taxation and equality in opportunity.

Sincerely,

JOSEPH R. SHAW,
President.

NEW YORK STATE CONFERENCE
BOARD OF FARM ORGANIZATIONS,
Ithaca, N. Y., July 10, 1956.

To All New York Members in Congress.

DEAR REPRESENTATIVES: The New York State Conference Board of Farm Organizations is thoroughly convinced that Niagara power should be developed by private enterprise in contrast with development by Government, either by the New York Power Authority or otherwise.

Sincerely yours,

E. S. FOSTER, *Secretary.*

ROCHESTER, N. Y., *July 11, 1956.*

Representative HAROLD C. OSTERTAG,
House Office Building,
Washington, D. C.

DEAR MR. OSTERTAG: I urge you to support the Buckley-Lehman bill, providing for State construction and operation of the Niagara River project.

Respectfully yours,

FRANCIS G. WARWIN.

ROCHESTER, N. Y., *July 11, 1956.*

HAROLD C. OSTERTAG,
House Office Building,
Washington, D. C.:

Your vote expected to be cast favor private development and operation Niagara Power issue. Please also do all in your power to prevent development and operation of public plan. Issue kicked around for years. Government not set up for business, only regulate. Get out and keep out business.

Mr. and Mrs. B. S. RAPLEE.

ROCHESTER, N. Y., *July 11, 1956.*

Hon. HAROLD C. OSTERTAG,
House Office Building,
Washington, D. C.

DEAR SIR: I do not recall what your position is on the Lehman-Buckley bill but I wish to go on record as asking you to vote against it as I believe the Niagara power should be developed by private enterprise as there are several concerns equipped and willing to do it.

I don't think that the Federal Government should get into any more power developments than necessary. It is all right in the wilderness where there is nothing to start from but here in New York State it is not necessary for them to take over. Therefore I am asking you to vote for the bill sponsored by Congressmen MILLER and DONDERO.

Yours respectfully,

Miss BLANCHE M. KELLEY,
ROCHESTER, N. Y.

The Honorable HAROLD C. OSTERTAG,
House Office Building,
Washington, D. C.

MY DEAR MR. OSTERTAG: I wish to take this opportunity to express my opposition to the Lehman-Buckley bill for State construction of the Niagara River project.

I see no point in the Government operating a business where private enterprise is willing and able to do so.

Sincerely yours,

Mrs. MARGERY LEACH.

JULY 10, 1956.

DEAR SIR: I should like to urge you to aid in getting our Government out of private business by voting against public power development at Niagara Falls. The alternate bill permitting private power at Niagara Falls should be passed with haste.

Sincerely,

F. C. KIESLING.

ROCHESTER, N. Y.

JULY 11, 1956.

Representative HAROLD C. OSTERTAG,
House Office Building,
Washington, D. C.

DEAR SIR: To uphold the American tradition of private enterprise, I would urge that you vote against the Lehman-Buckley bill.

The Government has no place in business, particularly when private enterprise is ready, able, and willing to do the job.

Please do not let this bill be rushed through before Congress adjourns since there is not time for adequate study.

Sincerely,

JEAN DIMOND,
Department of Medicine, Strong Memorial Hospital.
ROCHESTER, N. Y.

EMPIRE STATE CHAMBER OF COMMERCE,
Albany, N. Y., July 11, 1956.

Hon. HAROLD C. OSTERTAG,
House Office Building,
Washington, D. C.

DEAR CONGRESSMAN OSTERTAG: Efforts are being made to impress Members of Congress that the people of New York are willing to accept the principle of public ownership of power-generating facilities as provided in the Lehman-Buckley bill (H. R. 11477).

Nothing is less true than this. The organizations that truly represent the views of the residents of New York have signed a joint letter which was prepared and sent to Senator CHAVEZ and his committee associates when the Lehman bill was before the Senate Committee on Public Works. A reproduction of that joint letter is enclosed. More than 200 agricultural, business, civic, labor, and political organizations are on record as opposing public construction and operation of the power-generating facilities at Niagara Falls.

If the Lehman-Buckley bill is enacted, it will be the first time in American history that Congress has authorized public ownership of power-generating facilities without collateral flood control, navigation, irrigation, or other similar and necessary public purposes. I hope that you will not abandon this longtime concept of public power as a byproduct rather than the primary function of a governmental agency.

Sincerely,

WILLIAM A. MILLS,
Executive Vice President.

DEAR SIR: Kindly add my "No" to those who oppose Public Power for Niagara. I do not believe that it would be in the best interest of the citizens of the State of New York.

BRUCE A. YOST.

ROCHESTER, N. Y.

ROCHESTER, N. Y.

DEAR SIR: I am writing that I am directly opposed to this Lehman-Buckley bill and very much in favor of the private enterprise bill sponsored by Congressmen MILLER and DONDERO. Hoping this will receive your attention, I am

Yours truly,

ALFRED H. BEST.

ROCHESTER, N. Y.
July 11, 1956.

The Honorable HAROLD C. OSTERTAG,
House Office Building, Washington, D. C.

DEAR MR. OSTERTAG: I should like to urge your opposition to the Buckley bill concerning the electric power system proposed for the New York area. In its place I feel that the private-enterprise bill sponsored by Congressmen DONDERO and MILLER should be approved.

Since there is basically no power shortage in the area, and no flood-control or navigational aspects to justify Federal intervention or control, I can see no valid reason why the taxpayers in general should be forced to pay part of the electric bill of a select group. Can we anticipate your vote against the Buckley bill and your support of the Miller-Dondero bill?

GEORGE M. HOERNER, Jr.

JUNE 24, 1956.

HAROLD C. OSTERTAG,
House Office Building, Washington, D. C.:

The New York State Federation of Labor representing 1,300,000 members of organized labor in the State of New York reaffirm its position in favor of the development of Niagara River power potential by utilities companies of our State.

We respectfully request the House Public Works Committee to favorably report out Dondero-Miller bill and against the Buckley bill.

NEW YORK STATE FEDERATION OF LABOR.
HAROLD C. HANOVER, *Secretary-Treasurer.*

H. R. 6626, a Bill To Provide for a Federal Lottery

EXTENSION OF REMARKS
OF
HON. PAUL A. FINO
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, July 16, 1956

Mr. FINO. Mr. Speaker, as the Members of this House well know, for the past 4 years I have repeatedly urged this Congress and the previous Congress to adopt my bill, H. R. 6626, to provide for a Federal lottery. I have tried to convince this House of the great need and importance of this type of legislation.

I have said it before and I'll say it again: A national lottery will accomplish the following:

First. It will bring into the United States Treasury an estimated $10 billion.

Second. It will mean a tax cut for every taxpayer in this country.

Third. It will reduce our national debt.

Fourth. It will give us a balanced budget.

Fifth. It will eliminate the professional gambler who currently reaps the benefits and returns little to the Government in taxes.

Sixth. It will banish hypocrisy and channel people's gaming instincts into a legal path.

In my fight to convince the Members of Congress that a tremendous revenue is within our grasp but for hypocrisy, I am happy to have had the support of America's largest and greater newspaper, the New York Times.

An editorial appears in the July 15 issue of the New York Sunday News which further substantiates my contention, that a national lottery will help solve and lift the heavy tax burden from the shoulders of the American people. I urge each Member to read this editorial which follows and then sign my discharge petition which is on the Speaker's desk:

ROUND AND ROUND SHE GOES; OR, THE WHEEL OF FORTUNE

To Americans increasingly worried about the income tax (remember Sydney Mirkin's illuminating and infuriating news articles on the subject these last few days?) the proceedings of the recent Lottery Congress at Zurich, Switzerland, should be of considerable interest.

Assembled at this 2-day get-together to discuss their achievements and problems were the managers of 20-some government lotteries from most of the countries of Western Europe.

From a recent Wall Street Journal feature article, we borrow some of the more appetizing facts of life in countries where lotteries are legal and governments harvest fat and painless revenues from them.

The Spanish National Lottery is the most generous of all those in Europe. A $50 ticket gets you a chance on a grand prize of $375,000. In the Christmas lottery, tickets run up to $400 apiece, and the grand prize is $3,000,000. Smaller gamblers aren't neglected, by any means.

From this 63-year-old enterprise, Generalissimo Francisco Franco's government makes about $20,000,000 a year—a huge sum in not-so-rich Spain.

There are many other examples of what goes on in countries which tie the gambling instinct of most human beings to the need for revenue.

Italy's Ente Nazionale Lotterie, and various other government-sponsored gambling games, bring in around $60,000,000 a year for the Government, and a horde of prizes, large and small, to lucky ticket holders.

The Swedish Money Lottery Co. (previously mentioned in this space) was founded as a private concern in 1897, and taken over by the Government in 1939. Its manager, Harold Rooth, has recently hiked ticket prices from $2.60 to $3 and doubled the grand prize, to $40,000.

Business is looking up—so much so that the Swedish treasury this year expects substantially more lottery money than the $23 million it collected in 1955. Sweden's Government football pool and Government-controlled horse betting this year will most likely kick in another $30 million.

PLEASURE FOR PEOPLE; MONEY FOR GOVERNMENT

The French Loterie Nationale ($114,000 top prize; 400,000 tickets sold a week) should contribute $43 million this year, as against $37 million last, to the hard-pressed French treasury.

So it goes, with equally encouraging reports on the prosperity of public lotteries from Belgium, Denmark, Holland, Ireland, Finland, Norway, Portugal, Greece.

If there are any countries where national lotteries are failures, word of them didn't come out at Zurich.

We'd like to remind the readers that all the nations listed above are small and poor by comparison with the United States, though this is not written with intent to hurt the feelings of any of them. It's just another fact of 20th century life.

This fact has an important bearing on the frequent suggestions that a national lottery be given a tryout in the United States.

Our Federal income tax currently gouges an estimated $52 billion a year out of our blood, sweat, and toil—$21 billion from corporations, $31 billion from individuals.

How much revenue a national lottery would produce is anybody's guess.

PURITAN HANGOVER

The best-educated guess we know of is offered by Representative PAUL A. FINO, Republican, of New York, Congress' leading student of the whole subject of legalized gambling and longtime battler for a Government lottery.

Judging from other nations' lottery statistics, and reflecting that huge numbers of Americans will gamble on anything, Mr. FINO estimates that a national lottery in this country would yield $10 billion a year to the Treasury after payment of generous prizes and ample overhead. That would be a little short of one-fifth of the total raised by the Federal income tax, which could be reduced in proportion.

What are we waiting for? Answer: We're waiting for the hangover from Puritan times to pass off. How long must we wait? Answer: You tell us, or, far better, tell your Congressman and Senators you're damn tired of waiting.

PRICE OF THE CONGRESSIONAL RECORD

The Public Printer is authorized to furnish to subscribers the daily RECORD at $1.50 per month, payable in advance.

Remit by money order payable to Superintendent of Documents, Government Printing Office, Washington 25, D. C.

PRINTING OF CONGRESSIONAL RECORD EXTRACTS

It shall be lawful for the Public Printer to print and deliver upon the order of any Senator, Representative, or Delegate, extracts from the CONGRESSIONAL RECORD, the person ordering the same paying the cost thereof (U. S. Code, title 44, sec. 185, p. 1942).

LAWS RELATIVE TO THE PRINTING OF DOCUMENTS

Either House may order the printing of a document not already provided for by law, but only when the same shall be accompanied by an estimate from the Public Printer as to the probable cost thereof. Any executive department, bureau, board, or independent office of the Government submitting reports or documents in response to inquiries from Congress shall submit therewith an estimate of the probable cost of printing the usual number. Nothing in this section relating to estimates shall apply to reports or documents not exceeding 50 pages (U. S. Code, title 44, sec. 140, p. 1938).

Resolutions for printing extra copies, when presented to either House, shall be referred immediately to the Committee on House Administration of the House of Representatives or the Committee on Rules and Administration of the Senate, who, in making their report, shall give the probable cost of the proposed printing upon the estimate of the Public Printer, and no extra copies shall be printed before such committee has reported (U. S. Code, title 44, sec. 133, p. 1937).

GOVERNMENT PUBLICATIONS FOR SALE

Additional copies of Government publications are offered for sale to the public by the Superintendent of Documents, Government Printing Office, Washington 25, D. C., at cost thereof as determined by the Public Printer plus 50 percent: *Provided*, That a discount of not to exceed 25 percent may be allowed to authorized bookdealers and quantity purchasers, but such printing shall not interfere with the prompt execution of work for the Government. The Superintendent of Documents shall prescribe the terms and conditions under which he may authorize the resale of Government publications by bookdealers, and he may designate any Government officer his agent for the sale of Government publications under such regulations as shall be agreed upon by the Superintendent of Documents and the head of the respective department or establishment of the Government (U. S. Code, title 44, sec. 72a, Supp. 2).

RECORD OFFICE AT THE CAPITOL

An office for the CONGRESSIONAL RECORD is located in Statuary Hall, House wing, where Mr. Frank Brodie is in attendance during the sessions of Congress to receive orders for subscriptions to the RECORD at $1.50 per month, and where single copies may also be purchased. Orders are also accepted for the printing of speeches in pamphlet form.

CONGRESSIONAL DIRECTORY

The Public Printer, under the direction of the Joint Committee on Printing, may print for sale, at a price sufficient to reimburse the expenses of such printing, the current Congressional Directory. No sale shall be made on credit (U. S. Code, title 44, sec. 150, p. 1939).

CHANGE OF RESIDENCE

Senators, Representatives, and Delegates who have changed their residences will please give information thereof to the Government Printing Office, that their addresses may be correctly given in the RECORD.

SENATORS WITH RESIDENCES IN WASHINGTON

Fourth judicial circuit: Mr. Chief Justice Warren. Maryland, Virginia, West Virginia, North Carolina, South Carolina.

Fifth judicial circuit: Mr. Justice Black. Georgia, Florida, Alabama, Mississippi, Louisiana, Texas, Canal Zone.

Sixth judicial circuit: Mr. Justice Reed. Ohio, Michigan, Kentucky, Tennessee.

Seventh judicial circuit: Mr. Justice Minton. Indiana, Illinois, Wisconsin.

Eighth judicial circuit: Mr. Justice Clark. Minnesota, North Dakota, South Dakota, Iowa, Nebraska, Missouri, Arkansas.

Ninth judicial circuit: Mr. Justice Douglas. Washington, Oregon, Montana, Idaho, California, Nevada, Arizona, Alaska, Hawaii.

Tenth judicial circuit: Mr. Justice Clark. Colorado, Wyoming, Utah, Kansas, Oklahoma, New Mexico.

Appendix

So You're Going Into Business

EXTENSION OF REMARKS
OF

HON. EDWARD J. THYE

OF MINNESOTA

IN THE SENATE OF THE UNITED STATES

Tuesday, July 17, 1956

Mr. THYE. Mr. President, today, each Senator received an advance copy of a booklet published by the United States Chamber of Commerce entitled "So You're Going Into Business."

Because of my interest in the problems facing the small businessman, I was naturally attracted by the title of the booklet.

I recommend it to each Senator for his careful consideration, and I should like to compliment the Chamber of Commerce for this public service publication.

We hear a great deal about business failures increasing, but not much is said about the reasons for failure. I was surprised to learn from this booklet that in 9 out of 10 cases, failure is the result of a lack of "management know how". This booklet realistically helps the prospective businessman face the problems of management. This booklet is also an excellent vocational guidance tool for our schools.

I, of course, feel strongly about the importance of our Small Business Administration and the work they are doing, but we must realize that government, no matter how effective, cannot prevent all cases of business failure. If the figures in this booklet are correct, and they come from Dun and Bradstreet, then by far the biggest cause of business failure is lack of "management know-how" and more must be done along the lines of this booklet to help the small businessman and especially those just beginning a business venture.

Mr. President, I ask unanimous consent to have the pamphlet to which I have referred, entitled "So You're Going Into Business," printed in the Appendix of the RECORD.

I am informed by the Public Printer that it is estimated that the cost of printing this pamphlet in the RECORD will be $173.25, and that it will occupy about 2¼ pages in the CONGRESSIONAL RECORD. However, I think the pamphlet is so informative that it is well worth the cost.

There being no objection, the pamphlet was ordered to be printed in the RECORD, as follows:

SO YOU'RE GOING INTO BUSINESS—DOMESTIC DISTRIBUTION DEPARTMENT, CHAMBER OF COMMERCE OF THE UNITED STATES, WASHINGTON, D. C.

So you're going into business—that's wonderful—and we wish you every success. You will be successful, too, if you have carefully studied all the pros and cons about your business, your financing program is properly planned, you're the right type of person for such a venture, you have sufficient—and appropriate—experience, you stay alert to new ideas and new trends in your field.

CAPITAL? HOW MUCH IS NECESSARY?

A perfect place to make your biggest mistake is in estimating how much capital you will need. A lot of people spend all their money to get their doors open for business and then find they do not have the reserve necessary to keep them in business for the year or 2 necessary to build up a clientele.

Another point: do you remember "Mr. Blandings' Dream House"? Originally it was going to cost a moderate sum. But it wound up putting Blandings in the hole for much more than he expected because he couldn't anticipate all the costs and problems. Same problem exactly in setting up a new store.

One of the best things you can do is take advantage of the worksheets and operating ratios which are available from the United States Department of Commerce. The figures and ratios are generally gathered by trade associations and business organizations for their members or customers, but the Commerce Department regularly compiles these studies. They are useful aids in estimating costs.

RUNNING THE STORE

All right, once you get your groundwork dug and your foundation laid—and assuming your personal aptitudes look pretty good—what are the actual jobs you have to do in running a business? What jobs will have to be done for you? What jobs will you have to supervise others in doing? What kind of knowledge will you need, what kind of skills?

You might divide up the work of running a store like this:

1. Controls or record keeping: Accounting, inventories, estimating financial position, pricing your goods or services so that markups will cover your expenses, plus some profit, and still be low enough to be competitive and attract customers.

2. Selling, promotion, merchandising, advertising, display: Those activities which move the goods toward the customer, the customer toward the store, at the right time and price—and making the sales. You can't be passive about this part if you want to do business.

3. Buying: "Goods well bought are half sold." Where to buy your stock or equipment. How much to pay. Determining quality of goods. Arranging appropriate credit terms and promotional support from suppliers.

4. Handling employees: Selecting them, training them, particularly sales-training. Keeping their morale high. The staff reflects the attitude of the boss, and the success of the store is involved.

5. Planning ahead: Too many small operators, and big ones, too, get so involved in just "doing the next thing" that they neglect to do the long- and short-range planning which pays the big dividends.

6. Community participation: Some call it civic duty. Others think it is "good will" or useful contacts. Actually, it is long-range guaranteeing of your future. Participation in your chamber and in your local political processes is the way you help shape the future of your town and your country. Your work in this field can mean the difference in handling the traffic and parking problems, the education your children get or don't get, the taxes you pay, and finally, whether you will be allowed to continue to own your own store under a private property-free enterprise system. Some fellows just chase the dollar and leave this other stuff to "George."

7. Taxes, auditing, finance and insurance: You will probably get professional advice and counsel.

Well, there are quite a few rings to this circus, but a good man or woman can handle them all right and make a good living. It's all in developing the skills and knowledge that are needed and relying on help or outside services for the rest.

Incidentally, a lot of people plan to make their business a partnership, and they are careful to choose a partner who has experience and skills in those parts of the business where they are weak. One fellow may be skilled in accounting, inventories, record keeping and financial management. He will go out and get himself a partner with a lot of selling experience and, if possible, some experience in buying. Together, they make a fine team. Separately, they would have troubles.

JUST ONE MORE THING

Maybe it goes without saying * * * but the people this book is for are the people who wish to establish a substantial business which will earn them a living, serve their customers, and be a lasting credit to the community.

This book is not for the "fast buck" artist. That's why we talk about community participation as being a part of the business. It is also why we pass on this helpful hint: The successful merchant is the man who gives good value for the dollar and plays fair with everybody.

Customers don't come back if they are not treated well, if goods are not up to snuff or if they feel they haven't gotten their money's worth.

Chambers of commerce have long been aware that there is a connection between good, honest values and success in business. The opening statement of a code drawn up by the national chamber is significant: "The foundation of business is confidence, which springs from integrity, fair dealing, efficient service, and mutual benefit."

So * * * if you want a basic principle to guide you as you steer your business toward success, you can't find anything better than one you already know: The Golden Rule.

If you have to look it up to find out what it is * * * you'd better not go into business.

Operating a business is much more complex and difficult than is generally realized. There's nothing simple about it. You'll work hard * * * and long. That is, you will if you make a go of it.

But the rewards are worth it. You'll be the head man. Nobody can fire you. Your opportunity for income will be greater. You'll have more pride in your own abilities. And you'll experience a satisfaction that words can't describe.

This booklet suggests several important questions you should consider before you decide to go into business for yourself. These questions are important whether your business will be concerned with drugs or dry goods, hats or hardware, groceries or gasoline. The same basic factors must be considered in beginning virtually every type of business.

Don't expect this brief booklet to give you a foolproof formula for starting and operating a successful business. It doesn't.

But—if you'll heed the advice the book offers and follow through with some of the reference suggestions it contains for more specific information—you can find your own formula for success.

Good luck. (Domestic Distribution Department, Chamber of Commerce of the United States.)

WHAT ARE THE CHANCES OF SUCCESS—OR FAILURE?

Operating a business is tough, but not impossible. Let's look at some figures on business entries, discontinuances and failures.

What is the rate of business discontinuance? A business discontinuance is a case of a firm ceasing operation. Probably about half of all business discontinuances take place because of, or to avoid, failure. About 1,000 firms go out of business every working day. Roughly 600 of them are retail, service, or wholesale firms. About 70 out of every thousand retail businesses went out of operation in 1955. (United States Department of Commerce figures.)

2. How many new businesses start each year? Figures vary slightly from year to year. In 1955, for example, there were 374,200 new businesses started. One hundred forty-nine thousand and eight hundred of these were retail businesses. Over the years, starts and discontinuances just about balance out. (United States Department of Commerce figures.)

3. What chance does a business have to survive? The median age of all operating businesses is 7 years—that is, half of the businesses are older and half are younger than 7 years. Since World War II, a new firm has had a 50–50 chance of lasting 2 years under the same management. Chances are 3 to 1 against it living to age 4, and only 1 out of 5 businesses lasts 10 years. (December 1955 Survey of Current Business, United States Department of Commerce.)

4. What are the causes of failure? The actual reasons which have been carefully researched by Dun & Bradstreet do not always receive as much attention as they should. Dun & Bradstreet studies show that the causes of failure in the retail field in the year 1955, were as follows:

Lack of management know-how, 91.3 percent.

Neglect of business, 4.8 percent.

Fraud, 2.1 percent.

Disaster, 1.4 percent.

Other, 0.4 percent.

Chances are that a very large number of those that failed would have succeeded if they had just prepared themselves adequately for the job.

ARE YOU THE TYPE?

People are different. Some people can run a hundred yards in 10 seconds. Others couldn't do it under 15. A few people have the iron nerves, steady hands, and training necessary to be a surgeon; others don't, but maybe they can work 8 hours a day on girders 200 feet in the air putting up a building.

To do any job, a person needs certain aptitudes, certain knowledge and certain skills. What kind of people make good as owner and manager of their own store? Authorities say they rate high in most of these character traits:

Initiative: Self starters; don't wait for directions.

Positiveness: Optimistic, self-confident, willing to take risks.

Leadership: Forceful, inspire confidence and loyalty.

Responsibility: Accept it—don't duck it.

Organizing ability: Able to see what should be done and get it done in a logical order.

Industriousness: Willing, capable of working hard for long hours.

Decisiveness: Quick and accurate, not hesitant.

Sincerity: Square shooters, on the level, honest.

Perseverance: Stick-to-itiveness, particularly when hours are long and business seems slow.

Physical energy: Highly energetic at all times.

Friendly: Ability to get along with people, even when they try one's patience.

You may wish to try rating yourself as being "very high," "high," "fair" or "low" on these points. In addition, having a couple of friends rate you will probably prove helpful, since it is hard for any of us to be completely accurate in appraising ourselves.

WHAT KIND OF BUSINESS?

Nobody can decide what kind of business you should go into but you. Here are a few things that may help you in deciding:

1. Experience in a particular kind of business. If you have worked in a shoe store, you will already have some of the knowledge you need to run a shoe store and will be that much better equipped to do it well. The more experience and training you have which can be put to use in operating a particular kind of business, the more likely you are to succeed in it.

You've heard the old story, one fellow says to another, "Can you play the piano?"

The other fellow replies, "I don't know; I never tried."

Well, until you've gotten some experience in a business, it's hard to know what it's like, whether you could do well in it. One of the best pieces of advice that can be given is: Get experience in a line working for somebody else before you try it yourself. This way, you don't risk losing your own savings while learning the fundamentals, but actually get steady pay until you are ready for the big plunge on your own.

2. In a given area, what kind of business is needed? Best way to find this out is to go around and ask a lot of questions of the people who live in the area, wholesalers who service the area, the local chamber of commerce, local businessmen. Ask enough people and you'll get a pretty good idea of what's needed.

WHAT ABOUT LOCATION?

The location of your business is very important.

1. The proper town or city.

2. The choice of specific area within the town.

3. The exact site within the specific area.

The proper town or city is, of course, largely a matter of your personal likes or dislikes. You want to live where you and your family will be happy. But, you will want to be sure the town in which you locate can support your business profitably enough to meet your needs.

The area where you locate may be decided for you if there is only one business district in your town. But often, today, a question comes up concerning what looks like a good location in a shopping center on the outskirts. Don't forget that downtown is still a central location which can be more easily reached by more people than can a spot out on the edge of town. Depending on what type of business you are opening, you must be sure there are enough people in your shopping area to support your store.

The exact site in a given area is often determined by the rent you can pay. Bear in mind that a higher rent often means a better, more productive location. And, what about customer conveniences? Are parking facilities adequate? Is the site well located with regard to public transit?

Well, these are just some of the problems on location. The right location sometimes saves a poorly run business; the wrong location can wreck an otherwise superbly managed store.

BUY? RENT? START FROM SCRATCH?

There are three choices you may have in getting started: buying a business, renting a business, or starting from scratch. Each has its own advantages and risks.

If you buy an existing business, you inherit the goodwill and customers of your predecessor. He may also leave you some experienced employees who will be either a great help or resentful of new ownership, depending on how you handle them. But how much should you pay? Is the business going up, or has it been going downhill? Can you get all arrangements such as rent, credit, and so forth on as favorable terms as your predecessor?

On the other hand, if you start a brandnew business, you have several other advantages, and handicaps. You make your own goodwill and are not saddled with any hung-over ill will from a previous operator. You will be buying a lot of new fixtures and setting up your own store layout, and the result may be more modern and efficient than if you took over a going concern. But everything will have to be done from scratch. You may even need more capital since it will take months, or perhaps years, before you can build a substantial clientele.

Leasing or renting a business is an interesting possibility. This is often done with gas stations, for instance. Here you take on much less of the risk involved, but inevitably must pay something extra to the lessor for assuming part of your risk. Negotiation of the contract is very important. Always make certain that the contract means an advantage to both you and the firm or person you make it with; otherwise there will be difficulties.

REFERENCES FOR ADDITIONAL INFORMATION

There are various sources that you can—and should—use to secure detailed information concerning the problems involved in setting up your own business. Some of these sources are located in your own community, and you should establish personal contact with them. Others are out of town and will require correspondence.

Here are some of the sources that you should consider utilizing:

1. Your wholesalers or suppliers and their salesmen. They know a lot about your line of business.

2. Your banker. Cultivate him, too. He has seen a lot of businesses come and go and can really be of help.

3. Your local chamber of commerce manager.

4. The people you rely on for expert service—your lawyer, your insurance man, your tax man or CPA.

5. The trade association that represents your type of business.

6. The Small Business Administration, Washington 25, D. C. It has field offices in your area. It works in the fields of loans and technical advice. It has published scores of bulletins and releases on all kinds of businesses and most phases of business. It's a Federal service. Use it. Here are some of its free bulletins:

Advertising, Retail Store, BSB No. 2.

Arrangement and Display, Store, BSB No. 5.

Buying for Retail Stores, BSB No. 100.

Credit, Consumer, BSB No. 12.

Credit and Collections, Retail, BSB No. 72.

Home Businesses, BSB No. 95.

Operating Costs and Ratios—Retail Trades and Service Establishments, BSB No. 50.

Recordkeeping Systems for Small Stores and Service Trades Establishments, BSB No. 116.

Retailing, BSB No. 43.

Training Retail Salespeople, BSB No. 4.

Attracting Customers to Your Small Store. (Small Marketers Aid No. 3.) April, 1955.

7. United States Department of Commerce, Washington 25, D. C. Has published "Establishing and Operating Your Own Business," an excellent and comprehensive guide for the new business proprietor. Also cooperates with the Small Business Administration in rendering technical advice and services to business.

8. Distribution Data Guide—monthly. Subscription $2 per year; 15 cents a copy. A selective, annotated listing of significant literature on distribution. Deals with market research, merchandising, sales promotion, advertising, etc. United States Department of Commerce. Order from Superintendent of Documents, United States Government Printing Office, Washington 25, D. C.

9. Operating Results and Ratios. These are figures telling how much is spent for different items of expense in individual business lines. Good for comparisons. Sources are:

(A) Dun and Bradstreet, Inc., 99 Church Street, New York 8, N. Y.

(B) National Cash Register Co., Merchants Service, Dayton 9, Ohio.

(C) Accounting Corporation of America, 1929 First Avenue, San Diego, Calif.

(D) United States Department of Commerce and Small Business Administration.

10. Your State department of commerce at your State capital.

11. How to Establish and Operate a Retail Store. Second edition. Kenneth B. Haas and O. Preston Robinson. 1952. 379 pp., $6.65. Sketches many types of enterprise as possibilities and gives pointers in analyzing a prospective venture. Prentice-Hall, Inc., 70 Fifth Avenue, New York 11, N. Y.

12. Retailing—Principles and Practices. Paul L. Brown and W. R. Davidson; 1953; 726 pages; with 51 illustrations and 29 tables. Discusses all retailing functions and problems from management point of view. Ronald Press Co., 15 East 26th Street, New York 10, N. Y., $6.

13. Retailing—Principles and Methods. Debert Duncan and Charles Phillips; 1955; about 700 pages. A complete text on all phases of retail store operation. Richard D. Irwin Co., Homewood, Ill., $6.

SELECTED CHAMBER PUBLICATIONS

Special Days, Weeks and Months. Annual; 44-page booklet listing over 300 special observances, legal and religious holidays complete with date or dates, purposes, name, and address of sponsor for each event. Lists observances alphabetically and chronologically. 50 cents.

Trade Promotion Planning Calendar. Annual. Companion piece to Special Days, Weeks and Months; 26-page calendar with ample space for notes in calendar date blocks. Lists special days, weeks, etc., for each month. 50 cents.

Distribution Trends. Annual. Statistics, news, and informed observations highlighting events of past year and indicating major trends in retailing, wholesaling, advertising, and service industries. Useful for planning ahead; 30 cents.

What's the Answer? A guidebook to sources of business and economic statistics, facts, and general information. Handy and useful for businessmen as well as chambers of commerce and trade associations; 50 cents.

Small Business: Its Role and Its Problems. A 34-page booklet analyzing the problems and the importance of small businesses in the American economic system; 50 cents.

Quantity prices for publications on request.

In ordering, make checks payable to Chamber of Commerce of the United States.

Complete list of chamber publications available on request.

THE AIMS OF BUSINESS AND THE WORK OF THE NATIONAL CHAMBER

As the Chamber of Commerce of the United States becomes more widely known as a national institution, more people, it seems, want to know: "Precisely what does the National Chamber do—what is its purpose?"

That is a question we are glad to answer.

The National Chamber is the voice of business. It is the organization through which business as a whole expresses itself—to let the public and the Government know where business stands on controversial national issues, and the reasons.

The National Chamber is the channel through which the businessmen of America, as an organized group, exercise their leadership in national affairs.

It is the means by which the businessmen of America fulfill their responsibility for helping solve national problems.

The primary concern of business is not how to get something for nothing or how to wangle an unfair advantage for itself. The primary concern of business is how to maintain an atmosphere in which business can operate at a profit and without unnecessary Government restraint.

That means: how to maintain and improve the competitive free enterprise system.

Along with this, business has another concern. It is how to meet the human needs of a growing population, how to provide good paying jobs for a growing labor force, how to keep the economy dynamic and expanding.

That means: How to keep the future of America bright. In looking ahead, business sees six basic jobs that need to be done—by businessmen working together—to keep the country strong, productive and free. Here they are:

1. Cut taxes: Promote economy in Government, make sound tax cuts, and devise a fair and equitable tax system.

2. Improve labor relations: Create greater harmony between labor and management, America's productive team.

3. Lift living standards: Increase production, develop new markets, provide more jobs, keep the economy expanding.

4. Improve education: Raise educational standards, and build a better public understanding of free enterprise.

5. Build better cities: Combat urban blight and build better cities and communities for tomorrow.

6. Strengthen organized business: Keep local, State and national organizations of businessmen strong, forward-looking and increasingly effective.

Everything the chamber does is directed toward these six objectives. The job is a continuing one. It involves many activities. It involves the creative thought of many individuals. It involves the serious effort of many organizations. It involves teamwork—and every businessman should be on the team.

The Contribution of Oil to Illinois and the Nation

EXTENSION OF REMARKS

OF

HON. CHARLES W. VURSELL

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 5, 1956

Mr. VURSELL. Mr. Speaker, today I want to discuss the oil industry which has made such a great contribution to the defense and to the economy of our Nation, and to southern Illinois and the Congresisonal District I have the honor to represent.

First, I want to tell you why, for the 14 years I have been in Congress, I have constantly supported the oil industry.

I have supported the oil industry because of the tremendous and constant flow of wealth it has brought to the citizens of most of the counties of my congressional district, and to the State as well for the past several years.

To give you an idea of the great wealth the oil industry brings to Illinois, may I point out that Illinois in 1954 produced 81,130,000 barrels of crude oil, the value of which was $242,500,000, and, mind you, that was for just 1 year.

It is important to note that in the 23d District I represent, we produce about two-thirds of all the oil produced in the State, or 60,849,000 barrels in 1954—an income to this area for that year in the amount of $181,875,000, and millions of dollars from oil will keep coming in for many years in the future.

Now to emphasize the tremendous value of oil production to the 23d Congressional District, if you would multiply the production in 1954 of $181,875,000, by 14 years I have been in Congress, it would amount to $2,546,250,000. This does not take into account the early production for the first 5 years, from 1937 to 1942, which would amount to many more hundreds of millions of dollars.

In addition to the income from oil that is actually produced, in Illinois there is now more than 1 million acres of land, not now producing oil, under lease. From this source, the farmers of Illinois have at least another million dollars annual income.

I have been alert and active in protecting the legitimate interest of the oil industry because I want to continue, as long as possible, this great source of wealth and prosperity for our people.

By protecting the rights of the oil industry, I am representing the best interests of many thousands of farmers who have oil on their land, or who have sold royalties, or leases, upon which land they hope some day oil will be found.

BENEFITS BUSINESS AND LABOR

I am also representing the best interests of all of the businessmen who benefit from the millions of dollars of prosperity that has been brought to the farmers, and countless thousands of people who are employed, at good wages, in the various fields of the oil industry.

Back in 1936, before the Clay City and Salem-Centralia oil fields were discovered, the economic conditions throughout this area, as you will remember, were at a low level; in fact, in 1936 thousands of farms in this entire area were mortgaged for about all they could stand. Within a few years after the discovery of oil, thousands of farmers were able to sell their oil leases, oil, and royalties, thereby paying off their mortgages. In other words, the oil industry is of particular interest to practically every citizen in our entire area. This great production of wealth furnishes thousands of jobs, and the necessities and luxuries of life for our citizens. It pays a big tax to the State, to our local subdivisions of

government, which helps pay the running expense of government, and the building of schools for the education of our children. The industry makes its full contribution to the civic welfare of our communities, and the support of our churches.

To give you an idea of the wealth it has brought to the counties in the 23d Congressional District in 1 year, 1954, I am inserting a table containing this information, as follows:

Report from Illinois Geological Survey

County	Amount of barrels	Volume in dollars
Bond	79,000	$237,000
Clay	4,895,000	14,685,000
Clinton	1,735,000	5,205,000
Edwards	1,440,000	4,320,000
Fayette	6,693,000	20,079,000
Hamilton	3,326,000	9,978,000
Jefferson	2,281,000	6,843,000
Lawrence	3,258,000	9,774,000
Marion	6,525,000	19,575,000
Montgomery	6,000	18,000
Richland	3,515,000	10,545,000
Wabash	3,638,000	10,914,000
Washington	940,000	2,820,000
Wayne	7,067,000	21,201,000
White	8,010,000	24,030,000
Total	53,408,000	160,224,000

This great wealth that has come to the communities in my section of Illinois—not only in 1 year, but it has been repeated each year since the discovery of oil, in major quantities, in 1937. In total it runs into several billions of dollars. The good that it has done for all of our people is generally known throughout this area.

WHY PROTECTION OF OIL INDUSTRY?

You may ask why and how oil needs protection. The answer is very plain and understandable. The independent oil operators in particular, and at times the large operators need protection against the effort that has been made a number of times in the 14 years I have been in Congress to reduce, or wipe out, the 27½-percent depletion deduction. The demagogues in the Congress and those socialistically inclined, and the leftwingers of the Nation will tell you it should be wiped out, and they have tried to do it. This crowd generally is against the free enterprise system, and all legitimate business. They prefer Government controls, which are the forerunners of socialism.

WHAT IS DEPLETION DEDUCTION?

Let me explain it. Back in 1926 a group of the ablest tax attorneys in the Internal Revenue Department in Washington, and the Congress agreed upon allowing a 27½-percent tax depletion deduction on the sale of oil. They did it because under the Constitution the Government could not tax capital of any kind. After a year's study by the Government's tax experts and the Members of Congress, they determined that 27½ percent of the value of a barrel of oil represented the capital of the owner, and could not be taxed. They provided that the profit made on a barrel of oil should be taxed. From that date until this, the capital, or the oil under the ground that belonged to the farmer, or to the farmer and producer when they made a contract, represented 27½ percent of the value, and all above the 27½ percent, less operating cost, is profit, and is taxed as income the same as all other income. This principle has been made applicable to substantially all minerals, including coal, zinc, and so forth.

Several times in the 14 years I have been in the Congress a fight has been made to reduce this depletion allowance; however, so far, we have been able to defeat each attempt, and I will help to defeat every attempt in the future as long as I am in Congress.

If the depletion deduction was wiped out, it would hurt the farmers and the oilmen because it would slow down their drilling and exploration for more oil. That would strike a hard blow at the economy of southern Illinois and the Nation; two-thirds of the oil rigs in southern Illinois would be stacked in lots, or the operators would move away. Thousands of wage earners would be out of jobs, and the millions of dollars that come from the ground in southern Illinois, to enrich our communities, would be left underground because new fields would not be explored and developed. This is an undeniable fact.

OIL IMPORTS

Now, there is another threat that has been developing rapidly over the past few years to the independent oil producers, like most of them operating here in southern Illinois. That threat comes from a few big oil companies, about seven in all, which have developed a great deal of oil in the rich oilfields of the Middle East in particular, which produce unlimited millions of barrels of oil each year, at a very low cost.

Because of the abundant production, it is being imported into this country in such great amounts that the smaller oil producers of our entire Nation have been forced to cut back their production further than it should be. In the interest of defense, we must maintain production at a high level, and keep exploring and bringing in new fields and new oil reserves if we are to make certain that if another world war came we would be able to produce enough oil to keep industry in this Nation going at a high level. And enough oil to supply our Army, our great Air Force—so necessary to the protection of our country—and to keep our thousands of ships in position to transport our men and military supplies to any nations which would become our allies.

The Office of Defense Mobilization, the President of the United States, and all of those from the highest level in Government, realize that we must make certain that our production of oil and gas in this country must always be kept at a high enough level to sustain ourselves for many months if we are to assure the defense of this country.

May I point out in the last world war the submarine menace cut off, to a very large extent, the importation of oil from Venezuela and South America, and from the Far East.

Fortunately, even though the submarines cut off a large part of our import oil for several months before we were able to get them under control, our oil industry had been kept in such high production that we were able to increase our industry for war, and to supply our Army, Navy, and thousands of airplanes during this great crisis.

Since peace came, in 1945, oil imports have continued to increase year after year, and as they increased, our production of wells in the United States has been cut back and cut back until the Congress, and later the President, for the first time in our history recognized that excessive imports of oil had become a problem that must be dealt with.

In 1954, I introduced a bill that would not permit imports to reach the level of more than 10 percent of our national consumption, and after a major fight on the floor of the House, the bill failed to be passed by only a few votes.

We continued our fight against excessive imports in the Congress until in 1955 the President appointed a Cabinet-level committee, headed by Dr. Flemming, Director of the Office of Defense Mobilization, to study energy supplies and resources including oil. That committee, after making a thorough study, rendered a decision that in the future the proportion of oil imports to domestic production be held at the 1954 level. Since that time, Dr. Flemming, acting for the executive department, and the Congress have been making every effort to get the seven major oil importing oil companies to voluntarily reduce their imports and comply with the expressed will of the Congress and the executive department.

Some of them have shown an inclination to comply to a greater extent than others. Some few have not. Dr. Flemming recently issued his third letter to all of the major companies urging compliance, and asking for specific information as to their program of imports in the future. The oil people, generally, agree that it would be better to limit excess imports on a voluntary basis rather than to pass legislation if it is possible to get them to do it.

My information is that the executive department hopes that third quarter imports this year may be substantially reduced based on recent reports to the Office of Defense Mobilization, in reply to the recent letter he sent out and the personal conferences Dr. Flemming has had with some of these importers.

This is a problem that must be met in the interest of our economy, and in the defense of our country if legislation is to be avoided.

Unless voluntary compliance is met which will result in the proportion of oil imports to domestic production being held at the 1954 level, as recommended by the President's Cabinet Committee at the close of their study, I shall join with other Members of the Congress in introducing and supporting legislation which I predict will be passed by the Congress in the next session to accomplish this.

I would like to make a comparison between the attitude of President Eisenhower and his administration with the attitude of the two past Presidents, Mr. Roosevelt and Mr. Truman, with reference to the oil industry.

COMPARISON

President Eisenhower has shown by his friendly attitude toward the oil industry that he understands and appreciates the great contribution it has made to the economy of our Nation, and the necessity for keeping it strong as one of the first lines of defense of the Nation. For instance, one of his first acts was to support legislation to turn the oil tidelands back to the States, which had been in possession of them for over 100 years before the Supreme Court in a split decision brought the tidelands under the control of the Federal Government.

By comparison, President Truman had previously vetoed a tidelands bill, overriding the will of the Congress that had passed it by a substantial majority.

DEPLETION DEDUCTION

The late President Roosevelt, upon the recommendation of Mr. Henry Morgenthau, Jr., and others, made more than one attempt to reduce, or wipe out the oil industry's 27½-percent tax depletion deduction, but was prevented from doing so by the Congress.

Then again, after Mr. Truman became President, he made the same attempt to wipe out, or reduce, the 27½-percent tax depletion deduction, but was also prevented from doing so by us in the Congress.

By comparison in the 3½ years President Eisenhower has made no attempt or suggestion to do so.

IMPORTS

Because of the rapid increase in imports since World War II, President Eisenhower was the first Chief Executive to recognize the danger of excessive imports as a problem that had to be dealt with. He thereby brought into being the Cabinet-level study committee, which, under the chairmanship of Dr. Arthur S. Flemming, rendered a decision that in the future the proportion of oil imports to domestic production be held at the 1954 level. Furthermore, the President showed his interest in this problem by authorizing the Director of Defense Mobilization to follow up on the recommendations of the Committee, and to make recommendations to the oil importing companies designed to bring about substantial compliance with the Committee's recommendations.

I would also like to point out that in the veto of the gas bill the President said, in substance, that he reluctantly vetoed the bill because he thought that legislation should be enacted to prohibit Federal control of the price and gathering of gas at the wellhead, but that certain lobbying activities had been engaged in that caused him to feel he should take such action. He, in a manner, left the door open for the consideration of such legislation by a subsequent Congress.

I would also like to point out that the Cabinet-level committee, in making their report recommended against the Government's control of the price and gathering of gas at the wellhead.

By comparison, again, when the Kerr bill in 1950 was passed by the Congress to remove Federal control of the price and gathering of gas at the wellhead President Truman vetoed it.

The above comparison of records plainly shows the difference in the attitude of the Eisenhower Administration toward the Oil and Gas Industry. The Eisenhower administration has been favorable to the oil industry. The past administrations were unfavorable.

Controlling Narcotics

EXTENSION OF REMARKS
OF
HON. HERBERT H. LEHMAN
OF NEW YORK
IN THE SENATE OF THE UNITED STATES
Tuesday, July 17, 1956

Mr. LEHMAN. Mr. President, on July 11, 1956, there appeared in the New York Times an editorial entitled, "Controlling Narcotics." The editorial deals with the Narcotics Control Act recently enacted by Congress, and points out that there is much work ahead for Congress in doing something constructive about the nub of the narcotics problem—namely, the rehabilitation of the addict. As I stated in my remarks when the Senate was considering the Narcotics bill, the need lies in providing more facilities and services for the addicts, to assure the rehabilitation of as many of these unfortunates as possible. I do not think there can be any sound ground for doubt when the alternatives are between prisons and hospitals, between penitentiaries and aftercare, between locking up a sick man or giving him the services he needs to make him well.

Mr. President, I ask unanimous consent that the editorial on "Controlling Narcotics," as published in the New York Times of July 11, 1956, be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

CONTROLLING NARCOTICS

Now that Congress has passed and sent to the President a bill drastically increasing penalties for illegal sale and possession of narcotics—even up to and including the death penalty—we urge that it devote equal attention to the other side of the coin: medical treatment and rehabilitation procedures.

Severe punishment of the drug peddler is necessary as a deterrent, but punishment alone is not the answer to the drug problem. For 40 years the emphasis in combating illicit narcotics in this country has been on punishment; and today we are believed to have more dope addicts than all the other nations of the West combined. From a ratio of 1 addict to every 10,000 persons only a decade ago the United States now has 1 for every 3,000, of whom it is estimated that 13 percent are less than 21 years of age. These are truly appalling figures. The economic rewards of this traffic are so great (an ounce of heroin that costs $5 in Communist China may be sold for several thousand dollars in New York City) that it should be clear that even the most stringent penalties, necessary as they are, will not abolish the purchase and sale of illegal drugs. This is especially true because in many cases the seller is himself an addict who pushes the sale to provide funds to keep himself supplied.

Addicts are sick, as sick as alcoholics or the mentally ill or people afflicted with dread diseases. Some excellent work is being done by the Federal Government, and by State and private agencies, to cope with the problem in medical terms, with efforts directed toward rehabilitation. But a great deal more is needed, in terms of money and effort and psychological approach. In a letter to this newspaper a month ago the Attorney General of the State of New York, while supporting the punitive legislation then pending in Congress, urged enormous expansion and development of research projects and of facilities for clinical treatment, a suitable program for after-care and out-patient surveillance, and even an experiment in restricted legal distribution of narcotics. The latter method is used in the United Kingdom, where, according to the president of the New York City Medical Society, writing in the Times magazine last Sunday, there are only 279 known drug addicts "and probably very few unknown ones."

There is still plenty of work left for Congress to do in the field of narcotics control, even more important than that which has just been done. The problem has by no means been solved by the bill that is now awaiting the President's signature.

Slum Clearance Authorization Adequate

EXTENSION OF REMARKS
OF
HON. EDGAR W. HIESTAND
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 5, 1956

Mr. HIESTAND. Mr. Speaker, on July 13, 1956, there appeared in the Appendix of the CONGRESSIONAL RECORD a statement by the gentleman from Pennsylvania, Hon. ELMER J. HOLLAND, which deplored the action of the House Rules Committee in tabling the housing bill, H. R. 11742. The statement attempts to point out the allegedly serious effects on the Federal slum clearance program should the housing bill not be enacted.

The statement points up one of the great fallacies concerning the pending housing bill and that is its purported relationship to slum clearance.

Actually if the pending housing bill is not enacted, it will in no way affect the program of Federal grants for slum clearance and urban redevelopment. The Congress has appropriated $1 billion for this purpose and, since 1949, $700 million has been earmarked for Federal grants for slum clearance, leaving $300 million remaining in this fund.

The statement of the gentleman from Pennsylvania contends that if the housing bill is not enacted that slum clearance will be set back because there will be no public housing available for displaced persons. Actually it is the omission from the pending bill of this important relationship between public housing and slum clearance that prompted the Administrator of the Housing and Home Finance Agency, Albert M. Cole, recently to criticize the measure as "excessive, unrealistic, and ill conceived," and has influenced the House Rules Commitee to table an application for a rule.

The Administration in its endorsement of a modest public-housing program seeks to make public housing one of the instruments in the fight to clear the Na-

tion's slums. The other body and the House Banking and Currency Committee rejected such a use for public housing and approved an unrealistic program which seeks to project public housing on the Nation's communities as an end in itself and not as one of the instruments in the Nation's fight against slum clearance.

The proponents of public housing for years sought to justify public housing as necessary in the fight to clear slums. Yet when the administration sought to tie in public housing with slum clearance this was rejected. The administration believes that any community in order to qualify for public housing must have a workable program for the prevention of slums. This requirement was rejected by the other body and the House Committee on Banking and Currency.

I have here a letter from Frank P. Ziedler, mayor of the city of Milwaukee, Wis., dated May 25, 1956, and addressed to the regional director of the Housing and Home Finance Agency in Chicago, Ill. Mayor Zeidler points out that originally he opposed the whole concept of the workable program because he saw it to be a maneuver on the part of those opposed to public housing to put another stumbling block in the way of obtaining Federal funds for public housing or for slum clearance.

Now in this letter which I am inserting as part of this statement the mayor endorses the workable program requirement as something that is long overdue.

If the champions of public housing were sincere in their efforts to clear slums, they would accept the workable program requirement and insist that all units be earmarked for slum dwellers who are displaced by code enforcement, slum clearance, or other governmental action. By so doing they would remove the principal roadblock to the consideration of the pending housing bill.

The letter follows:

OFFICE OF THE MAYOR,
Milwaukee, Wis., May 25, 1956.

Mr. IVAN D. CARSON,
Regional Director of Urban Renewal Housing and Home Finance Agency, Chicago, Ill.

DEAR MR. CARLSON: When I discussed with you at East Lansing the effects of the workable program of urban renewal, I said I would express in writing some of the experiences which Milwaukee has had with the program in order that you might have some material for analysis of the course and direction of the program.

I was orginally opposed to the whole concept of the workable program because I conceived it to be a maneuver on the part of the real estate interests, who are hostile to public housing, to put another stumbing block in the way of obtaining Federal funds for public housing, or for slum clearance. I still believe that this was partly the reason for the creation of the workable urban renewal program.

However, I also recognized at the time that there were other persons interested in the workable program who had a genuine concern about slum clearance and felt that cities could and should do more on their own in order to accomplish the objectives of city restoration. I think that those who conceived the workable renewal program as being a means of forcing cities onward in their housing standards are being justified now to a considerable extent.

The necessity of having a workable urban renewal program certified by the Federal Government permited the forces for better housing conditions in Milwaukee to pass a housing code which is somewhat stiffer than the one that we have had in the past. I note that this code is not what the URA felt to be ultimately desirable, but, nevertheless, this code is much more than we could have obtained without the Federal spur to create such a program. At the present time the staff of the health commissioner, who administers the program, has gone over a considerable portion of the rooming house district and has come forward with many orders for improvement. Of course, there is a considerable amount of protest against the orders but I believe that they are desirable from the public point of view.

Secondly, the necessity of having a certified workable urban renewal program has brought about the passage of a resolution by the Milwaukee Common Council which permits the creation of the post of an urban renewal coordinator. Coordination is absolutely necessary for urban renewal, and the task is so great that the responsibility for it must be centered.

A citizen urban renewal committee, established to comply with the urban renewal law, is a strong force for improving standards of the community, because the citizens appointed are, in the main, completely interested in their work.

The workable urban renewal program also sorted out some planning difficulties that existed in the city. It was decided that the board of public-land commissioners should have the major responsibility for improving the master plan and for selecting planning sites and areas to be demolished, rehabilitated, or conserved. In my opinion, this was an important step forward, because the staff of the land commission did not concentrate on urban renewal until the Federal demand for a workable program came through.

Perhaps the principal way in which the workable program is having a good effect is through the office of the building inspector. The building inspector was able to secure additional assistance for inspection resulting in demolition. He has already caused to be demolished this year hundreds of substandard buildings. If the city had to pay for the razed buildings under a land-purchase plan, or under a forceable condemnation, the city simply could not have afforded a program of this type.

It would appear now that, on the basis of his present experience, the building inspector is taking down enough buildings every 4 months to amount in total to the number of buildings that would be taken down in a major clearance project in the city. This work is done at very little cost to the city government. It does not disturb communities and does not upset landownership. As a result of this experience, I am thinking of asking the State legislature to give us a stronger condemnation law.

The necessity of qualifying in 1957 for a recertification of having a workable urban renewal program has caused work to move forward on the creation of a civic center. This work is long overdue.

The workable program is also spurring the completion of the Milwaukee Building Code. I believe that the Milwaukee Common Council will hire a special consultant to complete the last six chapters of the code, which has been in the making a long time.

On the basis of our current experience, I think the workable program for urban renewal should be given several years of additional life in order to see what further advantages it will bring to the cities who have been compelled to meet its standards.

Yours truly,

FRANK P. ZEIDLER, *Mayor.*

A Workable Program for Fighting Slums

EXTENSION OF REMARKS
OF
HON. EDGAR W. HIESTAND
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 5, 1956

Mr. HIESTAND. Mr. Speaker, under existing law a local community may not receive Federal loans or capital grants for urban renewal projects, nor may it receive special FHA mortgage insurance aids for urban renewal housing unless the community has an approved workable program for the prevention and elimination of slums and blight. This provision was enacted by the Housing Act of 1954. The purpose of the provision in the 1954 act is to achieve maximum results in slum elimination and prevention by requiring localities assisted by Federal funds to utilize their own local facilities and powers in the prevention and elimination of slums. As originally enacted by the Housing Act of 1954, this requirement was applicable to Federal assistance to low-rent public housing. Its applicability to public housing was removed by the Housing Amendments of 1955. In his legislative program for this year President Eisenhower proposed that the law be amended so as to restore the applicability of the workable program requirement to future low-rent public housing.

H. R. 11742, the bill reported by the Committee on Banking and Currency, and referred to as the Housing Act of 1956, fails to restore the workable program provision. That is one of the reasons why a bipartisan Committee on Rules voted to table it. The bill is defective in that it presents public housing as an end in itself. That is certainly not the basis on which public housing was originally presented to the Congress. It was offered as a means of ridding our cities of slums. I believe, as does Albert M. Cole, the Housing Administrator, that public housing should be a part of an integrated attack on slums and blight and that communities undertaking public housing with the assistance of Federal funds should develop their own plans for meeting their overall problems of slums and blight and make their public housing projects a part of those plans.

That is what a workable program is—a community's plans for meeting its overall problems of slums and blight. It is in no sense an onerous or impossible requirement. Basically, it consists of the following seven elements:

First. Codes and ordinances: The objective is to assure adequate minimum standards of health, sanitation, and safety through a comprehensive system of codes and ordinances which state the minimum conditions under which dwellings may be lawfully occupied.

Second. A comprehensive community plan: The objective is the formulation and official recognition of a comprehensive general plan for the community as a whole. A general plan should be developed under procedures provided by State and local legislation, and should be supervised and administered by an offi-

cial local planning body with adequate resources and authority to insure continuity of planning.

Third. Neighborhood analyses: The objective is the identification of the extent and intensity of blight and logical patterns of specific neighborhoods for purposes of developing a basis for planning of healthy neighborhoods of decent homes and suitable living environment.

Fourth. Administrative organization: The objective is a firmly established administrative responsibility and capacity for enforcement of codes and ordinances, and for carrying out renewal programs and projects.

Fifth. Financing: The objective is the development of means for meeting the financial obligation involved in carrying out urban renewal activities.

Sixth. Housing for displaced families: The objective is to facilitate the rehousing, in decent, safe, and sanitary accommodations, of families displaced by governmental action.

Seventh. Citizen participation: The objective is communitywide participation on the part of individuals and representative citizens' organizations which will help to provide, both in the community generally and in selected areas the understanding and support which is necessary to insure success.

There are many reasons why the adoption by the community of a workable program for dealing with slums and blight should again be made a prerequisite for Federal aid to public housing, just as it is a requirement for Federal aid to urban renewal and special FHA mortgage insurance assistance for urban renewal housing. Among them are the following:

First. Federal aid to public housing should be given only where the community has an overall plan to prevent and eliminate slums. Public housing is only one of several instruments to be used in fighting slums and blight. A workable program is essential to assure that other available instruments which are appropriate under local conditions will be used by the community for this purpose and will be coordinated with public housing.

Second. The removal of this requirement resulted from a misunderstanding. The workable program requirement was repealed last year when it was confused with other provisions which required detailed calculations by the communities concerning displaced families, their incomes, existing low-rent public housing, and the timing of the construction of public housing in relation to the progress of urban-renewal projects. The workable program requirement never caused any difficulty or confusion in public housing, and the Housing Agency never asked that it be removed.

Third. The requirement for a workable program is not burdensome for either large or small communities. Communities are not expected to undertake protracted and unrealistic slum-prevention planning and other activities. Rather, they are merely expected to adopt sensible, long-range programs within their capabilities and suitable to their local conditions. Proof is that, as of June 1, workable programs had been approved for over 100 communities. More than half of them have populations of less than 50,000. About 45 percent have populations of less than 25,000. Twenty-two communities have populations of less than 10,000, 5 communities have populations of less than 5,000, and 2 have less than 2,000 population.

Fourth. The workable program does not have to be carried out before a public housing contract can be entered into. What is required is demonstration by the community that it is serious about carrying out its own program for dealing with slums and blight. It is recognized that it takes time to enact and put into operation housing codes and other actions contemplated by the workable program, and that it would be unreasonable to withhold Federal assistance to public housing until the program is carried out. The program looks only to future action.

Fifth. The workable program requirement would not preclude communities which do not have urban renewal powers from obtaining public housing. Requiring a workable program means merely that the community must have a plan of action for removing and preventing slums and blight. In some communities a program utilizing the city's normal police powers for rehabilitation and conservation would be sufficient. In other communities the program would be adequate if it coupled police powers with the usual exercise of eminent domain powers to acquire land for public improvement, such as parks, playgrounds, or other public facilities. Even in cities where extensive slum conditions cannot be eliminated without the use of eminent domain under urban renewal powers, this does not preclude such cities without those powers from having approved workable programs. It is only necessary that the city recognize its problems and have a plan for working toward this solution, even if this includes a reasonable plan of action for obtaining necessary State legislation or other legal action.

Mr. Speaker, the workable program requirement for the prevention and elimination of slums and blight is sound and desirable. The Congress should have no hesitancy in making it applicable to public housing in order that the public housing program may better serve its primary objective of helping to solve the slum problem.

Fear and the Security Program

EXTENSION OF REMARKS

OF

HON. HERBERT H. LEHMAN

OF NEW YORK

IN THE SENATE OF THE UNITED STATES

Tuesday, July 17, 1956

Mr. LEHMAN. Mr. President, the Washington Post of Friday, July 13, published what I consider to be a very incisive editorial highly critical of the recent endorsement by the administration of the proposal to place all Federal employees under the strictures and disabilities of the security program. It is an excellent editorial, commenting as it does on the recent report on this subject by the Association of the Bar of New York. I ask unanimous consent that the editorial be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

FEAR AND SECURITY

It is scarcely conceivable that President Eisenhower has considered the full implications of the effort in Congress, with administration support, to nullify a major Supreme Court decision on the Federal security program. The Court's decision in the case of Kendrick M. Cole was compatible with sentiments often applauded by the President. It said in effect that the security program ought to be limited to genuinely sensitive positions in the Government rather than applied as a blanket to all positions in the civil service. This is also one of the recommendations of a group of some of the country's best lawyers in the admirable study of the security program conducted by the Association of the Bar of the City of New York.

That the President may not have had an opportunity to review the Supreme Court decision and the subsequent actions of his subordinates is understandable. Mr. Eisenhower was stricken with ileitis the morning of June 8. The Supreme Court decision was not handed down until June 11, when Mr. Eisenhower was in the hospital. Introduction of the Walter bill classifying all Federal jobs as involving "national security," and the indorsement of it by Attorney General Brownell and Chairman Young of the Civil Service Commission, all occurred during the President's absence. As far as can be ascertained, he has not talked to either Mr. Brownell or Mr. Young. Yet as Mr. Eisenhower completes his convalescence he is confronted by a full-blown effort to reimpose one of the worst facets of a system for which the administration has been repeatedly criticized.

Mr. Eisenhower has often spoken of his desire to safeguard the security program against unfairness and abuse. In his 1955 state of the Union message he pledged: "We shall, in the process, fully preserve our traditions and the basic rights of our citizens." Previously he had extolled the traditional right of Americans to meet their accusers "face to face." Just before his recent illness he reportedly asked former Sen. Harry Cain to prepare a memorandum on the operations of the security system after the latter had given him case histories of some of the most flagrant abuses. These are the comments and actions of a man of conscience who is seeking to do the right thing.

Should the President not then take a careful look at what his subordinates are attempting to do through the Walter bill to negate the Supreme Court decision? Is it not time to place genuine security requirements in perspective, to face up to the fact that a fear psychosis has been dominating the program? The report of the New York bar recommends that the program be delimited to cover some 1.5 million persons in really sensitive posts instead of the 6 million persons who have been covered by this and allied programs. This is the advice of disinterested top-notch legal experts who have studied the problem with no partisan purpose but with the view of evolving a program that will really protect both national security and individual security.

Does the President not sense the opportunity now to revise the program and make procedural improvements that will relate to real needs, instead of ritualistically accepting the plea of fearful men who have learned nothing from the excesses and insecurity of

the past? Will not Mr. Eisenhower, if he reads the New York bar report and heeds his own sensible instincts, conclude that the Walter bill is a monstrosity and that the security program ought to be limited and refined, not expanded?

Probable Closing of Picnic Areas

EXTENSION OF REMARKS
OF
HON. WALLACE F. BENNETT
OF UTAH
IN THE SENATE OF THE UNITED STATES
Tuesday, July 17, 1956

Mr. BENNETT. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Alternative May Be Closing Picnic Areas," published in the Salt Lake Tribune of Wednesday, July 11, 1956.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

ALTERNATIVE MAY BE CLOSING PICNIC AREAS

Congress is pushing toward adjournment before the end of July. Lawmakers from the 39 States favored with national forests within their boundaries would do well to visit these woodlands this summer. They would find there many of their voting constituents and they could see for themselves how every man's playgrounds are being trampled to dust and how facilities are deteriorating.

Use of national forests in the intermountain region likely is typical. In 1953 recreational visits to the 19 national forests in the region totaled 4,964,600, not counting trips through. This was an increase of 41.8 percent on improved areas and 124 percent on unimproved areas in 5 years. The number rose to 6,106,300 in 1955 and, at the current rate of increase, will total between 7,500,000 and 9 million by 1960.

With water contamination already a serious problem and most popular areas suffering greatly from overuse, the Forest Service will not be able to safely accommodate such large numbers of recreation seekers unless the repair and maintenance program is vastly accelerated. Due in part to efforts of intermountain region congressional members, the 1956–57 appropriation for national forest sanitation and public camping facilities was set at $3,097,250. This is an increase of $1,372,750 over last year but still grossly inadequate to meet the growing demands and to safeguard public health. At least $24 million will be required to rehabilitate and expand existing public-use facilities on the national forests.

To make up for the decades of neglect, to provide necessary improvements to accommodate the visitor load (growing at the annual rate of 10½ percent) repeated proposals have been made that 10 percent of forest receipts be allocated for campground, wildlife habitat, and sanitation improvements. Utah's Senator WATKINS has cosponsored the program in the past. Several such measures are now in Congress. They place a ceiling on the annual allocation ranging from $5½ million to $7½ million, which is conservative considering that recreational visits for the Nation now total more than 40 million yearly.

The bills have failed in the past mainly because of opposition to earmarking funds. This remains a powerful factor. Though professing to support the objectives of the bill, the Agriculture Department opposes earmarking although this is fairly common with Forest Service receipts.

The House Interior and Insular Affairs Committee recently introduced a bill which would provide essentially the same benefits to the public domain woodlands under the Interior Department jurisdiction. The strategy is to amend the bill during the legislative process so that it would apply also to the 180 million acres of national forest lands. The circuitous legislative maneuver is called necessary by conservation-minded legislators and interested sportsmen's organizations in view of the urgency of the need and a possible roadblock in the Agriculture Committee.

These spokesmen point to the 3,200,000 big game animals—one-third of the national total—now living on publicly owned forests. They include 2,820,000 deer, 246,000 elk (90 percent of the elk in the country), and many thousands of bear, mountain goats, bighorn sheep, moose, antelope, and peccary. A harvest of 473,000 big game animals was taken from national forests during the 1954 hunting season under State game regulations. If all current Forest Service wildlife funds went for big game management—which they do not—the investment would be less than a dollar a year for each animal taken home.

Sportsmen, who made over 12 million visits to national forests last year, are making known their dissatisfaction over the pittance appropriations for Forest Service wildlife and recreational improvements. They are speaking through the National Wildlife Federation, the Izaak Walton League, and other organizations on behalf of more funds. Utah's Senator BENNETT, pleading for increased moneys for this purpose, a few weeks ago pointed out that total receipts from the national forests greatly exceeded the expenditures.

It would be both good business and good sense to reinvest more of these receipts in the maintenance and improvement of the growingly popular national forest playgrounds.

Vice President Nixon's Poise and Dignity

EXTENSION OF REMARKS
OF
HON. CRAIG HOSMER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Saturday, July 7, 1956

Mr. HOSMER. Mr. Speaker, it is a practically effortless task to criticize someone, and apparently a pleasurable one for some people. Particularly if the one criticized happens to be an especially able and active member of the opposing poltical party. It is a fair thing to give credit where credit is due, as in the following editorial which appeared recently in the Long Beach Press Telegram:

SHOW GOES AS BILLED

President Eisenhower's announcement that he will seek reelection surprised no one. He had never said anything to indicate any change of plan. He had permitted Republican strategists to proceed on the asumption that he would be the candidate. He had done nothing to prevent Press Secretary Haggerty from smiling broadly when asked about the possibility of Mr. Eisenhower's candidacy.

So the show will go on as billed.

It is good to hear from the President himself that he feels well enough to run. He says he feels better than before. Quite clearly, the seriousness of his recent illness was exaggerated.

The intestinal operation didn't merely hold the line in a physical crisis; nor did it signal a progressive deterioration. Rather it was rehabilitative, regenerative. The President, who knows his own feelings best, is a practical testimony to this theory, offered on the best of medical authority.

The assurance that Mr. Eisenhower will run leaves the Republican National Convention a cut and dried affair. Ike has been pledged the ballots necessary to hand him the nomination—which no one has doubted he could have for the asking.

If there is a shadow of doubt about the story the GOP convention will write, it surrounds the question of the Vice Presidency.

Mr. Eisenhower has not come out and said pointblank that he and RICHARD NIXON are a team seeking reelection. But for most political observers his statement expressing delight over NIXON'S decision to run was a conclusive sign that NIXON is again the choice for second place.

And why shouldn't he be? Mr. NIXON has done nothing to disqualify himself, but has conducted himself with poise and dignity through hailstorms of partisan abuse. He has handled all his assignments expertly and shown real genius in the field of diplomacy. He has demonstrated his ability to grow. It would be a sad injustice for the Republicans to reject such a man.

Again, NIXON has proved that he's no political liability, as some Republican leaders whispered previous to the spring primaries. He received strong, spontaneous support in several State primaries in which his name did not appear and in which he did no campaigning.

The Ike and DICK combination still has the look of a winner. By all logic, that will be the combination offered by the Republicans in November.

Costly Foreign Aid Funds Feed United States Industry First

EXTENSION OF REMARKS
OF
HON. ROBERT B. CHIPERFIELD
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Monday, July 16, 1956

Mr. CHIPERFIELD. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following article by James M. Haswell, of the Chicago Daily News:

WASHINGTON, June 18.—Congressional talk about foreign aid sounds as though it were all going out and none coming in.

Some people speak of it as taking dollars away from Americans to give to Europeans and Asiatics.

Such talk overlooks the fact that foreign-aid dollars make business in this country before they ever leave these shores.

Harry W. Arnold, president of the Ohio Chamber of Commerce, recently circulated in Congress a statement that President Dwight D. Eisenhower's 1956–57 foreign-aid request would cost Ohio taxpayers $292 million.

Figures from the International Cooperation Administration and the Census Bureau indicate this same foreign-aid request would bring $408 million worth of business into Ohio.

Using the same premises:

Michigan taxpayers would pay $368 million and Michigan farmers and manufacturers would get $393.5 million business.

Illinois taxpayers would pay $81 million and Illinois would get $345,600,000 business.

People talk about foreign aid in terms of dollars but foreign aid actually is goods and services.

Some of the goods and services are produced in the countries to which the foreign aid goes.

But the great bulk is produced in this country.

The International Cooperation Administration reports that 91 percent of the foreign-aid funds spent on agricultural commodities last year was spent right in this country for American farm products.

Seventy-one percent of the money spent on industrial goods went to American manufacturers, and 88 percent of the money spent on military goods furnished wages for American workers and profits for American corporations.

Ohio is one of the great centers of American industry. Ohio accounts for 9 percent of the value added by American manufacturing. Ohio also furnishes 3.1 percent of the Nation's farm products.

Michigan does 12.2 percent of defense-type manufacturing, 8 percent of general manufacturing, and raises 2.1 percent of the farm goods.

Working out all these percentages, it appears that postwar foreign-aid spending already has brought Ohio about $2,900,000,000 business, Michigan $2,300,000,000, and Illinois $3,100,000,000.

Compensation for Service-Disabled Veterans

SPEECH
OF
HON. GEORGE A. SHUFORD
OF NORTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 12, 1956

Mr. SHUFORD. Mr. Speaker, I am privileged to be a member of the Committee on Veterans' Affairs. Throughout my service on this committee, I believe I have made it abundantly clear that I consider our first obligation is to those disabled in service and to the surviving widows, children, and dependent parents of those who die from service-connected causes. This Congress has already provided generous increases for survivors by the approval of H. R. 7089. The House has also approved pension increases for veterans whose disabilities are not connected with service by the passage of H. R. 7886 on June 27, 1956. In fact, H. R. 7886 authorizes pensions for veterans of World War I at age 65 even though they are not disabled, if they can meet the income limitations. In view of this action, it seems clear that it is our obligation to promptly increase the rates of compensation for those disabled in service as provided by H. R. 12038.

Pensions for the nonservice disabled are usually justified on the basis that the veteran has made a personal sacrifice for the defense of his country that entitles him to assistance if subsequently disabled and in need. The veteran disabled in service is certainly entitled to no less than equal consideration on the basis of his contribution to the defense of the Nation and clearly he has made more personal sacrifice than one who was not disabled during his period of service. The service-disabled man would not have incurred his disability if he had not been in service and logically, our obligation to one whose disabilities resulted from his defense of the Nation is greater than our obligation to those who were not so disabled.

Approximately 2 million veterans will receive compensation increases under the provisions of H. R. 12038. Its estimated cost is not excessive and will decline rather than increase in future years.

For these reasons, I ask the full support of the House for this meritorious bill.

Are Large Numbers of Military Personnel Needed for Future Wars?

EXTENSION OF REMARKS
OF
HON. TIMOTHY P. SHEEHAN
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 17, 1956

Mr. SHEEHAN. Mr. Speaker, many of us have spent much time in trying to figure out what should be the future military policy of our country, in view of the fact that the nuclear weapons seem to indicate that future wars will be of an entirely different nature than past wars.

The Chicago Daily Tribune, in their editorial of Tuesday, July 17, points out the fact that it seems most likely that future wars will be on the basis of a quick destruction of the industrial potential of the enemy and therefore calls for a revised concept of our usual thinking about military preparedness.

The editorial is as follows:

RADFORD'S BOMBSHELL

Adm. Arthur W. Radford, Chairman of the Joint Chiefs of Staff, dismisses as a mixture of fact and pure speculation a drastic plan credited to him for reorganizing the Nation's Military Establishment and cutting existing forces by 800,000 men. Nevertheless, he concedes that the joint chiefs have a continuing duty to restudy the Nation's military needs and that the introduction of new weapons might make possible a reduction in manpower.

Admiral Radford's reported thesis is that the next war will be fought with nuclear weapons, that it will be short and violent, that the burden will be carried by the strategic Air Force, that it would be over before ground forces could ever be committed, and that, therefore, there is no need for a big army and no utility in maintaining substantial Army forces on the continent of Europe.

The admiral is said to believe the United States will be the main base in launching attacks upon the enemy through intercontinental bombers and guided missiles. Under this concept of fortress America, the United States would be less dependent on overseas bases and consequently would have less need to curry favor with other nations through foreign aid. Some bases, however, would be required to refuel the big B–52 jet bombers on missions into the heart of Eurasia, and some would also be needed for the takeoff of B–47 medium bombers, which don't have the range of the bigger plane.

Inasmuch as M- [for mobilization] day and D-day, marking the start of hostilities, are expected to coincide, the Radford plan, as outlined, is predicated on the belief that action would be over before an army could be shipped overseas. Accordingly, the admiral proposes to cut the Army by 450,000 men between now and 1960, reducing it from its present size of 1,030,000 men to 580,000.

Because the tactical Air Force is organized for close support of ground troops in battle, this arm of the Air Force would be cut by 150,000 men. Projected Air Force strength would then be 820,000 men.

The Navy, with 662,774 men at present, and its amphibious arm, the Marine Corps, now at a strength of 201,000, would be called upon, in combination, to give up 200,000 men, so that their combined strength, after reorganization, would be 663,774 men. The Navy's primary mission would be to provide antisubmarine defense. The principal strength of the Soviet Union afloat is a huge fleet of submersibles.

The National Guard and Army Reserve would be employed on civil defense and home guard duties. The Army forces now stationed overseas would be reduced to token forces which "would wave the flag." Five divisions are now in Europe under the North Atlantic Treaty Organization Command, 2 in South Korea, and 1 is in Japan.

The entire plan is said to have been drafted in support of the view that in a period of watchful waiting of indefinite duration, the principal preoccupation of the United States should be to maintain a sound and solvent economy. Instead of huge allocations of defense dollars to standing forces, the emphasis will be on research and the development of new weapons.

Now, what, in reality, is this plan? Where have you heard it before? It is, in all essential particulars, the plan that has long been advocated by such men as former President Herbert Hoover, the late Senator Robert A. Taft, Brig. Gen. Bonner Fellers and the Chicago Tribune. It made sense to us long before it seems to have occurred to the Chairman of the Joint Chiefs, who, in adopting it, has brought down upon himself the inevitable wrath of the Joint Chiefs, who know that its terms will cost them part of the manpower they so jealously hoard.

Another consequence of the plan is that it will lead, in all likelihood, to the end of conscription, which can only be justified so long as masses of men are called for in the scheme of defense. The draft will died of disuse as the services come more and more to be manned by professional career specialists.

We can find not the slightest logical objection to such changes, except, perhaps, that they still leave the Military Establishment loaded with 600,000 more men than it had before the Korean war. Why delay in putting in execution a project which will save the country money, maintain and improve its security, relieve it of the risk of exposing garrisons overseas, curtail the racket in foreign aid, release 800,000 men for useful civilian work, and relieve the Nation of the curse of conscription?

Pressure From the Left

EXTENSION OF REMARKS
OF
HON. CLARENCE J. BROWN
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 17, 1956

Mr. BROWN of Ohio. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following excerpt from the National Whirligig column which appeared in the Muncie press of July 9, 1956:

Ellis, public power lobbyist and big spending advocate, virtually ran the Rural Electrification Administration when Claude Wickard of Indiana and Charles F. Brannan, of

Colorado, headed Agriculture. In fact, Wickard and Ellis employed the same ghost writer for recent speeches pro public power. Unfortunately, the ghost writer plagiarized himself, writing virtually the same words for each.

Wickard and Brannan are the Democratic nominees from their respective States. Both are strong Stevenson supporters. The Chicagoan will owe them, as well as Reuther, Patton, Rauh, Harriman, and Truman, a great debt, if they should help to land him in the White House. Will he be able to withstand these pressures from the left, if—

Immigration Quotas

EXTENSION OF REMARKS
OF
HON. PAUL F. SCHENCK
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 17, 1956

Mr. SCHENCK. Mr. Speaker, under unanimous consent I am inserting in the RECORD a resolution adopted by the American citizens of Greek descent of Dayton, Ohio, relating to immigration quotas, as follows:

RESOLUTION OF AMERICAN CITIZENS OF GREEK DESCENT RESIDING IN DAYTON, OHIO, RELATING TO IMMIGRATION QUOTAS

Whereas over 300 citizens of Greek descent residing in Dayton, Ohio, and suburbs are familiar with the privations and hardships of the people of Greece resulting from warfare and occupation and from communistic depredations of the last decade and from the two destructive earthquakes within the last 2 years and these 300 Americans and their friends are cognizant of the inequities resulting from the national origins system of immigration and of the Refugee Relief Act of 1953, as amended; and

Whereas the prevailing United States immigration laws and regulations are clearly discriminatory inasmuch as they assign to the nations of northern and western Europe five-sixths of the migration quotas and to the southern and eastern nations only one-sixth and, as aptly stated by Secretary Dulles, this system "draws distinction between the blood of one person and the blood of another (which) cannot be reconciled with the fundamental concepts of our Declaration of Independence"; and

Whereas the State Department reports show that there are over 16,000 Greek assurances still pending and without visas; and

Whereas the economy of Greece is in an increasingly precarious state as a result of overpopulation and of depletion through her recurrent wars for liberation, for freedom, and for democracy from 1911 until 1947; and

Whereas immigrants from Greece, within the last 50 years, have been assimilated with unrivaled rapidity and thoroughness in the United States and now with their children and grandchildren, aggregating over 1,250,000 citizens, are amongst the most respected, most prominent, law abiding, home loving, loyal, and progressive Americans and American patriots, having proven themselves as such in every endeavor, civil and military; and

Whereas the historic friendship, existing between the United States and Greece, is predicated upon their mutual devotion to the tenets of democracy and liberty, to the principles of the dignity and the freedom of the individual, and to the culture of the western civilization which was founded in ancient Greece and is now flowering intensively and illuminatively in the United States; and

Whereas these two countries fought side by side in two great world wars since the days when each gained its independence; and

Whereas within the last decade, evidencing its interest in Greece the United States, through the Marshall plan and the Truman doctrine, aided decisively in the preservation of Greece within the orbit of the western nations, for which the Greek people are most grateful; and

Whereas the Greeks have demonstrated repeatedly their loyalty as allies of the western nations and their exemplary courage as a freedom-loving people by resisting heroically the mighty axis forces in 1940–41 and by exterminating the vile communistic forces in 1944–47; and

Whereas Greece, lying athwart the eastern terminus of the Mediterranean Basin, is strategically the controlling gateway of the sea, air, land, and fuel oil routes among three continents, Europe, Asia, and Africa, and because of its geographical location, Greece is the master hinge of the NATO, Balkan, Baghdad, and SEATO defensive systems and as such an indispensable bastion for the security of the western democracies.

It is resolved by the undersigned, personally and collectively, that our Representatives in Congress, namely, the Honorable PAUL F. SCHENCK, the Honorable JOHN W. BRICKER, and the Honorable GEORGE H. BENDER be and hereby are respectfully urged and appealed to, to take timely and appropriate action in urging vigorously the Honorable WILLIAM LANGER, chairman, Subcommittee on Refugee Relief Program, Hon. JAMES O. EASTLAND, chairman, Senate Judiciary Committee, Hon. EMANUEL CELLER, chairman, House Judiciary Committee, Hon. FRANCIS WALTER, chairman, House Immigration Subcommittee, (A) to expedite and support legislation for additional Greek refugee relief quotas by transferring an additional 10,000 visas for Greece from the unused and undersubscribed quotas (of the Northern and Western Europe 5/6 visas) and 10,000 or more for Italy; but not to increase the overall total of 209,000 under the entire refugee relief program, such transfer being within the humanitarian spirit and true purposes of the prevailing immigration laws, and further, (B) to support actively the effectuation of amendments of the present immigration law beneficially to the people of Greece and of Italy, both members of NATO, and particularly to support the enactment of legislation within the contemplation of pending bills S. 3570, S. 3571, S. 3572, S. 3573, and S. 3574, (C) this resolution signed by the members of this community be transmitted to the Honorable PAUL F. SCHENCK, Congressman, Third District, Ohio, for transmittal to his fellow Congressmen.

Respectfully submitted.

JUNE 8, 1956.

Nixon and Nehru

EXTENSION OF REMARKS
OF
HON. PATRICK J. HILLINGS
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 17, 1956

Mr. HILLINGS. Mr. Speaker, I wish to call attention to an editorial from the Washington Daily News of Tuesday, July 10, 1956, discussing Vice President NIXON's successful global tour. The editorial follows:

NIXON AND NEHRU

Moscow's mouthpiece, Izvestia, and India's neutral Premier Nehru appear to be in agreement on one thing: They don't like what Vice President NIXON has been saying on his current trip. For instance—

In Manila, he said neutralism in the cold war is a fearful risk.

In Formosa, he said President Eisenhower stands by Chiang Kai-shek and still is firmly opposed to recognition of Red China.

In Bangkok, he commended the pro-westernism of Thailand.

And in Karachi he reminded Mr. Nehru that any country which takes Russian aid runs the risk of becoming a satellite. India, of course, is benefiting from very favorable trade and credit deals with the Soviets, as well as direct American aid.

Izvestia says Mr. NIXON is clinging to "outdated cold-war positions." Why shouldn't he—or we—is there the slightest reason for believing the cold war is over?

And Mr. Nehru says it isn't democratic to want all people to think the same as you do. Well, it isn't so much that we want the Indian Premier to think the way we do—we'd settle for it if he'd just quit thinking the way Moscow does.

H. R. 11122

EXTENSION OF REMARKS
OF
HON. HERBERT ZELENKO
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 17, 1956

Mr. ZELENKO. Mr. Speaker, on July 16, there appeared on the Consent Calendar of the House, H. R. 11122, a bill dealing with the charter of tankers under certain conditions.

Had I been present when this bill was called up, I would have objected. I have vigorously opposed this bill at all times, in the Merchant Marine and Fisheries Committee and on the floor of the House.

It was my personal understanding, and that of many other Members, perhaps naively, that this measure would not be brought up at that time by its proponents.

On July 2, 1956, it first appeared on the Consent Calendar of the House. At that time, the following took place:

The Clerk called the bill (H. R. 11122) to promote the development and rehabilitation of the coastwise trade, to encourage the construction of new vessels, and for other purposes.

Mr. CUNNINGHAM. Mr. Speaker, I understand that this bill is programed to be called up under suspension of the rules. Therefore, I ask unanimous consent that it be passed over without prejudice.

The SPEAKER pro tempore. Is there objection to the request of the gentleman from Iowa?

There was no objection.

Later, on the same day, under suspension, debate was had on the bill. At that time it was opposed not only by myself but by the gentleman from Pennsylvania [Mr. VAN ZANDT], who had demanded a second under the suspension of rules. Other Members also indicated their opposition. At the conclusion of the debate, on a division, a vote was taken. The ayes were 101 and the nayes 90. It appeared

from the vote that the measure was defeated under the suspension of rules. At this point, the gentleman from North Carolina [Mr. BONNER], the proponent of the bill, objected on the ground that there was no quorum and asked unanimous consent that further proceedings on the bill be postponed until Friday, July 6. On page 10546 of the July 2 CONGRESSIONAL RECORD, his verbatim statement appears as follows:

Mr. BONNER. Mr. Speaker, as I stated before, I object to the vote on the ground that there is no quorum, but I am not going to ask for a rollcall vote now. I ask unanimous consent that further proceedings on this bill be postponed until Friday.

The SPEAKER. Is there objection?

There was no objection.

On July 6, 1956, the bill was called up again and the following took place, and I quote:

The SPEAKER. The unfinished business is on suspension of the rules and passage of the bill (H. R. 11122) to promote the development and rehabilitation of the coastwise trade, to encourage the construction of new vessels, and for other purposes, which the Clerk will report by title.

The Clerk read the title of the bill.

Mr. MARTIN. Mr. Speaker, I think the Members of the House would like an explanation as to what this suspension is.

The SPEAKER. This is a bill, the consideration of which was carried over from last Monday until today.

Mr. BONNER. Mr. Speaker, I ask unanimous consent to withdraw further consideration of this bill, as I have requested a rule from the Rules Committee.

The SPEAKER. Is there objection to the request of the gentleman from North Carolina?

Mr. VAN ZANDT. Mr. Speaker, reserving the right to object, if the gentleman's request is granted, does that mean it may be called up at any time between now and the adjournment of Congress?

Mr. BONNER. No. I will bring it up under a rule.
